Dutch strawboards are selling at £10 to £10 5s. per ton up to 16 oz. substance with £1 5s. extra for 1½ lb. and up. Lined boards are subject to the usual extras, namely, £3 10s. per ton 8 oz, £3 per ton 10 oz., £2 10s. per ton 12 oz., £2 5s. 14 oz., and £2 for 16 oz. Large stocks of strawboard have entered the country since prices started advancing. According to report there is every prospect of a still higher price for strawboards but buyers show no anxiety to fill their requirements in anticipation. Box-makers are very quiet and their stores are purposely being maintained in a depleted condition.

Other Board Prices.

First quality glazed leatherboards are listed at £19 2s. 6d. per ton, second quality at £18 12s. 6d and a lower grade at £18 per ton. White wood pulp boards remain firm at £20 per ton, 600's; £18 per ton, 450's and 500's; and £17 per ton for 90's to 350's. So far the pulp workers' lock-out in Sweden has not seriously affected the board market, but unless a settlement is arrived at very speedily there will be a hardening in all paper and board quotations from Scandinavia.

Pluviusin Leather Cloth.

The British Pluviusin Co., Ltd., has presented its customers with a handy little notebook covered in P-V Brand of Art Leather Cloth as a demonstration of the quality and efficiency of this series of imitation leather.

Ruling by Offset.

Apropos the remarks in the last bookbinding issue with reference to the diversion of work from the ruling department to litho and letterpress, we have since received a batch of specimens of one-colour ruling patterns from Messrs. Morland and Impey, Ltd., which demonstrate the possibilities of the offset process as applied to rulings. The work is neater, sharper and more delicate than anything which either pen or disc machines could accomplish, whilst the round-cornered borders present an impossible proposition for the ruler.

Vellum Binders and Machine Rulers' Pension Society.

At the eightieth annual meeting of this society, held at St. Bride Institute, Mr. Wm. Boyle (Messrs. Boyle, Son and Watchurst, Ltd.), occupied the chair.

Mr. F. C. Peacock, the secretary, having read the notice convening the meeting, said he felt the members generally would have the utmost satisfaction in seeing their friend Mr. Wm. Boyle occupying the chair that evening, as it was a continuation of association with this society extending from 1846 up to the present time. Mr. Boyle's father joined in 1846 and was still an active member when he died in 1914, a period of 68 years. This was, he thought, an easy record of unbroken work in the interests of the society.

Minutes of the last annual meeting were read and confirmed and also letters of apology for inability to attend, mainly through illness, from Messrs. H. R. Danford (Messrs. Danford's, Ltd.), Frank Garrett (R. T. Tanner and Co., Ltd.), treasurer, H. V. Gibbs (H. Gibbs and Son), C. W. Atkins, etc.

The election of three scrutineers for the ballot for pensioners resulted in Messrs. P. R. Aves, R. W. Pearse, junr., and R. Hirst being selected.

Mr. Wm. Boyle, the chairman, who had a cordial reception when he rose to move the adoption of the eightieth annual report and balance-sheet, said it was a very pleasant duty for him that evening to preside, as the work of this society was amongst his earliest recollections, for when quite a boy he had very often to address the envelopes and sometimes deliver them for his father, who was at that time secretary of the society and even then an old member. The society, founded in 1842, was only four years of age when his father joined in 1846, and as he was, during this membership, committeeman, secretary, hon auditor and presided at the annual meeting on at least two occasions, he thought he must have been a fairly active member.

Progress in a Difficult Period.

Proceeding to refer hopefully to the society's progress, he said the last few years had seen new life put into the work, and he thought the present satisfactory report and balance-sheet was largely due to their energetic secretary and committee. The former, by the by, seemed to be receiving the same salary as was paid in the early life of the society, so presumably it was a labour of love on his part. The present unprecedented slump in the binding trade must inevitably make the work of the committee more difficult, and although he found the ruling branch were not so badly hit in the slump as the binders, he thought the growth of loose leaf binders and the high cost of production would make the hoped for improvement in the trade a slow one.

He saw there was a motion to come before the meeting that evening *re* State Old Age Pensions, with which he cordially agreed, as he thought no person should be penalised for his or her thrift, for apparently that was the effect, whatever the intention, of the present method of deduction from the State pension, the small sums that might be received from this or other societies of a like nature, after years of effort to continue their payments. He thought the signs were propitious, as when the subject was brought before the House of Commons last session, the proposed reform was only defeated by 22 votes on the score of expense. He had very much pleasure in moving the adoption of the report and balance-sheet.

The motion was seconded by Mr. J. J. Harward (secretary, State Section Stationers' Mutual Benefit Society) and carried *nem con.*

On the proposition of Mr. W. A. Finch seconded by Mr. J. Keeley, Mr. A. Willmott (Messrs. Willmott and Son, Ltd.), was unanimously elected hon auditor, after some feeling references to the loss sustained by the death of the society's esteemed friend and auditor, Mr. Frank G. Willmott.

A very cordial vote of thanks was accorded Mr. Frank Garrett (hon. treasurer) for his valued services during the past year, and a similar resolution of thanks to the trustees

Digitized by Google

and auditors, was responded to by Mr. A. Willmott.

A vote of thanks to the committee was very felicitously proposed by Mr. Robinson, who said the fact that a committee who worked entirely gratuitously—had an average of 75 per cent. in attendance, showed they were in earnest, and did their utmost in the interests of the society. This was seconded by Mr. McPherson, carried unanimously, and responded to by Mr. W. T. Higgins, who made a strong appeal for more help from those present to bring in new members, donors and subscribers.

Messrs. T. J. Hunt, W. T. Higgins, P. R. Aves, and G. Jacobs, retiring in accordance with rule, were unanimously re-elected.

Mr. F. C. Peacock, upon the proposition of Mr. T. J. Hunt, seconded by Mr. W. T. Higgins, was re-elected secretary.

Election of Pensioners.

The chairman then announced that the election for pensioners had resulted in Mr. H. Cecil, with 166 votes, and Miss J. Marr, with 343 votes, being elected pensioners. Mr. H. Sims would, as the highest unsuccessful candidate, receive the H. F. Parker Special Charity Sports Pension, and Miss E. Way the grant for unsuccessful candidates from the Bookbinders' Supplementary Pension Committee.

The meeting then proceeded to discuss the resolution on the need for reform in regard to State Old Age Pensions deduction. This was unanimously carried.

A very cordial vote of thanks to the chairman, proposed by Mr. A. Willmott, and seconded by Mr. T. J. Hunt, brought a very business-like meeting to a close.

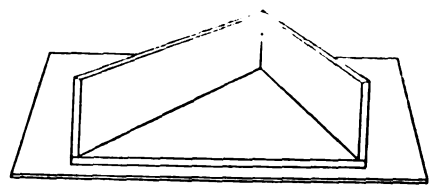
Bookbinding and Rebinding.

Book Publishers Want Guidance.

A special study of book manufacture from the librarians' point of view has been made by the Bookbinding Committee of the American Library Association, and, at the request of the National Association of Book Publishers, Miss Wheelock, chairman of the committee, has analysed the investigation and embodied it in a report entitled, "Danger Spots in Book Manufacture," which has been printed for the Publishers' Association. This report supplements the detailed work of the committee, by which they send to the Publishers' Association itemised reports on individual books which are from there forwarded to the publishing offices.

The committee's systematic criticism of publishers' outputs is a thing which is bound to make for better bookbinding and is a thing that might advantageously be encouraged in this country. The American publishers seem to appreciate the suggestions meted. Thus, in reply to the last reports, one publisher writes: "The criticism about the calendered paper is a just one. We are pleased to state that we are planning to print the next editions of three juveniles on lighter weight paper." Another reports: "What the Bookbinding Committee say about that book of ours is right. We have cut off that supply of paper. We are glad to get these criticisms. They help us keep up to the mark." Another writes: "These suggestions are helpful, and, when next printing or binding, we will endeavour to comply with them."

The criticisms have been largely on books of which the paper does not stand the resewing either because of lack of firmness of texture or because of the calendered surface used in the effort to make the half-tones more effective.



Valleyfields Dispute.—The dispute at the Valleyfields Paper Mill of Messrs. Alex. Cowan and Sons, Ltd., is still in operation, and is now concluding its ninth week, during which time the mills have been entirely closed. It is singularly unfortunate that this stoppage should continue. According to the report of the Amalgamated Society of Papermakers, "this is a case where one man, who has been a trade unionist, now refuses to pay up his arrears and the whole of the workers, numbering nearly 500, refuse to work with him."

Contrary to the intimation conveyed in our commercial paragraph last week, Messrs. Olive and Partington, Ltd., inform us that they have paid a dividend on the ordinary shares for the year ended December 31st last.

Binder's Corner-Cutting Device.

Mr. E. R. Mason, in the *Inland Printer*, thus describes a useful appliance:—"In binderies where a case-making machine is at hand the device herewith illustrated probably will not prove of interest, but to the binderies that do not have the use of such a machine, the device will prove of real worth.

"Where edition binding is done entirely by hand and the books are bound in full cloth, all four corners of each piece of cloth are cut off to allow for the turn-in. Ordinarily this is done on the paper cutter after marking the position of the cuts with a pencil. In this manner, however, it is extremely difficult to cut all four corners exactly the same, a fact

which causes no end of trouble to the workman who makes the cases. Every bit of trouble can be eliminated if the workman will use a device similar to the one illustrated. The sketch is meant to portray the side and end boards of an ordinary cigar box, with the bottom cut off as shown.

"To operate, a bunch of cloth is placed within the two walls of the box. It is only necessary to mark one bunch of stock. Each bunch should have one or two stout rubber bands around it to hold the pieces of cloth firmly. The whole thing is then slid against the back gauge of the cutter and pushed under the clamp until the desired position is reached for the cutoff. The cutter gauge is set at this point. Two cuts are taken, then the bunch of cloth turned over and the next two cuts taken. Cut as many bunches as you wish in this manner, stack the cloth in a pile and note the exactness of all the corner cutoffs.

"This is perhaps the simplest and most effective method of cutting off the corners in cloth edition work, as all corners will be cut exactly the same. This will prove the worth of the idea when the actual case-making begins, and especially to the workman who lays the boards on the cloth after it is glued up.

"It would be a good plan to reinforce the cigar box with a few extra brads, or, better still, make a frame out of some heavier wood. Needless to say, this contrivance can be used for practically any size cloth in edition work."

Latex Boards for Binders.

To a press representative, Mr. Frederick Kaye, the inventor of the process for using rubber latex in the manufacture of paper, has been enlarging upon the advantages of his process.

He emphasised that in the matter of bookbinding the use of the material produced by rubber latex would do away with the cause of the present high price of books, for it would be possible to use many grades of waste paper with suitable proportions of rubber, and the pulp being dyed beautiful colours and made into a heavy substance would make splendid materials for bookbinding. The texture of the surface would have a pleasant appearance and touch. These qualities could be embossed to represent leather or textile fabrics, and the folding number could be made to reach a high figure.

We have not yet reached the stage when a decimal coinage is necessary, and Messrs. Gall and Inglis may be thought rather premature in publishing the "Rapid" Decimal Calculator in their series of reckoners. But they seem to view the matter with equanimity, and plunge into issuing a book of 80,000 calculations, at the popular price of 1s. 6d. Foreign money exchanges, percentages, and even petrol consumption in miles per gallon can be easily found from this book; while the multiplication table in itself will save a lot of calculating in making square or cubic measures. This is the 77th reckoner issued by this firm.

Machine Bookbinding.

A Reading List.

There appeared in our issue of March 8th a report of a lecture on "Modern Machine Bookbinding," delivered at University College by Mr. Geo. A. Stephen, City Librarian of Norwich. Mention was made of the fact that those attending the lecture received a copy each of a reading list compiled by Mr. Stephen, and, this reference having led to our receiving a request that the list should be published, we print it herewith.

Books.

Trade Notes.

STATIONERY OFFICE STRIKE.—About 800 members of the National Union of Printing and Paper Workers employed by H.M. Stationery Office, in Prince's-street, London, and elsewhere, ceased work last week, and at the time of our going to press were still on strike. The trouble is an extension of the dispute between the same union and Messrs. De la Rue and Goodalls, and arose when union members in the Stationery Office refused to handle paper for De la Rue's and members of the Civil Service, who were not members of the union, were brought in to do the work.

MESSRS. THOMAS COOK AND SON, the tourist agents, write that they have not been and are not in any way concerned with the arrangements including printing, for the Free Church Touring Guild tours.

AT the April meeting of the Association of Master Printers of South-East London—to be held at the Shakespear Hotel, Powis-street, Woolwich, on Tuesday, April 10th, commencing at 4.30—Mr. Frank Colebrook will read a paper on "Photo-Litho and Letterpress: Their New Inter-Relation."

THE South-West Master Printers' Association is to hold its annual general meeting on Wednesday, April 11th, at 7 p.m., at Stanley's Restaurant, Lavender-hill, S.W.11.

A JORDAN LAWSUIT.—In the High Court last week Messrs. Jordan and Sons, Ltd., the printers and stationers and company registration agents, of Chancery-lane, sought for an injunction to restrain Mr. Francis Richard Jordan and Mr. Edmund Alfred Jordan and Messrs. Jordan and Jordan, Ltd., from carrying on the businesses of company registration agents and printers and publishers of company books, documents, and forms under the name of Jordan and Jordan, Ltd., or any other name calculated to lead to the belief that they were carrying on any such business in succession to the plaintiffs' business, or that their business was identical or in any way connected with the plaintiffs' business, and from issuing or publishing any circulars or advertisements which might lead to any such belief. Mr. Justice Astbury said that he was satisfied that a deliberate fraud had been committed, and that the plaintiffs were entitled to an injunction in the terms asked for until the hearing against the two first defendants.

NEWSPAPER COMPETITIONS.—In the House of Commons last week Mr. Bridgeman (the Home Secretary), in reply to Mr. R. C. Morrison, who asked whether his attention had been drawn to the *Sunday Pictorial* kinema contest, said that it had. He understood that the Commissioner of Police had been advised that there appeared to be no real distinction between this scheme and the poster competition, and on those grounds the Commissioner had directed proceedings to be taken. He added that an appeal had been entered against the conviction in the poster case.

IT is understood that the Postmaster-General intends to make reductions in the charges now levied for parcels sent through the post and to revise the printed matter rate. A deputation waited on the Postmaster-General last week from the Horticultural Trades' Association, and pleaded for a reduction in the parcel post and printed paper rates. It is understood that Sir William Joynson-Hicks made a significant comment as to the possibility of their request being acceded to.

THE "TRAP" ENVELOPE.—In consequence of representations made by the Federation of Master Printers and the Stationers' Association, the Postmaster-General has intimated that the regulations in regard to the use of unsealed envelopes with wide openings will not be strictly enforced until January 1st, 1924. In this connection Mr. W. H. Burchell, governing director of the Caxton Press, Ltd., writes us to point out again the harm that would be done by the proposed Post Office regulation making 4½ inches the maximum width of aperture allowable in envelopes containing printed matter. He recalls that before the Postmaster-General decided last week to defer any action in the matter until January 1st next many clients of envelope manufacturers had threatened to cease sending out catalogues if this restriction was enforced, this implying unemployment in the printing and allied trades, besides cutting down other classes of employment. It is to be hoped, says Mr. Burchell, that, when that time limit expires, the evil arising from "letter trapping" will have ceased, and therefore will not warrant the imposition of any restriction at all. He suggests that careful handling of correspondence at the Post Office should ensure this.

A PENDING action by Lord Alfred Douglas against the *Morning Post*, for alleged libel, was before the Court of Appeal last week.

"YORKSHIRE POST" SPORTS CLUB.—At the annual meeting of Sports Club recently formed for the staffs of the *Yorkshire Post* and the *Yorkshire Evening Post* it was reported that up to the present 365 members had joined the club. The chairman of the directors, the Hon. Rupert Beckett, was elected president, and the other directors vice-presidents.

THE project of using pillar boxes for advertising has been rejected by the Postmaster-General.

A SCHEME for reducing the rates by utilising the bars attached to the street lamps in the borough for advertising purposes has been rejected by Paddington Borough Council.

A WIRELESS society has been formed by W. H. Smith and Son for the members of their staff. It will be assisted by the Radio Association, who will give lectures, demonstrations, etc.

NEWSAGENTS' TRADING.—Mr. Justice Russell, in the Chancery Division last week, delivered judgment in the action by William James Sorrell, a member of the National Federation of Retail Newsagents, Booksellers and Stationers, against Mr. Valentine Smith and other members of the Circulation Managers' Committee of the London daily newspapers. Mr. Sorrell was granted an injunction restraining the members of the Committee from procuring a breach of contract between him and his wholesalers, Messrs. Watson and Son, of Dalston-lane, and from interfering with his right to carry on his business as he willed.

MR. WALTER HAWKINS, formerly chairman of the *Bristol Times and Mirror*, Ltd., died on Saturday at an advanced age. A native of Taunton, he joined the *Times and Mirror* staff as a reporter, working his way up to be the head of the firm. He was active in support of the West of England Press Fund and the Institute of Journalists, and had also served full terms on the Committee of Management and Consultative Board of the Press Association.

BY the death at East Dulwich on Saturday last of Mr. Robert J. Ward there passed one who for upwards of half a century was a well-known figure in the Press Gallery of the House of Commons. Mr. Ward, who had reached the age of 77, was first engaged in the Gallery in 1862, when he was employed on the Wheatstone Alphabetic Telegraphs, which were at about that period first installed to connect the reporting staffs in the Press Gallery with the editorial offices in Fleet-street. He was more particularly associated with the *Daily News*, but in his time he had acted as despatch clerk for many other papers.

MR. GEORGE TURTON (78), of Derby-road, Ausdell, Lytham, St. Anne's, formerly for 20 years editor of the *Chorley Guardian* (net personalty £341) £2,444.

MR. WALTER SMITH, of Finchley, N., for some years managing director of Messrs. Tom Smith and Co., Christmas cracker manufacturers, left £146,839.

MR. FREDERICK VILLIERS, famous war correspondent and artist, who died on April 3rd last, aged 70 years, left estate now valued for probate at £999 gross, with net personalty £440.

NEWSPAPER REPORTS OF WILLS.—In reply to Captain Terrell, who asked the Home Secretary whether he would consider the desirability of legislation to prevent the publication in newspapers of extracts from private wills which are often of a vindictive nature in respect to the living, the Attorney-General writes:—"I have been asked to reply. No evidence has reached me which would lead me to think that the evil to which the hon. and gallant member refers is sufficiently widespread to justify legislation, and I do not think that a complete suppression of the contents of wills is desirable to the public interest."

Two fatal accidents in the paper, printing, etc., group of trades were reported in February.

PIPER AND FRERES is a new Paris company formed for the sale and purchase of supplies of paper, mill-board, wires and sizes for papermaking and bookbinding. Capital 197,000 francs.

ENGLISH-MADE playing cards are among the articles which will be subject to 33⅓ per cent. *ad val.* duty under the Irish Free State's decision.

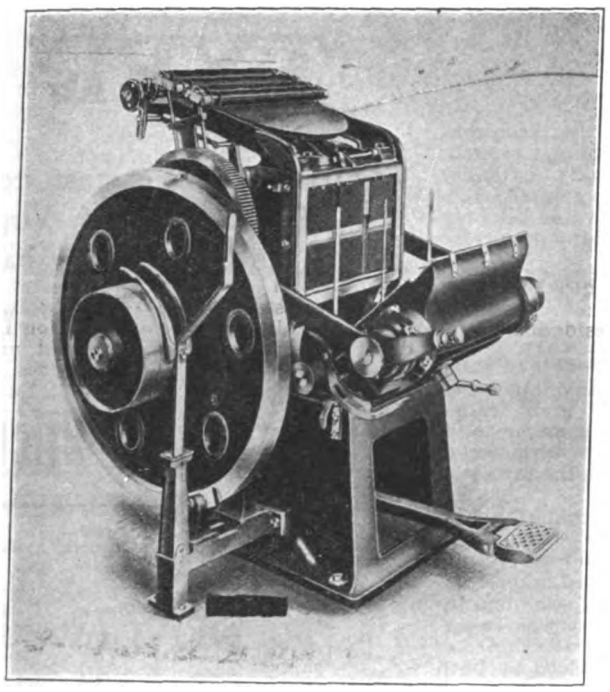
THE 1924 ADVERTISING CONVENTION.—Arrangements have been made by the Thirty Club of London for an influential delegation of business men to attend the Convention of the Associated Advertising Clubs of the World, which is to be held at Atlantic City during the five days, June 3rd to June 7th. The object of the delegation is to present to the clubs assembled at Atlantic City an invitation to hold the 1924 Convention in London. The invitation is supported, not only by numerous organisations more directly identified with advertising but also by the Federation of Master Printers, the Newspaper Proprietors' Association, the Weekly Newspaper and Periodical Proprietors' Association, the Newspaper Society, the Scottish Daily Newspaper Society and the British Association of Trade and Technical Journals.

DEPARTMENT OF OVERSEAS TRADE.—Under the auspices of the Department of Overseas Trade there has just been published an interesting brochure dealing with many subjects which cannot fail to be of interest to merchants and manufacturers in almost every sphere of commerce and industry in this country. The handbook is not only a comprehensive survey of the aims and methods of the department, but it covers a wide range of subjects dealing with the many ramifications of trade in general. Outlining the main objects which it has in view, the booklet points out that the underlying principle of the Government's activity is to assist trade without interfering with it. The pamphlet succeeds in its plainly expressed object to make clear to the reader that the aims of the department are severely practical, and that its policy is to give British firms the live information and help which they may need in their efforts to develop their export trade. Copies may be obtained from the department at 35, Old Queen-street, Westminster, S.W.1.

PICTORIAL MACHINERY SUCCESS. — The managing director of Pictorial Machinery, Ltd., informs us that at 7, Farringdon-road, his company has been exceptionally busy for some months past, and that many important contracts are in hand for plant for printers at home and abroad who are taking up the illustrative methods for which Pictorial Machinery especially cater. Some of the largest and most successful printers here are extending their plants and Pictorial Machinery is interested with this important work. We are informed the company is now declaring a 5 per cent. *interim* dividend on its ordinary shares.

TO demonstrate our confidence and at the same time guarantee the efficiency of the

"Monometer" Melting and Refining Furnace



for Printers over any other system at present on the market, we have decided to place installations on a first payment of 25% of the price of same, and to spread the balance over a period of twelve months.

The "Monometer" Furnace never wears out.

"Monometer" Furnaces installed twelve years ago are to-day equal to new, and we have never had to replace a pot.

Papermakers' Association.

Mr. C. R. Seddon Elected President at the Annual Meeting,

Mr. W. Leonard Tod, the retiring president, occupied the chair at the annual general meeting of the Papermakers' Association of Great Britain and Ireland, held on Friday March 23rd at the offices of the Association, 26-27, Farringdon-street, London, E.C.

Review of the Year.

The report was taken as read, and the chairman, traversing this, pointed out that the report gave a very good account of the year's work. It showed the many directions in which the Association was exerting itself for the good of the trade generally.

Technical Section.

One of the most important branches of the Association's work was that of the Technical Section, which came into being just three years ago, when he was first elected president. That Section was a most healthy child and was doing an immense amount of good for the trade. They all hoped that phase of activity would increase and that the benefits would be still more visible as time went on. As they would readily understand, many technical questions required consideration and research and they could not look for results immediately. It was a case of casting their bread upon the waters and it would be returned to them after many days. He hoped, however, the work would not take many days to bear fruit. They had seen results already. It was a thoroughly live Section and he should like to congratulate Mr. Baker, the original chairman, and Capt. Nuttall, who was the present chairman, on their very vigorous offspring.

As to the accounts, the chairman thought they presented a very satisfactory state of affairs. The balance-sheet showed their assets to be £2,446 and the total liabilities £338, so they had to their credit something over £2,000.

In conclusion, Mr. Leonard Tod moved the adoption of the report and balance-sheet, and this resolution, seconded by Mr. Herbert Green, was carried unanimously.

Thanks to Retiring President.

Capt. Nuttall, in moving a vote of thanks to Mr. Leonard Tod for his services to the Association as president during the past year, wished that gentleman long life and happiness. He had been their president during three of the most extraordinary years the paper trade had ever experienced.

Mr. Baker, in seconding the resolution, mentioned that Mr. Tod was the first president to serve a full term of office under the new scheme of reconstruction, and he had carried out a vast amount of spade work.

The resolution was carried unanimously.

Mr. Tod, in returning thanks, said he felt that when they elected him as their president they had conferred upon him the highest honour that it was in the power of the Papermakers' Association to give to one of their members.

The New President.

Mr. Stanley Cousins, after associating himself with all that had been said regarding Mr. Tod, moved that Mr. C. R. Seddon, J.P., managing director of the East Lancashire Paper Mill Co., Ltd., be elected president for the year 1923. It was hardly necessary to introduce that gentleman to them, because he was very well known, especially for his excellent work as president of the Employers' Federation of Papermakers.

Mr. John Tod, seconding the nomination, said, as a Scottish papermaker, the election of Mr. Seddon would be welcomed in Scotland quite as much as it would be in England, and Mr. Seddon could be assured at all times of their support.

Mr. Leonard Tod, in declaring Mr. Seddon unanimously elected, congratulated his successor, and observed that Mr. Seddon held the unique position of being president both of the Association and of the Federation. Their new president was well worthy of the honour which had been conferred upon him, while the Association was to be congratulated on having him at their head. (Hear, hear.) Mr. Seddon was *the* outstanding man in the trade to-day.

Mr. Seddon then took the chair amid a very warm ovation. He described the reception he had met with as overwhelming, so much so that all he intended to say had practically gone. (Laughter.) He appreciated the honour very highly, although it had been no real desire on his part to occupy the presidency.

As far as the Technical Section was concerned, he thought it was the best asset the Association possessed, and it would be still more useful in the future. He knew of no industry in this country which needed such a Section more. Their difficulty had been, and still was, where to get a good leader except by stealing him from someone else. The work which was now being done by Capt. Nuttall offered great promise in the future in that respect.

Mr. Seddon concluded by thanking the members for the confidence they had placed in him, and he hoped they would never have reason to regret the step they had taken.

On the motion of Mr. Seddon, seconded by Mr. Gilroy, Mr. Herbert Green was re-appointed treasurer, and appreciation of that gentleman's work was voiced by both speakers.

At the instance of Mr. Herbert Green, seconded by Mr. Challinor, Messrs. James Fraser and Sons were appointed auditors.

Corporation Profits Tax.

The chairman said they had received a letter from the Federation of British Industries, which in its campaign for a reduction of taxation, emphasised that the withdrawal of the Corporation Profits Tax should be put in the forefront. Mr. Seddon moved the following resolution: "That the attention of the Chancellor of the Exchequer be directed to the urgent demand of manufacturers, merchants, and the trading community generally for the withdrawal from the Budget of the Corporation Profits Tax on the ground that it is unjust in its conception, unfair in its incidence, and prejudicial to the interests of commerce by reason of the fact that, following upon the income arising from the ordinary shares of an undertaking, it acts as a deterrent to business enterprise by restricting investments in this class of security."

Mr. W. L. Tod mentioned that a Scottish firm had raised the question as to whether during the past two years the imposition of the Corporation Profits Tax had not been illegal, the contention being that it had not been formally re-imposed in the last two budgets. He agreed that it was an iniquitous tax, and they should do everything possible to get it abolished.

The resolution was carried unanimously.

Machinery Rating and Railway Charges.

Mr. Arthur Reed drew attention to two matters of importance to papermakers. The first was the question of the rating of machinery, and he asked whether the Association could not press the Government to introduce a Bill to abolish this system. The next question was that of railway rates, upon which the Association might well approach the companies with a view to getting the rates reduced earlier than it seemed likely at present.

Mr. Foster said in regard to the rating of machinery the Association was acting with the Federation of British Industries, a committee of which organisation was collaborating with the Government in regard to this particular Bill, and the form in which the Bill would come before the House was the form agreed to by that committee. As to railway rates, Mr. Foster said they never left this matter alone, and he did not think it would be many weeks before there was a further substantial reduction. (Hear, hear.)

Foreign Competition.

Mr. Parker Smith raised the question of imports from countries with depreciated currencies. While attention had been mostly directed towards Germany, there were other countries concerned. He mentioned that the wrapping paper industry was particularly affected.

The matter was left to the Executive Council for consideration.

A vote of thanks to the chairman closed the meeting.

Papermakers' Annual Dinner.

Record Gathering.

New records in connection with the British paper industry were established on March 23rd, when the annual dinner of the Papermakers' Association of Great Britain and Ireland was held at the Connaught Rooms. Mr. C. R. Seddon, J.P., the new president, was in the chair, and he had the gratification of presiding over probably the largest gathering that has ever assembled under the auspices of the Association. Moreover, the company was representative of every section of the industry, including the representatives of the trade unions.

The Papermaking Industry.

Viscount Burnham, C.H., who was very warmly received, proposed the toast of "The Papermaking Industry and the Papermakers' Association of Great Britain and Ireland." He said the world would perish on its moral and intellectual sides if it were not for paper, and, therefore, when the paper trade was looking up, as it was to-day, the whole world ought to rejoice with them.

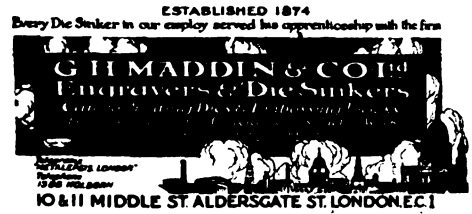
Signs of Progress.

They might think that at home, though there were signs of progress, the steps were slow and halting. At the same time, they could see from the report presented to their Council that the rate of unemployment during the last year in the paper trade was a good deal below the average—only about one-half—and vastly below that of some of the staple trades which might be put into comparison. They noted, he did not say with satisfaction, but as an infallible guide to what was bound to come, the continuous advance in prices in their raw material. There had been during the past six months an advance of 20 per cent. in price both in chemical and mechanical pulp, although they might regret that up to the present there might not have been a corresponding advance in the manufactured article. At the same time, they knew very well that if the papermakers of Scandinavia had advanced their prices in proportion to the pulp industry they would that evening have had a different, and perhaps for all there who were not newspaper proprietors a pleasanter, tale to tell. (Laughter.) On the other hand, it could not be disputed, as an economic proposition, that when they had a steady advance in the half-manufactured product, an equivalent advance in the finished article was bound to follow.

Problems of the Industry.

Mr. Seddon was very cordially received on rising to reply. He said that during the past year business had been more or less restricted to immediate requirements, and thus the whole year had been employed in settling down, and enterprise had lacked encouragement. During the latter part of the year considerable improvement had taken place in some of the sections.

Allied Industries.



Capt. W. Nash proposed the toast of "Our Allied Friends" and referred to the distinguished and representative gathering present that night. He was glad to hear from such eminent authorities as the chairman and Lord Burnham that the paper trade was definitely improving, and that they might expect brighter things in the future than they had experienced during the past two or three years. During the past year or two, perhaps, the "news" mill, thanks, no doubt, to their friends "Pip and Squeak" and Tutankhamen, had been busy, but in the fine writing and wrapping sections they had very often closed down the mills on Thursday or Friday evening, hoping, like Mr. Micawber, that something would turn up to enable them to start on the following Monday. But those times were passing away, and they could look forward to better things.

Sir Andrew Caird, in replying to the toast, said he appeared before them that night, to his great surprise, as an allied industry. He supposed that was because half of his time was given to making paper and the other half to buying it. He would not say that night which side he preferred. (Laughter.) After expressing extreme regret at the cause of Lord Riddell's absence, Sir Andrew said he could not help feeling that it was worth while coming to meet the papermakers on such a festive occasion. He believed really it was the mission of papermakers

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

throughout the world to make cheap paper. (Hear, hear.) He thought the reason why paper money was so cheap in Germany was because the papermakers were in control and were trying to find a new outlet for paper. (Laughter.) When he was the guest of Mr. Stanley Cousins at the last annual dinner, Sir Andrew said he felt considerably humiliated, because news-print had not been mentioned. He had learned, however, that, although they made 450,000 ton of news-print a year in this country, they made nearly three-quarters of a million of other and much more important paper. (Laughter and applause.) So that coming there really helped to take the conceit out of the newspaper people, and that was all to the good. (Laughter.) They believed on 364 days in the year that they were really an important element in the Allied Industries, and on the 365th day they got some of their misconceptions corrected. But they really did believe the papermaking industry of this country was a very important one, an industry with a high reputation throughout the world. They were glad to watch its progress and prosperity, and they hoped both would increase. Criticism was sometimes made of the newspapers and their way of using the paper which they purchased at such huge prices—(laughter)—but everything they did—their insurance schemes, their free gifts, and their "Pip and Squeak"—were mainly for the object of increasing the consumption of paper. (Laughter.)

Sir Frederick Becker proposed what he described as the toast of the evening, namely, that of "The Visitors." He mentioned that in his recent visit to the States he met one consumer who used 320,000 tons of news-print per annum. Three or four of those fellows, and there would be no question of slack times at the mills. (Hear, hear.) In other branches of the industry they had certainly felt the pinch, although the news-print situation had been very good. The wrapping trade had had it "in the neck," but he thought better times were coming all round, especially if they could get this food wrapping business on the move. (Applause.)

Hospitality and Business.

Sir James Owen (president of the Newspaper Society), in acknowledging the toast, said he really thought Mr. R. A. Austen-Leigh should have responded, because he was a much larger customer of the papermakers than were the newspapers. There was a cynical and substantially untrue dictum that there was no friendship in business. As a matter of fact, they were all better off in connection with their business if they would join a little hospitality and a little human relationship. He was sure he was speaking for all the guests when he said the British paper manufacturers were very fine fellows and they hoped to continue to do business with them, hoping at the same time that their prices would not go up. (Laughter.) He knew they had been going through severe times. When Lord Burnham was speaking he was so optimistic that he (Sir James) felt like getting up and waving his handkerchief; but when the chairman spoke of the difficulties through which the papermakers were still passing, he felt he must use his handkerchief for another purpose. (Laughter.) The papermaking industry was in a measure a trade barometer. If the papermaking industry was busy, they might depend upon it that all the other trades in the country were busy. All they hoped from that point of view, quite apart from their present desire for their prosperity, was that greater profits would come to papermakers in the future. (Cheers.)

Mr. G. R. Hall Caine, M.P., introduced the toast of the chairman, and said no one deserved the honour of president of the Papermakers' Association more than Mr. Seddon. (Hear, hear.)

Future of Letterpress Printing and Photo-Engraving.

Prominent American Photo-Engraver discusses the Prophesied Eclipse of Present Methods.

Our printing trade confrères in the United States have a name for being more ready than ourselves to adopt new ideas and to scrap relentlessly any methods or apparatus which they believe to have been superseded by something more efficient. This fact gives special interest to American views regarding prophesied impending "revolutions" to be brought about by new developments such as photo-typesetting. Still fresh in our minds is the startling prophecy of the impending doom of letterpress printing made by Mr. William Gamble in his recent lecture on "The Influence of Photo-Offset and Rotary Photogravure on the Future of Letterpress Printing," reported in the *British and Colonial Printer and Stationer* of November 9th last. More recently, as recorded in our issue of March 22nd, Mr. Gamble has been telling process engravers how the newer developments in printing processes threaten to supersede the process block. Thus the process engraver is closely concerned with these developments, and we note with much interest that Mr. Louis Flader, commissioner of the American Photo-Engravers' Association, writes in the monthly journal of his association to discount some of Mr. Gamble's prognostications. "To differ from so eminent an authority," he says, "is a risky proposition. However, since no prophet ever scored one hundred per cent. and as it takes a long time to check prophecies against fulfilment, a few words in rebuttal may be permissible."

The Expected Funeral.

For quite some time, writes Mr. Flader, we have been told by experts and others that relief-plate making and letterpress printing are doomed, and the surgeons sitting on our case are being gradually replaced by undertakers, whose long faces and mournful looks have a tendency to spread a thick layer of gloom over all of us. Rival methods of illustrating and printing will wipe us off the map very shortly, and all sorts of alleged evidence is hurled at us to prove these claims and assertions. Our acquiescence is about the only thing needed to stage a first-class funeral.

An Accomplishment of Doubtful Value.

Let us assume that photo-composing will be a success, and that within five years it will replace hand and machine composition. From the description furnished it is difficult to see where and how it offers advantages over present methods of typesetting. Far be it from me to say that photo-composing cannot be successfully accomplished, but it is a question as to whether it will be an advantage of value after it is accomplished. It requires quite a stretch of the imagination and a great deal of optimism to see an advantage in a method like photo-composing, calling for intricate machinery, mechanism and fragile material, as against the setting of solid type by hand or by one of the various type-setting machines now in use, which have been perfected during a course of many years. Setting up a line of type in a solid casting is bound to be a simpler function than to accomplish the same results by photo-composing. However, we shall see what we shall see. By the way, photo-composing is expected to be useful to planographic and intaglio illustrating and printing methods only, and presupposes that these methods will supersede all others.

As to the relative costs of these various methods, these cannot well be determined until the methods are in practical use. All of the developments that have taken place in the last 15 years in connection with engraving and printing have been based more upon the results desired than the cost connected therewith; none of them have resulted in such low production costs as to make them particularly attractive, on that account and on that account only.

Why Consent to be Buried if Still Alive?

As to the future of photo-engraving and letterpress printing, those of us who are engaged in these industries will go to our own funeral only if we consent to remain dead. There is plenty of opportunity for rising in the coffin that has been prepared for us, and for disturbing the last sad rites.

Mr. Gamble's statements, and others of a similar nature, as to the death of relief-plate making and letterpress printing, and the advent of planographic and intaglio methods of illustrating and printing are true only if we are willing to admit separately and jointly that relief-plate making and letterpress printing have reached the end of their development, and that no further progress in these lines is possible. We believe it is possible to improve every phase of photo-engraving and every phase of letterpress printing. It is not only possible, it is actually being done. Leaving photo-engraving out of it for a moment, your attention is called to developments in letterpress printing that are apt to revolutionise the industry, and that will make planographic and intaglio printing methods hustle to keep up with the procession.

A Few Well-Known Facts.

The act of printing with letterpress from relief-plates and type has not changed in principle from its very beginning. It consists of spreading a layer of printing ink over the type and plates, bringing the latter in contact with the paper which is to receive the impression, under sufficient pressure to take the ink off the printing surfaces and transfer it to the paper, after which the printed sheet is delivered. The act, then, of printing, or making the impression, is accomplished by the application of pressure to the sheet placed in contact with the printing surface. This pressure was first applied by Gutenberg and his disciples in a very primitive way, which called for great exertion; consequently it has ever been the thought of all those who practice the art of printing that the application of great force is absolutely necessary to accomplish the object.

When power-driven machinery was first applied to the printing principle, about the only change made was to substitute mechanical power for human power. Later on someone discovered that printing could be accomplished with greater ease and speed by the use of a movable bed on which the printing forme rested, this being brought in contact with a revolving cylinder, which printed only a small portion at a time; consequently, did not require the immense pressure necessary in platen press impressions.

The next development was the rotary press, on which both the printing formes (semi-cylindrical in shape) and the impression cylinder revolved against each other, thus making the printing line still smaller and producing a greater volume of impressions in a given time, because there is no lost motion as compared to the cylinder press with its reciprocating bed. And this, incidentally, is the printing press and method of the future.

The common conception and understanding of these principles is about as follows:—

"As We Go Round the Mulberry Bush."

The finest printing, especially that where quantity is not a great factor, is accomplished on a platen press. For evidence of this, you will be told that the engraver's proof, taken on a Washington hand press, represents the highest type of printing obtainable You will then be told that the finest printing in quantities can be obtained from a cylinder press. This is naturally followed by the statement that the rotary press is good only for high-speed production on poor paper, and therefore is confined largely to newspaper and magazine printing. This misconception of the true factors entering into the subject has kept the printing industry hog-tied and hobbled for a great many years, and it is only lately that we are beginning to see light.

Take a pressman anywhere—whether he is operating a Washington hand press in an

THE LM CUTTER AND CREASER

Specially designed for the accurate cutting and creasing of carton work at high speed.

SPECIAL FEATURES

Built on similar lines to the Miehle Press, and all the desirable features of the latter, ensuring dead register, smoothness of working, etc., are incorporated in it.

The tympan or cutting plate on the cylinder is held at the front and rear edges by special locating and clamping devices.

The cards are fed to the front lays in the usual manner, and are then taken by the cylinder grippers at the front edge of the tympan plate with a small amount of over-lapping gripper edge.

The cylinder with the card around the tympan plates comes into contact with the forme in the same way as on the two-revolution printing machine.

The card is taken directly off the cylinder by a special gripper delivery mechanism.

Delivery grippers and pads are adjustable.

An endless band travelling at the same surface speed as the cylinder extends from the point of take-off to beyond the point of release of the delivery grippers.

Another endless band on the delivery carriage receives the card from the first endless band.

The card is transferred from the first to the second endless band at the commencement of the outward stroke of the delivery carriage; the second band rolls away from under the card, leaving it to fall directly on to the pile delivery.

The delivered cards are jogged up so that they can be easily stripped.

There are no tapes or sticks in the pile delivery. From the point of take-off from the cylinder until the card is deposited on the pile it is supported by endless bands.

It is easily handled, and requires no special knowledge on the part of the operator.

This Cutter and Creaser can, if desired, be supplied with a specially designed pile hoist for raising the cards to the feed board.

engraving establishment, a cylinder press in a print shop, or a rotary press in a magazine pressrom—and he will tell you that his first act in printing a forme consists of making the forme "level." In other words, in bringing it up to a point where an even impression of the entire forme can be obtained. Then, after he has the forme levelled off, he begins the act of "make-ready," which consists of patching a number of pieces of paper over the solids and dark portions of his forme, and shaving out that portion which comes in contact with the highlights, so that he will get a fair reproduction of the plate itself. When he has his make-ready all completed, and when it is sufficiently irregular to suit his purpose, he is then ready for the press run, which is completed under more or less trying circumstances. If a great many impressions are required, the pressman finds that his make-ready wears out after a certain length of time, and he is then obliged to do the work all over again, so as to continue printing.

This holds good on all types of presses, and it is the orthodox method of printing to-day. At this juncture, we might say in the language of the hour, "What's wrong with this picture?" Nothing at all, except that we have started with a foundation laid in quicksands, and as we continue to build upward and outward the structure strains and lists, resulting in constant and ever-increasing costs to keep it up and going. That's exactly what's the matter with the printing industry, and if the fundamental error can be corrected, 90 per cent. of the complaints, jibes and shafts directed against typographic printing will fall to the ground.

Let us go into this subject a little deeper. When a pressman has a forme on the press, all locked up and in register, he prints an impression, takes the sheet to the light, turns it upside down and looks at it on the reverse side. Why?—He knows the forme isn't level and he wants to see where the errors and inequalities exist, so he can locate them properly and compensate for them in his make-ready. In practically no case does he ever receive an even impression on the first sheet. He finds that parts of the forme show very little impression, some perhaps no impression at all, while other parts are squeezed into the paper, frequently depressing it to the depth of a 64th of an inch. If the press bed and the impression cylinder are perfect, the inequalities would be due to the plate and the type. It is a fact, however, that there are inequalities in all points of contact, beginning with the bed of the press, with the back of the plate, with the printing surfaces, in the paper, in the impression cylinder and in the bearings.

These errors, inaccuracies and inequalities must all be compensated for in the make-ready before a passable job can be printed. This takes a great deal of time, slows down production and adds to the cost of the product, to say nothing about interfering with the quality of the work. Such inequalities as cannot readily be overcome by make-ready are overcome by pressure. The pressman, as yet, cannot get it out of his head that it takes tremendous pressure to print.

How Much Is Enough?

How much pressure does it take to transfer the printing ink from the printing surface to the paper? Most any pressman will answer you by saying that it takes a great deal more to print from the solids and darker portions than it does from the highlights. Does it? Make a test yourself by inking up a halftone block, placing a sheet of paper on top of it, and rubbing the sheet with any smooth surface. You will find that it takes surprisingly little pressure to transfer the ink from the plate on to the paper, and that it takes no more pressure to perform this function in the solids or dark tones than it does in the highlights. After you have satisfied yourself, make your discovery known to the first person you meet, and then duck for shelter. He will demonstrate to you that if he removes even one thin sheet from the tympan he will not be able to print the forme as it should be printed, and that by adding more sheets, which means more pressure, he gets the desired results. Certainly, it requires some pressure to print, and it is equally certain that it does not require the amount that is being constantly applied, to the detriment of the plates and the printing itself.

The theory is that if all surfaces are perfect in themselves, and in perfect alignment with each other, the act of printing can be performed with much less pressure, with practically no make-ready, with less ink and with greater speed, than it is now being done. So much for the theory. How about practice?

A New Figure Appears.

Some years ago, a man with unusual experience, exceptional powers of perception and a genius for mechanics, worked out these various theories and began to apply them in a practical way. We refer to Mr. L. W. Claybourn, President of the Claybourn Process Corporation, Milwaukee. Mr. Claybourn has spent a lifetime in the various branches of the plate-making and printing industries, and when he first announced his intention to print without make-ready, he met with arguments and derision on all sides. This did not deter him from pursuing his investigations and experiments, and when he had satisfied himself that he was right, he went ahead. He found that the imperfections and inaccuracies in the average printing press (speaking of the bed, the bearers and the impression cylinder) ran from ten to forty-eight one-thousands of an inch. This applied to new presses, as well as those that had been in use for some time. He further found that there were certain inaccuracies in paper. These, however, were very slight compared with the ones already noticed. In investigating printing plates, he found that electrotypes varied from one to five one-thousands of an inch, and that photo-engravings varied the least of all, seldom as much as three one-thousandths of an inch. He is convinced that photo-engravings can be made so that the inaccuracies in the printing surface will not exceed over one one-thousand of an inch, and thus be negligible.

Working Out the Problem, Step by Step.

In order to accomplish his purpose, he invented and perfected electrotyping machinery of exact accuracy and precision. This machinery was not available in the market, and he was obliged to build it himself. He found that the ordinary machine-shop practice of planing surfaces was too inaccurate to be employed, and he was forced to resort to grinding to accomplish his purpose. He next learned that the various materials used would not retain their shapes and remain constant after being brought to precision, and then devised a method of heat-treating these materials so that they would retain their shapes and dimensions. By combining all these factors, he was able to produce electrotypes, both flat plates and curved, and with such a degree of precision that when properly placed on the printing press, the pressman could go ahead and get perfect results without any make-ready whatever.

Going to the Bottom of the Trouble.

Having perfected electrotypes, he found that that availed him little as long as the presses themselves contained most glaring inaccuracies and inequalities. He then invented and patented a method of correcting printing presses. This is accomplished by attaching special patented machinery right to the press and under the latter's power, grinding the press where it is required to absolute precision so that the variations and inaccuracies are removed and all working parts stand a micrometer test showing that they are corrected to the thousandth part of an inch. He has done sufficient work by the use of his plates and methods to demonstrate beyond the shadow of a doubt that with precision plates and precision presses perfect printing can be obtained with far greater ease, higher speed and at a less cost than by any other method. As an evidence of accomplishment, Mr. Claybourn, during his years' connection with the Menasha Carton Co., where his ideas here enumerated were carried into practice, amply demonstrated the feasibility of printing three or four-colour process plates on ordinary cardboard, which, after being printed, was converted into cartons. If the proof of the pudding lies in the eating thereof, the proof of Mr. Claybourn's work lies in the finished products, and these he can produce in unlimited quantities.

When we can bring ourselves to view the matter in a sane and rational light, and make use of the means placed before us, we will realise that relief-plate making and letterpress printing possess potentialities not even dreamed of up to this time.

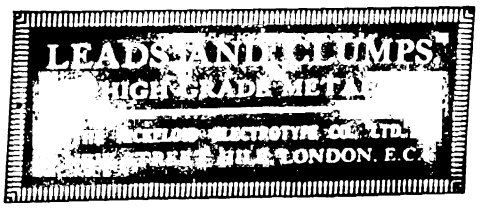
Thus far we have dealt with this principle as applied to cylinder presses only. When the same thing is applied to rotary press procedure, even more startling results can be obtained. In this case, speed is limited only by the texture of the paper and its tensile strength. Mr. Claybourn has designed rotary printing presses for special purposes that would make the average printer or pressman's head swim if he saw them in operation. This is especially true when applied to multi-coloured printing. Thus far, nothing has been devised that will equal the speed and output of these machines, both for quantity and quality. The entire proposition is built around precision machinery and perfect plates. When these two factors are properly co-ordinated, they will outstrip all other methods.

One and the Same When Properly Conducted.

The outstanding claim made for offset and rotary photogravure is that illustrations can be printed on soft and unfinished papers. In this respect they are supposed to possess great advantages over relief-plates and letterpress printing. Let us admit that this is true. But—it is true only as long as we insist upon squeezing and smashing our plates and type into the paper. When we reach that point of understanding where we will apply only sufficient pressure to transfer the ink from the forme to the paper, we will be on a par with these other methods, and instead of doing "relief" printing, we will be engaged in producing planographic or "surface" printing. On that day our sun of success will come out from behind the dark clouds of ignorance, which have obscured it all too long.

A New Typesetting Machine.

A new typesetting machine which has been invented by Frederick W. Letsch, of Baltimore, is known as the Supertype and is being handled by a company which has just been incorporated under the name of the Machinery Development Co., of Baltimore.



The concern, says the *American Printer*, starts with a capitalisation of $5,000,000. Among the outstanding features claimed for the new machine is instantaneous change of line which is adjustable all the way from a single letter up to the full length of the mould. The new device also has an adjustment for tabular work and there are a number of other features which make the machine unusual in its class. The Supertype is said to be very much simplified in form and of easy action in operation. There are not so many parts as there are in other machines of similar style, and all adjustments are manipulated from the operator's position. The machine occupies less space than other typesetting machines and is correspondingly of lighter weight. It is said that the Supertype will deliver six hundred lines per hour and that the slugs are perfect in every way, requiring no trimming.

Mr. Frederick W. Letsch was for many years connected with the Mergenthaler plant.

Messrs. Spicers, Ltd., have kindly presented a cup to the Paper Trade Golfing Society, to be competed for annually, and to be known as the "Spicer Challenge Cup." Qualification to enter the competition for this cup (to be played under match play conditions) will be limited to the eight lowest scores returned in the stroke competitions at both the spring and summer meetings respectively.

Trade Notes.

THE financial advertising and publicity business carried on by Mr. Charles Duguid has been amalgamated with that of the Dorland Agency, Ltd., and will be carried on in future under the latter name at the City offices of the Dorland Agency, 9, Old Broad-street, E.C. Mr. Duguid will join the board of the company as from April 1st last.

PRINTERS' PENSION ELECTION.—The 101st election of pensioners of the Printers' Pension Corporation took place at the Connaught Rooms, Great Queen-street, W.C., on Saturday. For the 101 benefits offered (87 pensions and 14 grants) 163 candidates competed. The result of the voting will be announced at the annual meeting of the Corporation at St. Bride's Institute next Saturday.

F. M. P. MEETINGS.—The annual meetings of several provincial centres of the Federation of Master Printers are due shortly. On the 19th inst., the East Anglian Alliance holds its annual meeting and luncheon at Norwich, under the chairmanship of its president, Mr. Cecil Clay. On the 20th is the annual meeting of the Newcastle and District Association, and on the 26th that of the Manchester and Salford Association. These will be followed early next month by the annual gathering of the Home Counties Alliance, to be held this year at Eastbourne.

IN aid of the Newspaper Press Fund, the Westminster Choral Society gave a concert at Queen's Hall on Tuesday night. The programme was illustrated by several cartoons by well-known artists, which referred to "the other Westminster Choral Society"—*i.e.*, the House of Commons. In the interval Lord Riddell acted as auctioneer and sold the originals.

DAMAGE estimated at about £500 was caused by an outbreak of fire on Sunday morning in the premises of Messrs. Livingstone and Robertson, paper merchants, 159, Brook-street, Bridgeton, Glasgow. A considerable quantity of stock was damaged.

PRINTERS' BOY AT ROYAL WEDDING.—Boys representing thirty great British industries have been invited to attend the royal wedding on April 26th. The Duke of York, as president of the Industrial Welfare Society, recently suggested that industry should be represented in this way, and from among the Society's member firms thirty were selected by ballot from as wide an area as possible, and each of the firms concerned was asked to nominate one of its boy workers for this honour. Only one firm was chosen from the printing industry, viz., Messrs. Waterlow and Sons, Ltd., London.

THE Newspaper Workers' Club concert, on behalf of the Caxton Convalescent Home, at the London and Brighton Hotel, Peckham, on Saturday evening last, was a most successful one. Thanks to the efforts of the chairmen (Messrs. W. A. Rodford, T. Hoare and S. W. Newcombe), a "plate" of twenty-five guineas was announced by the treasurer of the Home, Mr. C. W. Bowerman, M.P., who thanked the promoters for their efforts in aid of the trade convalescent institution. The work of the musical director (Mr. Will White) in providing an excellent entertainment, also received special recognition.

THE *Daily Herald* has received a donation of £10 17s. 6d. from *The Times* composing and reading staffs, and one of £10 from *The Times* night publishing chapel.

WE hear that the Aylesbury Printing Works Band, under the conductorship of Mr. W. Smith, has been gaining golden opinions locally by its public concerts, seating accommodation being increasingly taxed.

THE late Mr. Edwin Bale, R.I., the well-known painter of landscapes, whose death was reported on Monday at St. John's Wood, N.W., was at one time art director of Messrs. Cassell and Co., Ltd.

A VERDICT that the deceased committed suicide while temporarily unbalanced in mind was recorded at a City inquest on Tuesday in respect of the tragic death of Graeme Douglas Williams, aged 39, a journalist, lately staying at Anderton's Hotel, Fleet-street, E.C.

A LETTER has been received by the *Freeman's Journal* from the Irish Republican Army, "London Area," demanding the removal from a window in the paper's Fleet-street offices of photographs of leaders of the National Army.

PRINTERS AT FOOTBALL.—On Easter Monday, at the Dulwich F.C. ground, a football match was played between elevens representing the London Branches of the National Union of Printing and Paper Workers and the National Union of Operative Printers and Assistants. The game was a keenly contested one and resulted in a win for the Paper Workers by 5 goals to 4, extra time being played. There were about 1,000 spectators present when the game started, Mr. G. F. Larcey, London Branch secretary, N.U.P.B. and P.W., being responsible for the kick-off. Among those present was Mr. E. W. Spackman, the new general secretary of the Printing Section of the N.U.P.B. and P.W.

THE State Senate of California has passed a Bill making it a misdemeanour for any person wilfully to lie in giving information for publication in a newspaper.

BOOK EXHIBITION AT PARIS.—Much interest attaches to the exhibition arranged by a committee of the International Congress of Librarians and Bibliophiles meeting in Paris from the 3rd to the 9th inst. In addition to wonderful displays of illuminated manuscripts and incunabula, there is a fine representation of the modern book work of the best French printers and bookbinders. French publishers are making earnest efforts to withstand foreign competition, English publishers having obtained a considerable hold on the French market with French books produced primarily for English readers, whilst German producers are extremely active in the production of books in the French language.

THE Berlin Police President has suspended for two weeks the Communist newspaper, *Die Rote Fahne*, under an article of the law for the protection of the Republic.

BERLIN newspapers stated at the week-end that the French had occupied a large printing works at Muelheim, seized the presses, confiscated £20,000, and arrested the manager.

FROM the Melbourne Technical School (Australia) we have received a copy of the 1923 prospectus which shows that this institution—alternatively known as the Working Men's College—provides a "Full Trade Course" in printing, including first-year instruction in arithmetic and English, and covering either composing or machine. The Government Printer is a member of the Printing Board of the College.

Trade Union Matters.

P. AND K.T.F. CONFERENCE.—The annual administrative council conference of the Printing and Kindred Trades Federation will be held at Scarborough on Wednesday, Thursday and Friday, April 18th, 19th and 20th. Through the courtesy of the Mayor of Scarborough, Councillor G. Whitfield, the Town Hall has been placed at the disposal of the Council for the conference, and his Worship will extend a civic welcome to the delegates on their assembling on the opening day. The question of the introduction of the 44-hour week will again be raised, and motions are being introduced which have for their object the alteration of the constitution of the Federation so far as the position of the executive authority and the power of the Federation to secure unity of action are concerned. One resolution voices a protest against the delay in the revision of the Workmen's Compensation Act, whilst another calls attention to the use of mechanical devices for checking the time taken on jobs.

PRINTING T.U. AMALGAMATION.—There appears to have been no tangible outcome of the conference of printing trade unions called by the General Council of the Trades Union Congress and held at Leicester on the 23rd ult. Not every union could be represented on the date which the General Council fixed at short notice, and it was unfortunate also that the General Council failed to take due cognisance of the existence of the Printing and Kindred Trades Federation, a body in a unique position to supply information and assistance in the matter of amalgamation of printing trades unions. The outcome of the conference appears to have been but little more than another pious resolution as to the desirability of amalgamation.

THE Executive Council of the Typographical Association have granted permission to the Cardiff Branch of the Association to impose a levy of 6d. per week on all fully-employed members in order to assist the unemployment funds of the branch.

THE Birmingham Branch of the National News and Operators' Guild, which is affiliated to the Typographical Association, have been notified by the Executive Council of the latter body that their action in requesting the newspaper distributing unions not to handle papers if published on Boxing Day was a usurpation of the functions of the Typographical Association. They have also been informed that any future matters arising from that section of the trade must be submitted to the Executive Council before any action similar to that in question is taken.

THE figures which appear in the "L.T.J." relating to unemployment amongst L.S.C. members reveal a better state of affairs, although in making any comparison the fact that the new Superannuation Scheme is now in operation must be taken into account. For the week ending March 24th the number signing the books stood at 742, as against 812 in the previous week, 926 for the week ended March 10th and 984 for March 3rd. Contrasting these figures with those of last year, there is also recorded an improvement. For instance, the number signing the books on March 24th, 1922, represented 976, as against 1,037 on March 17th, 1,125 on March 10th and 1,102 on March 3rd.

STONE AND PLATE PREPARERS.—Negotiations have been taking place between the three societies in the trade which cater for lithographic stone and plate preparers, namely, the Amalgamated Lithographic Printers (incorporating the Lithographic Stone and Plate Preparers' Society), the National Society of Printing, Bookbinding, etc., Workers, and the National Society of Operative Printers and Assistants. It was not found possible to reach an agreement that the Amalgamated Lithographic Printers should absorb all the preparers, and the Printing and Kindred Trades Federation was asked to draw up a scheme to co-ordinate the policies of the three societies in respect of their members who are stone and plate preparers.

PRESENTATION TO MR. BISPHAM.—"Natsopa" members are contributing towards a testimonial to Mr. A. Bispham, who recently resigned his position as assistant general secretary of the union. Mr. Bispham's long and useful services have been widely appreciated by the members, and the small donations desired will doubtless be forthcoming in large numbers. It is desired to close the subscription list on the 21st inst.

AT the delegate council meeting of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers in London last week a resolution of support and sympathy with the strikers at Penicuik Scotland, "in their fight for better conditions," was passed with enthusiasm.

MR. YORK, the secretary-treasurer of the Printing Industry Employees' Union of Australia, is spending a vacation in this country, accompanied by Mrs. York.

THE ONLY

"Mechanical"

Melting Furnace.

Why not follow the example of the "Warrington Guardian" and save 75% of your time taken in re-melting and refining your Metals?

Read what they say—thousands of others support this:

"GUARDIAN" OFFICE,
WARRINGTON, LANCASHIRE.
April 9th, 1923.

Messrs. MONOMETER
MANUFACTURING CO., Ltd.,
SAVOY HOUSE,
115-116, STRAND, LONDON, W.C.2.

DEAR SIRS.—In reply to your letter of the 5th inst., addressed to our Mr. J. C. Coppock, we shall be glad at any time to bear testimony to the efficiency, economy, and smooth working of your "Monometer" Metal Furnace.

As a matter of fact it enables us to do our melting in a quarter of the time occupied under the old system, and it also does it much better.

Yours faithfully,
MACKIN & COMPANY, LTD.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, APRIL 12, 1923.

Letterpress Redivivus?

THOSE more interested in letterpress printing than in planographic or intaglio methods should find special pleasure in the lively and pointed remarks of the American photo-engraver whose views as to the "doom" of letterpress printing we publish on another page. Mr. Flader, we think, brushes aside too lightly the possibilities that photo-typesetting may prove not only practicable but also economical; with this part of the question he does not deal in detail. Nor does he dwell upon the fascinating achievements and the certain further development of photo-offset and photogravure. What he does, however, is to throw a strong light on an aspect of the subject which has not been sufficiently emphasised—the need and the possibility of improving our present letterpress methods. In doing so he rightly emphasises the ticklish question of "impression," a matter which many printers are thinking about just now, and on which, we opine, there is yet room for a great deal more investigation.

* * *

Cheapening Postal Charges.

PRINTERS cannot too often find opportunity to insist upon the admitted fact that a cheap postal service is vital to the well-being of our nation's industries, and that the Post Office is not intended to be, and ought not to be, run for profit, but should aim at reducing its charges to the very minimum that will allow of the service paying its way. Mr. A. E. Goodwin, as secretary of the Federation of Master Printers, did well to protest in *The Times* last week against a suggestion which appeared in that journal to the effect that the present "abnormal times" provided justification for the appropriation of Post Office surplus for general revenue. "We are not likely," wrote Mr. Goodwin, "to see normal times for many a year, and it would be unfortunate if, year after year, this suggestion should be raised. The new Postmaster-General has told us very definitely that in his view the Post Office should be run in the interests of the community. It cannot be claimed that it was ever intended that the charges for the services rendered by the postal service should be more than is required to meet the expenditure of this service. Apart from the [in] equity of diverting such revenue to relieve other forms of taxation, it will be readily seen that there would be no incentive at all for efficiency if any surplus earned by the Post Office is handed over to the Treasury. It is to be hoped that we have heard the last of this suggestion, and that in framing the estimates the only question which will be kept in mind will be how far the postal rates can be reduced."

* * *

Railway Rates.

MR. ARTHUR REED did well to draw attention to the question of railway rates at the annual meeting of the Papermakers' Association, although it is quite true that the Association, through the Federation of British Industries, is in close contact with the railway companies on the subject. However, the correspondence which has passed between the F.B.I. and the Railway Clearing House reveals a desire on the part of the railway groups further to reduce rates on goods traffic, and there is a widespread belief that this will be followed by action at an early date. It has been suggested in the last letter addressed to the Railway Clearing House that the traffic statistics, as well as the general financial position of the companies as revealed in the reports, make it impossible to justify the retention of rates even at the figure of 50 per cent. over the old standard, which was the earlier demand of trading organisations. The view is taken that the railway companies would be justified in cutting rates down to 33⅓ per cent. above the pre-war level pending the coming into operation of the new scales which are now in course of preparation. In well-informed circles it is stated that while a further all-round reduction of rates will be made, it will not be of the drastic character referred to above. It is unlikely that a lower point than 40 per cent. above the 1913 standard will be reached. There are, however, high hopes that the abolition of the unpopular flat-rate addition, with its exasperating anomalies, may disappear.

* * *

The Ruhr Fiasco.

THE difficulties created by the French occupation of the Ruhr and their indirect control over the Rhine area, in which the British Customs operates, are well exemplified by the position in which the German papermakers find themselves. There are a few mills in the area, and hitherto British importers have done a fair amount of profitable business with them, despite rather burdensome regulations. Reparations duty was exacted and ultimately recovered by the papermaker from the German Government. So long as the transaction was made *via* British authority, all went well, but the German Government refuses to refund duties collected by the Customs instituted by the French. Thus trade is rendered practically impossible on account of prohibitive cost for one thing and the disinclination to help France for another. The German mills lose business and the British trader is prohibited from dealing with his accustomed centres.

* * *

Paper from India.

WE have recently received a collection of samples of paper made in Indian mills from native materials, bamboo and grasses. The quality standard is high, in fact very little below our own, excepting for irregularities in finish and a certain amount of dirt in the paper. Strength and colour are good, and sizes and substances tally with our own. There is no doubt that papermaking in India is an improving and a growing industry. At present and for a long time to come, the great bulk of paper used in India will be imported.

Personal.

Viscount Burnham is to preside at an Empire Press Union dinner arranged to be held at the Savoy Hotel on Monday for the entertainment of several well-known Canadian Press visitors, who will shortly be in London.

The guest list includes Mr. C. F. Crandall, hon. secretary of the Second Imperial Press Conference (Canadian Executive), held in Canada in 1920; Mr. J. H. Woods, editor and managing director of the *Calgary Herald;* and Mr. W. Rupert Davies, editor of the *Renfrew Mercury* and president of the Canadian Weekly Newspaper Proprietors' Association.

Sir Roderick Jones, chairman of Reuter's, gave a dinner party at Claridge's on Monday in honour of Mr. Frank B. Noyes, president of the Associated Press of America. His other guests included the American Ambassador, Viscount Long, and the principal British newspaper proprietors and editors.

Viscountess Northcliffe was married last week to Sir Robert A. Hudson at Hartlebury Castle, Worcestershire.

With interesting, old-time ceremony two new liverymen were admitted to the Worshipful Company of Stationers at a meeting of the Court presided over by Mr. Herbert Fitch, the Master, on Tuesday—Viscount Burnham and Mr. Frederick Gillis.

By a curious coincidence, both the new liverymen are associated with the paper as well as the newspaper industry—Lord Burnham, of course, through the *Daily Telegraph* and his paper mills at Dartford; and Mr. Gillis as a member of the firm of Stonhill and Gillis and his connection for nearly 40 years with the *British and Colonial Printer and Stationer* and the *World's Paper Trade Review.*

Lord Riddell, Sir Wm. Waterlow and Sir Fredk. Bowater were among those present at the luncheon which followed the ceremony of admission, when the Master suitably proposed the health of the new liverymen.

Viscount Burnham, in his response sketched in broad outline his family's long and intimate association with the City of London.

Mr. Gillis also acknowledged the toast in appropriate terms.

Mr. John Walter of *The Times* is one of the new members added by the Postmaster-General to the Post Office Advisory Council.

Major the Hon. J. J. Astor, M.P., will preside at the annual dinner on behalf of the funds of the Readers' Pension Committee at the Holborn Restaurant on Saturday, October 20th. The formation of the sixteenth pension has been begun by the committee.

From Mr. Frank Lloyd Mr. Gomer Berry has received a cheque for £4,000 for the Lloyd Memorial Home at Deal. This, with the amount raised at the dinner held on March 10th, brings the total up to £5,600, which will enable the new wing of forty beds to be proceeded with immediately.

In writing to Mr. Gomer Berry, Mr. Frank Lloyd remarks: "I think the Home is very well managed and I have had abundant evidence from men and women who have spent a few weeks there that they are made very happy and comfortable."

Messrs. A. E. Goodwin, F. W. Bridges, T. E. Naylor, H. Milton (president, Printing, Bookbinding and Kindred Trades Overseers' Association), and W. Bullett (secretary, Electrotypers and Stereotypers Managers and Overseers' Association), are a few of the many visitors expected to attend the annual dinner on Saturday of the Printers' Managers and Overseers Association.

At the invitation of the Association des Journalistes Liberaux de Belgique, Mr. Wickham Steed delivered a lecture at the Maison de la Presse in Brussels on British opinion on the Ruhr. Mr. Wickham Steed was received by King Albert at the Castle of Laeken, and was entertained to luncheon by the Belgian journalists.

Mr. Frederick Johnson (managing director of the Lindenmeyr and Johnson Paper Co., Ltd.), will deliver an address on "Distribution of Paper—from Mill to Consumer: How it Affects the Printer" at the annual general meeting of the Association of Master Printers of the London Central Districts to be held at Stationers' Hall on the 19th inst., commencing at 6 p.m.

Mr. A. Purkis entertained the members of the Printing, Bookbinding and Kindred Trades Overseers' Association at its meeting on Tuesday evening at St. Bride Institute when he delivered an address entitled the "History of Deptford." Mr. Purkis, who is Town Clerk of Deptford, dealt with the history of Deptford from the earliest recorded period up to the present time, and succeeded in making the evening a most successful one.

Great success attended the bohemian concert at Upton Park on Saturday over which Mr. E. W. Whittle presided on behalf of the East Ham and Upton Park Auxiliary. There was a crowded attendance and a record "plate" for the district, the sum of £70 being collected in aid of the Printers' Pension, Almshouse and Orphan Asylum and local charities.

A dinner given by the directors of the Alnwick and County Gazette and Steam Printing Co., Ltd., to the shareholders in commemoration of the winding-up of the company, was presided over by Mr. Charles Percy (chairman of the company) on Saturday night. Other directors present were Messrs. Wm. Percy, Hugh J. Percy, J. W. Short, and Mr. S. D. Glass, and the company also included Mr. Hew Stephenson, managing director of the Northern Press, Ltd, the new proprietors.

In the course of the proceedings Mr. Hugh Percy, on behalf of the shareholders, presented Mr. G. D. Glass who had been editor and manager of the *Gazette* under the company for nearly 14 years with a valuable clock with Westminster chimes and handed over a separate gift of Queen Ann silver ware to Mrs. Glass.

At the offices of Messrs. R. Robinson and Co., Ltd., wholesale stationers and printers, Newcastle, on Saturday, Mr. Norvel Forster was the recipient of a gift from the employees, in commemoration of his having completed 50 years' service with the firm. Mr. E. H. Coysh, warehouse manager, presided, and the presentation was made by Mr. G. H. McLean, managing director.

Mr. and Mrs. T. E. Gibson, of Knutsford, celebrated their diamond wedding on Saturday. Mr. Gibson lived previously in Crewe and founded a large printing works in that town.

We are glad to learn that Mr. W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), is much improving in health during his sojourn in Italy.

Sir W. Robertson Nicoll is about to resign the editorship of the *British Weekly* owing to ill-health. He will be succeeded by the Rev. J. M. E. Ross, M.A., who at present is Press Dictator of the Scottish Churches.

Mr. Edward G. F. Tebbutt, who since 1906 has been editor of the *North Mail* at Newcastle-on-Tyne, and also managing director of the company owning the *North Mail* series of newspapers, has been appointed editor of the *Daily Graphic.*

On the occasion of his forthcoming marriage Mr. A. Robertson, of the sub-editorial staff of the *Aberdeen Press and Journal*, has been presented by his colleagues with a mahogany mantel clock and an Old English ware biscuit barrel.

Last week-end Rochdale journalists made a presentation of an inscribed biscuit barrel to Mr. Carl Fox, a member of the reporting staff of the *Rochdale Observer* on the occasion of his wedding.

The Stationery Office Strike.

In addition to the 600 or so members of the National Union of Printing and Paper Workers who have been on strike at the London works of H.M. Stationery Office—in extension of the strike of the same union at the works of Messrs. De la Rue—about 200 employees at the Harrow works of the Stationery Office have this week ceased work in sympathy. There has already been delay in the issue of certain S.O. publications, and the *Daily Herald* stated on Wednesday that "the strikers have now asked members of the Transport and General Workers' Union to assist them by refusing to handle goods either bound for, or coming from, the Stationery Office. This would mean an entire embargo on all Government publications of every kind."

Bristol Jobbing Price List.

Issue of Revised Edition.

On Tuesday, the 27th ult., there was a large gathering of Bristol printers at the Cadena Cafe, Wine-street, on the occasion of the launching of a revised edition of the Bristol Minimum Jobbing Price List. A re-issue of the Bristol List had been in contemplation for some time, but uncertainty respecting wages and prices of materials had involved delay. The time being considered ripe for again placing the book in the hands of those who were anxious to make use of it, an enthusiastic sub-committee took the matter up with commendable enterprise and thoroughness, the result being welcomed at the meeting.

Mr. R. C. Conyers, chairman of the Bristol Costing Committee, presided, and in his opening remarks said cost finding was the foundation of business, and without it we did not know where we were. By adopting the price list, and using it, they would get off their shoulders the horrible feeling that they did not know what the other man was going to do.

Mr. Chappell placed the Price List before the meeting, outlining its principal features and the method upon which it had been built up, and illustrating his remarks by reference to charts hung on the wall. He also thanked the members of the sub-committee for their work, and Messrs. W. B. Harris (the printers) for the care taken with the issue of the list.

Mr. A. H. Pole said that, the list having been issued, the next thing to ask was, "What are we going to do with it?" He presumed all present were in business to make money, and if they used the List it would give them back their cost and the profit they were entitled to. He suggested that the List should be accepted, and that everybody present should undertake to give it a three months' trial. At the end of that time they could meet again and discuss their experiences.

Interesting discussion then took place, after which it was duly moved and seconded that the List be adopted, and used as a minimum for three months, and that at the end of June another meeting be held. Upon being put to the meeting, the resolution was carried unanimously.

Ludgate, Ltd.

With reference to the notice concerning this company, which appeared in our issue of April 5th, it has been pointed out to us by Messrs. G. Duncan and Son, Ltd., wholesale manufacturing stationers, 190, High-street, Edinburgh, that they purchased from the liquidator for Ludgate, Ltd., as from June 1st, 1922, the Edinburgh factory and branch of the business. This purchase included all the plant and machinery, the whole of the Edinburgh stock, furniture, and office fittings, patent rights in the Ludgate and other makes of loose leaf ledgers and books, with right to use all registered names and trade marks, and also the goodwill of the Edinburgh business. Messrs. G. Duncan and Son, Ltd., are now running this business under the name of the Ludgate Co., at the same address, 76, Hanover-street, Edinburgh, and are not in any way affected by the proceedings before the Board of Trade with reference to Ludgate, Ltd.

DIVIDENDS AND REPORTS.

LAMSON PARAGON SUPPLY CO.—Dividend of 2½ per cent. on the ordinary shares for year ended January 31st, 1923 (against 10 per cent. for 1921-22).

CASSELL AND CO.—The dividend on the cumulative preference shares at rate of 7 per cent. per annum will be payable at the National Provincial and Union Bank of England, 15, New Bridge-street, E.C., on April 14th to shareholders registered April 7th.

"FINANCIAL NEWS."—Report for year ending December states that profit amounts to £9,702, which, with £22,902 brought forward, makes £32,604. Of this £7,508 has been applied to payment of dividends on 5 and 6 per cent. preference shares for year to June last, leaving balance, subject to national taxation, of £25,096, which directors recommend be carried forward. Previous year similar payment was made.

NEW COMPANIES.

PARSONS AND BAVERSTOCK, LTD.—Capital £3,000, in £1 shares; to take over the business carried on at 373, Earlsfield-road, S.W., by S. Healing as "Parsons and Baverstock," and to adopt an agreement with the said vendor and H. P. Haynes and to carry on the business of printers, stationers, etc. Private company. First directors: H. P. Haynes, J. T. Parsons, L. Baverstock, H. J. Bragg and G. H. Lugsdin. Registered office: 373, Earlsfield-road, S.W.

Directors: A. H. J. Pullinger, T. S. Pullinger and W. H. Large. Registered office: 4, Great Marlborough-street, W.

A. WARNER AND CO., LTD.—Capital £1,500, in £1 shares; to acquire the business carried on by A. H. Warner, F. Needham and W. H. Gates, at 61, New Oxford-street, W.C.1, as "A. Warner and Co.," and to carry on the business of dealers in fancy and fancy leather goods, stationery, chemicals, etc. Private company. First directors: F. Needham, A. H. Warner and W. H. Gates, junr. Registered office: 61, New Oxford-street, W.C.1.

NEPTUNE WATERPROOF PAPER CO., LTD.—Capital £6,000, in £1 shares; manufacturers of pitched and oiled waterproof and other classes of papers, etc. Private company. First directors: H. G. Holland. G. H. Wilkinson, junr. and Mrs. Frederica D. Wilkinson. Registered office: Bridge Works, Cowley, Middlesex.

MODERN PUBLICITY, LTD.—Capital £5,000, in £1 shares; advertising and service agencies in connection with all sorts of printing, publicity and billposting, etc., and to adopt an agreement with A. H. Munro. Private company. Subscribers: E. H. A. Anthony and E. S. Holloway. Registered office: 120, Victoria-street, S.W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

E. R. ALEXANDER AND SONS, LTD. (printers, Leyton).—Satisfaction in full on March 1st, 1923, of mortgage dated March 11th, 1918, securing all moneys due or to become due.

IMRAY LAURIE NORIE AND WILSON, LTD. (map engravers, etc.).—Charge on certain copyrights, etc., dated March 9th, 1923, to secure £900 and further advances. Holder: C. Comins, 50, Cannon-street, E.C.4.

GRAISELEY ENGINEERING CO., LTD. (Wolverhampton). — Debenture dated March 12th, 1923, to secure £200, charged on the company's undertaking and property, present and future, including uncalled capital, subject to first debenture for £2,000, but ranking *pari passu* with a second debenture for £250. Holder: W. Riches, 8, Oaklands-road, Wolhampton.

A. DAVIS AND CO., LTD. (manufacturers of stationers' sundries, etc., Birmingham).—Debenture dated March 21st, 1923, to secure £150, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. D. J. Clive, 142, All Saints'-road, King's-heath, Birmingham.

GENERAL SERVICE ASSOCIATION, LTD. (Huddersfield).—First mortgage or charge on the company's assets, present and future, dated March 16th, 1923, to secure £300. Holder: W. Carter, 4, Firth-street, Rastrick, Brighouse, Yorks.

J. J. KELIHER AND CO., LTD. (printers, etc.).—Land Registry Charge on 11, Marshalsea-road, S.E., dated March 26th, 1923, to secure all moneys due or to become due from company to L.J.C. and M. Bank.

Digitized by Google

R. J. Acford, Ltd. (printers, etc., Chichester).—Particulars filed of £3,000 debentures authorised March 12th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

"Grimsby Times and Telegraph" Co., Ltd.—Particulars filed of £10,000 debentures authorised December 29th, 1922, and covered by trust deed dated February 22nd, 1923, charged on various properties in Grimsby, and the company's undertaking and other assets, present and future, the amount of the present issue being £8,000. Trustee: J. J. Burridge, 5, Clegg-street, Oldham.

A. B. Swain and Co., Ltd. (manufacturing stationers, etc., London).—Particulars filed of £2,500 debentures authorised March 8th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Consolidated Advertising Corporation, Ltd.—Debenture dated March 19th, 1923, to secure £242 10s., charged on the company's undertaking and property, present and future. Holder: H. D. Hyams, 5, Primrose Hill-road, Hampstead.

Hartlepools Paper Mills Co., Ltd.—Supplemental trust deed dated November 22nd, 1922, to secure an additional £50,000 debenture stock, charged on freehold and leasehold lands and hereditaments at West Hartlepool and the company's undertaking and other assets, present and future, except uncalled capital. Trustees: Right Hon. Lord Morris and A. E. London, 6, Grafton-street, W.1. (Registered March 26th, 1923, pursuant to order of court.)

Taylor and Robbins, Ltd. (Typewriter importers and exporters, etc., Bristol).—Debenture dated March 14th, 1923, to secure £150, charged on the company's property, present and future, including uncalled capital. Holder: Mrs. M. E. Taylor, High-street, Weston-super-Mare.

J. Lockwood and Son, Ltd. (Stationers, printers, etc.).—Mortgage contained in a conveyance dated March 5th, to secure £50 per annum during the life of Mrs. E. Hughes, of 21, Swinbourne-grove, Withington; also mortgage dated March 6th, 1923, to secure £2,050, charged on 15, Shudehill, Manchester. Holders: Miss S. A. Lockwood, 21, Swinbourne-grove, Withington, Manchester, and Mrs. M. A. Knee, 4, Brownsville-road, Heaton Moor, Lancs.

John Walker and Co., Ltd. (Publishers, manufacturing stationers, etc., London).—Appointment of new trustee and conveyance dated March 19th, 1923 (supplemental to trust deed dated October 14th, 1898, and two deeds dated April 7th and June 23rd, 1922, securing £30,000 debentures), charged on the company's undertaking and property, present and future, including uncalled capital. Trustees: J. Abernethy and R. Jardine, 20, Bucklersbury, E.C.4.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Czecho-Slovakia.

The Comptroller-General of the Department of Overseas Trade sends out a rather cryptic inquiry received from Prague. It reads: "The British Vice-Consul at Prague reports that he has been approached by a local agent who desires to obtain the representation for Czecho-Slovakia of United Kingdom manufacturers of fast-running printing machines and type similar to American under-type (? inter-type). The name of the agent may be obtained by United Kingdom manufacturers interested on application to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1."

Egypt.

An established commission agent in Cairo desires to obtain the agency of a British firm exporting all kinds of paper.

Argentine.

His Majesty's Consul-General at Rio de Janeiro (Mr. E. Erroll MacDonell, C.M.G.) reports that a local agent is desirous of purchasing, on behalf of certain firms, machinery for the manufacture of grey newsboard, M G. thin paper and sulphite pulp. (Reference Department of Overseas Trade.)

Paper in Ocean Transit.

Absorption of Moisture.

The Materials Testing Office at Berlin was asked whether an increase of 5·5 per cent. in the weight of a 25 grm. per sq. meter paper between the time of its leaving Hamburg and its arrival in South America (resulting in a high customs tariff) could be due to the sea voyage.

Experiment proved that the paper in question contained moisture under varying conditions as follows:—

At 30% air saturation	...	7%	moisture
65% "	...	9·5%	"
85% "	...	11·0%	"
95% "	...	17·0%	"

At sea the air is always very moist, and more so under tropic heat conditions, even 95 per cent. and more being quite usual. It is, therefore, quite probable that the greater weight of the paper on its arrival in South America was due to the absorption of moisture from the air during the voyage.

Messrs. Martin and Clarke, the Paper House, 3, Joiners' Hall-buildings, Upper Thames-street, E.C.4, have published a spring issue of the stocks of paper, clearance lines, etc., they have for disposal. A wide variety is covered, with prices plainly marked. A special line is card index boards, claimed to be the "best value on the market."

A new enterprise in Philadelphia intends putting on the market quality book papers made from esparto grass.

Price of White News and Offcuts.

SIR,—May I direct attention through your columns to the sudden increases in the prices of various papers ruling at the present time? Some, you will agree with me, are warrantable; but as regards white news, it seems that it is simply a question of supply and demand. If a papermaker can explain the advance of 42 per cent. in two months on white news offcuts, viz., from an increase of £12 per ton to £17, it would be very interesting. Certainly no scientific calculations can justify this increase, and it seems to me that owing to the shortage of paper, the papermakers are extracting as much money as they can possibly extract from the merchants, which is detrimental to the trade, the effects of which will be an increase on the unemployment register.

We have had a little experience of English manufacturers in the last few years not being content with a reasonable profit, which tends to drive the trade away to other countries, instead of nursing our home trade.

Yours, etc.,
WESSEX.

Magazines Lost in Transit.

Cost of Reprinting Disallowed.

An interesting point was raised in a recent case at Harrogate County Court, in which Annie Nicholson, of Felling-on-Tyne, acting on behalf of herself and other members of the Ripon Training College Association, sued the London and North-Eastern Railway Company for £6 6s. for the loss of a parcel containing 51 copies of the Ripon College Association Magazine, despatched to plaintiff by Messrs. Wm. Harrison and Sons, printers, Ripon. The parcel containing the 51 copies of the magazine was lost on the railway in the course of despatch. The railway company admitted the loss of the parcel, but objected to the amount of damages claimed. The company had paid £2 11s. into court.

His Honour Judge McCarthy, in giving judgment, said the only issue was damage. For the plaintiff it was argued that the cost of replacing the lost publications was the proper measure, whilst for the defendants it was contended that as there was no declaration of exceptional risk and no special contract of carriage, the ordinary cost of the magazine in the market was the true measure of the damage. The publication in question was an annual issue of the college magazine, of which about 1,680 copies were printed. Of those 51 were never delivered. No statement was made to any of the defendants' servants at the time the parcel was handed in for carriage, and no special contract was made. When the loss was discovered, the type had been distributed, but copies of 3½ sheets out of the 4½ remained with the printers. The missing sheet was again set up and the lost copies restored. The damage claimed was the cost of that work as paid by the printer to his workmen, without profit or overhead charges of any kind. If the plaintiffs were entitled to damage beyond the sum paid into court, it was evident the claim was a moderate and reasonable one. The damage claimed was not the natural and ordinary consequence of the loss of the parcel, but an accidental and extraordinary one, nor was it in the contemplation of the parties, or either of them. Hence he thought that the damage claimed for resetting and reprinting part of the pamphlet was too remote, and the sum paid into court was enough to meet the plaintiffs' claim in the action.

His Honour granted leave to appeal.

THE late Mr. James Bowden, for 22 years general manager of the Religious Tract Society, left £8,843.

IN connection with the Turin Photographic Exhibition (May to June), it is pointed out by H.M. Consul that owing to the weakening of German competition due to recent political events, a useful market might be found by British manufacturers of paper and postcards.

Amalgamated Society of PAPERMAKERS.

Quarterly Report.

The current quarterly report of the Amalgamated Society of Papermakers contains a number of interesting references to events in the paper industry.

Dealing first with the state of trade, it is stated: "Trade during the last three months does not appear to have made the progress that was anticipated. During the past few weeks information has been forwarded to your secretary to the effect that certain mills have closed down indefinitely, and there are some mills which are unable to run more than 50 per cent. of their time. The news section of the trade continues to be busy, but the fine writing and wrapping sections appear to be still suffering from lack of orders. No doubt the increased importation of foreign-made paper is making itself felt in the latter case. In view of this, it is to be hoped that the legislation proposed for the distinct marking of the country of origin upon all imported paper may become an accomplished fact." Mr. Arthur Fowler, the general secretary of the Society, adds that in his opinion, as a trade, they ought to explore every avenue possible, in the endeavour to bring about the adoption of a trade label, whereby all users of paper could detect at once the home product. This, he thinks, would help to increase the demand for British-made paper.

The report then refers to the various proposed alterations of rules, specifically mentioning the suggestion that contributions should be on a graduated scale, affording proportionate benefits.

Attitude to General Workers.

An important attitude is indicated with regard to unions negotiating with the Employers' Federation of Papermakers on labour matters, and reference is made to the reply of Mr. A. E. Holmes to a point raised by Mr. J. O'Grady, secretary of the General Workers' Union. In explaining the particular situation which had arisen, Mr. Fowler mentions that Mr. O'Grady had written to the General Council informing them that the papermaking unions objected to their taking part in negotiations with the Employer's Federation, and that they have "no say as to the constitution of the National Agreement entered into for the benefit of the paper industry."

"This," observes Mr. Fowler, "is quite true; we do object," and he goes on to quote the following extract from a letter which Mr. Holmes wrote to the secretary of the council: "Our unions cannot be expected to provide the means whereby the unions represented by Mr. O'Grady can be given a standing in the industry to which they have no representative claim. We respectfully submit that Mr. O'Grady's unions are entrenching upon the activities of the unions I have the honour to represent. They are making divided council and retarding progress."

The next item in the report refers to the desire to reduce the balance in hand of the political fund, and to a resolution that the amount usually transferred to this fund from the general account should be suspended for a period of two years.

Wage Negotiations.

During the previous quarter, "the secretary had a number of wage negotiations to deal with, and in all cases these have been requests by employers for reductions in wages. Many mills, owing to the bad trade, are finding their position difficult, hence these negotiations. In some instances amicable agreements have been reached, but others have not yet reached that stage and negotiations are still being carried on. It is most desirable that our members should report at once anything that may be suggested to them by their firm, in order that the matter may be dealt with by your secretary through the proper channels. Many attempts have also been made to increase the number of hours in some of the larger mills and in many cases without the consent of the workers being obtained."

The present agreement provides for six hours extension by mutual agreement, and the members must insist on being consulted on the matter, says Mr. Fowler, who points out that members have no right according to the National Agreement to consider anything beyond a 138-hour week.

The report concludes with a reference to membership, and mentions that a good number of new members have been secured. There is, however, still room for improvement, and Mr. Fowler feels that the knowledge that the Society is now in a position to clear off all outstanding claims will do much to restore the confidence of all. He looks forward to the future with confidence, and, providing the coming months are accompanied by an improvement in trade, he feels sure the financial position of the Society will be greatly benefited.

The proposed alterations of rules are printed in the report, two of which refer to suggested payments in cases of accidents.

French-Canadian Convention.

Printing Items in the Schedules.

The Board of Trade have received a copy of the Commercial Convention between France and Canada which was signed at Paris on December 15th. No date is given as to when the Convention comes into force.

Canadian products enjoying the benefit of the minimum tariff of France comprise:—Cellulose pulp, paper and card, duplicating paper, etc., albumenised photographic paper, sensitised, etc., cardboard, in sheet or plates, etc., artificial leather, common, etc, printing presses, and machines, etc., stereotype blocks, plates, etc., for printing.

Canadian products which shall enjoy the benefit of the percentages of reduction mentioned, such percentages to bear on the difference between the rates of the General Tariff and those of the Minimum Tariff, include the following items: Wall-paper (other than Lincrusta-Walton and the like); cardboard, moulded, reinforced, or not, called papier machie, etc.; cardboard, cut, grooved, or shaped; cardboard boxes, etc.—all 60 per cent. Cylindrical and conical tubes, so-called "busettes" for spinning and weaving; cardboard wares ("cartonages"), ornamented with paintings, etc.; lincrusta and the like—50. Articles of cardboard or of cellulose, moulded, compressed, etc.; articles of cardboard or of cellulose, lacquered or covered with a uniform varnish—80. The same with painted or inlaid decorations, 50; engravings, facsimilies of engravings, etc., 25; rolls or bands for cinematographs, 50; printed matter of all kinds, etc, 40.

French duties receiving fixed rates of duty embrace: Books (novels, Christmas annuals, toy books, etc.), 15 per cent.; advertising and printed matter, 12½ cents; printed music, bound or in sheets, and music for mechanical piano players, 5 per cent.

French products receiving the intermediate tariff less a discount of 10 per cent. on the amount of the duty include: Books, printed, periodicals and pamphlets, or parts thereof, n.o.p, not to include blank account books, copy books, or books to be written or drawn upon; labels for cigar boxes, fruits, vegetables, meats, fish, confectionery, or other goods or wares; shipping price or other tags, tickets or labels, and railroad or other tickets, whether lithographed or printed, or printed, n.o.p.; photographs, chromos, chromotypes, artotypes, oleographs, drawings, paintings, pictures, decalcomania transfers of all kinds, engravings or prints or proofs therefrom, and similar works of art, n.o.p.; blueprints, building plans, maps, and charts, n.o.p.; strawboard, millboard and cardboard, not pasted or coated; tarred paper, felt-board, sandpaper, glass or flintpaper and emery, paper, or emery cloth; paper of all kinds, n.o.p.; ruled and border and coated papers, boxed papers, pads not printed, papier-maché ware, n.o.p.; papeteries, envelopes, and all manufactures of paper, n.o.p.

BY virtue of a Swedish Royal Decree, effective as from March 15th, mats of pasteboard, coated with colour, varnish, or the like, which have hitherto been classified under Tariff No. 396 (10 öre per kilog.) are now classified under Tariff No. 546 (25 öre per kilog.).

New Inventions

Newspaper Machine Delivery.

This invention relates to devices for separating the copies of newspapers, etc., deposited on a delivery belt into numbered batches by displacing one copy of each batch, wherein such displacement is effected by a kicker fast on a rocking shaft provided with

FIG.3.

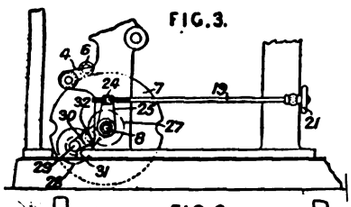

FIG.4.

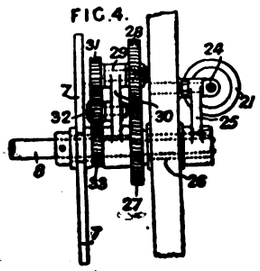

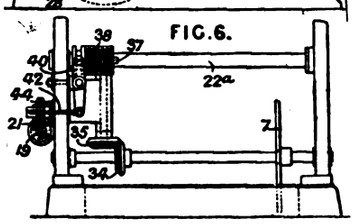

FIG.6.

an arm carrying a roller riding on the edge of a rotating disk having one or more recesses into which the roller can fall so as to actuate the kicker, and consists in providing means for adjusting the time of actuation of the kicker while the machine is running. In the first arrangement described, comprising a rock-shaft carrying the kicker and an arm with a roller riding on the edge of a rotating disk having notches, the timing of the kicker is adjusted by moving the roller towards or away from the rock-shaft. For this purpose the roller is carried by a rod slidably mounted in the arm, the end of the rod threading through a worm wheel gearing with a worm on the end of a shaft, which is supported by the arm and a second arm rigid with the rock-shaft, rotation being imparted to the worm shaft through spur pinions and bevel gears by means of a shaft actuated by a hand-wheel. In the modification shown in Figs. 3 and 4, the roller 6 is mounted in fixed relation to the arm 4 and the timing of the kicker is adjusted by an angular movement of the disk 7 on its driving shaft 8, on which the disk 7 is loose. The hand-wheel 21 actuates a shaft 19 threading through a nut 24 carried by an arm 25 projecting from a sleeve 26 loose on the shaft 8, the sleeve 26 having a rigid gear 27 meshing with a pinion 28 fast to a pin 29 on the end of an arm 30 rigid with the shaft 8. The pin 29 also has a fast pinion 31 geared by an intermediate pinion 32 carried by the arm 30 to a pinion 33 fast with the disk 7. In a further modification shown in Fig. 6, the timing is again adjusted by angular movement of the disk 7. The latter is driven through the bevel gears 34, 35 and a worm-wheel 37 by a worm 38 slidably mounted on the shaft 22^a carrying the flies, the worm being adjustable along the shaft 22^a to effect adjustment of the disk 7 by means of a rock-lever 40 pivoted to a rod 42 which threads through a worm-wheel 44 engaged by a worm on the shaft 19 of the hand-wheel 21. The inventors are Messrs. E. T. Morris and J. T. Mills.

Knock-Down Paper Boxes.

Mr. G. H. Streater has patented a knock-down paper box which is made from a blank folded so that the parts of the box are of double thickness, the blank is arranged to give an integral box structure, Fig. 5, having the lid hinged to the rear lower edge of the body. The blank, Fig. 1, comprises panel portions a, a^1, b, b^1, which constitute the main portions of the body and lid respectively; side strips 1-2, axx and 3-4, a^{00} constituting the backs of the body and lid; side strips ax a^0 and $axxx$, a^{000}, constituting the fronts of the lid and body; end strips c^1, c^2 and d^1, d^2 constituting the ends of the lid and body and lateral tabs or end extensions $e, e^1 \ldots m, m^1$ which are interlocked with adjacent portions of the side and end strips. A stage in the folding operation is illustrated in Fig. 3, the strips c^2, d^2 lying against the strips c^1, d^1 respectively with the tab f, f^1, h, h^1 between the strips c^1, c^2 and tabs m, m^1 between strips d^1, d^2; the ear pieces d, c lying on the panels a^1, b^1 are subsequently covered by the panels a, b. In the final folding of the parts the strip 3-4 overlies the strip a^{00}, strips 1-2 and a^{xx} abut, and the tabs e, e^1 are locked between the strips d^1, d^2. The tabs g, g^1 lie between the strips a^x, a^0; i, i^1 between a^{00}, 3-4; k, k^1 between

FIG.1.

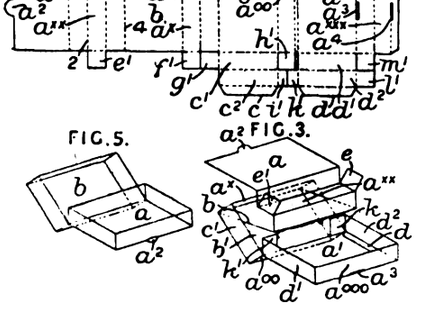

FIG.5.

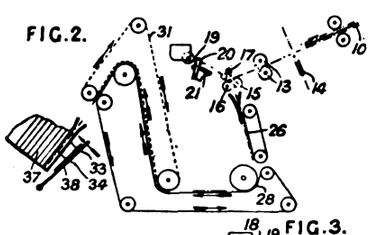
FIG.3.

a^{xx}, 1-2 and l, l^1 between a^{000}, a^{xxx}. A grip piece a^2 passes through slots a^3, a^4 to hold the parts together. A pair of somewhat similar blanks may be used to form a separate body and lid.

Paper Bags.

A British patent has been granted to Mr. C. W. Hartmann on this subject. The invention relates to a bag-making machine in which a

FIG.2.



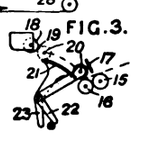


FIG.3.

web of paper is folded around a former into a flat tube that is cut up into bag lengths and gummed and folded, and comprises means for gumming and folding the bottom of the tube, means for stacking the finished bags, and arranging the parts of the machine so that a minimum space is occupied. In the construction shown, a web of paper from a roll, after being pasted along one edge, is folded around a former 10 into a tube which is cut into bag lengths by a blade 14. The short tube is fed by rolls 13 to the gumming device which consists of a rib or blade 19 secured at its end to a pinion 20 that engages a toothed segment 21. The pinion is journalled in a crank arm 22, Fig. 3, and the segment is secured to a crank 23. These cranks are oscillated in such a manner that the blade 19 turns through 180 degrees as it is swung from the paper tube to the feed roller 18 of the gum box and thus does not make a wiping contact with either the paper or the feed roller. After being gummed, the paper tube is forced by a reciprocating folding blade 17 into the space between rollers 15, 16 which fold and press the bottom of the bag. The folded bag is conveyed to the delivery box by means of endless bands 26, 28, 31, Fig. 2, which are arranged mainly in two upright rims, as shown, in order to minimise the space occupied by the machine. The bands feed the bag between the side rails 33, 34 of the folding box, and an oscillating plate 38 knocks the bag from between the rails into the pile 37. The rails 34 engage the edge of the bag and prevent it from returning into the path of the succeeding bag.

Paper Wrappings for Food.

A Lead in Campaign for Legislation.

The necessity for sanitary wrappings for foodstuffs was urged by Mr. James Strachan, of the Donside Paper Co., Aberdeen, at a meeting of the Royal Microscopic Society on March 28th. He said that in spite of great improvements in the past ten years, more care was still bestowed on such things as soap, tobacco, and confectionery than on the great bulk of our foodstuffs. Legislation on the subject was urgently needed. The sale of foodstuffs without a paper wrapping should be made illegal. The use of old newspapers and the re-use of any wrapping contaminated by handling should be prohibited.

"Six weeks ago in London," added Mr. Strachan, "I saw a newspaper dated 1882 used for wrapping food. It would be interesting to learn its history during the past forty-one years." Bread was to some extent sterilised in the baking process, but unless the bread was mechanically handled and wrapped in proper paper, contamination followed in its distribution. Unfortunately in the past wrapping papers had been regarded by the consumer as the cheapest of all, and consequently the papermaker had been forced to produce them from all sorts of waste paper and old bagging. They were, however, thoroughly sterilised in the process of manufacture, but even under such conditions it was not desirable to make paper for actual contact with foodstuffs from low-grade materials. There were dozens of papermakers in this country capable of producing pure wrapping paper for food, and there was not a mill but would welcome inspection of manufacturing processes by the consumer. With paper of foreign origin this was not always possible, and at present the bulk of the wrapping paper came from the Continent.

Mr. J. Leonard Spicer (president of the Employers' Federation of Envelope Makers and Manufacturing Stationers), who was in chair, said there had been a gradual change of public opinion, and if the public would only create the necessary atmosphere paper-makers would be prepared to meet the requirements and give the utmost service at the minimum cost.

Mr. Sydney R. Wycherley said cigarette papers were not made of rice, as many people supposed, but of cotton fibres. They were a strong paper, very pure, and he did not think people suffered any harm from smoking them.

IT has been well said that in this world a man must be either an anvil or a hammer. Is your business being hammered by the advertising of competitors, or are you advertising yourself?

Mr. A. Dykes Spicer.

The New President of the National Association of Wholesale Stationers and Paper Merchants.

Mr. A. Dykes Spicer, the new president of the National Association of Wholesale Stationers and Paper Merchants, is a very live wire in the paper trade. His great energies also bring him into other fields of activity, and he carries on, in politics and elsewhere, as well as in the paper trade, the wonderful Spicer tradition.

Mr. Spicer was born in November, 1880, at Woodford, Essex, and is the eldest of the three sons of Sir Albert Spicer, himself

Photo: Histed, London.

MR. A. DYKES SPICER.

one of the original "sons" in the firm of James Spicer and Sons. Educated at Mill Hill and at University College, Oxford, Mr. Dykes Spicer distinguished himself by taking an honours degree in history. His bent for learning was also apparent in the thesis on the history of the Paper Trade of the 19th century, which was written in 1905 for the D.Sc. degree of the London University. This work, which subsequently became regarded as a text book, was published in 1907 by Messrs. Methuen and Co., under the title of "The Paper Trade: A Descriptive and Historical Survey of the Paper Trade from the Commencement of the 19th Century." Carefully and well written, and containing numerous diagrams and plans, together with an index, the volume is still a valuable source of reference. The dedication is interesting, since it implies a tribute to "My father, uncles and cousins composing the firm of James Spicer and Sons."

Commencing his business training in 1902, when he entered the house of James Spicer and Sons, Mr. Dykes Spicer spent three years in going through the various departments. While he has also been specially interested in wrappings and boards, he is now in touch with all the branch houses in England, Scotland and Ireland, the firm having established a number of these throughout the country. In 1908 he attained the position of a partner, and when the company was formed in 1919 he joined the board as a director. Now, of course, he holds a corresponding position with the amalgamated undertaking, Spicers, Ltd.

On behalf of his company, Mr. Dykes Spicer has travelled to many parts of the world, including a tour of Australia, whence he returned by way of America. He paid a second visit to Canada and America in 1912.

Mr. Dykes Spicer is a keen business man, as, of course, are all the Spicers, and he has a clear understanding of the importance of personality. In this respect he has made a big impression upon the paper trade of this country. A strong vein in Mr. Dykes Spicer's composition is that of politics. He is a National Liberal, and is a member of the executive for the whole of the National Liberals of England, being at the same time honorary secretary of the London section. Previous to the formation of the National Liberal party, he was on the committee of the Eighty Club for about eight years, and he was one of those who founded the 1920 Club, which represents the Lloyd George element of the Eighty Club. He has also been a member of the Reform Club for 20 years.

Interest in eduational movements is also a strong point with the new president of the Wholesale Stationers' Association. For 16 or 17 years he has been a Governor of the Regent-street Polytechnic, and he is a member of the Court of Governors of the Mill Hill School.

With the organisations associated in the paper trade, Mr. Dykes Spicer has been very actively associated for a number of years. He has served on the committee of the Wholesale Stationers' Association since it was started, and now in the fourth year of its existence as a national association he becomes its president, the first to hold that office being Mr. Harry G. Spicer, who belongs to the other branch of the family. Mr. Dykes Spicer has taken an active interest in all the affairs of the Association, and he has brought to bear upon the various problems which have had to be faced an alert mind and sound judgment. In the direction of the affairs of the Association the new president will be inspired by that wide vision and those broad sympathies which are a family inheritance. He is anxious that the British paper mills should get a fair chance, and although there may be conflicts of interests, the British papermaker can rely upon due consideration at the hands of Mr. Dykes Spicer.

On the personal and recreational side of the paper trade Mr. Dykes Spicer has been a conspicuous figure, and one of his most fruitful ideas was the institution of the Paper Trade Golfing Society, which became such an immediate success, and which has done so much to bring the members of the paper trade together under agreeable circumstances. Although only started last year, the Society is developing rapidly and has exercised a very good influence in trade circles.

Mr. Dykes Spicer married the daughter of the Rev. Dr. Morrison, Rector of Marylebone, and has three daughters.

German Paper Crisis.

Demand for Lower Prices.

The Commercial Secretary at Berlin (Mr. J. W. F. Thelwall) has forwarded to the Department of Overseas Trade an extract from the *Berliner Tageblatt* of recent date which states that the Economic Committee of the Reich Council of Economics recently had under consideration an application from the associations of the paper working-up industry for the abolition of the surcharge on the gold duty for cellulose, paper, and cardboard of foreign origin, in order thereby to effect a reduction of prices.

The world market prices for cellulose, c.i.f., German ports, are about 8–10 per cent. below the German prices and in the case of certain kinds of paper up to 50 per cent. lower. Those for cardboard are also proportionately lower.

A crisis has thus occurred in the paper working-up industry, which has already led to restriction of work and unemployment. According to the representative of the cellulose industry, wages form only 6 per cent. of sale prices.

After a short discussion the Committee adopted the following resolution: "The Government of the Reich is requested to consider whether, in view of the extended occupation of Germany and of the consequent threatening of the supply of the German market, the import duty for cellulose, paper and cardboard cannot be temporarily reduced by one-half of the customs rates."

Papermaking in Mysore.

For some years past, the feasibility of the manufacture of paper pulp from bamboos in Mysore has been under consideration. This industry has, however, been now shelved, says *The Times of India*. It has been found that even the manufacture of straw boards from various waste materials, requires the investment of considerable capital. For this reason, the Government do not see their way to embark upon these enterprises in the immediate future.

UNITED STATES

Imports and Exports of Paper, etc.

The total values of the imports of paper and manufactures of paper (excluding printed matter) into the United States, and exports therefrom, during the undermentioned periods were:—

		Imports.	Exports.
October,	1922 ...	$9,871,719*	$2,020,108
"	1921 ...	6,733 608	1,360,978

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

GENERAL
UNIV. C

"SLOGGER"

METHOD IS THE BEST

Separation of sheets is accomplished by a blast of air directed through the top sheets of the pile, and this blast of air at the same time frees the paper from dust and fluff, very prevalent in certain types of paper. This dust and fluff would eventually find their way to the ink rollers and duct, and detract from the colour of the ink and spoil the quality of the work. By cleaning each sheet before feeding it, the high quality of the work is maintained, and washing up and brushing out of the forme are therefore minimised.

JOBS from letter-press to any colour work.

SPEEDS to suit any press.

STOCK from tissue to board.

RUNS from 500 upwards.

Designing Better Printing.

Suggestions by Mr. Frederic W. Goudy, the famous Type-Designer and Art Director of the Lanston Monotype Machine Co. (U.S.A.)

In the United States, and indeed in this country also, the name of Frederic W. Goudy is a household word to those interested in the printing craft, particularly on its artistic side. His name is immortalised in the well-known Goudy type face, which, together with the Kennerley and other admirable faces, is the outcome of Mr. Goudy's genius for design. He is an expert on all that relates to artistic design in relation to printing, and we think our readers will be interested in the following article which is the substance of an address recently delivered by Mr. Goudy before the Poor Richard Club of Philadelphia :—

First, we should fix firmly in our minds just what we mean by better printing. Printing, which has been styled the nurse and preserver of all the arts, the art preservative of all arts, in itself is not an art. It is merely an apparatus for the diffusion of knowledge, an apparatus more economical and more expeditious than the art of the scribes which it displaced. Printing is a craft that widens and deepens the very foundations of literature. Printing fixes thoughts which arise in the minds of men that otherwise might disappear unrecorded, and transmits those thoughts to future generations; it makes visible a portion of the eternal mind caught in its process through this age and preserves it for ages not yet reached, just as we to-day are enabled to possess the knowledge of the past.

Artistic Possibilities.

But printing may yet become more than a craft when every detail is kept in the hands of the artist. An artisan is usually uninspired by the artistic possibilities of his craft and in his ignorance lacks wholly the quickening spirit of craftsmanship that breathes life and beauty into his chosen work.

How often, however, is either the printer or compositor an artist? And just for this reason is most typography vulgar and expressionless. The artisan printer has technical skill, usually not a great deal of culture and too frequently less real taste. How, then, can he produce printing that is above the commonplace? By familiarising himself with the very fundamentals of ethics, because it is impossible to maintain a vital interest in æsthetics without an equal or even greater interest in ethics, by thinking of printing for its own sake as a means to higher aims and higher ideals and not a mere means to a livelihood.

Readers of taste to-day demand of the printer that he carry into his work something more than that which will satisfy the necessities of utility—that he add to printing intended for daily use a degree of beauty greater than the exigencies of commercialism absolutely require. But this degree of beauty is not attained by adventitious aids, by the mere addition of some decorative detail, nor even by the tasteful use of ordinary materials. It requires more than these—it must be organic—a development of the structure itself; it can only be attained by better design of the typography itself.

What is Design?

When, then, is design? Can design be acquired by the workman? First, let me attempt to define design. It is not a mere matter of appearance, something added by way of ornamentation. On the contrary, design can not be detached from craft and considered by itself—it is an inseparable quality of the work itself. It involves the selection of proper materials, fitness of purpose, and a realisation of its destination as well as concern for its appearance.

Design in printing does not mean capricious originality—the placing of a typographic unit in position or place on a page for the sake of "originality," when the obvious place for it might be elsewhere. Design means reasonableness and natural growth, and does not require an attempt to coerce our materials into some preconceived form that may not be the natural outcome of the tools and materials employed.

Two Distinct Features.

Too often the printer confounds two features of design—first, the design of the individual elements with which he is working, and, second, the skill displayed in the arrangement of those elements. Design is the inventive arrangement of lines and masses in such a relation to each other that they form an harmonious whole, to which each separate part contributes, but in such combination with every other part that the result is a unity of effort that satisfies the artistic sense. In the printed page, design utilises printers' types and ornaments instead of mere abstract lines, and the beauty of the result is the sum of refinement, proportion, arrangement of type and decoration, adequate presswork and careful composition combined into one whole that delights and makes visible man's admiration of the thought conveyed.

I fear there is too much talk in our printing schools of tone, harmony, balance, tone shape, colour and what not as constituting the principles of design—these things are the results of the application of the principles of design and will not of themselves produce design itself, nor can design be taught. Principles may be learned, but their application depends upon the taste and ability of the user. Common sense will tell us what to do, but taste will dictate how it should be done. Taste may be developed by a study of the masterpieces of typography, which in turn furnish a standard toward which to aim. In many shops the best work produced is of the highest standard imaginable. The works of masters are as sealed books to the ordinary workman and yet it is from this workman that we demand a finer result.

Good Work Should be Normal.

Good work too often is looked upon as something apart, something to be produced on occasion and not as a matter of course. The workmen trained to do good work naturally will produce good work just as economically as poor work, as it is no more difficult or expensive to set and print well designed types or pages than poorly designed ones. There is too little thought and study given to the fundamentals of design and too much attention given to mere technical details. The printer with a definite standard toward which to aim will produce good work even though his technical skill may not be great. It is the blind adherence to job shop traditions, the disinclination to disregard time-worn customs, that holds back many a workman from exercising personal expression which gives charm to ordinary print.

Our printing seldom even approximates the dignity and breadth of style attained in the best work of the fifteenth century. Why? Because the high standards set up at that period reflected always definite aim toward beauty and order, standards that to-day are in great danger of being lost through too ready an acceptance of new and lower ones that are the outcome of the great variety of materials ready to the workman's hand. With few materials and inadequate equipment to produce fine work thought and care were required.

Actual utility does not of necessity require that we disregard potential beauty or preclude the application of the fundamentals of contrast, harmony and proportion, qualities absolutely inseparable from good design.

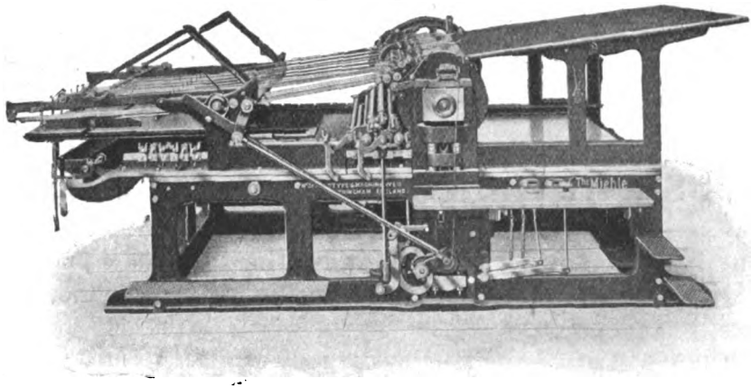
Every printer appreciates Miehle work—and so does the buyer of printing. Miehle printing does not cost more than ordinary printing, but it commands better prices.



The Miehle is prepared for a job more quickly than an ordinary press. The rollers are quickly set, the ink duct can be accurately adjusted to suit formes of any kind, make-ready is reduced to the mimimum owing to the scientific construction of the press, and the little make-ready required is quickly effected.

There is no risk in installing a Miehle. It is a sound investment for every printer—a perfect tool and a real asset at all times.

If the work you are now doing is "ordinary," you can raise your standard of printing to the highest level by installing the Miehle.

The Miehle is built in this country, in our Works at Altrincham, Cheshire, and can be obtained only from us.

E. & N.E. London Master Printers.

Successful Dinner follows Annual Meeting.

That the Association of Master Printers of East and North-East London is a live section of the employing printers' organisation and gives promise of making its influence more widely felt in the trade was made plain at the annual meeting and dinner held on Wednesday of last week at the Three Nuns Hotel, Aldgate. Following the briskly dispatched business of the evening, about 40 people sat down to dinner, features of the toast list being speeches by Mr. W. Whyte (secretary of the L.M.P.A.), Mr. W. H. Burchell (hon. secretary, Association of Master Printers of the London Central Districts), and Mr. J. Johnson (organiser, L.M.P.A.). The proceedings were brightened by musical contributions provided by members and friends, and amongst those who gained applause as singers were the Association's very active honorary secretary, Mr. T. D. Hawkins, and Mr. C. H. Ward, the new president.

Councillor H. Ridler occupied the chair at the annual meeting.

After the reading and adoption of the minutes, the hon. secretary spoke of difficulty in finding someone to accept the presidency in succession to Mr. E. R. Alexander. Mr. Hawkins mentioned several gentlemen who had been approached, including Mr. E. E. Alexander, M.P., from whom he read a letter, expressing inability to accept the position.

Six new members having next been elected to the Association, the secretary presented the balance-sheet for the past year. This showed a satisfactory surplus and was unanimously adopted.

A Well Organised District.

The secretary's report was an encouraging one. Though it told of a year of depression, it stated that the Association had not only maintained its position but had slightly increased its membership. Extremely cordial appreciation was expressed of the assistance that had been received from Mr. J. Johnson, the organiser, the report putting on record that the whole of the recent advance in strength made by the Association was due to Mr. Johnson's effective work in the district. The secretary went on to state that he imagined they had "roped in" all the printers worth the name in their district, and that the locality was now thoroughly organised. Referring to the new financial arrangements whereby local associations can obtain extra monetary assistance from headquarters to meet the cost of approved schemes of local activity, Mr. Hawkins pointed out that it was up to the Association to take advantage of the improved financial position by extending its operations. A total membership of 112 was reported, and in a review of the year's activities stress was laid upon the success which attended the Association s outing to Ongar, also the dance at Stratford Town Hall in aid of the Printers' Pension Corporation. Great regret was expressed at the passing, during the year, of the Association's esteemed hon. treasurer, Mr. A. D. Phelps, whose loss is keenly felt. The report closed with a confident appeal for the active interest of members so that the Association might go forward in future with a more aggressive policy than in the past.

A very hearty vote of thanks was, on the motion of the chairman, passed to the retiring officers and committee, and the meeting proceeded to the elections for the coming year. These resulted as follows: President, Mr. C. H. Ward; vice-presidents, Messrs E. E. Alexander, M.P., Harold Curwen, F. Whitworth, W. Farley, F. H. Gillett, G. F. Tomkin, and C. Beamand; hon. treasurer, Mr. S. T. Norman; hon. sec., Mr. T. D. Hawkins; committee, Messrs. Ramsey, Jackson, Suckling, Gillard, Manning, Lipscomb, and Ridler; representatives on the L.M.P.A. council, Messrs. C. H. Ward, S. T. Norman and G. F. Tomkin.

After-Dinner Speeches.

There were many expressions of pleasure at the fact that the dinner was presided over by Mr. E. R. Alexander, the veteran past-president of the Association, who has just attained his 80th year.

After the toast of "The King" had been honoured on the very hearty proposition of the chairman, Mr. C. H. Ward gave "The L.M.P.A." Referring to the Egyptian hieroglyphical signification of the letters L.M.P.A., Mr. Ward told how after thinking over that subject he had dosed off, and then found himself dealing with the same four letters, which now appeared to represent pages that he had to impose and had somehow got "pied." He first found himself with the pages laid down in the order LAMP—which brought to mind the illuminating character of the printer's craft. The second attempt at imposition produced PALM—which was appropriate to the printing profession, and particularly to the L.M.P.A., which, of all organisations, deserved the palm for what it had done for its members. The third attempt gave ALMP—a reminder of Mr. Alexander, M.P., the son of their worthy chairman that evening, who was a credit to the London Master Printers' Association. Mr. Ward added a personal tribute to the advantages accruing from membership of the L.M.P.A. and a cordial expression of good wishes for the Association's future prosperity.

Labour Troubles *versus* Progress.

Response to this toast was made by Mr. W. Whyte, who paid a high tribute to the work done for the Association by Mr. Ward. He referred with regret to the retirement of Mr. E. R. Alexander, commending that gentleman's heroic services to the organisation during the war, and he also made feeling mention of the loss of Mr. Phelp, whose lovable qualities had endeared him to all, and who had given most devoted services to the Association, practically laying down his life for it. Mr. Hawkins, too, came in for very appreciative reference in respect of his energetic services as hon. secretary and in respect of the model report he had presented that evening. Proceeding to speak of the general activities of the L.M.P.A., Mr. Whyte expressed regret that ever since he had become secretary, the Association had been almost continually engaged in labour conflicts which left no time for useful work. It was a lamentable thing and a disgrace to the printing craft that on that very day the Joint Industrial Council—with a long programme before them of matters affecting the printing industry throughout the country, and including reports of deputations to Government departments, and so on—should have had to spend its whole time investigating a dispute which did not arise out of any breach of trade conditions or agreements by the firms which had been attacked. It was very necessary that the employers should be better organised, if only in order to help the other side to discipline those amongst them whose activities tended to make havoc in an industry that was painfully recovering from the effects of the War. Among other matters which Mr. Whyte touched upon was the good work done by the Debt Recovery section at 24 Holborn, and the need for further costing propaganda. Pointing out that much less use was made of printing in this country than in the United States, he said our business world used only a fraction of the printing it might use. Printers might well try co-operative advertising. A newspaper campaign, followed up by booklets or leaflets to commercial houses would bring in good results.

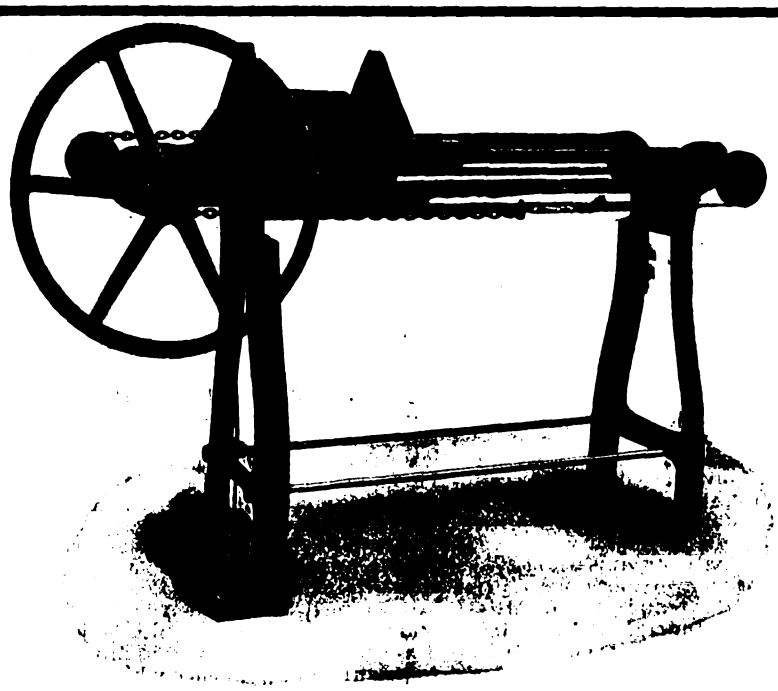
The toast of "Our Craft" was proposed by Mr. E. R. Alexander, who coupled with it a cordial reference to his old friend, Mr. W. H. Burchell. In the course of his remarks he referred to his long and successful efforts to promote better printing, and said that the printing of to-day showed more intelligence than that of 40 years ago, and there was a better spirit in the craft. He had been to France, Germany and the United States, but came back with the conviction that there was nothing to beat English printing.

The Postal Rates Agitation.

Response to this toast was made by the guest of the evening, Mr. W. H. Burchell, who began by recalling the fact that within 300 yards of the "Three Nuns" Hotel, he first entered a printing office at the tender age of seven—fifty-three years ago. He recalled that it was rather a primitive sort of printing office, everything being produced by hand—even the cylinder machines being driven by the aid of two handles and four small boys. Mr. Burchell went on to say that "Our Craft" was never better equipped and organised than to-day. It was very satisfactory to know that the L. M. P. A. was steadily attracting more members to its ranks. This had been brought about by helpful get-together meetings, at which a brotherhood was created amongst printers. Referring to the high postal charges, which still limit the output of publicity literature, Mr. Burchell recalled that the first postal protest campaign, with which he had something to do, resulted in a reduction of postal charges on May 29th, 1922. The reductions were not sufficient. The second campaign, with which he was also having something to do, aimed at obtaining further reductions. He assured them that he was leaving no stone unturned to secure this. He had recently approached the Premier, the Chancellor of the Exchequer, the Postmaster-General, and even His Majesty King George V., who in reply commanded his private secretary to advise him that he had brought his request to the notice of the Postmaster General. Mr. Burchell then read a copy of the letter which he addressed to His Majesty on the 6th inst. This set forth forcibly the decrease in postal correspondence which followed the increased postal charges of June, 1921, the outcry which led to a slight reduction of charges in May, 1922, and the increase of correspondence which followed the reduction. The letter then urged the need for further reductions, in the interest of trade and to decrease unemployment. It recalled the concession allowing a 4-oz. letter for 1d. granted to celebrate the diamond jubilee of Queen Victoria, and pointed out the 600 per cent. increase ruling at present, ending in an appeal for His Majesty's interest on behalf of the traders and the unemployed of the Kingdom. Mr. Burchell concluded his speech with an appreciative reference to Mr. E. R. Alexander's long services to the trade, and wished him long life and happiness in his well-earned retirement.

Mr. H. Ridler gave the toast of "The District Associations," stressing the advantages of the co-operation which local associations make possible.

Organising the L.M.P.A.



Mr. Johnson respoded to this toast, making interesting reference to his work as organiser. He drew attention to the large extent of the territory of the London Master Printers' Association, which covers no less than 740 square miles. Their own district (E and N.-E.), he said, extended from the heart of the City to Upminster in the east, to Waltham Cross in the north, and to the river in the south. Referring to the difficulty of organising such scattered districts, he told of the advantages which had accrued in some localities by the holding of meetings in the more outlying places, thus gaining the co-operation of printers who could not be attracted to meetings at a distance. Mr. Johnson acknowledged, on behalf of the other associations, the kindly thought expressed in the toast, and remarked with satisfaction that there were good reports from all directions. Since he became organiser four years ago the total membership had about doubled.

The toast of "The Ladies" was proposed by Mr. G. F. Tomkin, response being made by Mrs. Gillard, and the final toast was "Our Association," the proposer being Mr. H. W. Wood, Mr. W. H. Gillard replying.

Printers' Managers & Overseers' Association

Brilliantly Successful Annual Dinner.

Another outstanding event has to be added to the annals of the P. M. and O. A. with the successful accomplishment of the Association's annual dinner on Saturday, when members and friends to the number of no less than 330 filled the fine King's Hall of the Holborn Restaurant. The large attendance speaks well for the popularity of this function, and it was notable that only eight of those who accepted invitations failed to appear.

The chair was occupied by the Association's president, Mr. S. M. Bateman, who was accompanied by Mrs. Bateman and Miss I. M. Bateman, and the large company included, besides the Association's prominent representatives both London and provincial—Mr. F. W. Bridges and Mrs. Bridges, Mr. A. E. Goodwin (secretary of the Federation of Master Printers) and Mrs. Goodwin, Mr. T. E. Naylor (secretary, London Society of Compositors), and Mrs. Naylor, Mr. T. E. Nelson (secretary, Liverpool Typographical Association), Mr. H. Milton (president, Printing, Bookbinding and Kindred Trades Overseers' Association), Mr. W. Bullett (secretary, Electrotypers and Stereotypers' Managers and Overseers Association), Mr. H. Wilson Howes and Mr. Woodgate Stevens.

The very harmonious way in which everything was carried through reflected great credit upon all those responsible, including the dinner stewards, Messrs. E. H. Campling, R. Condliff and J. A. B. Reed.

An excellent repast was served, and interspersed with the long series of toasts which followed were a number of first-class concert items, which were one and all enthusiastically received. The artistes included: Miss Annie Douglas, who has a magnificent soprano voice; Miss Gladys Peel, a very expressive contralto; Mr. Albert Watson, whose tenor voice is of admirably sensitive quality; Mr. Chass. Lewis, who provided "Paper Magic and Ventriloquism," the former including the production of striking designs in paper cut-outs by the process of merely tearing paper in apparently simple fashion; and Mr. Rex Harold, a humorist whose songs and jokes never fail to amuse.

"The" Association.

The principal toast, that of "The Association," was given by Mr. F. W. Bridges, who recalled past friendly relations with the P. M. and O. A., and said that he wished to give the toast as "'The' Association," for there was only one association of the kind that he knew of. He said this without fear of giving offence to his friends, Messrs. Goodwin and Naylor; he believed they would agree that this was *the* association of the printing trade. In substantiation of this he went on to say that the P. M. and O. A. was absolutely unique in the position it filled; it was an association which was the friend of every branch of the trade. It was the friend of the employer and the friend of the worker, possessing the confidence of both sides. Looking at their membership, he was inspired with the possibilities of the Association. The success of the printing industry depended upon printers' managers and overseers. The employers were almost entirely in their hands, and they had also the greatest opportunity of helping the workers. It was wonderful how many workers throughout the world could look back with gratitude upon their connection with some member of the P. M. and O. A. The Association was also the friend of the customer, whose interests it had closely at heart. He hoped the Association would continue to flourish and grow in numbers. They had had wonderfully good officers and he coupled with the toast the name of their president, Mr. Bateman, whom he regarded as one of the finest men he knew in the printing trade.

Mr. Bateman, in reply, referred jocularly to Mr. Bridges' remarks as to the esteem in which printers' managers and overseers were held by employers and employees. He was afraid, he said, that the employers looked upon them as a rather necessary evil, whilst the employees looked upon them as a very unnecessary evil indeed. They did not permit the Association's representatives to sit upon a council where the two sides met together. They asked "Where would you sit?"—apparently thinking they had nothing to sit upon. He thought that in the future they would make still stronger efforts to be represented there, for they might do great things by bringing impartial commonsense to bear upon any disputes that might arise. Recalling the Association's 30 years of existence during 29 of which he had been a member, Mr Bateman pointed to the services rendered by the Association in regard to technical education and the provision of unemployment insurance. He made appreciative reference to the fact that they had with them one of the members of the first P. M. and O. A. council, Mr. W. H. Gill, and he also made appreciative mention of the names of the late Mr. Moyce and Mr. R. J. Davies. Mr. Bateman concluded by thanking Mr. Bridges ("the Barnum of the printing trade, without the bunkum") on behalf of the council and members of the Association.

Mr. Goodwin's Speech.

The toast of "The Printing Trade" was cordially given by Mr. A. E. Goodwin, who remarked that he appreciated the honour of having to propose this important toast. He recalled the fact that ten years ago his first public appearance in connection with the printing trade was made at a meeting of the P. M. and O. A., on the occasion of the launching of the costing movement, and he was not unmindful of the many directions in which the Association had helped that movement forward. Referring to the place of the printers' manager in the printing trade, he said some people were under the impression that the industry stood upon only two pedestals—capital and labour. He thought a far more useful metaphor was the statement that the industry was built upon a tripod—and the picnic kettle and three-legged stool were examples of the advantages of a third leg. Industry stood upon three legs—capital, labour and management. Their Association belonged to the last important section of the three. There might be differences of opinion as to the distribution of the fruits of industry, but all would agree that industry could continue satisfactorily only if those who managed it were given an appropriate voice in its control. It had been suggested that they were not, as an association, as fully represented in the councils of the mighty as they might be or as they ought to be, but he would remind them that it was not by sitting on committees or councils that they could exercise the most influence in the world. After all, those who could put forward an idea and could give that idea life, must eventually see it reach fruition. Even the costing system, which had been such a benefit to the industry, emanated not from an employer but from a printer's overseer. Referring to the state of trade, he said that, despite prophecies that the compositor would soon be as extinct as the dodo, and that photographic methods would silence many printing machines, he thought that that time was a long way off. Evidence, he said, was reaching him that the printing industry was now beginning to recover from the depression through which it had passed. He was hopeful that this progress would be maintained. He concluded with a kindly reference to Mr. T. E. Naylor, with whose name the toast was coupled.

Mr. Naylor Responds.

Mr. Naylor, who began by commenting upon the improved conditions which made it possible for a representative of the Employers' Federation to be wishing him good health and long life, said they were all interested in the trade to an equal extent, and it should be the main desire of all to make it possible for their trade to yield the greatest possible return for all who had anything to do with it. There should be a fair return for the capital in the industry, a fair return for the management section, and he thought he would have the present company with him in adding that there should be a fair return for the men and women who work in the industry. (Hear, hear.) That result could best be brought about by carrying out the principles of co-operation. Mr. Goodwin had referred to a strenuous week. He might have gone further and spoken of a strenuous year, but the spirit of the Joint Industrial Council had been such that the trade had successfully emerged from crisis after crisis, and the two sides had found themselves better friends afterwards than before. It was lamentable that there seemed to be no little niche in trade negotiations for the printers' managers and overseers. He was quite sure that if it were possible to fit them in somewhere they would perform a most useful service to the industry. But, as had been said, there was nowhere for them to sit: they could not sit with the employers and they could not sit with the trade unions; therefore they had to stand on the mat—which was rather unfortunate for the printing trade. He thought, however, it might be possible to utilise their services in the conciliation department. He believed printers' managers and overseers could bring impartial judgment to bear on the many questions that engaged their attention from time to time. Affirming that there was now a turn of the tide in the printing trade, and that there was a prospect of a boom in the not far distant future, Mr. Naylor concluded with a humorous story which served to deprecate the action of a certain section of the trade in raising trouble at the present juncture. What was needed was a peaceful and progressive state of the industry, a thing which they who represented the trade unions most heartily desired.

The Visitors Welcomed.

A cordial welcome to the visitors and the representatives of the provincial P.M. and O.A. centres was expressed by Mr. E. W. Whittle, general secretary of the Association. He referred with satisfaction to the largeness of the gathering present and especially to the presence of so many ladies, and went on to make appreciative personal reference to many of the principal visitors, amongst whom he mentioned Mr. H. Milton, Mr. W. Bullett, Mr. Woodgate Stevens and Mr. T. Nelson. He announced that expressions of regret at absence had been received from Mr. C. W. Bowerman, Mr. Joseph Mortimer, Mr. McAra and Mr. W. H. Burchell. After making affectionate reference to Mr. W. W. Fox ("The P. M. and O. A. are proud that they taught the employers the Costing System"), Mr. Whittle welcomed the provincial representatives, mentioning Mr. J. N. Poole, for nineteen years secretary of the Liverpool centre, and Mr. C. Mackie, president of that centre; Mr. Broughton, president of the Birmingham centre, accompanied by Mr. Bruff; Messrs. Campbell and Crane, representing the Leicester centre; Mr. Bowen, secretary of the West of England centre, and Mr. Biggs, treasurer. Mr. Whittle added that other centres had sent expressions of good wishes and of regret at not being represented and he read a telegram of greeting from the Yorkshire centre. In giving the toast of "The Visitors and Our Centres," he coupled with it the name of Mr. H. Wilson Howes.

Mr. Howes made able response in a speech which was heartily applauded, in the course of which he returned thanks on behalf of the visitors for the banquet provided and for the cordial welcome given.

Response was also made on behalf of the centres. Mr. Poole expressed with enthusiasm his delight at the welcome accorded. "London's warm!" he said. He had never enjoyed any previous Association function so much as that evening's. It had been "a rare gradely do." As one of the visitors he was heartily satisfied, and would go back to Liverpool and say "London's all right." (Applause.) Messrs. Crane of Leicester and Bruff of Birmingham also made appreciative response.

The toast of "The Ladies" was heartily proposed by Mr. E. H. Berryman, and reply was made by Mr. W. P. Armstrong, solicitor to the Association.

Mr. R. H. Berry very cordially gave the toast of "Our President," referring to Mr. Bateman's long connection with and great services to the Association, and making kindly mention also of Mrs. Bateman. Mr. Bateman then made appropriate reply.

The toast list ended with "The Stewards," proposed by Mr. J. C. Pugh and responded to by Mr. J. A. B. Reed.

A pleasant and memorable evening concluded with the singing of Auld Lang Syne and the National Anthem.

When things are not coming right maybe it is because you are not going after them rightly.

Printers' Medical Aid Association.

Many Tributes paid at the Annual Dinner to the Excellent Work of this Institution.

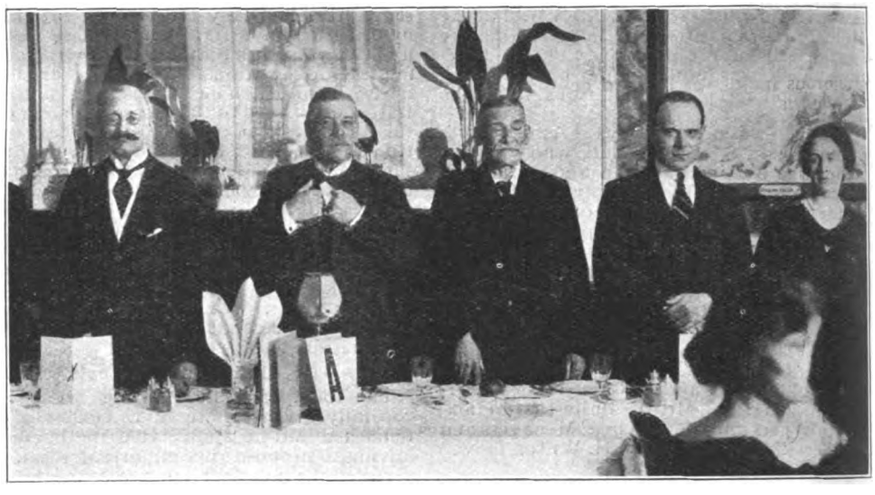
The annual dinner of the Printers' Medical Aid and Sanatoria Association was held on Friday at the Broad-street Station Restaurant, the chair being occupied by Mr. C. W. Bowerman, M.P. The gathering—consisting of close upon one hundred ladies and gentlemen—was marked by the presence of many well-known representatives of the printing and allied trades. During the course of the speeches several well-deserved tributes were paid to the excellent work done by the Association, and to the untiring efforts of Mr. Arthur O'Connor, the secretary.

Among those present supporting Mr. Bowerman were: Messrs. H. E. Deuval, H. Wilson Howes, A. E. Holmes, G. Isaacs, T. E. Naylor, T. G. Newland, J. E. Simcocks, Woodgate Stevens, W. Vandy, Rennie Rogers and Arthur O'Connor.

After an excellent repast there were interspersed among the many toasts a number of very pleasing and warmly-appreciated musical items, rendered by Miss Emily Williams, Miss Winifred Mansfield, Mr. Gerald Adams, Mr. Emile Clare and Mr. Joseph Batten (accompanist).

The P.M.A. and P.M.A. Pension.

In proposing this toast Mr. Bowerman said the man in the street knew nothing of the existence of the Printers' Medical Aid Association. In the printing trade thousands knew about it and about the advantages derived from it. He thought the Association constituted one of the brightest constellations in the printing industry. He asked himself who was responsible for its progress. There were those who year in and year out gave their time, their energy, their judgment, and on many occasions their money, so that this little Association might be made even more successful. These characteristics he was glad to say permeated the whole of their trade. He wanted to pay his tribute to the members of the committee for all they had done. The Association was now getting on towards manhood, and it possessed a robustness which the founders hardly anticipated for it so early in its lifetime. He expressed a hope that they would be as successful in the second Printers' Pension as they had been with the first. In proposing the toast he very cordially associated with it the names of their genial secretary, Mr. O'Connor, Mr. Isaacs and Mr. Vandy.



Mr. Arthur O'Connor, in responding, said he found it difficult to reply to the nice things that had been said about him. With regard to the progress being made by the P.M.A. they were at the present time doing a sprint. As far as their finances were concerned they also had gone up correspondingly. The idea of running a Pension was a "side line," and that it should be named after himself was also a "side line." However, he felt prouder for that fact than if he had been presented with the O.B.E. Mr. O'Connor concluded by referring to the deep interest Mr. Naylor had taken in the inception of the Association, also to the good work done by Mr. Vandy.

Mr. Vandy, who also replied, thanked Mr. Bowerman for the flattering remarks made regarding himself, and said he knew no body of men or women who were doing better or finer work. After all there was nothing like voluntary work; in fact it was the secret of the success achieved by the Association. He could see the day coming when it would be one of the greatest honours for any member of the printing trade to serve on its committee. In that time there would be waiting queues—not seeking benefits—but asking what service they could render. He hoped the P.M.A. would never lose sight of its great traditions. It was founded for one purpose, and that was to help the needy, and with that vision he hoped it would continue to prosper.

"Kindred Associations."

This toast was entrusted to Mr. T. E. Naylor, who referred to the various associations that could claim kinship with the P.M.A. First, there was the Caxton Convalescent Home at Limpsfield, one of the finest homes in the country, if not in the world. Then there was the Lloyd Memorial Home at Deal, which had the distinction of being the only convalescent home connected with the printing trade that stood by the side of the silver sea. There was also the "Natsopa" Memorial Home, which had the distinction of being erected in memory of the "Natsopa" boys who fell in the War. He would like to congratulate that Institution on the fact that they had recently placed a rose garden at the Home in memory of their very good friend, the late Lord Northcliffe. He thought they were all under a debt of gratitude to the N.S.O.P. and A. for having perpetuated the memory of his Lordship in that way. Then last but not least there was the Home at Carshalton, which had the distinction of being the only one in the printing trade that was supported by the allocation of a definite weekly contribution from all its members.

Mr. T. G. Newland, in replying to the toast, referred more particularly to the Convalescent Home at Carshalton with which he was more prominently identified. He wondered to himself of the tremendous possibilities there were if all their efforts could be combined. The Home at Carshalton had beds for about fifty men and women, and members were brought from as far north as Cumberland; their railway fare was paid, and they had three weeks' stay at the Home; Scottish members being sent to a home in Scotland. All their work had been done by deducting a half-penny per week from each member. Their Home was free from debt, and had £9,000 in hand.

Mr. T. E. Naylor. Rt. Hon. C. W. Bowerman, M.P. Mr. Wm. Vandy. Mr. Geo. A. Isaacs. Mrs. Isaacs.

At the Top Table.

A Corner of the Dining Hall.

The Press.

The toast of "The Press" was offered by Mr. A. E. Holmes, who remarked that Mr. Naylor in his speech had said that he (Mr. Naylor) had been given the same toast that night as on a former occasion because he had managed it so well. He (Mr. Holmes), however, had been given a different toast this year, which he supposed was for the reverse reason. (Laughter.) He was glad to see present so many representatives of the Press, and extolled the services rendered to the trade by the *Caxton Magazine* and the *British and Colonial Printer and Stationer*, not to speak of the L.S.C. journal and the "Natsopa" journal. (A Voice: "The *Bulletin*.") In connection with the toast he had pleasure in associating with it the name of Mr. Rennie Rogers, of the *Sporting Life*.

Mr. Rogers, in responding, told many humorous incidents he had come across in his journalistic experiences. Referring to the work of P.M.A. he thought it would be a good thing if the committee extended their operations to include the workers on editorial staffs.

Mr. Geo. Isaacs gave "The Visitors" in a breezy speech which was responded to by Mr. Fisher.

In giving "The Chairman" Mr. H. Wilson Howes referred to Mr. Bowerman as being indefatigable in all that concerned the best interests of the printing trade. He was also an earnest man, a zealous man, and last, but not least, always a gentleman. He hoped Mr. Bowerman would be long spared to preside at many functions of a similar character.

The toast was heartily honoured and accorded musical honours.

In returning thanks, Mr. Bowerman said he was never in better heart and spirit and than when amongst his own fellow members. He was much happier there than in the House of Commons, even when the singing of the "Red Flag" was in progress. He regretted the absence of his wife, who had many friends amongst the P.M.A.

The toast of "The Stewards"—Messrs. W. S. Lintern, G. T. Richards, J. E. Simcocks and W. F. Moore—was given by Mr. H. E. Deuval and responded to by Mr. Simcocks.

Congratulations are due to the committee and the stewards for the excellent arrangements provided for the comfort and enjoyment of the gathering.

Concert at Printers' Almshouses.

On Saturday evening the residents at the Almshouses of the Printers' Pensions, Almshouse, and Orphan Asylum Corporation were given an entertainment, through the kindness of Mr. J. A. Goodall (*Evening News*), and Mr. W. A. Perkins (member of the Council of the Corporation). Mr. W. Vandy (chairman of the Almshouse Visiting Committee) occupied the chair, and among those present were Mr. N. I. Hammond and Mr. Geo. Tams (members of the Visiting Committee), Mrs. James (wife of the medical officer), and Mr. and Mrs. J. Christmass.

The main portion of the concert was given by a party under the direction of Mr. L. R. Chandler, and consisted of concerted pieces, duets, songs, dances etc., the following all contributing of their best: Miss F. A. Goodall, A.V.C.M. (at the piano), Misses L. Parker, Ada Bishop, W. Griffin, V. A. Goodall, and U. Cottrell, and Messrs. L. R. Chandler, Ernest Mynott and Stanley Servanté. By special request, there was an 'extra turn" in the shape of a rendering of the old duet, "Upper Ten and Lower Five" by Mr. W. A. Perkins and his son (Mr. A. D. Froude Perkins), whilst the former also sang "The Vlies be on the Turmits."

During the interval, the members of the audience were supplied with refreshments provided by Messrs. Goodall and Perkins and served under the superintendence of the Almshouse nurse.

At the close, the chairman, in a characteristic speech, proposed a hearty vote of thanks to all who had contributed to such a splendid evening. He mentioned that Messrs. Goodall and Perkins both attained the 25th anniversary of their weddings on the previous Monday, and he was sure that all present would join him in wishing them and their wives a further 25 years of wedded bliss.

Mr. Geo. Tams seconded, and the vote was heartily acclaimed, Messrs. Goodall and Perkins briefly replying.

An expression of thanks to Mr. Vandy for his conduct in the chair closed what was agreed to be a most enjoyable evening.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous,

One Insertion **3/0**
Three Insertions **6/0**
For every line exceeding three lines **1/.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion **1/6**
Three Insertions **3/0**
For every line exceeding three lines **6d.**

Sales by Auctions, Tenders,
Patents for Sale,
Legal and Final Announcements

Per line **1/0**

THURSDAY, APRIL 19, 1923.

Printers and the Budget.

WHILST the Budget leaves many loopholes for attack, we think the Chancellor must be realising that on the whole he is receiving much more approval than blame. Many items are included which must tend to improve trade in general, and printers in particular must benefit by the welcome postal concessions. Mr. A. E. Goodwin points out that the principle which was contended for so strenuously last year has not been upheld, that the whole of the surplus from the postal services should be devoted to reductions in charges, but in view of the Postmaster General's statement, it may be possible for further concessions to be made in the course of the current financial year. The picture post card industry will be disappointed, but in this direction some concession may yet be made by the Postmaster-General himself.

* * *

The Merchandise Marks Act.

IN pursuance of its policy of pressing for amendment of the Merchandise Marks Act to ensure that all foreign printing entering this country shall show clearly the country of origin, the Federation of Master Printers was represented by its secretary in the deputation to the President of the Board of Trade on Tuesday, arranged by the Federation of British Industries. When consideration was given to various representations made by officials of the Associated Chambers of Commerce and the F.B.I. representatives, Mr. Goodwin was asked to explain the case for the printing industry. He pointed out that regulations which would suit some industries would not be in any way effective in helping the public to know the origin of printed matter. He produced a letter from a German printing firm with specimens of colour printing, the letter stating that the goods would not bear any indication of their origin. The plea for regulations efficiently covering printed matter was supported by the representatives of the Federation of British Industries, and there is little doubt that when the Bill appears it will be adapted to meet the requirements of the printing industry.

* * *

Pensions for Employees.

A USEFUL piece of work has been accomplished by the Industrial Welfare Society (51, Palace-street, Westminster, S.W.1) by the preparing and issuing of an interesting memorandum on the subject of superannuation schemes for industrial firms. The memorandum deals with the various methods that may be employed to build up funds, and special reference is made to the peculiar privileges attaching to these funds in respect of income-tax exemption. Some interesting notes are also given on the subject of life assurance cum superannuation and on group assurance. The latter has enjoyed much popularity amongst large firms in America. The pamphlet is of particular interest at a time when thrift and old age pensions are the subject of comment in Parliament.

* * *

Paper Wrapping for Food.

THE crying need for the hygienic wrapping of food, ventilated so effectually at the annual dinner of the Papermakers' Association, was promptly taken up by Mr. James Strachan and Mr. J. Leonard Spicer at the recent meeting of the Royal Microscopical Society. This is a question of the most urgent importance. There are already too many sources of infection to permit our food to be exposed any longer to the vagaries of errand boys and the dangers of the open street. So obvious is the defect in our system of distributing food that one would think it only required attention to be directed to the matter in order to secure an effective remedy Fancy wrapping up meat in waste paper! For that is what the use of old news and printing paper amounts to. Papermakers can readily provide the means for overcoming all the objections that might be raised. Hygienic wrappings are insisted upon in America, and this course should be at once adopted in this country. There would be little, if any, additional cost. The surprising thing is that public opinion has not already demanded the voluntary adoption of such wrappings by the bakers and butchers. A little well-directed propaganda should quickly remove an obvious scandal.

The Brixton-Streatham-Balham Fund

The above auxiliary held their annual committee dinner at Anderton's Hotel, Fleet-street, on Saturday last, Mr. J. W. Punnett, chairman of committee, presiding. Some 40 members and friends were present, including the Right. Hon. C. W. Bowerman, M.P., Mr. H. F. Parker (Lloyd Memorial Home), Mr. Arthur O'Connor (Printers' Medical Aid) and Mr. T. Timberlake (chairman L.S.C.).

The toast of "The Fund" was proposed by Mr. Bowerman, who detailed the good work accomplished, which included the founding of two pensions and the endowing of beds at Deal and Limpsfield, as well as subscribing largely to the Printers' Medical Aid, and sundry local funds. The replies of the two hon. secretaries elicited the information that a third pension was well on the way and would be known as the "Dan Pointing" Pension, both Mr. George Clow and Mr. T. Wheeler expressing the hope that there would be a goodly gathering next Saturday, when Mr. S. W. Newcomb would be supported by the News Committee of the L.S.C., for the purpose of completing the said pension.

Other speeches were given by Mr. P. M'Ginty (treasurer), Mr. H. Deuval (vice-chairman), Mr. T. Timberlake, Mr. H. F. Parker, and Mr. Arthur O'Connor. The excellent concert was in the capable hands of Mr. T. Wheeler (musical director), and Mr. Chas. H. Hardy was the ever ready accompanist.

Paper Workers' Dispute.

Dangerous Position Reached.

At a meeting of the Joint Industrial Council for the Printing and Allied Trades, held on Wednesday of last week, the question of the dispute with the Central London Branch of the National Union of Paper Workers, which is now affecting Government contractors who are members of the London Master Printers' Association, was discussed until a late hour. The Council unanimously passed a resolution that: "In the opinion of this Joint Industrial Council, the Central London Branch of the National Union of Printing and Paper Workers has failed to comply with the constitution of the J.I.C., and advises the Branch to take steps to act in accordance with the constitution, and to avail itself of the assistance of the Council, with a view to bringing about a settlement of the present dispute, which affects the Government contractors."

This resolution was conveyed to the executive of the union, with the result that the embargo placed upon Government work was lifted so far as work in the offices of the members of the London Master Printers' Association is concerned. A Special Joint Committee was appointed to see what steps could be taken to bring about a settlement. The committee waited upon the Controller of his Majesty's Stationery Office, and discussed the position very fully, and certain suggestions were submitted to him for his consideration.

The Whitley Council connected with the Stationery Office met on Saturday, but it was subsequently stated that the Whitley Council had been unable to arrive at any basis for a settlement.

On Monday a deputation from the Paper Workers' Union called at the offices of the L.M.P.A., and stated that as attempts to reach a settlement had failed, they had decided to impose again a complete embargo on all Stationery Office work, and they also complained that certain members of the L.M.P.A., not being able to deliver completed work to the Stationery Office, were employing non-society labour for this purpose. The position was reported to the Emergency Committee of the L.M.P.A. on Tuesday, and the Committee decided that their members had not broken any agreement or agreed conditions; that members were making these deliveries under their contracts; and that the union should be informed that the matter was in the hands of the Joint Industrial Council. Practically all the trade union leaders are attending the annual conference of the Printing and Kindred Trades Federation at Scarboro this week, and information has been conveyed to those J.I.C. officials who are at Scarboro that there are possibilities of the dispute spreading, and that even a general stoppage of work in London seems probable.

It was reported on Wednesday that five more firms had become affected by the dispute, these being Messrs. Henderson and Spalding, Sylvan-grove, S.E. (60 men and women); Messrs. John Parry and Co., Bankside, S.E. (12); Messrs. W. Griffiths and Sons, Old Bailey, E.C. (80); Messrs. Adams and Co., Cross street, E.C. (3); and Messrs. Mercer and Son, Kennington, S.E. (2), making a total of 157 employees out.

It seems unfortunate that some of the firms affected are not in the employers' organisation, a fact which must hamper the application of the conciliation machinery which the organised printing trade possesses.

Lighting of Printing Works.

A particularly interesting lecture is due to be held at the headquarters of the Royal Society of Arts, 18, John-street, Adelphi, W.C., at 8 p.m. on Tuesday, April 24th. Mr. Leon Gaster, at a meeting of the Illuminating Engineering Society, will open a discussion on "The Lighting of Printing Works and Newspaper Offices." The Health Committee of the Joint Industrial Council of the Printing and Allied Trades has been specially invited to attend.

With nett profits of 46,610,000 marks the Bautsen Paper Mills propose dividends of 8 per cent. and 150 per cent., according to the kind of share, 10,000,000 marks being allotted to the reserve.

Printers' Pension Corporation.

Successful Year Reported.

At the annual general meeting of the Printers' Pension Corporation, held in the St. Bride Foundation Institute, on Saturday afternoon, the chair was occupied by Sir G. Rowland Blades, M.P.

In his opening speech, moving the adoption of the report and balance sheet, the chairman referred to the great work being undertaken by the Printers' Pension Corporation. The work of the Corporation had shown wonderful progress, in spite of many difficulties. The success was largely due to the Duke of York, to whom they offered congratulations on his forthcoming wedding, his Royal Highness having presided at their annual festival in November last. They were much indebted to members of the Royal Family for the support they had given to the Printers' Corporation. The report gave evidence of the great growth of the institution during the past ten years. Ten years ago the total number of recipients of benefits was 543, while to day they numbered no fewer than 1,974. The amounts distributed in benefits ten years ago were £9,193, whereas now they were £30,681. In pensions alone the sum of £18,000 was now distributed, as compared with £8,400. This was a great work of alleviation, of which every printer must be proud.

Mr. F. G. Parish seconded the adoption of the report, which was unanimously adopted. A letter was read from Sir William E. Berry accepting the presidency of the corporation for the ensuing year.

Personal.

Viscount Burnham presided and many prominent newspaper men were present at the dinner to Canadian Press visitors given on Monday at the Savoy Restaurant by the Empire Press Union.

The guests were Mr. C. F. Crandall, hon. secretary of the Second Imperial Press Conference (Canadian Executive); Mr. J. W. Woods, editor and managing director of the *Calgary Herald*; and Mr. W. Rupert Davies, editor of the *Renfrew Mercury* and president of the Canadian Weekly Newspaper Proprietors' Association. Mr. George Isaacs attended.

Sir Stanley Reed, of the *Times of India*, has left Bombay for England.

Mr. F. H. Cole, the secretary of the South-West London Master Printers' Association, is arranging a series of interesting addresses on "The Pitfalls and Peculiarities of the Craft."

Mr. R. A. Austen-Leigh, the president of the Federation, will inaugurate a monthly series on May 1st. He will be followed by others who will take up particular aspects of the subject, such as ink, blockmaking, paper, and other matters upon which the printer will obtain enlightenment. Members not associated with the S.-W. will be cordially welcome.

Merthyr Tydvil Corporation have resolved to confer the freedom of the borough upon Mr. H. Seymour Berry, J.P., in recognition of his many local public services and philanthropic acts.

Mr. Martin Herlihy, of the Press Association Gallery Staff of the House of Commons, has passed his final examination for the Bar, standing ninth on the list of certificates of honour.

Mr. Oswald J. Bradbury, who has been chairman of Bradbury and Smith, Ltd., paper merchants, Leicester, since its incorporation, has retired from active participation in the business.

Mr. A. T. Shorthose Smith, the present managing director, has been appointed chairman of the company, and Mr. A. J. Bradbury and Mr. F. W. Botham, who have been associated with the business for some years, have been elected additional directors.

Postal Concessions.

Sir,—The welcome modifications of the postal rates contained in the new Budget which are to come into force in the near future will give real satisfaction to the trade, for although they do not reach as far as was at one time hoped, yet the advantages conferred by them are considerable and the full effects of the concessions will not be realised for some months.

The increase in the weight for letter communications will undoubtedly lead to an increased circulation of folders and other advertising matters enclosed in business letters, but more important still, the doubling of the weight of printed matter permissible for a halfpenny cannot fail to cause a considerable increase in printing and lithographic work for advertising purposes.

There is one tinge of regret that must be referred to, *i.e.*, that the Postmaster General has not seen his way to comply with the suggestions of the picture post card trade, but possibly he will be able to do something in this direction by departmental order in the near future.

The thanks of the industry at large are undoubtedly due to all those who have laboured to bring about those improvements; to Lieut.-Colonel H. Rivers Fletcher, vice-president of the Federation of Master Printers, who has worked incessantly; to Mr. H. Skinner, chairman of the Joint Industrial Council of the Printing and Allied Trades for his support; to the Rt. Hon. C. W. Bowerman, M.P., for his constant help in the House; to Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation and joint secretary of the J.I.C. for his organising efforts; and above all to the permanent staff at 24, Holborn, and particularly to the untiring and indefatigable secretary. Mr. A. E Goodwin, whose judicious and careful direction of the Press campaign which has been carried on for many months past, has now achieved such gratifying results.

Yours, etc.,
E. G. Arnold,
Chairman,
Contracts and Legislation Committee, Federation of Master Printers.

April 17th, 1923.

The Amalgamated Press.

"New Journeymen" at Gravesend Works Receive Congratulations.

An interesting gathering of printers was recently held at the Masonic Hall, Gravesend, the occasion being the termination of seven years' apprenticeship of Messrs. C. Elliott and T Beech (letterpress department) with the Amalgamated Press (1922), Ltd., at their works in the district. The event marked the cordial relations between the various departments, and also emphasised the keen interest taken in the welfare of the younger members of the craft. Mr. W. Bagley (overseer of the machine department) presided, and he was supported by Messrs. A. Smith (the works manager) and H. Pearson (Father of the machine minders' chapel). In all the company numbered between 60 and 70.

After "high tea," Mr. A. Smith submitted the toast of "The New Journeymen." He congratulated Messrs. Elliott and Beech upon being equipped with a knowledge of the craft with which they were all proud to be associated The new journeymen were fortunate in having served their apprenticeship side by side with some of the best craftsmen the trade had produced, and he was convinced in their journey through life they would be a credit to themselves and to the firm. The toast was received with the greatest enthusiasm.

The "New Journeymen" suitably responded, and expressed their appreciation of the good wishes of the chapel, of which they were proud to be members.

Another popular toast was that of "The Chairman," proposed by Mr. George Chapman, and Mr. Bagley, in reply, referred to the mutual comradeship between all sections.

An excellent musical programme was rendered during the evening.

DIVIDENDS AND REPORTS.

"ILLUSTRATED LONDON NEWS AND SKETCH."—The report for 1922 states that the arrangement with the *Sphere and Tatler*, under which the two companies are co-operating in the production and sale of their publications, is working well. The directors report a very substantial improvement in the profits, and state that the circulation and advertisement revenue show satisfactory increases. The result of the year's working is a trading profit of £57,423, and, after deducting interest on debenture stock, administration expenses and taxes, there remains a balance of £37,417, making, with £413 brought in, a total of £37,830. It is proposed to pay a dividend at the rate of 6 per cent. per annum on the preference shares for the nine months ended December 31st, 1922, and a dividend at the rate of 7½ per cent. per annum on the ordinary shares for the same period; also to transfer £14,000 to reserve fund (making a total of £45,000), which is employed in the business, and to carry forward £1,682

NEW COMPANIES.

LEWER AND POND, LTD.—Capital £5,000, in £1 shares; to adopt an agreement with J. W. Lewer and J. G. R. Pond, and to carry on the business of manufacturing stationers, carried on by them as "Lewer and Pond" at 7, Fore-street-avenue, E.C 2, and 13, Green street, Cambridge-road, E 3. Private company. First directors: J. W. Lewer, J. G. R. Pond and W. Rawles, J.P. Registered office: 7, Fore-street-avenue, E.C.2.

ERNEST BENN, LTD.—Nominal capital of £35,000, in £1 shares; to acquire, upon the terms of an agreement with Benn Brothers, Ltd., the book department of the said company, and to carry on the business of publishers, librarians, printers, binders, exporters and importers of or agents for books, papers, magazines and printed matter, of every description, etc. Private company. First directors: Sir Ernest J. P. Benn, V. Gollancz, H. P. Shapland and C. E. Hughes. Registered office: 8, Bouverie-street, E.C.

FRED SPALDING AND SONS, LTD.—Capital £3,000, in £1 shares; to take over the business of a photographer, stationer, bookseller, printer and fancy dealer carried on by F. Spalding at Chelmsford, as Fred Spalding and Sons. Private company. First directors: F. Spalding, Jun., and E. W. Spalding. Registered office: 4 and 5, High-street, Chelmsford.

Robson at 9, Gloucester-road, Bishopston, Bristol. Private company. Permanent directors: W. F. Robson, F. A. Bendall and S. H. Pomeroy. Registered office: 9, Gloucester road, Bishopston, Bristol.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

AINSWORTH'S, LTD. (stationers, etc., Newport, Salop).—Satisfaction in full on March 29th, 1923, of "A" and "B" debentures dated September 27th, 1916, securing £600 and £650 respectively.

JAMES DAVIES AND CO., LTD. (newspaper proprietors, etc.)—Mortgage on South Wales Press buildings, Murray street, Llanelly, dated March 27th, 1923, to secure all moneys due or to become due from company to L.J.C. and Midland Bank.

R. V. HARLING AND CO., LTD. (advertising and publicity experts, etc., London).—First mortgage debenture dated April 5th, 1923, to secure £100, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs W. Maidment, 24, Elm grove-road, Barnes, S.W.

AVON PRINTING CO., LTD., MANCHESTER.—Satisfaction in full on July 5th, 1919, of debenture dated August 11th, 1915, securing £200. (Notice filed April 6th, 1923).

BANKRUPTCIES, etc.

Re J. W. ALEXANDER, picture post card dealer, 11, Long-lane, Aldersgate-street, and late of 16, Carthusian-street, E.C.—This bankrupt who failed in February, 1908, applied to Mr. Registrar Hope at the London Bankruptcy Court on April 11th for an order of discharge. The official receiver reported that the accounts showed ranking liabilities £75 and contingent liabilities £241, whilst the assets, valued at £25, had proved unrealisable. The bankrupt commenced business in November, 1906; six months later the concern was taken over by the London View Co., Ltd., of which company the bankrupt acted as a director until it went into liquidation in August, 1907. It was to the failure of the company to discharge the old partnership debts that the bankrupt attributed his insolvency. The only offence cited was insufficiency of assets to equal 10s. in the £ on the amount of the liabilities, and His Honour suspended the discharge for the nominal term of three weeks.

Progress of S.A.P., Ltd.

During the past twelve months the developments and ramifications have been noticeable of S.A.P., Ltd., of Gough-square, Fleet-st., E.C.4, one of the latest firms in the printing machinery world, of which Mr. Herbert J. Salmon is managing director, than whom perhaps no man is better known throughout the United Kingdom in the printing machinery industry. This new firm appeared in London about eighteen months since without any "flourish of trumpets," and has been quietly pushing its way to the front with the most modern presses and devices. It has been appointed sole agents in the United Kingdom for the productions of Koenig and Bauer, of Wurzburg (flat or rotary); also those of Faber and Schleicher, Offenbach-on-Main, who are manufacturers of up-to-date offset presses; also the folding, wire stitching and book stitching machines of Preusse and Co., of Leipzig. Mr. Salmon and his colleague, Mr. J. H. W. Smith, have also paten ed a split cone for the reel spindles of rotary printing machines and for the slitting and rewinding machines in paper mills, which bids fair in itself to develop into a big business. It has already been adopted by some of the principal newspapers in London and the country, including the *Daily Mail*, the *Daily Mirror*, the Amalgamated Press and the *Daily Sketch*. With regard to the paper mill side of the business, S.A.P., Ltd., have placed this in the hands of Messrs. John Collis and Sons, Ltd. In addition to the above, S.A.P., Ltd., are hoping to place on the market shortly a Wharfedale tapeless delivery, which can easily be attached to existing machines; an automatic sheet feeder, and several other novelties. They have lately supplied an all-sized rotary printing and folding machine, by Koenig and Bauer, to Messrs. Cahill and Co., Ltd, of Dublin; a magazine rotary, by the same firm, to the London Caledonian Press; also a K. and B. "Hexe" stop cylinder press; and have orders in hand for several "Sturmvogel" two revolution presses, by K. and B., including repeat orders in three instances. The "Compleo" semi-automatic stereo plant, for rotary machine users, will also be heard more about in the near future, as will also the "Gigant" hydraulic matrix-making and drying press for producing the finest half-tone illustrations, as published in the *Daily Sketch*, the *Sunday Herald*, the *Daily Mirror* and the *Sunday Pictorial*.

Swedish Lock-Out Settled.

A definite settlement of the lock out in the Swedish wood pulp industry was reached last week, and the agreement entered into will bind both parties until the end of next year. Mills are to be started up as soon as practicable but it will be two or three weeks before they can be got into full swing.

South-West London Master Printers

Annual Meeting of the Association.

The annual meeting of the South-west London Master Printers' Association was held on Wednesday of last week, at Stanley's Restaurant, Lavender Hill, S.W., Mr. J. D. Wise presiding.

The formal business having been concluded the secretary (Mr. F. H. Cole) presented the committee's fifth annual report, for the year 1922-23, which showed that the Association had maintained and strengthened its position within the Alliance. The committee bore testimony to the work of their president and council representatives during the wages negotiations, and also placed on record their sincere appreciation of the work so well and enthusiastically carried out by their secretary, Mr. Fred. H. Cole. Mention was made of the fact that the result of the General Election questionnaire, sent to the candidates of the south-west constituencies, was very satisfactory, all the sitting members with the exception of three having expressed their willingness to help the printers in their efforts to oppose continuation of State printing at Harrow and elsewhere, and to strengthen the Merchandise Marks Act as it affects the printing industry. The Association's activities in condemning the action of the Postmaster-General in abolishing the sample post, and protesting against the action of the Church Touring Guild in having all its mailing matter printed in and posted in Vienna, were recorded. The Association's successful annual dinner and various monthly meetings were recalled and the further active interest of members solicited. The membership of the Association was reported as now standing at 107, an increase of six during the year.

The report was unanimously adopted.

The hon. treasurer, Mr. R. Kent, in presenting the accounts for the year showed that the deficit of last year had been almost wiped out during the present year under review.

The treasurer moved, and Mr. E. J. Pegg seconded, that the balance sheet be passed, and the meeting unanimously agreed.

Before proceeding to the election of officers for the ensuing year, Mr. Wise, the retiring president, gave a brief resumé of the work of the past year.

He cordially thanked all the officers and members of the Association who had so loyally supported him during his term of office (two years) as president of the Association. Whilst he was thankful for all that had been achieved in the past he looked forward to renewed efforts for furthering the interests of the Association in the days to come. He was glad to note that there had been some improvement in the attendance at the monthly meetings, but hoped that every effort would be made to increase the active interest of their members in the affairs of the Association. There had been an excellent programme of lectures and speakers during the past year, and the thanks of all were due to their energetic secretary, Mr. F. H. Cole, whose services were so untiringly given to the Association. Mr. Wise also reminded the members of the great benefit that resulted from affiliation to the L.M.P.A., and said that one of his chief pleasures in the work had been his cordial reception at 24, Holborn, where the staff were ever ready to do what they could to help the individual member in times of difficulty. Mr. Wise concluded his remarks by saying that it gave him great pleasure to propose that the vice president, Mr. E. G. Cole, be elected as president for the coming year, and he was sure that in Mr. Cole the members would have a president who would devote himself wholeheartedly to the interests of the Association.

Mr. A. Spring seconded the proposition, and the meeting unanimously elected Mr. E. G. Cole as president, with marked signs of the popularity of this choice.

Mr. Wise then vacated the chair, and Mr. E. G. Cole took charge of the proceedings.

Mr. Cole expressed the great pleasure that his election gave him, and said it would be his aim to try and follow worthily in the steps of the preceding president of the Association.

Mr. R. B. Simnett was unanimously elected as vice-president of the Association.

The president, Mr. E. G. Cole, at this point asked leave of the meeting to retire in order that he might go back to another appointment from which he had come to this meeting.

Mr. R. B. Simnett, vice-president, then took the chair.

The treasurer, Mr. R. Kent, and the joint hon. secretaries, Messrs. F. H. Cole and Fred A. Chivers, were unanimously re-elected.

The following were elected to form the executive committee: Messrs. H. A. Chivers, W. G. Mead, E. J. Pegg, G. Rangecroft, E. Trim, P. Walmsley, G. W. Young, F. E. Tally and S. Maidment.

Messrs. E. G. Cole, president, R. B. Simnett, vice-president, and Mr. J. D. Wise, past president, were elected as the Association's representatives on the Council of the L.M.P.A.

Mr. E. J. Pegg was also re-elected as deputy representative to the Council.

This completed the election of officers.

Mr. Simnett and Mr. Spring paid very eloquent tribute to the work of the retiring council representative, Mr. G. W. Young, who suitably responded.

The meeting next proceeded to adopt the Standardised Form of Local Association Rules, which Mr. Wise informed those present had been accepted by all the other district associations in London, and it was decided to print and distribute copies of the rules as amended to the members as soon as possible.

Mr. H. A. Chivers rose to propose that a cordial vote of thanks and appreciation for the work done by the retiring president, Mr. J. D. Wise should be recorded in the minutes.

Mr. P. Walmsley seconded the proposal and Mr. Simnett supported it. The meeting with entire and hearty unanimity passed the vote, and Mr. Wise, obviously much touched by the depth of feeling expressed by the meeting, responded.

Mr. W. F. Willsher, L.M.P.A. asst. sec. reported on the present state of the Paper Workers' Dispute, and a very enjoyable and successful annual meeting was brought to a close with a cordial vote of thanks to the vice president, Mr. R. B. Simnett for the able way in which he had conducted the proceedings at such very brief notice.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

F. Reader, G. Townsend, and W. E. Cooper, letterpress, lithographic, and colour printers, 86, Rutland-street, Leicester, under the style of the Reader Printing Co.

F. J. Kew and F. J. Morgan, stationers, printers, bookbinders, and booksellers, 54, The Broadway, Wimbledon, and 5, Worple road, Wimbledon, under the style of Collins and Kew.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

W. Hughff, Mousehold-lane, Sprowston, Norfolk, carrying on business at 4, Exchange-street, Norwich, bookseller and stationer.

E. Shinegold, 105, Osbaldeston road, Stoke Newington, London, paper agent's clerk.

Openings for British Trade, etc.

THE farmer has learned that he can't sow and reap the same day. Some city folk don't know it yet.

Federation of Master Process ENGRAVERS.

Annual Meeting in Manchester.

The annual general meeting, annual dinner and conference of the Federation of Master Process Engravers took place in Manchester on Wednesday and Thursday of last week. London members to the number of 32 travelling from St. Pancras by special saloon on the Wednesday arrived at Manchester at 2.25 p.m., where they were met by Mr. W. A. Nixon, secretary of the Northern Counties Association of Master Process Engravers, which is really a section of the main Federation. Prominent members of the Manchester reception committee included Mr. H. Entwistle, of Entwistle, Thorpe and Co., and Mr. F. W. Thomas, of the Star Process Engraving Co., Ltd. The entire party was accommodated at the Midland Hotel where the subsequent functions took place.

A start was made on official business at 4 o'clock on the first day, the meeting being presided over by Mr. T. B. Gould, of the Northern Art Reproduction Co. (immediate past-president of the Northern Counties Association). About 50 firms in all were represented, and letters were received from others who were unable to attend by reason of distance or pressure of business.

At the annual dinner on the Wednesday, at 6.30 p.m., the chair was taken by the president of the Federation, Mr. Andrew Dargavel, of John Swain and Son, Ltd., and the company numbered over 60. The guests of the evening were Major C. Gamble, of the Manchester College of Technology, and Mr. Gee, of Leicester, representing the Federation of Master Printers. Major Gamble proposed the toast of "The Federation," and the chairman responded on behalf of the members. Mr. P. J. Bailey, of the Strand Engraving Co., London, proposed "The Provincial Associations," which was responded to very ably by Mr. H. Entwistle, after which a musical programme was proceeded with. Mr. C. F. Coombs, of the West End Engraving Co., amused the company with a topical song adapted to the occasion, the chorus of which was heartily joined in by all members.

Officers for the ensuing year included Mr. Andrew Dargavel re-elected as president and Mr. V. Siviter Smith, of Birmingham, vice-president; additions to the Council being Mr. W. B. Hislop, of Hislop and Day, Ltd., Edinburgh, Mr. A. Knighton, of Knighton and Cutts, London, and Mr. R. Vincent, of the Amalgamated Press, Ltd., London.

Important items of business transacted during the two days' meeting were the strengthening of the rules of the Federation, increase of subscriptions and favourable discussion of an Unemployment Insurance Scheme for the entire industry.

Future of "The Times."

Major J. J. Astor, M.P., presided at *The Times* Companionship dinner held on Saturday night at the Hotel Cecil. More than 1,000 members of the various staffs and their guests were present, and speeches made in the Grand Hall were transmitted to another section of the company in the Victoria Hall of the hotel by means of the Western Electric Public Address System, a remarkable elaboration of the loud speaking telephone.

Major Astor, replying to the toast of *The Times* Publishing Co., expressed his view that the paper should be used for national interests, and it should be beyond the power of any individual to use it for his own personal ends. He would regard *The Times* as a national institution, and so far as it was possible he was taking steps, with the help of his friend, Mr. John Walter, to put it beyond the reach of unworthy ends, and to maintain it as the independent, fearless, and truthful voice of England.

IN Mr. Fred. J. Melville's book, "Rare Stamps: How to Recognise Them," just published at 1s. nett, by the Melville Book Co., of 26, Plumstead High-street, London, he tells of many tiny scraps of printing which are worth hundreds and even thousands of pounds. The book should be of practical utility to all interested in its subject.

Trade Notes.

A CONFERENCE between the L.M.P.A. and the "Natsopa" on rates for machine assistants on the larger printing machines chiefly used by periodical printers, also rates for revisers and general assistants, etc., has been held, and after an interesting discussion was adjourned to allow of the employers submitting counter-proposals to those put forward by the Society.

IN connection with the annual meeting and social functions to be held at Eastbourne on May 4th and 5th by the Home Counties Master Printers' Alliance (secretary, Mr. Percy D. Michael, 24, Holborn, E.C.1), a very tasteful programme has been prepared giving full particulars of the arrangements made.

ROCHDALE PRINTING TRADES GUILD.—The Rochdale and District Printing Trades Guild visited Manchester on Saturday last. About 60 members paid a visit to Messrs. Hulton's, Withy-grove to see the production of the *Sunday Chronicle*. The party afterwards split up, part visiting the Manchester Town Hall and the rest going through the John Rylands Library where Mr. Guppy had set out some specimens of printing, ancient and modern. The day was a big success. The next visit is to the Linotype Works at Broadheath.

THE Newspaper Society has invited the Rt. Hon. Sir Henry Duke, P.C., as the principal guest at their annual dinner which will take place at the Trocadero Restaurant on Tuesday, May 8th, at 7 p.m. for 7.30 p.m.

NEWSPAPER PRESS FUND.—The Diamond Jubilee Appeal of the Newspaper Press Fund has already met with a generous response, and there is every hope that a record result will be announced at the sixtieth annual dinner at the Hotel Victoria on May 10th, when the Prince of Wales will preside. Early donations include the following: £1,050, Viscount Rothermere; £1,000 each, the *Daily Mail*, the *Evening News*, the *Weekly Dispatch*, the *Daily Mirror*, the *Sunday Pictorial*, Proprietors of the *Daily Telegraph*, *The Times*, and *News of the World*; £525, Mr. Frank Lloyd; £500 each, Messrs. E. Hulton and Co., Ltd., and the *Observer*; £250, *Liverpool Post and Mercury*; £210, Sir Roderick Jones and Reuters; £105 each, Sir James Owen (president of the Newspaper Society), *Daily News*, *Yorkshire Post*, Sir John Ellerman; £100, *Manchester Guardian* and *Manchester Evening News*.

THE eight-fourth annual general meeting of the Newsvendors' Benevolent and Provident Institution was held at Stationers' Hall on Tuesday. Viscount Burnham, the president, occupied the chair, and on his motion, seconded by Mr. Arthur T. Yates, chairman of committee, the report and financial statement were adopted. A satisfactory year's progress was reported, and the intention was announced of having a festival dinner this year, under the chairmanship of Sir Charles Wakefield.

THE excellent relations existing between the management of Messrs. Wyman and Sons and their bookstall staff were again emphasised at the annual dinner of the staff, held at the Hotel Great Central on Saturday night. Mr. H. W. Pountney, manager and a director of the firm, was in the chair, and three other directors and all the superintendents were among the large company. Lord Riddell was one of the speakers.

THE Associated Advertising Clubs of the World are to send an invitation to the Prince of Wales to attend the Atlantic Convention in June.

PRECURSOR OF THE LINO.—The *Observer*, quoting its own columns of 100 years ago writes: "Dr. Church is now at Birmingham preparing his new printing press. The compositor has only to sit down at this curious piece of mechanism as he would at a pianoforte, and as he strikes the keys, the types all fall from the case into their proper places, with a velocity that keeps pace with the most rapid speaker. The form having been worked off, the type moves into the melting pot, from which it is returned, recast into its original state without any diminution of material, and thence distributed into the case quite new. One of these presses placed at the bar of the House of Commons would always insure a correct report of the debate. Dr. Church, the inventor, is a native of Boston, in New England."

MR. H. GORDON SELFRIDGE gave a dinner at Lansdowne House, Berkeley-square, on Wednesday of last week, to Mr. Clarence W. Barron, principal proprietor of the *Wall Street Journal*, the *Boston News Letter*, *Barron's Financial Weekly*, of New York, and other publications. Amongst those who accepted invitations were Sir Herbert Morgan, Lord Riddell and Sir W. Berry.

MRS. REINER, of Sutton, mother-in-law of Sir Roland Blades, M.P., when stepping off the pavement in Worcester-road, Sutton, on Friday, was knocked down by a cyclist and killed.

MR. W. JONES, a Runcorn journalist, was killed on Friday by colliding on a motor-cycle with the Duke of Westminster's motor-car whilst on the road near Nantwich.

THE interment took place on Saturday at Knaresborough of the late Mr. William Parr, who for half-a-century conducted the business of a printer and stationer in the ancient borough.

THE late Mr. Joseph Constantine of Northallerton, Yorkshire, a director of the Field Press (Ltd.), who recently gave £40,000 for the establishment of a Technical College in Middlesbrough, left unsettled property valued at £1,563,195.

MR. HARRY CROOM-JOHNSON, of Wrexham, managing director of the company which owns the *Wrexham Advertiser*, left £14,128 (net £9,170).

THE late Mr. James Brown, Harrow, late of Messrs. Denyer and Harwar, Burgo-street, E.C., manufacturing stationers, who died November 15th, aged 44, left £6,333.

AUSTRALIAN DUTIES.—The High Commissioner for Australia has received telegraphic advice that the following goods have been brought under the operation of the Customs Tariff (Industries Preservation) Act:—Paper feeding and folding machines, combined or separate, Germany, Section 8.

MR. S. W. ROSENBACH has brought off one of the biggest deals in books that have been made in the United States for many years in the purchase for $450,000 (approximately £90,000) of the greater part of James W. Ellsworth's collection.

THE MASTER PRINTERS' ANNUAL AND TYPOGRAPHICAL YEAR BOOK, 1923. Edited by R. A. Austen-Leigh and Gerard T. Meynell. London: Spottiswoode, Ballantyne and Co., Ltd. Price 12s. 6d. net; by post 13s. 6d.

We welcome the appearance of the new edition of this very useful volume of reference matter relating to the printing and allied trades. In size and get-up almost identical with that of last year's issue, the new "Annual" cannot boast to have made much advance upon its already established utility, but it has some 20 or so more pages of reading matter, has been generally revised, and contains a few new items of interest. As the preface points out, the 1923 negotiations which resulted in decreasing of wages have necessitated a revision of nearly all the agreements between employers and unions—which agreements constitute a substantial and important section of the volume. There is a useful revised legal section dealing with the "Rights and Obligations of Printers under the Factory Acts and other Acts of Parliament, etc.," by Messrs. Scatliffs, solicitors to the Federation of Master Printers, whilst in the foreign section Mr. Robert O. Ballou, managing editor of the *Ben Franklin Monthly*, writes a review of the year's printing in America. It is a pity that, as the book was sent to press before the holding of the many recent annual meetings of the district associations, much of the information regarding the office-bearers in the employers' organisation is out of date by the time of publication. Other matter also already requires revision. The list of printing trade papers is a useful feature. This list, by the way, contains no reference to the Canadian field, and the *Canadian Printer* might be added. The volume is again admirably printed and produced (by Spottiswoode, Ballantyne and Co., Ltd.), and it bears as frontispiece an excellent new portrait of Mr. R. A. Austen-Leigh, president of the Federation.

THE employee who simply "puts in the time" is by and by put out.

Trade Union Matters.

RETRENCHMENT IN THE T.A.—A big effort is to be made to put the finances of the Typographical Association on a sound basis which were undermined through the strike. The members are to ballot on the following questions:—A. Are you in favour of a reduction of 25 per cent. in the out-of-work and funeral benefits as specified? or B. Are you in favour of an increase in subscriptions as embodied in the accompanying table in order to maintain the benefits at the present rate? Table shows roughly an increase of 2d. per week.

NATIONAL UNION OF JOURNALISTS.—Mr. R. Patterson (South Shields) presided at the annual meeting of the Newcastle branch of the National Union of Journalists, held in Newcastle. The reports, which were of a very satisfactory character, were adopted, and the following officials appointed for the ensuing year: Chairman, Mr. W. Lowes; joint hon. secretary, Mr. J. N. Back and Mr. W. W. Tagg; hon. auditors, Mr. A. S. Reeves and Mr. J. Prunskill; and committee, Messrs. W. D. Stephenson, A. H. Garside, J. Harding, E. Allan, W. W. Snaith, R. Patterson, T. Coulthard, G. A. Roberts and G. F. Hall.

LITHOGRAPHERS' WAGES.—After a conference with the Federation of Master Printers on the question of wages certain terms have been proposed and these have been recommended for acceptance by the executive of the Lithographic Printers' Society. Although the terms, we understand, are much below the amount asked for, it is believed the London members will accept the position, at any rate until 1924, when the position will again be reviewed. We learn that a vote is being taken on the suggested terms, which if agreed to by the men, will place London lithographic printers in a super-grade of the National Wages Agreement. Up till now there has never been an agreement between employers and the lithographic printers covering a scale of wages.

PAPER WORKERS AND AGRICULTURAL LABOURERS.—Mr. W. Ross, general secretary of the Papermaking Section of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, writes to correct the report which appeared in our last issue concerning the grant of £100 to the agricultural workers in East Anglia. He writes: "A resolution of sympathy with the East Anglian agricultural workers in their fight against starvation wages was carried unanimously by the delegates at the Biennial Conference of the National Union of Printing, Bookbinding and Paper Workers, and it was resolved to send a grant of £100 to the strike fund of their union, not to the paper workers there, as the report stated. There are no paper works in East Anglia, so the agricultural workers there could not invade them."

BARGAIN.

One-ton Gas-fired Melting Pot,

with Hotplate, or can be Oil-fired.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer. The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mar or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

8 Feeders sold during the last weeks.

COME AND SEE IT RUNNING IN LONDON.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply Houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

THIRD YEAR OF PUBLICATION

Make a Good Impression!

An unrivalled experience and technical knowledge enable Lorilleux & Bolton, Ltd., to produce Printing Inks of the first quality for the latest processes and with the greatest range of tints, colours, consistencies and drying properties.

Lorilleux & Bolton, Ltd., have an intimate knowledge of the requirements of printers, and make a feature of producing inks for special purposes, and they will be pleased to answer any enquiries and give expert advice if desired.

TRADES OVERSEERS' ASSOCIATION.

There was a large muster of members at the April meeting of the Association held on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C. The meeting—called a week later on account of the Easter holidays—was presided over by Mr. H. Milton (president) who was supported by Mr. J. Fleming (vice-president). Those responsible for the Association's activities have always exhibited commendable enterprise in securing first-rate lectures at the monthly gatherings, and that given by Mr. A. Purkis, Town Clerk of Deptford, on the present occasion, was by no means an exception to the customary "bill of fare."

The minutes of the previous meeting having been read and confirmed, the secretary (Mr. A. Cox) submitted several items of correspondence.

Early in the proceedings Mr. J. Dixon, in drawing attention to the loss the Association had sustained in the death of Mr. W. Vernum, said their departed friend had been a strenuous, although quiet worker, and one who always had the best interests of the Association at heart. It was Mr. Vernum, in conjunction with their past president, Mr. A. W. Hunt, who had framed the rules when the Association was first formed, and during all the intervening years he had served first on one committee and then on another. The least they could do was to pass a resolution expressing their sincere condolences with Mrs. Vernum and her family.

The resolution was seconded by Mr. J. J. Jones and sympathetically approved.

The items of correspondence included a letter from Mr. A. J. Daines, who wrote promising a lecture to the Association at an early date. A letter was also read from the management of the Holborn Restaurant, regarding the Association's annual dinner for 1924. Other letters were from Mr. J. R. Riddell and Mr. G. W. Knight, secretary of the Bookbinders' Cottage Homes.

Arising out of the correspondence relating to the annual dinner next year, Mr. Cox said there were only two dates left open to them at the Holborn Restaurant, and on his own responsibility he had decided on that of Saturday, March 29th.

Confirmation was unanimously given by the members to the date and also to the arrangements so far made by Mr. Cox in respect of this function for next year.

With reference to the donation to the Bookbinders' Cottage Homes, it was decided to grant the same amount as last year, viz., three guineas.

The annual donation to the Printing Industry Technical Board was next considered, and Mr. G. A. Rutherford moved that the sum of five guineas be granted.

Mr. G. A. Eden, the Association's representative on this body, in seconding the resolution, said that in taking an interest in the activities of this useful organisation they were not only helping the apprentice but also looking after their own Association in years to come.

The resolution was carried.

A suggestion was made that the summer outing, to be held early in June, should take the form of a visit to Jackson's Millboard Mill at Bourne End, the idea being very favourably received.

Mr. J. J. Jones spoke on the possibilities of holding a field-path ramble in July, and said that as the idea seemed to meet with the approval and support of the members he would be pleased to arrange such an outing. With reference to this matter Mr. J. A. Esler proposed that a small committee be appointed, but it was eventually left with the executive to deal with.

Mr. A. C. Ware, on behalf of the stewards, reported that the arrangements for the annual dinner to be held at the Connaught Rooms on Saturday next were practically completed, and that a large gathering was expected.

The chairman next called on Mr. Purkis for his lecture, which proved to be a very interesting account of the early history and present-day conditions in Deptford.

At the close of the lecture contributions to a discussion were made by Messrs. G. A. Rutherford, A. Cox, W. Robinson and J. Walker.

A hearty vote of thanks to Mr. Purkis was moved by the chairman, seconded by Mr. Rutherford, and very cordially carried.

Thin Opaque Printings.

It is evident that the demand for thin opaque printings is on an increasing scale, the satisfactory results obtained, even with heavy illustrations, proving the utility of this class of paper for many purposes. Again the outlay on postage has to be considered by firms freely circulating commercial catalogues, and in the form of cheap editions of standard works the paper is most attractive.

Amongst the firms giving particular attention to this class of manufacture, a leading position is held by the Royal Dutch Paper Mill, generally known as "Hollandaise," represented in this country by Messrs. E. A. Bristow and Co., 23-28, Fleet-street, E.C.4. The "Hollandaise" papers, it may be mentioned, are supplied through the usual wholesale firms.

We have had samples brought under our notice of the "Hollandaise" papers, which certainly have special characteristics in the matter of look-through, an absence of wire-mark, and the velvety feel of the real India paper is even reproduced in the cheap grades.

Known as thin opaque Bible printing No. 2 grade is of excellent appearance, and is well adapted for heavy-faced type. The saving in bulk is apparent when it is mentioned that 1,000 pages come within seven-eighths of an inch. Another attractive grade is that known as No. 1, which is a new quality, the result of the long experience of the makers—extending over 20 years—to meet the increasing demand for commercial purposes. The price, for instance, is only a little over half that for the real India opaque paper. It is supplied white and toned, and has an excellent appearance printed in red and black. One thousand pages equal about five-eighths of an inch. The all rag India paper is a splendid sheet, and among other attractive lines may be mentioned imitation hand-mades, deckled four sides, for book work.

THE highest ambition is to think rightly.

Scottish Notes.

(From Our Own Correspondent.)

IT is interesting to notice that the Postmaster-General is considering an alteration in the rules for the printed paper rate of postage. The present rules seem to have been drawn up with the express purpose of preventing the public from obtaining any more benefit from the ½d. rate than could be avoided, and to the ordinary man they are quite unintelligible. For instance, orders for goods can be sent for ½d. postage, but they must be on forms approved by the Post Office. Now the meanest intellect outside the postal staff would at once recognise an "order" which really needs no definition, but the postal authorities require that it must be headed by the word "Order" or "Please Send" and that these words must be printed not typed or written. So the ordinary householder must pay 1½d. postage if he orders a leg of mutton from his butcher, because he has no printed forms. What can be sent by the printed paper post and what cannot, is so much a matter of conjecture that many people are constantly in the habit of sending communications of various kinds which are not admissible when posted to certain places, while they are accepted without question in many other quarters.

SINCE the war the demand for tinted papers of all kinds has not been nearly so great as before, owing to the difficulty during that time of securing suitable colours and their high cost. For this reason many people who used to work coloured papers went on to white, and have not yet altered their style. It might be worth their while to notice that coloured papers can now be bought in abundance and that the price is comparatively low. In fact, it is rather strange to observe the number of mills that are now competing for coloured orders.

FROM the papermaker's point of view, it cannot be a very attractive line, and the fact that so many are now engaged in making these papers implies that trade must be extremely dull in some quarters. To do the trade a mill requires to keep large stocks, as the demand is generally for stock lines, and in the commoner qualities in particular there is a good deal of competition with foreign makes. Moreover, the foreign mills frequently secure the larger orders, as their price is much lower than home-made papers. Then there is always the danger of colours fading when kept in stock too long, and the extra cost of handling, warehouse rent and interest on capital can hardly be provided for in the difference in the price obtainable as compared with white papers.

NEW members of the Federation of British Industries include the following:—Messrs. J. Lovell and Son, Ltd, paper manufacturers, Avon Paper Mills, Linlithgow; James Cropper and Co., Ltd., paper manufacturers, Burneside Mills, Kendal; and Bradbury, Wilkinson Co., Ltd., manufacturers of bank notes, postage stamps, etc., New Malden, Surrey.

THE more of yourself you give the richer you become—and others.

U.S. Paper Tariff.

Explanation of Some of the Changes.

The United States Tariff Commission in its annual report has the following to say regarding the revision of the paper schedule in the present tariff law:

A simplification of the classification of printing paper by the employment of a utilisation rather than a value basis is an outstanding feature of the schedule applying to paper and books in the Tariff Act of 1922. Under the Act of 1910 printing papers were classified for tariff purposes on the basis of value of not less than 5 cents per pound and not more than 8 cents per pound. The purpose of the higher classification was to distinguish book paper from news-print, but owing to unusual conditions of trade newsprint prices advanced materially and a new basis for tariff purposes became necessary. After careful consideration, it was recommended that the commercial term "standard news-print paper" be adopted, and that the remaining imports of paper under the former schedule be known as "printing paper." The recommendation was supported, and under the Act of 1922 standard news print paper is admitted free of duty, while printing paper, which is in reality a grade of book paper, is subject to a duty of one-fourth cent per pound and 10 per cent. *ad valorem*. The great bulk of printing paper which is used by the newspapers of the country thus enters free of duty.

Minor Changes.

A number of minor changes were made in the Schedule for the purpose of clarifying the Tariff Act and its administration. For instance, all varieties of paper board no further advanced than the original manufacture on the paper machine are grouped under paragraph 1302, thus doing away with the segregation of cardboard, cylinder machine bristol board, leather board, and box-board and pulpboard. By defining the thickness of paper imported under this paragraph the classification is clearly established. Further illustration of the clarifying process accomplished through minor changes in wording or grouping is the paragraph applying to envelopes. Under the Act of 1922 envelopes instead of bearing a uniform rate of duty are assessed according to the paper from which they are manufactured.

Among the changes in the paper and book schedule made by the Congress are the inclusion of two retaliatory clauses directly affecting printing paper and wallboard, respectively, and indirectly affecting wood pulp and pulpwood. The clause forming part of the printing paper paragraph provides that where a country or political sub-division forbids or restricts the exportation of printing paper, wood pulp, or pulpboard, the President may negotiate for the free movement of these commodities, and if no change is forthcoming there shall be imposed an additional duty of 10 per cent. and an amount equal to the highest export charge upon an equal quantity of printing paper or its equivalent in wood pulp or pulpwood.

The second retaliatory clause in the paper and book schedule appears in paragraph 1302, relating to paper board, wallboard, and pulpwood.

The paragraph provides that if any country imposes a duty on any article specified in the paragraph when imported from the United States in excess of the duty provided by the United States, then the duty imposed shall be equalled.

A PAPER SHIP.—The Anglo-Newfoundland Development Co. have ordered a large new liner from Messrs. Vickers, Ltd., to be built at their yard in Barrow-in-Furness. The new vessel is contracted to be completed early next year. She will be fully 400 ft. in length, with a sea speed of over eleven knots, a displacement of 13,000 tons, and a capacity for carrying about 5,000 tons of paper in rolls. Part of the paper for the *Daily Mail* and the *Daily Mirror* is manufactured in Newfoundland, and the vessel will be employed in transporting this paper from the mills in the oldest Dominion of the Empire to London and Manchester. She has been specially designed to withstand the heavy weather in the North Atlantic in winter, and particularly for navigation in ice.

U.S. Printing Paper Exports.

During October the exports of American printings were as under to the countries mentioned:—

The Linotype Afloat.

Of special interest to printers is the fact that the "Wonder Ship" "Aquitania," when she sailed from Southampton for New York on March 31st, had on board not only a wireless installation but also an editorial staff and an up-to-date Linotype, capable of producing a daily paper. This distinction is now also shared by other ships of the Cunard Line, the "Berengaria" and the "Mauritania."

The Linotypes installed on these ships are Model 4's, driven by L. and M. direct-geared motors and fitted with electric metal-pots. When Linotypes were first installed on board ship it was considered desirable to swing them in a cradle; but the machines now installed are bolted to the deck. It was not necessary to arrange for any ropes to hold the machine steady, as the bolts have proved quite satisfactory in keeping the Linotypes firm at all times. That Linotypes are satisfactorily operated on board ship during all kinds of weather was fully demonstrated by the "Aquitania," which experienced very heavy seas during her first outward run following the installation of the Linotype.

In addition to setting the wireless news for the *Daily Mail Atlantic Edition*, the Linotype produces a wide variety of indent forms, wireless telegram forms, ship notices, repair lists, log abstracts, passenger lists, memo forms, ship daily orders, report sheets, etc., as well as, of course, the usual menus and programmes, for which the necessary display matrix founts are carried.

Italian Paper Imports.

With reference to the revised regulations on the subject of temporary (duty-free) importation into and exportation from Italy of various articles, the list of articles which may be imported under the "temporary importation" system has been further extended by a Decree dated December 16th. The articles concerned include insulating manilla paper, white or coloured in the pulp, not sized; other, not ruled (ex Tariff No. 847, a, 1, b) for covering electric cables and conductors.

THANKS to facilities offered by the Royal Society of Arts, the Technical Section of the Papermakers' Association has been able to acquire a complete set of the proceedings of the Society from 1861 to the present time.

Greek Import Duties.

A Greek Legislative Decree, dated January 27th, and coming into force on that date, modifies the Customs duties on various goods on importation into Greece. The duties are in metallic currency and are represented in drs. per 100 okes (the oke = 2·81lb. avordupois). The following items are included:—

	Gen. Tariff.	Convn't Tariff.
Stereotype plates, plates for engraving maps, etc., of copper ...	40	–
Common articles of copper, not specially mentioned...	100	–
Joints for machines or pipes in general, typographical articles, bedsteads and buttons; of brass ..	40	30
Nails of zinc and zinc alloys ...	40	30
Tarred roofing paper	10	6
Emery paper, glass paper or glass cloth	50	40

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Photo-Litho as the New Conqueror:

ITS IMITATIONS—AND ITS LIMITATIONS.

A Talk by Mr. FRANK COLEBROOK.

The Association of Master Printers of South-East London at their recent Woolwich meeting invited Mr. Frank Colebrook to address them. A "paper" had been intimated, but Mr. Colebrook followed his usual practice and gave an extempore talk—upon "The New Inter-Relation of Photo-Litho and Letterpress." He had brought a fair assortment of specimens, which were examined with much interest, some being offered for members' acceptance. He had also lightly sketched two large diagrams to make mechanical points clearer.

The Manul Process.

The Manul process was the first to which reference was made. Messrs. Muston of Bell-yard, by the Law Courts, London—in premises, as the lecturer believed, in some way associated with Messrs. Butterworth—were named as handling this method. Mr. Plumacher-Parrish was also handling it. Mr. Colebrook said there were indeed several "light printing" methods aiming to make possible cheap good reprints—it might be of a book, or of a memo-heading, of a fine line engraving, or even of a half-tone or like subject; a reprint from a print of the subject at a previous working. He mentioned Messrs. Lowe and Brydone, of Willesden, as having been prominently associated with the successful operation of this method, and produced a number of specimens of that firm's work.

As lately operated, he said, the process involved the use of two or more glass plates with a sensitive coating. The plan had apparently been adopted of placing four pages of a book above the coated glass, this glass filling up what otherwise would be an aperture in the roof of a box or chamber. Electric glow lamps of no great candle power were in use a foot or two below, and these hardened all the sensitive solution save where the black or other colour of the lettering or design protected the solution behind it and left it soft and soluble in water. With the washing out of the still soluble solution a stencil was produced. The later developments had been that glass could be dispensed with and useful economy effected. A film of celluloid, he understood, was now employed. The printing-down stencil could be made of paper which was an advantage. The stencil was commonly dyed a dark purple or almost black. Of course pages taken from a book to be thus reprinted bore type upon their back; but printing on the back did not make the difficulty that might be anticipated. Apparently complete pneumatic rubber blanket contact was secured before the light was turned on. The printing off was commonly by rubber offset-litho. One firm in Leipsic, Messrs. Spamer, who until lately were letterpress printers only, were understood to have laid down a score or so of offset machines in the last two or three years in order to cope with the tremendous amount of reprint work which the Manul process had brought to them. The process seemed to be half Swiss, half German; or perhaps it might have been partly Swiss, partly German and partly Dutch. Edinburgh printers and other book printers were watching this matter very closely, for it appeared that even where stereotype moulds were available for reprint, this method might mean great economy. Correcting of pages to be thus reprinted could obviously be done by pasting slips over the matter needing to be put right before the pages were placed on the glass or film for the "light printing." It would be noted that no camera was needed: it was simply printing by action of light, much as occurred hourly in every photo-engraving studio. Of course, it had to be remarked that this method only served for reprint and for facsimile reprint. A per-inch cost had been worked out, and was being confidently quoted by those handling the method; but Mr. Colebrook considered that per-inch comparison with other methods could not be be very helpfully made without reference to the character of the job, and particularly to the length of the run. Apparently there was now no idea, if there ever had been an idea of attempting to bring about one absolute monopoly of the method in this country.

There were other methods of reprinting from existing printed matter, one indeed known through many years to the craft, at any rate known to printers who had interested themselves, as Mr. Howard Hazell for instance had done, in the art of photography. "Whatever a master printer's view may be on this or any matter that I may touch upon," said Mr. Colebrook, "he cannot be wrong in one thing—in himself making a practical acquaintance with photography, or renewing and extending such acquaintance as he may already have attained."

Proceeding to refer to the earliest days of lithography, Mr. Colebrook pointed out that litho owed its coming into being to a letterpress manipulator and in poetic justice litho should help the letterpress man now. It could be a powerful co-operator. But was it to be a supplanter? It could give imitations of letterpress work. What were its limitations.

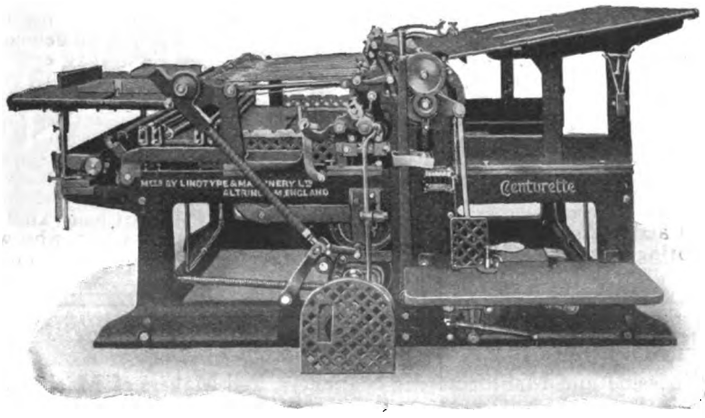

Photo Type-Setting.

Any inventors of new methods of type printing might be forgiven for entertaining very great expectations. And there were at least four of them. Only that week he had learnt of two new comers into the field, new methods of photo-type composition. The actuating principles of one of these methods differed from the Robertson and from the Hunter. A fourth operation directed to the same end apparently differed from the other three. The Robertson machine had been luminously described to the world by Mr. William Gamble, head of A. W. Penrose and Co., the famous photo-engravers' suppliers, Mr. Gamble suggested the fairly early extinction of pretty well all letterpress printing: it was to be replaced by the new photo type-composing power. We must never belittle any well-meant warnings, over his highly reputed name; but equally, we must reserve our critical freedom, and certainly we must keep probability in view.

Mr. Colebrook explained the Robinson process briefly. He would be interested to see if corrections could be made economically. Altering camera focus to produce various sizes of a letter from one original design, might serve for newspaper and journal printing, where almost anything that would mark paper might be passable, but it would not satisfy the canons of art printing. The balance of the black to the white of the paper which was correct in 48 or 36 point, would not be correct for six or eight. Type founders were only too painfully aware of that. Yet the assumption that there would be perfect satisfaction in such mere focus alteration, for securing differing sizes, was one thing which Mr. Gamble seemed to rely upon. A more important consideration was that of speed. Mr. Colebrook said he had certainly heard of an American machine that was supposed to be doing rotary litho at 11,000 an hour. That even, if reached, must be pronounced satisfactory or not, according to the quality of the product. It had seemed that litho work tended to show a certain degradation when speeded much beyond 4,000. He believed one of the phototype composing machine inventors hoped before long to see the plates as printed-down through his machine, worked off in this country by rotary offset litho at 7,000 per hour. The lecturer would be interested to learn of any such speed for good work in this country. To be sure, Mr. Gamble said that phototype composed plates need not be printed by rotary offset at all; for they might be printed by photogravure,

and he actually claimed that photogravure was quicker than rotary letterpress machining. It seemed a case of Jove's occasionally nodding. Mr. Gamble named the *Cape Times* as printing by rotary gravure at a speed of 32,000. In another place he gave the figure as 24,000 or 23,000. Mr. Colebrook thought that even taking the modified figure as the maximum, he must surely be representing the product of more than one cylinder. Rotary letterpress was not handicapped by a steel doctor blade having to traverse the cylinder with every printing operation, and even so, the highest speed of rotary letterpress that the speaker had heard of was in the London offices of the *Daily Mail* and *Daily Mirror*. They surely were not outpaced by the *Cape Times*. The "per cylinder" must not be confounded with "per machine." One machine's output might be 96,000 or more per hour. His comparisons were per cylinder.

The Hunter phototype composing machine did very great honour to the inventive brain and enterprise of Mr. Kenneth Hunter, a director of Hunters, Ltd., of St. Bride-street, E.C., and to his brother-in-law, Mr. August. Mr. Colebrook proceeded to describe the Hunter machine (see the *British and Colonial Printer and Stationer* of March 15th last), emphasising the provision for making corrections, also the method of justification and spacing.

Printing Photographed Type Faces.

Mr. Colebrook showed various gravure printed journals. A half-tone cross-line screen was not necessary to rotary photogravure, but was commonly employed. The Process Year Book for 1923, which he brought, showed admirable Bolt-court student rotary gravure work with such screen. If a screen were used with type, as often happened, it, of course, tended against a sharp, clearly defined lettering. There was also in all cases the uncertainty as to just what would be the action of the etching acid. Photogravure, like other processes, was itself changing. It recognised its limitations—its present limitations—and adapted itself to them. For instance, some had hoped for speedy and great success in rotary gravure work fed from the reel; but reel feeding tended to be abandoned now for certain classes of gravure work. Sheet feeding was found to be much better.

Mr. Colebrook said he had seen in the office of Mr. F. T. Corkett, at 7, Farringdon-road, some very small and some very large phototype printing done in the United States. Some of the small work was by way of tint lettering on cheques. One ingenious cheque showed up the word "void" when its tint coating was at all tampered with by any fraudulent manipulator. The large work was of 48, 60 or 72 point lettering. He had noted text matter of such large size, photographically composed. It appeared to be the practice in some American establishments to box away certain finger-sized strips of white card, carrying a large sized letter at the top of the strip, and for an operator to withdraw the strips, just as a compositor would withdraw the corresponding metal stamps from their respective boxes, and to range them in order, to go before the camera. Speaking broadly, America had not shown any great keenness on the photo type-composing quest. Americans, however, welcomed men bringing over improved processes from our side. Mr. Corkett, for one, went from London. He took his particular process of rotary gravure to the American Lithographic Co. about ten years ago. Mr. Joseph Knapp, the head of that great concern, bought the process, and Mr. Corkett remained with him a year to watch its installation and development. An immense amount of photogravure work was now being done week by week by this company in the States, journal illustrations being a very large part of that output. No doubt the method as now worked represented the amending notions and contrivances of both Mr. Corkett himself and of the American Lithographic Co's workers. Perhaps lithographers were particularly alert in that calendar loving country. There was even once an effort to run a daily paper produced lithographically—the *New York Graphic*. He believed it ran a year. Mr. Corkett's craftsman career showed an Englishman leading and the States adopting and developing his ideas; and as a kind of balancing to this, it also showed the States leading and an Englishman adopting and developing that lead. Miller and Motley brought to England their so-called "Printex" method of stepping and repeating the same negative upon a plate for litho printing, and when they set about the capturing of the British market, Mr. Corkett took over their process, and greatly developed it. This, with his developments, now formed the Lithotex operation of the Pictorial Machinery Co.

(To be Concluded.)

British Paper in India.

Improvement in Printings and Writings.

In a report on the import trade of India for the period April-December, 1922, H.M. Senior Trade Commissioner (Mr. T. M. Ainscough) includes particulars regarding paper and pasteboard.

Under the heading of packing paper, the report states: The total trade rose from 15 to 22 lakhs. The British share fell slightly from 7.8 to 7.4 lakhs while that of Sweden rose from 1.7 to 3 lakhs, Norway from 7 to 2.3 lakhs, the United States from .8 to 2 lakhs, and "other countries" (mainly Germany) advanced from 3½ to 7 lakhs.

In printing paper, the total trade rose from 57 to 71 lakhs. The British share advanced from 19 to 24 lakhs, that of Norway from 14 to 23 lakhs, and that of Germany from 5 to 8 lakhs. "Other countries" and Swedish shipments fell from 9 to 7 lakhs, Belgian shipments from 3 to 2 lakhs, and the United States from 2.3 to Rs.37,000.

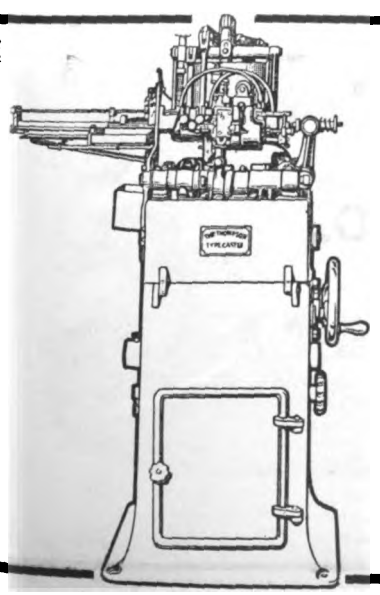
There was also an increase in the total trade in writing paper and envelopes from 37 to 45 lakhs. The British share advanced from 26 to 29 lakhs, that of Germany from 1¾ to 4 lakhs, and that of Norway from 1 to 4 lakhs. Swedish imports remained stationary at 1½ lakhs, while imports from the United States were reduced from 1.8 to 1 lakh. "Other countries" have slightly increased their share from 3.8 to 4½ lakhs.

Imports of paper mill machinery fell from 27 lakhs to 6 lakhs.

INDIFFERENCE and idleness harvest poverty. Work now or worry later.

A University Degree for Printers.

Important Development at Leeds.



As a result of conferences, the Leeds Education Committee and the University have together succeeded in setting up a new course of training for students who may expect to occupy posts of directive responsibility in the printing trades. By co-operation these two bodies have been enabled to take this important and interesting step, which would not have been possible to either of them working independently. The University has no printing department of its own, but in other respects is able to offer just that kind of training which is needed by a man who will afterwards take a responsible position in business life. The Leeds Technical School Printing Department, on the other hand, within a few minutes' walk of the University and admirably equipped with up to date machinery, is providing technical training in the various processes of printing in a manner which has won the full confidence of those who are most competent to judge. The School has the goodwill of the industry, and this fact gives reason to hope that the new course, in which the University and the School co-operate, will be welcomed by those who seek to combine a university degree with technical instruction in printing.

A Four Years' Course.

The full course will extend over four years. The first three years will be spent in reading for the University degree, one of the subjects for which will be printing. A fourth year, leading to a diploma, will be spent wholly on printing at the Technical School. The work for the degree will comprise economics, including commercial and financial organisation and the economics of the printing and allied industries, statistics, accountancy, commercial law, mathematics, physics, mechanical engineering and printing. The last-mentioned subject will be taught in the Technical School Printing Department, which has been affiliated to the University for this purpose. Attendance at the Printing Department will occupy one afternoon a week in the first and second years, and about half the student's time in the third year. During these three years the University will take full responsibility for the student's course and examinations, and, at the end of his third year, if he has satisfied the requirements, he will receive his degree. He is then advised to spend a fourth year in technological training in printing at the Technical School, under the care of the school authorities, in preparation for the diploma in printing. There he will find ample facilities for the practical and theoretical study of every branch of printing, bookbinding and photographic processes, including the latest methods of photo-lithographic work. During that year he will be entitled to remain a member of the University Union.

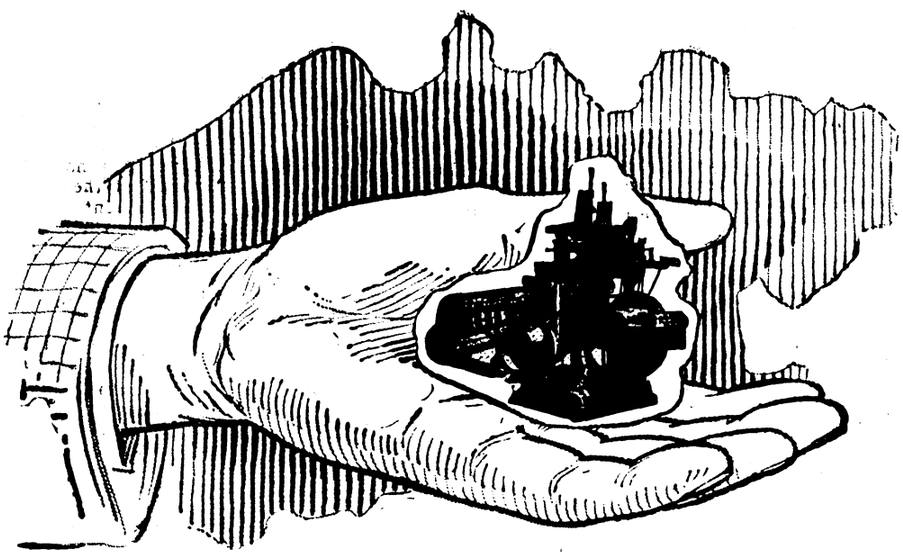
The scheme, fuller particulars of which may be obtained from the Registrar of the University, will come into operation next October.

THE Swedish State Railways have made reductions in the freight rates for news-print between Sundsvall and other places in Norrland Stockholm.

THE

THOMPSON TYPE, LEAD & RULE CASTER

Is a simple, complete and compact machine for casting finished type, spaces and quads in all sizes from 5 to 48 point inclusive and of all faces within the range of Linotype, Intertype and its own matrices.



Leads, Slugs and Rule from 2 to 12 point inclusive.

Embodies features not found in any other machine, while having at the same time the essential merits of simplicity and strength.

Produces type in all languages as perfect, durable and well finished as that supplied by any type foundry.

Trade Notes.

THE *London Gazette* announces that a winding-up petition to be heard May 1st has been presented against Commercial Cars, Ltd., by Worrall and Robey, Ltd., stationers and printers.

PRINTING FOOTBALL COUPONS.—At Atherstone (Warwickshire) last week, Messrs. Baxter and Sons, local printers, were summoned for printing certain football coupons alleged to have been used for ready-money betting. The coupons had printed on them, "For credit betting only," but the prosecution argued that the defendants became liable if the coupons were subsequently used for ready-money transactions. For the defence it was argued that the Legislature never meant printers to be liable under such circumstances, and the Bench held that every possible precaution had been exercised by the defendants, and dismissed the case.

COMMERCE AND POSTAGE.—A return to the penny post would be of the greatest possible advantage to the trade of the country, declared Lord Southwark at the meeting of the Association of British Chambers of Commerce at the Hotel Vicotria last Thursday. A resolution was passed urging that halfpenny postage packets, consisting, as they frequently did, of urgent commercial documents, should not be delayed in any way.

NEWSPAPER POSTAGE.—In respect of a question asked in the House, Sir W. Joynson-Hicks replied to Mr. Linfield regretting that it was not possible at present to make any reductions of postal rates other than those already announced. The newspaper post, he said, was, and always had been, carried on at a loss.

A BALL will be given at 18, Carlton House-terrace, S.W., lent by Lady Violet Astor, in aid of the Newspaper Press Fund, on Monday, May 7th, which is the Diamond Jubilee of the fund. Tickets may be obtained from the organisers, who include Lady (Milsom) Rees, 18, Upper Wimpole street, W.1, and Lady (Frederick) Bowater, 181, Queen's-gate, S.W.

T.A. WAGES REDUCTION.—The final portion of the reduction in wages of members of the Typographical Association under the revised award of the Industrial Court last year comes into operation next week. The reduction of 3s. 6d., according to the agreement, operates on the "pay day in the week ending May 5th."

MESSRS. QUARITCH paid £470 for a second edition of Bacon's Essays at Hodgson's yesterday. The book once changed hands for a penny.

DR. A. S. W. ROSENBACH, the American book collector, on leaving Southampton last week for New York by the White Star liner "Olympic," said he had spent over £200,000 in England and £55,000 in France and Italy since February 25th in the purchase of several private collections, as well as that of books by auction.

THE National Federation of British Newsagents began its annual conference at Newcastle on Tuesday, and was given a civic welcome.

A WELL-KNOWN Leith journalist, Mr. Charles Thomson, J.P., has died at his residence in Leith. Mr. Thomson was managing director of the Leith Printing and Publishing Co., Ltd., proprietors of the *Leith Observer* and *Leith Burgh Pilot*.

MR. J. B. MILBURN, editor of the *Tablet* since 1920, and previously for 25 years assistant editor, died on Saturday, aged 63.

THE death occurred on Friday morning, after a long illness, of Mr. H. Robertson Murray, formerly a member of the *Sunday Times* staff.

MR. THOMAS DAVID WANLISS, former proprietor of the *Ballarat Star*, and member of the House of Representatives, Australia, has died at Edinburgh, aged 94.

MR. ROBERT OLIVER, who passed away on Thursday in Edinburgh, aged 88, had been employed in the office of the *Scotsman* for a period covering 68 years. Born in Galashiels in 1835, he joined the *Scotsman* in 1855. In 1867 he left to start business as a printer and stationer in Innerleithen, and for seven years was the *Scotsman* correspondent in that town. He returned to the *Scotsman* in 1874, where he was employed till a few weeks ago.

THE late Mr. James Bennet Peace, Cambridge, printer to the University, manager and director of the Cambridge University Press, a Fellow of Emmanuel College, and formerly bursar thereof, a past president of the Master Printers' Federation, who died January 30th, aged 58, left £7,647.

MR. GEORGE ARTHUR PINDAR, of Manor-road, Scarborough, printer and stationer, who died on February 21st, in his 69th year, left £5,393, the net personalty being £3,701.

THE *Daily Herald* has received the sum of £8 3s. 6d., the result of a second collection made among members of the *Daily Mail* composing staff.

BETWEEN 5,000 and 6,000 delegates, representing advertising interests in America, Europe and the Dominions, are expected to attend a convention at the British Empire Exhibition at Wembley next year. Arrangements for their reception are being made by the Thirty Club.

A NEW YORK newspaper announces that it will issue, in addition to the regular edition, a miniature newspaper for the busy man, to be read in ten minutes.

WE are now informed that the "Satz-und Drucknuster, 1923" (Sample Book of Composition and Printing, 1923), published by the "Deutscher Buch und Steindrucker" (Berlin, S.W.61, Teltowerstr 32), and reviewed in our issue of March 22nd, is obtainable post free on remittance of a money order for one shilling—not $1 as indicated in the information previously supplied us, the discrepancy being doubtless due to a typist's error.

Stationery Office Dispute.

A Settlement Reached.

The dispute between H.M. Stationery Office and the Printing and Paper Workers' Union was settled on Tuesday morning. A guarantee having been given that all workers who came out on strike against the handling of supplies for firms employing non-union labour will be re-instated, the Printing and Paper Workers' Union withdrew its embargo from the Stationery Office.

We understand that the union has undertaken that no difficulties will be raised in regard to the delivery of materials to all the Government contractors, and that all work completed under the contracts will be handled by the members of the union at the Stationery Office, no matter where these are being produced.

It is hoped that a settlement will shortly be reached in the dispute at Messrs. De La Rue and Co.'s where the trouble originated.

MESSRS. LORILLEUX AND BOLTON, LTD. (31-34, Cursitor-street, E.C.4), send us a booklet containing a series of specimen half-tone illustrations printed with their Double-Tone Inks. It is very noticeable that, by printing with the same block and the same ink, a quite different tone is produced on art paper from that produced on imitation art paper.

Printers and Paper Distribution.

By Frederick Johnson (Managing Director of the Lindenmeyr and Johnson Paper Co., Ltd.)

What is commonly known as competition seems to have been sent into the world to make it more interesting. When times are prosperous we are more inclined to bless our fellow competitor than during stress of trade. There are also periods in the history of all businesses when imagination runs riot, and we begin to think that the other man is taking a mean advantage of his position. Curiously enough, when upon rare occasions our competitor's business is revealed to us, we find that he has similar troubles to our own, and is not always the active embodiment of the evil one that we suppose. Let us, therefore, approach these questions in an open and friendly spirit, and learn to regard business as a means to an end, to assist us on the road through life.

When the Master Printers' organisation wrote to a number of paper merchants under date of February 22nd, 1922, a private and confidential letter embodying a questionnaire on the subject of supplying paper direct to consumers, an opportunity was given to me to take up the matter with the National Association of Wholesale Stationers, because I realised that at last something was moving in the direction of the vexed question of paper distribution—a very important matter. I had recently discussed this question personally with my friend Mr. Burchell, who was good enough to suggest that I might talk to the Central London M.P.A., but at the time of our conversation the questionnaire referred to from the Master Printers could not be publicly discussed, as it had been labelled private. Recently, however, the letter was published, and we are consequently able freely to exchange views on the subject in at least some of its bearings.

From time to time it is to be presumed that printers complain of various paper dealers—not necessarily paper merchants—who are supplying paper direct to such houses as buy printing but do not own printing plant. These complaints have probably been referred to headquarters from members of the various printing associations and it is probable that some of them are justified.

The Master Printers' Questionnaire.

The secretary of the L.M.P.A. asked: "1. Do you confine your business to the trade only? 2. Do you under any circumstances supply direct to the consumer?"

These two questions only prove that the subject has never been mutually discussed by the units representing the important trades concerned and it is evident that recently the matter has become more acute owing to the chaotic conditions prevailing to-day in the general distribution of paper from mill to consumer. There is danger of that friendship hitherto existing between the printer and the paper supplier being disturbed and it is time that some action is taken.

Now, prior to the war we rarely had this question referred to. In my opinion there is no need for a house to supply paper other than through the printer for jobs that are mutually agreed should be purchased in entirety through the printer himself. I can well understand that such a course of action weakens the position of the printer with his customer and is a source of irritation. Much the same feeling is displayed by a tailor who cannot be expected to hail with enthusiasm your suggestion to supply him with cloth to make you up a suit even although the material is the well-known highly scented and fuzzy homespun from the northern isles, and generally speaking the idea is wrong in commercial practice. There is no necessity for the average purchaser of printing to buy his own paper. The printer can handle this matter more economically. The printers, however, are partly to blame as they should never have permitted past precedent.

The third question from the letter under review runs: "If so, would you mind saying whether you supply consumers at the same prices as are supplied to the trade—or always quote consumers a price that would allow a profit to the printer if the goods had been supplied through him?"

My immediate comment on this is that the enquiry is a trifle weak and one that would lead the printer to condone the direct selling. Printers should be very firm on this point. If you permit paper for the printed job to be supplied through incorrect channels you are only complicating your own business. At least the recognised paper suppliers do not wish to supply consumers to the detriment of printers and some authority is necessary to define where the printer ends and the paper supplier legitimately begins so far as completed reams for use for other than printing is concerned.

Mr. Frederick Johnson.

The Position of the Paper Merchant.

During the War and since that unfortunate period, the printer has had paper offered to him by an astonishing number of strangers. Apparently it was mooted abroad that the wholesale paper business was an El Dorado, and we wholesalers had innumerable competitors who set up businesses—of sorts—but they had never learned their trade and many of them wish they had never entered into it. These businesses of mushroom growth are lessening in number, but the entire system is wrong from a distributing and economical view point, as I will show later. Following the boom of 1919 and 1920, there was a very serious depression in trade, but prices fell rapidly as much from financial as from manufacturing causes. The printer found himself in possession of large and unwelcome stocks, previously purchased at pinnacle prices. The paper merchant was in a similar or worse condition, and the poor state of trade aggravated matters still further for him owing to an invasion from innumerable small agents and persons, the majority of whom did not represent any paper mill but who brought still further competition and for the time being made the life of the paper merchant still more unenviable. Now, I am a firm believer in freedom of trade and I am not criticising any form of trade: my object is to traverse the ground and the argument with a view to submitting how this matter affected the printer. Apart from the question of printers' stocks he has been and is to-day the most fortunate so far as the distribution of paper is concerned. Where he possibly can he will go direct to mills, as he puts it. He is assailed by a host of applicants for his paper business and the old-time paper distributor has not been over-burdened with even a proportion of the printers' orders.

The above conditions are known and constantly dealt with in conference by the wholesale paper trade. The immediate effect on that trade is partially the cause of the questionnaire from the Master Printers referring to the subject of supplying direct to consumers, and there were no regulations to the contrary. Agreed that it is only commercial instinct to buy in the cheapest market, the paper merchant can show you that his business is established on the lines of economy, and only requires the co-operation of paper mills to be the most economical channel of distribution to-day.

But at the risk of repetition I must make it clear that we do not desire to supply paper for printing purposes to consumers. During the past two or three years times have been extremely difficult for all parties, and at certain periods in most businesses it was not a question of making a profit but minimising a loss. Certain sections of the wholesale paper business had a very lean commercial period, and it looked as though there might be a necessity for unwelcome changes in trading policy. Whilst in the old days your customer was your friend, of late years it is generally accepted that relations are strained. The disorganisation of paper distribution alone arouses suspicion and distrust, and until this question is immediately and effectively handled by the Master Printers, the Papermakers' Association, and the National Association of Wholesale Stationers, in conference, fierce competition may even range around the consumer.

It may seem to you printers ordinary freedom of trade to purchase direct from mill, but where there are old-established businesses with enormous capital invested in paper stock intended for the printers, that section of the trade will have to be considered. But I repeat the problem can be easily solved.

Questions for Printers.

There are one or two questions I should like to ask, and among them is, why the average printer has permitted the possibilities of advertising to slip until it has almost become a separate business, and that section of the trade known as the advertising contractor has obtained firm hold on the catalogue market. I would also like to ask why the printer apparently considers the buying of paper to be the last position in his establishment. Paper buying is a matter of considerable difficulty, and requires much foresight; it also requires a technical knowledge of paper. Knowledge of paper amongst the printing trade is improving, but much could be said on that subject. To-day we have in London most excellent technical institutes, and no person intending to enter into the printing business should fail to take a long course of instruction on the subject of paper from a technical and commercial point of view.

Great Britain is a free trade country, and we get poured into the market a bewildering mass of material, the variety of which, when combined with the British-made papers, is sometimes impossible to understand. The printer's paper buyer is confused chiefly owing to the fact that names of mills are undisclosed, which only goes to prove that the same papers are offered by a number of houses. I am not commenting on the wisdom of this at the moment. Then, again, one paper house will offer a British-made paper against a Continental imitation offered by another paper house of equally good standing, and here the buyer is often puzzled, and imagines that one house demands a larger proportion of profit than the other. When the Master Printers' Association asks if we confine our business to the trade, it overlooks the enormous tonnage of cheap foreign papers which are distributed in many cases through unauthorised channels. Paper is a very wide subject, and the complaint in question must be discussed in connection with all classes of papers. Do not for a moment imagine that the paper merchant should be singled out as supplying direct. It may be that more than one paper mill to-day is supplying consumers direct—the subject must be discussed always with a view to reconstructing distribution from the source of supply.

Another question that I should like to ask is, Are you aware that amongst printing houses there are a number of excellent firms known as trade printers, and does your Association connect direct supply with these trade printers who willingly, almost gladly, accept paper for consumers? No, the matter is not so simple as it would appear, and the elucidation is to be found by united conference. No one section controls the situation.

(To be Concluded.)

Lecture delivered before the Association of Master Printers of the London Central Districts on Thursday last.

DELAY is always the result of a temporary suspension of thinking about duty.

Printing and K.T. Federation CONFERENCE.

Meetings at Scarborough.

Many interesting matters have, of course, been discussed at the annual conference of Printing and Kindred Trades Federation's administrative council, which opened at Scarborough on Wednesday of last week.

Mr. C. W. Bowerman, M.P., presided.

On the opening day the business was mainly of a domestic character, but one important feature was the passing of a resolution welcoming the intended reduction of postal rates for printed matter, but regretting it has not been possible to grant a measure of relief for communications on halfpenny picture post cards, now limited to five words.

Another resolution strongly supported the Merchandise Marks Act Amendment Bill now before Parliament. The Federation has been labouring for many years to get some amendments to the Merchandise Marks Act, as a large amount of printed matter is sent into this country which does not bear the marks of origin.

At a social function on the Thursday one of the speakers was Sir Meredith Whittaker, the well known newspaper proprietor, who strongly repudiated the suggestion that the remuneration of a workman in any trade should be only enough to keep body and soul together. Sir Meredith mentioned that he had drawn up a superannuation scheme in connection with the newspaper section, which could be established at little cost.

ASSOCIATED NEWSPAPERS, LTD.—An extraordinary general meeting of shareholders of the Associated Newspapers, Ltd. (proprietors of the *Daily Mail*, *Evening News*, and *Weekly Dispatch*), was held on Monday to carry a step further the resolution to enlarge the capital by the creation of a further 500,000 deferred shares. It was now proposed that 250,000 of these should be issued by capitalising a portion of the undivided profits. The directors were satisfied that after the successful operations of the past year they were amply justified in recommending this course. The financial year of the company which closed on March 31st had been the most successful in its history. The sales of the company's newspapers were considerably higher than they were a year ago, and the advertisement revenue was the largest ever experienced. The rate of profit, as well as the total profit, also showed a great improvement. The new financial year had opened well, and the prospects of the company's three newspapers were never better than to-day. The resolution was carried unanimously.

Tenders.

METROPOLITAN BOROUGH OF GREENWICH.

Contracts for Books, Bookbinding and Stationery.

THE Council of the Metropolitan Borough of Greenwich is prepared to receive TENDERS from Trade Union Houses for

(1) BOOKS and BOOKBINDING, and
(2) STATIONERY and OFFICE SUNDRIES,

for a period of three years from June 24th, 1923.

Printed forms of tender and conditions and schedules of requirements, with "Standard Prices," can be obtained and samples seen at the Town Hall, Greenwich-road, between the hours of 10 a.m. and 4 p.m. on week-days (Saturdays between 10 a.m. and 12 noon). A deposit of One Guinea will be required, which will be returned to the Depositor on his sending in a bona-fide tender.

The Contract will contain a clause providing for the adjustment of the contract price according to any variation in the cost of labour and/or material.

Tenders, on printed forms, sealed up, and endorsed on the envelope "Tender for Books and Bookbinding" or "Tender for Stationery and Office Sundries" as the case may be, must be sent to the Town Clerk, Town Hall, Greenwich, before 10 a.m. on Monday; May 28th, 1923.

The Council does not bind itself to accept the lowest or any tender.

FREDERICK J. SIMPSON,
Town Clerk.

Town Hall, Greenwich, S.E.
April 19th, 1923. 14108

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines 1/.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines 6d.

Sales by Auctions, Tenders, Patents for Sale, Legal and Final Announcements

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

ESTIMATING and COSTING CLERK wanted; must have had thorough experience in handling and estimating first-class Booklet and Catalogue work.—Write, stating experience and wages required, to Clarke and Sherwell, Northampton. 14116

ESTIMATING CLERK wanted in a large and progressive Printing Office in East London; young and full knowledge of Costing and Estimating essential; excellent opportunity for an energetic and thorough worker.—Write, stating age, experience and salary required, Box 1623, Sells Advertising Offices, Fleet-street, E.C.4. 14107

LIBERAL COMMISSION paid to anyone able to introduce and influence orders for Paper and Stationery.—Write, Box 14095.

PAPER and PRINTING MATERIALS.—MAN of good experience wanted for Paper Merchants and Printers' Furnishers in India.—Write, in confidence, stating age, experience, etc., to D, Box 14098.

TRAVELLERS wanted by West End firm of Printers for Printing and Stationery; good commission and expenses paid to right men.—Apply, Box 14104.

TRAVELLERS on liberal commission and expenses basis with established connections throughout the United Kingdom, preferably with own car, to sell a series of High Grade Cleansing Products.—Write full particulars of Lines carried exact territory, state where interview could be attended within the next two weeks, to "O.K.," c/o Streets, 30, Cornhill, E.C.3. 14114

WORKING FOREMAN (Machine) wanted for country works; Book-work and General; house available.—Box 14117.

Situations Wanted.

COMPOSITOR, Jobbing (n.s.), requires situation; could take charge.—R. W. H., 14, Helmet-row, Old-street, E.C.1. 14101

COMPOSITOR, with considerable all-round experience and theoretical knowledge seeks position as Overseer's or Manager's Assistant.—C., Box 14110.

GENTLEMAN, aged 23, good education and appearance, requests Position as ASSISTANT REPORTER; excellent references.—Write, Box 14070.

MACHINE MINDER (soc.) seeks situation; Two Revs., Wharfes, Slogger Feeder; Colour and Com., Stereo; disengaged.—G. W., 103, London-road, Clapton, E.5. 14100

MONO CASTER MECHANIC, 14 years' experience, seeks change; London preferred.—Box 14103.

PHOTO-LITHOGRAPHY.—Gentleman with exceptional practical experience of all branches desires change; all latest methods, half-tone, colour, etc.—Box 14084.

PRINTING, STATIONERY.—MAN (27), 10 years' experience, desires Engagement; Inside Salesman and Part-time Traveller.—A. Wright, 13, Grove-place, Shelton, Stoke-on-Trent. 14094

PRINTER (Comp. and Machine) seeks situation; General and Commercial Work; could assist Two-feeder (News) Machine.—L., 1, Seafield-road, Ramsgate. 14092

PRINTER, educated, wide experience, practical and theoretical knowledge, seeks Post as MANAGER'S RIGHT HAND; good business and technical references.—Box 14091.

PRINTERS' WAREHOUSEMAN and CUTTER, all-round experience of General Printing, Keeping Stock, Folding Machines, Stitchers, etc., and Estimating.—C., 430, Hertford-road, Lower Edmonton, N.9. 14111

STATIONERS' ASSISTANT, 15 years experience wholesale manufacturing trade, desires Position of Trust; highest references.—Write S., Box 14083.

YOUTH (16½), wanting literary career, requires Position as Pupil in Editorial Office or other such capacity with good scope; just left secondary school; has incentive, originality; commencing salary immaterial.—R. Betteridge, 40, Station-road, Epsom. 14112

Partnerships and Financial.

OFFICE FURNITURE, Typewriters and Supplies Business in Central City with Fine Windows and Show-room, desire PRACTICAL and CAPABLE PERSON with Capital, to develop same.—Write, Box 14087.

PRINTER seeks PARTNER with Going Plant; will invest from £100-£200, with services; what offers?—Box 14109.

Machinery for Sale.

COPPERPLATE PRESSES, "D" ROLLERS, all iron, in working order, for sale cheap to clear.—Box 14093.

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

TOGGLE PRESS (Williams), 30-in. by 24-in., complete in every way and in perfect order; no reasonable offer refused.—Apply, Box 14102.

Miscellaneous.

DESIGNS, Line, Half-Tone, Colour, Figure, Lettering, Etc.; first-class work; lowest rates.—Morris Studio, 19, Farringdon-avenue, London, E.C.4. 14099

FARRINGDON ROAD.—90-ft. long Ground Floor (concrete); also Basement.—Call 171. 14106

IDEAL, Well-built, MODEL FACTORY to be sold Freehold at Cricklewood—north light, saw-top roof, perfect daylight—size 230-ft. by 70-ft. clear floor, also offices—steam-heated, electric light, power, etc.; immediate possession; suit any manufacture. Leopold Farmer and Sons, Factory Specialists and Auctioneers, 46, Gresham-street, Bank, E.C.2, and Kilburn, N.W. 14113

MODERN FACTORY and PLANT for sale by private contract. The works of the Ruby Cycle Co., at Altrincham, freehold, admirably situated, built on the most modern lines in 1910 and 1920, electric power and light laid on, own gas plant, everything on one floor, with large range of automatic machinery and tools. Most suitable for any modern industry.—Apply, R. H. Lord, J. B. Boyd, Wrigley and Co., 53, Brown-street, Manchester. 14097

TWO Very Well Lighted TOP FLOORS to Let, together or separately, in Stonecutter-street, off Shoe-lane, E.C.; floor area 2,400 sq. ft.; rent for the whole £550, including rates and taxes.—Leopold Farmer and Sons, Factory Specialists and Auctioneers, 46, Gresham-street, Bank, E.C.2. 14115

The Value of a Small Advertisement in the "British and Colonial Printer and Stationer."

We have received the following letter, dated April 5th, 1923:—

> *Re* my Advertisement in your paper "Newspaper Engineer and Machine Overseer desires change," will you please cancel same, as I have secured a splendid appointment through your valuable paper. Wishing you and your journal every success.

The Paper Workers' Dispute.

It is gratifying to know that the unfortunate dispute in which H.M. Stationery Office has been involved, and which has delayed the publication of Government work and seriously inconvenienced Government departments and the public, has at last been settled. With all the machinery which now exists for the settling of disputes in the printing trade, it is a remarkable thing that this particular trouble should have attained such serious proportions before a settlement was reached. Though it may not be generally realised, there was a point, as we indicated last week, when there seemed to be a definite possibility of the whole of the general printing trade of London being brought to a standstill. It may be that some of the members of the trade union concerned are still unaware of powers which they possess, under the Joint Industrial Council, of bringing pressure to bear upon any employer who disregards recognised trade union conditions or regulations. Everything possible should certainly be done to hasten the full appreciation by the trade of the possibilities which the Joint Industrial Council offers. One cannot, on the other hand, escape the fact that the J.I.C. presumes that both employers and employed are organised, and it appears that until all employers are linked up with their trade organisations, the full possibilities of the machinery which exists for settling disputes cannot be utilised. The fact also that the State itself is a large employer in the printing industry and is of necessity obliged to keep apart from both the Employers' Federation and the Joint Industrial Council of the Printing and Allied Trades tends to increase the difficulties of settlement. There is a separate Whitley council for the Stationery Office, but the recent dispute has shown the necessity for some arrangement being made for the printing industry's Joint Industrial Council to have some means of making its influence felt, even in such disputes. It was only when this trouble had been in existence for some weeks and had begun to have serious effect upon the members of the London Master Printers' Association that the Joint Industrial Council was able to function. Perhaps this unfortunate affair will not have been altogether without good effect, if it helps the trade unions to realise what a great deal is to be gained by conference before aggressive action, and leads also to some improvement of organisation on the employers' side.

* * *

State Printing and Economy.

The report of the Select Committee on Publications and Debates, to which reference is made on another page, contains several matters of interest to printers, one of these being the statement of the loss of £32,839 on the State Printing Works during nine and a half months' working in 1921. It should be noted that later figures, given in the House of Commons, indicate a further loss of £21,318 during the twelve months 1921–2. It has been stated that the Works are now being run at a profit, but the final figures will not, of course, be available for some months. The main criticism of the Select Committee is as to Departments not knowing, when work is delivered, what it has cost. If some of the Departments were able to obtain competitive prices, they would then be in a better position to judge as to whether or not it was profitable to do the work in the State Printing Works. The fact will not be forgotten, in this connection, that when a group of work was recently put up to tender amounting in value to about £71,000, the State Printing Works were only able to secure contracts amounting to £400.

* * *

The Ruhr Chaos.

Not only are the exploits of France in the Ruhr causing unsettlement in trade and industry generally, but they are having particular effects upon paper business. An important section of the German paper industry is situated in occupied territory, and a good deal of the paper goods from that area are handled in this country. In the present circumstances, however, with the French demand for 40 per cent. on the original cost on the one hand and threats from the German Government as to the penalties that will be enforced if manufacturers export goods, it is practically impossible to carry on business in that quarter.

Caxton Home, Limpsfield.

The South London Caxton Musical Society brought their season of weekly smoking concerts to a close on Saturday last, when, for the twenty-seventh year in succession, officials of the Sick Fund Union occupied the chair. Supporting the chairmen (Messrs. R. W. Lee, secretary, and Geo. Chapman, trustee), were the Right Hon. C. W. Bowerman, M.P., and Mr. C. J. Drummond, J.P., president of the Caxton Home. A varied and enjoyable programme of music and song was rendered to a crowded audience assembled at the London and Brighton Hotel, Peckham.

The chairman of the Society (Mr. S. J. White), in the course of the evening, announced that the financial result had amounted to fifty guineas, and conveyed the thanks of his committee to Mr. Lee and his colleagues. The concert had proved a most successful wind-up of the season. The Society would be able to hand to the Caxton Home their usual annual donation to the Building Fund of £150, and it had also been arranged to instal a wireless receiving set for the entertainment of patients.

Mr. C. J. Drummond took the opportunity of thanking the Society for their continued and much valued assistance to the Home, and joined in the vote of thanks to the chairman of the evening, which was also spoken to by Mr. Bowerman.

Invitation was given to the company present to attend at Limpsfield on June 16th, when the Society's gift of a new entrance and pair of gates will be formally handed to the trustees of the Home.

Central London Master Printers.

Annual Meeting and Lecture.

There was an appreciative gathering at the fifth annual general meeting of the Association of Master Printers of the London Central Districts, held at Stationers' Hall on Thursday last, the meeting being followed by an important address by Mr. Frederick Johnson (managing director of the Lindenmeyr and Johnson Paper Co., Ltd) on the vexed subject of the distribution of paper.

Mr. J. D. McAra, F.C.I.S., was in the chair, beside him being Messrs. W. H. Burchell and W. J. Boyle (joint hon. secretaries), Mr. J. Crowlesmith (hon. treasurer), and Mr. Geo. Eaton Hart, president-elect.

The Year Reviewed.

The annual report, which was read by Mr. Boyle, put on record the services of the Central London representatives in connection with the wage reduction negotiations. The various meetings held by the Association were reviewed, special emphasis being laid upon the success of those addressed by Mr. Wm. Gamble and Mr. Herbert Jordan, the audiences in both cases being more representative than at any of the Association's previous meetings. Congratulation was expressed to Mr. R. A. Austen-Leigh (president of the Federation of Master Printers) and to Mr. W. Howard Hazell (president of the London Master Printers' Association), two members of the Central London Association elected to positions of great importance. Gratitude was expressed to the late president of the London Master Printers' Association, Lieut.-Col. J. R. Truscott, for the valuable services he had rendered to the craft during his year of office. The finances of the Association were reported to be in a flourishing condition, thus providing opportunity for extended activity, and members were urged to undertake missionary efforts to increase the membership, to which 30 firms had been added during the year. It was reported that just over £134 had been received towards the testimonial fund opened for the purpose of repaying to some extent the expenses of Mr. Burchell's campaign in regard to postal rates, and it was stated that of this amount £25 each had been contributed by the London Master Printers' Association and the Central District Association. The executive's appreciation was expressed in respect of Mr. Burchell's services to brother printers in the Law Courts, giving expert evidence as to trade customs, etc.

The report having been adopted without discussion, Mr. J. Crowlesmith, as hon. treasurer, presented the financial statement which showed that a substantial balance remained in hand after payment of all expenses.

The financial statement having been approved, Mr. Crowlesmith took the opportunity to appeal for further donations in order to raise the Burchell Testimonial Fund to the sum of £200.

Officers and Committee Elected.

The election of officers was the next business. A notable feature was the retirement of Mr. McAra, who has for three years, *i.e.*, since the inception of the Association, been the very able and genial president. Mr. McAra explained that he had accepted a third year of office only because of special circumstances, and he expressed the wish to give place to a new president. He proposed Vice-president Mr. George Eaton Hart for the office.

Mr. Hart was unanimously elected president, and accordingly succeeded to the chair, expressing his gratitude for the honour done him, and his wish to serve the Association to the utmost of his capacity, also paying a tribute to the services which Mr. McAra had rendered during a most strenuous period.

On the motion of Mr. Crowlesmith a resolution was passed unanimously expressing to Mr. McAra the thanks of the Association for the services he had rendered to the craft generally, and especially to the Central Districts Association, during his three years' term of office as president.

As vice-presidents, the meeting elected Sir Cecil Harrison and Messrs. W. Howard Hazell, R. A. Austen-Leigh, and Lieut.-Col. J. R. Truscott.

Mr. W. H. Burchell was unanimously elected hon. secretary on the motion of Mr. McAra, who laid due emphasis on the hard work and virile force which Mr. Burchell had brought to bear upon all the duties he had carried through.

Mr. Burchell responded recalling the many remarks of encouragement he had received in the course of his postal protest campaign, which he would still continue.

Mr. W. J. Boyle was re-elected joint hon. secretary, Messrs. Hays, Roughton and Dunn re-elected hon. solicitors, and Mr. C. Clifford Bliss, A.C.A., hon. auditor, who was present, and was thanked for his past services.

Mr. Crowlesmith was re-elected hon. treasurer, thanks being expressed to him for the keen interest he had shown in the Association's finances.

The following were elected to the executive committee it being agreed that they should have power to co-opt further members to bring their number up to 30:—Messrs. A. Bonner, W. Charles, J. S. Crowther, H. B. Cahusac, H. R. Danford, W. Ede, E. Edkins, H. J. Forder, H. J. Goss, Lient.-Col. B. L. Hooper, C. H. Lea, O. G. Poulson, F. W. White, A. Willmott, C. Orchard, W. Brooks, P. Ryde, H. W. Jordan and G. C. Griffith.

Mr. Burchell having reported upon the illness of Mr. Oscar C. Griffith, it was resolved at his suggestion that a letter be written conveying to Mr. Griffith the Association's sympathy and good wishes for a speedy recovery.

The Association's new rules, as printed, were unanimously confirmed.

"The Distribution of Paper."

The conclusion of the business agenda was followed by a break for light refreshments, after which Mr. Hart introduced Mr. Frederick Johnson, referring to that gentleman's lifelong association with the trade, and Mr. Johnson proceeded to read his paper, "The Distribution of Paper—From Mill to Consumer," an important subject which he dealt with in a very able address, which we report elsewhere. Mr. Johnson's paper was followed by a brief discussion, opened by Mr. Hart, who complained strongly of paper mills approaching the printer's customer and quoting absurdly low prices. He was, he said, entirely in favour of the standardisation of paper qualities by means of an understanding with papermakers, on the American plan. In view, however, of the complex system in this country, he thought the only practicable scheme to-day was that projected by the Federation of Master Printers, who had sent their members a questionnaire with a view to forming themselves into a sort of co-operative buying society, which might instruct and educate papermakers into supplying them with the qualities of paper desired, and supplying under agreed trading conditions.

Mr. W. J. Mizen (hon. secretary of the North London Master Printers) corroborated what had been said about the absurdly low prices sometimes quoted to the printer's customer.

Mr. A. C. Shaw stated emphatically that both wholesale stationers and paper mills were going direct to the consumer, and there seemed to be no strong move to stop it. He could give names in many instances. Moreover, some of these people were now doing printing and entering into strong competition with the printer.

Mr. McAra reminded the previous speaker of the committee sitting at 24, Holborn, who would be very glad to have definite information such as Mr. Shaw was prepared to give.

Mr. Johnson, in winding up the discussion, urged the adoption of a broad-minded attitude. They must bring freedom of trade into their horizon. After all, there was nothing to prevent a man who possessed a paper mill from running an envelope factory also, or even becoming a printer—though his own personal opinion was that the distributor of paper ought to distribute paper only. He would very much like to see something done by the various Associations. That this was essential was proved by the statements made that evening to the effect that even paper mills were supplying consumers direct. That was a matter which ought to be taken up immediately.

A very hearty vote of thanks was passed to the lecturer on the proposition of Mr. Hart, seconded by Mr. McAra, the latter suggesting that as Mr. Johnson's paper dealt with so many delicate and intricate points members should study the lecture when it appeared in the *British and Colonial Printer and Stationer*, and at a subsequent meeting they might have short speeches from several members and be prepared to discuss the subject in extenso.

Sunday newspapers are now supplied to the inmates of H.M. convict prisons.

Personal.

Sir George Wyatt Truscott, Bt., will preside at a dinner of the Imperial Industries Club at the King Edward VII. Rooms, Hotel Victoria, to morrow (Friday), when Colonel J. P. Hodge, M.P., will open a discussion on "The Safeguarding of Industries."

Sir John M. Le Sage, editor of the *Daily Telegraph*, who has just completed his 86th year, will in June next have been for sixty years associated with that newspaper.

The Hon. George H. Carter, Public Printer of the United States, is expected to arrive in London on May 19th, and has been invited to attend the annual meetings of the Federation of Master Printers. He will afterwards proceed to Gothenburg for the International Congress of Printers, from June 4th to 6th.

The Rt. Hon. C. W. Bowerman, M.P., Mr. A. E. Goodwin, Mr. A. E. Holmes, Mr. Geo. A. Isaacs and Mr. J. R. Riddell were amongst the speakers, and Mr. F. W. Bridges was in the chair, at an important conference on the subject of the lighting of printing works held under the auspices of the Illuminating Engineering Society on Tuesday evening. The meeting was held at the house of the Royal Society of Arts. Report next week.

At the annual meeting, held in Norwich on Thursday of the East Anglian Alliance of the Master Printers' Fedn., Mr. F. Hanson, of Ipswich, was elected president of the alliance for the ensuing year, and vice-presidents were adopted as follows:—Mr. R. A. Austen-Leigh, Mr. A. Spalding, Mr. W. T. F. Jarrold, Mr. S. Herbert Wood, Lieut.-Colonel H. Rivers Fletcher and Mr. Cecil Clay.

The president of the alliance mentioned, amid applause, that Col. H. Rivers Fletcher would probably be nominated as president of the Federation for the coming year, and in that case would probably be elected. It was to be hoped, therefore, that the Council would be authorised in due course to issue an invitation to the Federation to hold their annual meetings in East Anglia next year.

Mr. Walter Lewis, whom the Syndics of the Cambridge University Press recently appointed as manager of their printing business in succession to the late Mr. J. B. Peace, will begin his work at Cambridge with the advantage of many years of practical experience behind him.

Mr. Lewis was previously manager of the Ballantyne Press, London, and subsequently of the Complete Press, West Norwood; later he became director and manager of the Cloister Press, Manchester, a press whose productions quickly made their mark in the printing world. As the latest successor of John Siberch, Mr. Lewis will have the good wishes of all lovers of fine printing.

Miss Rebecca West, the novelist, was the guest of the evening at the House dinner given at the Press Club, London, on Saturday night.

During the evening the chairman's gold medal was presented to Mr. William H. Lock, who has been for twenty-one years treasurer of the Club.

Mr. T. A. Davies, the ex-president of the National Union of Journalists, has been appointed deputy editor of the *South Wales News*, of which for some years he has been the Cardiff Docks representative.

The chairman of Messrs. Waterlow and Sons, Ltd., on Wednesday of last week, presented Mr. Quickfall, manager of the firm's Old Ford factory, with the honorary vellum awarded by the Royal Humane Society and a handsome clock from the company, whilst the father of the chapel, on behalf of the workers in the factory, presented him with a silver-mounted ebony stick, subscribed for by them as a mark of appreciation.

The presentations signalised an act of heroism by Mr. Quickfall on February 14th, in rescuing a drowning man from the wharf.

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE LTD.—From the report of the directors of International Linotype Ltd. for the year ended March 31st, 1923, it appears that the net profits available for dividend amount to £29,664 13s. 9d. An interim dividend of 2½ per cent. was paid on November 1st, 1922, and the directors now recommend a balance dividend of the same amount, making with the interim dividend 5 per cent. for the year, against a 6 per cent. dividend declared last year, leaving a balance of £1,881 4s. 11d. to be carried forward. The report states that during the year the Mergenthaler Linotype Co. (of whose stock International Linotype Ltd. hold 14,404 shares of $100 each, fully paid) has distributed dividends amounting to 10 per cent. on the nominal amount of their issued share capital, the same percentage as in the preceding year.

MACNIVEN AND CAMERON.—Directors of this Edinburgh firm of stationers and pen manufacturers announce that dividend on preference shares is postponed. Previous year only preference dividend was paid.

MANSELL, HUNT, CATTY AND CO.—Directors of this London company of embossed and laced paper manufacturers have declared dividend of 9 per cent., actual, on ordinary. Interim of 4 per cent. was paid in November last. Total distribution previous year 11 per cent.

NEW COMPANIES.

G. AND E. MILES, LTD.—Capital £3,000, in £1 shares; manufacturing, commercial and scholastic stationers, printers, lithographers, stereotypers, electrotypers, photographic printers, die sinkers, envelope manufacturers, bookbinders, account book makers, box makers, cardboard manufacturers, etc. Private company. First directors: G. Miles, E. Miles and F. B. Holt. Registered office: 61, Ducie-street, Manchester.

EDWIN J. PARKER, LTD.—Capital £20,000, in £1 shares; publishers or proprietors of books, magazines, journals, newspapers, catalogues, and programmes of all kinds, advertising contractors, canvassers or agents, manufacturers of advertising novelties, etc. Private company. First directors: E. J. Parker and W. W. Bemrose. Registered office: 133, High Holborn, W.C 1.

State Printing and Stationery.

Select Committee's Report.

A Blue Book issued last Thursday contained a special report from the Select Committee on Publications and Debates, 1923, together with the proceedings of the Select Committee last year, and minutes of the evidence.

The Committee say they note that the gross total of the estimate for the ordinary services—stationery and printing—amounted to £3,454,937 for 1922-23, as compared with £5,019,944 for the year 1921-22, showing a reduction of £1,565,007. Of this reduction £280,000 represented a further decrease in the cost of printing registers, etc., under the Representation of the People Act, in addition to the decrease of £400,000 which took place between the estimate of 1920-21 and that of 1921-22 for the same sub-head. Of this sum of £280,000, £30,000 represented the annual cost of the registers for Southern Ireland, which will in future be borne by the Irish Free State. The remaining £250,000 represented in the first place the advantages obtained by the Stationery Office in securing better prices on the last occasion on which the contracts were up to tender, the full extent of which could not be foreseen when the estimates for 1921-22 were prepared. Another factor in the reduction of the total cost was a fall of wages in the printing trade.

The report says it appears that many important printing items, including the telephone directory and the Parliamentary debates, were given to the State Printing Works without tenders being invited from private firms.

The Committee add that they note the references made to the State Printing Works in the report for 1921 on Government trading and commercial services by the Auditor-General, in which it is stated that the loss for 9½ months amounted to £32,839.

Having ascertained that it is still the case that no State Department receiving stationery or printed matter from the Stationery Office is informed of the cost, the Committee say they are of opinion that the absence of this knowledge is "detrimental to good management and economy."

Bookbinders' Overseers' Annual Dinner.

Another Successful Effort by the P.B. & K.T.O.A.

The nineteenth annual dinner of the Printing, Bookbinding and Kindred Trades' Overseers Association, held on Saturday at the Connaught Rooms, adds another successful function to the long list of similar efforts made by this organisation. Everything possible was done for the general comfort and enjoyment of the company, the arrangements from start to finish being carried through with perfect harmony. A prominent feature of the proceedings was the good fellowship that prevailed, this atmosphere being largely the result of the tact displayed by the croupiers in seeing that those dining at their respective tables got to know one another. The gathering—held in the Princes Room—was presided over by Mr. H. Milton (president), and among those present were the following: Messrs. E. W. Whittle (general secretary, P.M. and O.A.); S. M. Bateman (president, P.M. and O.A.); E. C. Bateman, M.B.E. (H.M. Stationery Office); W. Bullett (secretary, Electrotypers and Stereotypers Managers and Overseers); A. C. Barnes (London Paper Mills); A. G. Aves, A. J. Daines, J. Dixon, G. A. Eden, J. Fleming, T. Goodall (Jackson's Millboard Mill), W. H. Hillman, A. W. Hunt, J. Lee, F. C. Peacock, A. W. Sandilands, A. C. Ware and Arthur Cox (secretary, P.B. and K.T.O.A.).

The Association.

Mr. F. C. Peacock, in giving what he claimed as the toast of the evening, thought the gathering that night showed that the Association had fully justified its existence. During all the intervening years since its inception, it had achieved many things for which the founders felt justly proud. The Association's first ideal in these early days was the development of the social element, so that overseers might get to know one another better. Before the Association was formed bitterness often prevailed, and bad opinions existed among overseers engaged in the same line of business. The formation of the Association had altered all that, continued Mr. Peacock. It had eased the anxieties of many an overseer. When the Association was first formed it was strongly urged that it should not be a trade union, but that it might act as intermediary between the workmen and the employer. The founders saw the danger there was in the employers thinking they were forming another trade union. The reason why he had mentioned this matter that night was because recently he had felt there was a tendency amongst some of the younger members to break away from this early resolve. He thought that the tendency he had referred to was a dangerous one to the Association. (Hear, hear.) He wished the Association further prosperity, and hoped also that it would long continue to flourish. (Cheers.)

Mr. H. Milton, in replying, thanked the company for the hearty manner in which it had honoured the toast. He was present on the previous Saturday at the annual dinner of the P.M. and O.A., and one of their friends, Mr. Bridges, in referring to that association, spoke of it as *the* association of overseers. That statement he rather took to heart. Mr. Bridges seemed to forget the warehouse and binding overseer, for he (Mr. Milton) thought that the printer would be nowhere without the assistance of the binder and the finisher of the book in order that it might be made presentable to the public. Mr. Bridges evidently only had in mind the overseers present on the occasion when he made that statement.

President and Vice-President.

In proposing this toast, Mr. A. W. Hunt said he thought the head of the Association was well filled in the persons of Mr. H. Milton and Mr. J. Fleming. Their president was one of the most genial and warm-hearted of men, whose heart and soul were in the welfare of the Association. Mr. Fleming, whom he knew as a boy, would carry the duties and honours of the Association with every degree of ability and success.

The toast was very heartily accorded.

Mr. Milton briefly returned thanks for the sincere way in which his name had been honoured.

"Some" Association.

Mr. Fleming, in responding, said he was pleased to see so many friends present. He thought that went to show they were "some" Association. It was rather amusing to read in the *British and Colonial Printer and Stationer* that morning an account of a gathering of a similar association to their own which was addressed by a prominent gentleman in the printing industry, who referred to that association as *the* association. Well, he was very pleased that they had with them that night the president and the energetic secretary of that particular association, Mr. S. M. Bateman and Mr. E. W. Whittle. He confessed that they always looked up to the P.M. and O.A. and were willing to take their hats off to it. He was pleased to say there were no petty jealousies between the two associations. The fact that they had so many gentlemen there that night joining them in their happy gathering was proof of that, and it also went to show that their association was something to be reckoned with in the printing industry. (Hear, hear.)

Our Guests, especially the Ladies.

Mr. G. A. Eden, in proposing "Our Guests, especially the Ladies," remarked that their Association had many activities, social and otherwise, but the social aspect stood out pre-eminently. The importance of their annual dinner was added to in every respect by the presence of their guests, and especially the ladies. Years ago their guests were very few, and the ladies were entirely absent. They had improved since then and were glad to acknowledge it. He was pleased to welcome Mr. E. C. Bateman, Mr. S. M. Bateman and Mr. W. Bullett. Mr. Eden thought they had present with them all the people that mattered. With regard to the ladies, they lent colour and life to the function. Concluding, he had great pleasure in presenting the toast of "Our Guests, especially the Ladies," with emphasis on the "especially."

Mr. E. C. Bateman, in reply, said he had come to the gathering feeling absolutely free from responsibility and not expecting to be asked to respond to a toast. He had been associated with the printing trade for close upon forty years, having served his apprenticeship in a small office in Bath, engaged in the production of a weekly newspaper. Mr. Bateman then gave some reminiscences and recounted many amusing pranks resorted to by the printer's devil in those early days.

Mr. E. W. Whittle, who also replied, said he thought their hosts had entertained their guests, and especially the ladies, in a very warm-hearted manner. With regard to the reference made by his friend Joe Fleming to his (Mr. Whittle's) association's annual dinner, he was certain that in spite of any distinction that might be drawn by those who read the report of the speeeh alluded to, Mr. Bullett, Mr. Cox and himself were, behind the scenes, combined in one heart. (Hear, hear.) The P. B. and K. T. O. A. was the first to entertain the ladies, and he was not ashamed to own that after five years of effort on the part of the president and himself his association had only just commenced to follow their excellent example. He noticed also that they had booked up next year's date for their annual function, a fact which went to show that they were again to the front and that they knew how to do these things properly. He had spent a very happy evening and would like to express on behalf of the guests, and especially the ladies, thanks for the splendid way in which they had been entertained.

The Stewards.

Mr. J. Dixon, in proposing "The Stewards," said they had everything to be thankful for in respect of the arrangements that had been made, and congratulated the dinner stewards —Messrs. J. A. Esler, A. J. Jones, and A. C. Ware—on what he considered a record night.

The toast was accorded musical honours.

Mr. Ware, responding on behalf of the stewards, said adequate testimony that the evening had been a success was to be found in the happy looking faces round the tables.

The musical programme—provided by the "Chansonettes" Concert Party—was under the able direction of Mr. Denis Horton, assisted by the Misses Frances Buckland, Nessie Valerie and Doris Skinner (accompanist), and Messrs. Ted Lymbery and Douglas Johnson. Except for an item by Mr. Ted Lymbery in which that artist rendered a clever feat in memorising, entitled "A Stunt," the programme had a distinct leaning towards the humorous and burlesque. Most of the numbers were given by the whole party collectively, and met with well-merited appreciation.

A memorable evening was brought to a close by the singing of "Auld Lang Syne."

Printers' Eastbourne Week-End.

Home Counties M.P.A. Programme.

Members of the Home Counties Master Printers' Alliance are hoping that the first week-end in May will be blessed with the best of weather, as that seems to be about the only thing not already arranged for to make their annual gatherings at Eastbourne a brilliant success.

The week-end's functions begin on Friday, May 4th, with a conversazione, and an interesting list of events has been planned for Saturday. As is characteristic of this Alliance, things are to be done in excellent style, and the Eastbourne programme includes a civic reception by the Mayor and Mayoress of Eastbourne.

Obtainable from the secretary of the Alliance (Mr. Percy D. Michael, 24 Holborn, E.C.1), is a charmingly produced programme containing two Eastbourne views and giving the following particulars of the arrangements:—Friday—8 p.m., conversazione, by invitation of Eastbourne and District M.P.A., at the Saffron Rooms, Meads-road (near Town Hall). Music and light refreshments (dress optional). Saturday—10 a.m., rendezvous, it is requested that the whole of the party shall assemble at the Queen's Hotel; announcements will be made and indications given as to the ways in which the morning can be spent to best advantage (those who arrive at Eastbourne after 10 a.m. should first call at the Queen's Hotel); 10.30 a.m., committee meetings at the Queen's Hotel; 12.15 p.m., luncheon at the Queen's Hotel. His Worship the Mayor of Eastbourne (Councillor G. B. Soddy) and the Mayoress (Mrs. Soddy) have kindly accepted an invitation to be present; tickets 5s. each inclusive; 2.0 p.m., civic reception by the Mayor and Mayoress of Eastbourne at the Saffrons Rooms; 2.30 p.m., annual general meeting of members at the Saffrons Rooms, during which there will be a motor char-a-banc excursion for ladies over the South Downs, passing Beachy Head and through the quaint Downland villages of East Dean, Litlington and Alfriston—the Church of Alfriston is known as the Cathedral of the South Downs, the cars leaving the Saffrons Rooms at 2.25; 4.15 p.m., tea at the Saffrons Rooms, by invitation of the Mayor and Mayoress; 8.45 p.m., dance at the Queen's Hotel (free to guests staying at the Hotel, others 3s. 6d. each). Sunday—Particulars of Church services and other arrangements will be available on arrival at Eastbourne.

Large Stocks always on hand for Immediate Delivery.

Shakespeare Tercentenary.

The First Folio Publication.

Worthily has the Worshipful Company of Stationers taken its appropriate part in the celebration of the tercentenary of the publication of the First Folio Shakespeare. The Commemoration was inaugurated on Friday evening by a *conversazione*, mainly for the Livery, held at Stationers' Hall by the Master, Wardens, and Court of the Company. The Registers of the Company were on view, together with an exhibition of selected Shakespeariana, illustrative of the First Folio, its printers, publishers, and all concerned in the book, including original Folios and Quartos of great value, lent by Mr. John Murray, Messrs. Maggs, Messrs. Quaritch, Mr. William Jaggard, and others.

There followed on Saturday a luncheon at Stationers' Hall, held in conjunction with the Shakespeare Association, the Master (Mr. Herbert Fitch) presiding.

The Master proposed the toast "The Immortal Memory of William Shakespeare," and after it had been honoured in silence Mr. Poel recited lines from Ben Jonson's Panegyric in the First Folio, "To the memory of my beloved, the Author, and what he has left us."

Sir Israel Gollancz submitted the toast "The memory of the editors, Heminges and Condell, and the printers, publishers, and all concerned in the publication of the First Folio." He said they were thinking not only of the master, but of those who consecrated high service to a great and noble task. There were others associated with the First Folio to whom they must pay reverent homage. He referred particularly to William Jaggard, Edward Blount, John Smethwick, and William Aspley, and their associations with the Stationers' Company.

Shakespeare's Vocabulary.

Responding to the toast of the Worshipful Company of Stationers, the Master said he wished to convey to Sir Israel Gollancz the thanks of the Stationers' Company for his invaluable services in securing the success of their commemoration. There was a new thing that he could tell them about Shakespeare. He was reputed to have used about fifteen thousand words, which was something like twice the number that Milton used, and about ten times the vocabulary of the "man in the street." And yet by some strange oversight he never used the word "stationer." (Laughter.) He had not the premonition to foresee how much his world-wide fame would be due to the stationers, which term included, of course, the allied callings of the printer, the publisher, and the bookseller. ("Hear, hear," and laughter.)

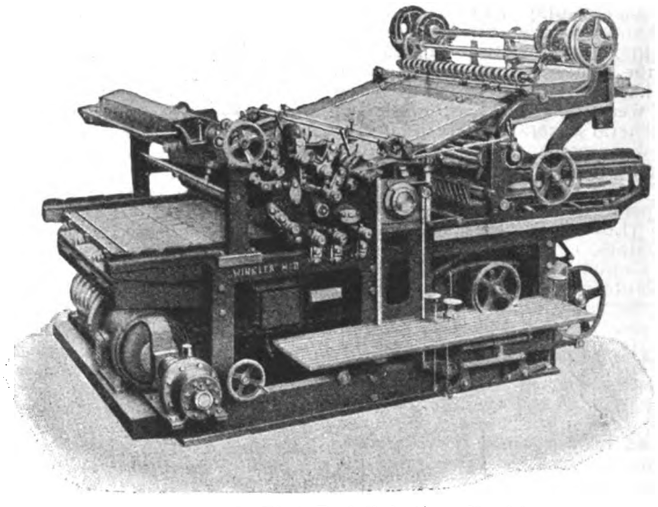
As a memento of the celebration each guest was presented with an illustrated brochure relating to the publication of the First Folio, with an intoduction written by Sir Israel Gollancz.

A copy of the First Folio, with other exhibits relating to the tercentenary, were on view at Stationers' Hall on Monday.

The entry of the First Folio on the registers of the Worshipful Company of Stationers bore the date November 8th, 1623. Formal licence was obtained by Edward Blount and Isaac Jaggard to publish sixteen plays "not formerly entered to other men.' Four other hitherto unprinted plays were included in the volume, which contained 36 in all.

First Folio Publishing House.

Fleet-street very nearly had the honour of publishing the First Folio Shakespeare, but, unfortunately, before John Jaggard, the City printer, undertook that task he had removed his printing works to the Barbican, says the London correspondent of the *Manchester Guardian*. Before that he had his business under St. Dunstan's Church, where it had originally been established by Wynkyn de Worde, Caxton's apprentice. He was the first law printer, and from that time to this the business, which has passed through many hands, has always been connected with the law. It passed from De Worde to a man named Smith, then successively to a Richard Tottell, to Richard Yeksweirt, a Dutchman, and to William Jaggard, whose descendant William Jaggard was present at the service at Aldermanbury on Saturday. Later it came into the hands of Andrew Miller, who published Johnson's Dictionary, and exentually, at the beginning of the nineteenth century, to Butterworth. This firm, who are now in Bell Yard, maintain the four-centuries-old tradition. They are still the leading law publishers of the whole world.



It is interesting to note that descendants of Heminges, Condell and Jaggard took part in the tercentenary celebrations.

A New Flat-Bed Press.

Notable "Winkler" Model.

We are able to print herewith an illustration of the latest Winkler flat-bed printing machine with tail-first delivery and automatic feed, a machine which has many points of interest.

Strong driving gear of the crank type is provided, an important feature being the inclusion of a coupling between the operative parts of the press and the driving mechanism, enabling stopping and starting to be accomplished quickly and with the minimum of shock. The inking arrangements have some specially attractive points, including the provision of a smaller-diameter roller between two inking rollers, to assist in ensuring uniform distribution of ink. To prevent "picking" when difficult formes are being worked, electric heating of the type carriage is provided, the inking rollers being specially cooled. The tape system used to hold the sheet against the cylinder during printing is very ingenious. Sheets are delivered printed side up, special means being employed to ensure gentle delivery. The problem of accurate register has received very careful attention, and it is claimed that even an expert cannot distinguish between a sheet that has been put through the machine several times with reduced inking and a sheet put through only once with normal inking.

Winkler No. II Flat-Bed Printing Machine.

The sole agents in this country for Winkler machinery, which is of Swiss manufacture, are Messrs. W. J. Light and Co., Ltd., 36–38, Whitefriars-street, London, E.C.4.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

H.M. Trade Commissioner at Toronto (Mr. F. W. Field) reports that a Canadian firm is desirous of receiving samples and prices of .007 red vegetable parchment. (Reference, 10985/E.D./M.C.(2).

A Canadian company manufacturing devices for printing on wrapping paper and gum tape, and also for sealing packages, would like to arrange for the sale of these goods in this country. (Reference, Canadian Trade Commissioner's office, 73, Basinghall-street, E.C.2.)

SIAM.

H.M. Consul-General at Bangkok reports that the Ministry of Marine have invited tenders for the supply of naval stores, including stationery. Tenders must be submitted through an agent resident in Siam. (Reference D.O.T. 10059/F.E.)

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

There was only a fair attendance of members at the April meeting of the Association on Tuesday of last week at the St. Bride Institute, Bride-lane, E.C., when the chair was occupied by Mr. J. Black (vice-president).

After the confirmation of the minutes, the secretary said the only item of correspondence was a letter from Mr. Glen Steele (Messrs. Jubbs), in which that gentleman stated that he hoped to be able to give an address to the Association on the next meeting night.

The chairman thought a lecture from Mr. Steele would be warmly welcomed by the members, as he was sure that gentleman was capable of giving them many wrinkles on the subject on which he proposed to address them.

Mr. W. M. Forsyth, one of the stewards for the annual dinner was asked if he had anything to report, said his time had been so limited that he regretted he had not been able to make any further arrangements for this annual event.

The remainder of the evening was occupied in matters privately concerning the Association's welfare and also on a discussion on the subject of apprenticeship and its bearing on the shortage of labour.

A vote of thanks to the chairman closed the proceedings.

Lamson Paragon Supply Co.

Presiding on Wednesday at the 20th ordinary general meeting in London, Mr. Alan McLean (chairman) said whilst the output of the London factories had been greater than last year, the turnover was substantially less. A substantial part of the reduction was due to lower selling prices, of which the customer got the benefit. Another contributing factor in the reduction in profits was the continued practice of traders to order from hand to mouth, and small and hastily required orders involved uneconomical working conditions. Still another contributing factor is that of wages, which have not fallen to the same extent as in other trades. The Caribonum Co. continued to make good progress in spite of the trade depression. Its carbon paper and typewriter ribbons hold the premier position. The company's businesses abroad were good and bad in patches, but any losses made had been provided for, or were amply covered by reserves. Investments this year had contributed the major portion of the profits. In spite of difficult trade conditions and in face of keen competition the parent company had continued to extend its *clientele* during the past year.

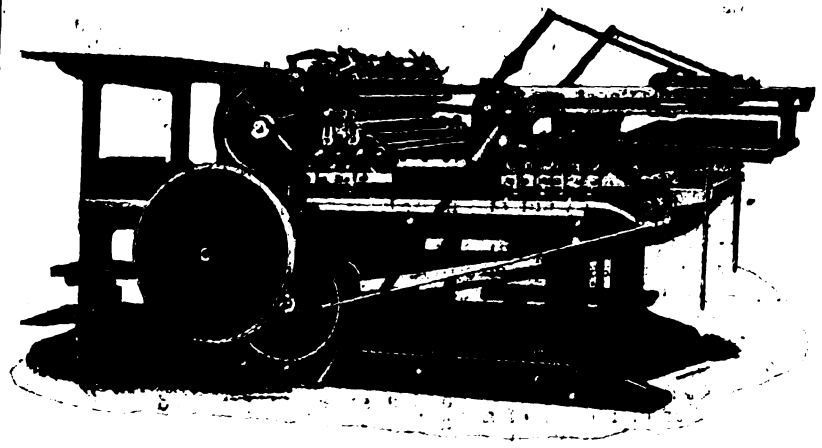
The . . .



American Miehle Company's THREE-ROLLER Two-Revolution Press.

SPECIFICATION.

Type matter locked in Chase, 24 in. × 38 in.

Largest sheet which can be delivered, 26½ in. × 41½ in. (approximately Double Royal).

The Inking arrangements on this machine are adequate for all requirements. The Three-roller Press has a pyramid of eight rollers and riders over the forme, three of the rollers being inkers.

Gear side view of the American Miehle Company's Three-roller Two-Revolution Press.

Over-all measurements:
Width 7 ft. 10 in.
Length with sheet delivery 12 ft. 3 in.
Practicable speed per hour 2,400.

THE American Miehle Company's Three-roller Two-revolution Press will handle satisfactorily every class of work undertaken by the Jobbing Printer. It will print the heaviest and lightest formes with equal ease. It registers to a hair and delivers faultlessly. It is an American Miehle Company's Press, in no way inferior to that Company's regular Four-roller machine, bearing the same high reputation, and giving the fullest satisfaction where installed.

This machine may be seen running by appointment.

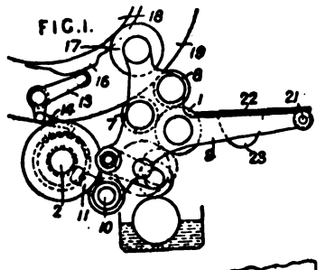
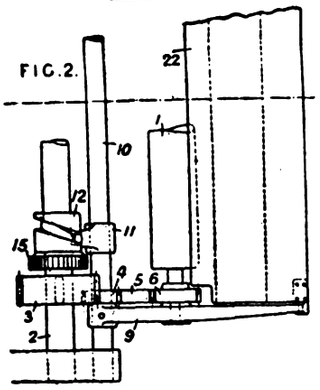
New Inventions

Reproducing Letterpress.

In a process for reproducing letterpress matter by means of indirect flat printing, as invented by the Polygraphische Ges., the matter is composed by means of a type bar making machine having relief characters, or by means of a typewriter, the characters are inked with ground flat colours, and a platen supporting the paper is pressed against the type. Type bar matrices *a*, Fig. 1, having relief characters a^1, may be inked by a roller *b* travelling in a guide *c*, and the paper

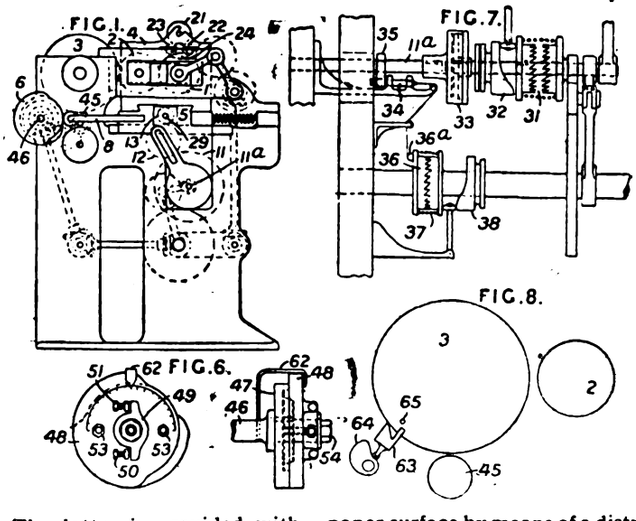




pressed against the characters by a platen *d* carried by a rocking arm *e*. Type bar matrices of the kind which are suspended from wires may be employed. Alternatively, a typewriter may be used, the type levers *s*, Fig. 5, being brought by means of keys into position beneath a platen *u*, and inked by a roller *t* carried by a revolving arm t^1. The platen *u* is then moved down on to the type. Ink is transferred to the roller *t* from a vessel *v* by means of rollers *w*, *y*.

Litho. Damping Apparatus.

An invention by the Bautzner Industriewerk Akt. Ges. is announced by which in damping-



apparatus for lithographic offset printing machines, the felt damping rollers alone or together with the intermediate brass roller or the entire damping apparatus are reciprocated to ensure efficient wetting of the forme cylinder, and a doctor blade may be provided bearing on the intermediate brass cylinder to remove immediately any ink which may collect thereon, thereby preventing it from being spread in the form of streaks on the forme cylinder. In the arrangement shown, the intermediate brass cylinder 1 is driven from the shaft 2 by gearing 3, 4, 5, 6, the felt damping rollers 7, 8 rotating frictionally. These rollers are mounted in cheeks 9 secured to a shaft 10 and supported by a spring or weight. The shaft 10 is reciprocated longitudinally by an arm 11 engaging a cam groove on a drum 12, which is loose on the shaft 2 and is rotated intermittingly by means of the ratchet mechanism 13, 14, 15 and a cam 16 on the shaft of the forme cylinder 19. Another cam disc 18 engaging a roller 17 pushes the damping mechanism periodically out of contact with the forme cylinder. A doctor blade 22, pivoted at 21, is held by a weight 23 or spring in contact with the brass cylinder 1 for removing any ink collecting thereon.

A Repeating Machine.

By an invention patented by Mr. W. Gardner a rotary machine is adapted automatically to transfer a number of repeats of a design carried by a master plate on to a lithographic printing plate mounted on a cylinder, the repeats being arranged in spaced relation both longitudinally and circumferentially of the cylinder. As shown, the cylinder 1, Fig. 1, carrying the master plate is in contact with a cylinder 2 which offsets the design on to a plate carried by a large cylinder 3. The cylinders 1, 2 are adapted to transfer rows of repeats of the design on to the cylinder 3, and for that purpose they are mounted in a carriage 4 longitudinally slidable in vee-guides on a spring-pressed transverse slide 5. The latter is provided with roller arms 8 in engagement with adjustable cams 6 whereby the cylinders 1, 2 are moved away from 3 after each impression and returned to commence the next impression. The cylinder 3 is intermittingly rotated from the cylinder 2 by gear wheels which are disengaged when the slide 5 is moved back so that the impressions are transferred to the cylinder 3 in close succession circumferentially. When one row of impressions has been completed the revolution of the cylinder 3 is completed by means of a constantly rotating gear wheel 45 mounted in sliding bearings and raised by a cam into engagement with a gear wheel on the cylinder 3. The revolution is accurately adjusted by a V-stop 63, Fig. 8, raised into engagement with a stud 65 on the cylinder by a cam 64. Meanwhile the slide 4 is moved longitudinally into position to commence another row of impressions by a screwed spindle 29 engaging a nut thereon. The spindle 29 is rotated by exchangeable gears, 13, 12, 11, the shaft 11^a of the latter being revolved through a friction clutch 33, Fig. 7, one half of which is rotated by a coupling 31 operated by a cam 32 rotated from the cylinder 3 through chain gearing. The shaft 11^a is normally prevented from rotating by a projection 35 thereon engaging a spring-pressed sliding pin 34. The latter is withdrawn by a cord fixed to a stud 36^a slidably engaging a semi circular groove in one half 36 of a coupling 37 which is closed by a cam 38 driven from the cam 32. The arrangement is such that the part 36 makes a half revolution and holds the pin 34 retracted while the part 35 makes one and a quarter revolutions. The stud 36^a then slides to the top of its slot the pin 34 returns and stops the shaft 11^a at the end of its second revolution. A similar cam and clutch arrangement to those described above is used to drive the cam 64. The roller 1 is inked by rollers 21, 22, 23, the latter two being separated to interrupt the inking by a wedge 24 raised by a pivoted lever. Damping rollers may also be provided. Fig. 6 shows the details of each main cam 6 which comprises two coned parts 47, 48 mounted on the shaft 46 and clutched together by tightening a nut 54. Screws 53 are provided for separating the parts and a member 49 fixed on the shaft provides an abutment for locking the part 48 in adjusted position by means of screws 50, 51 and also for effecting a fine adjustment. A pointer 62 and a scale are provided to indicate the adjustment.

Paper Designs.

In German patent No. 367,804, there is described a process for producing designs on the paper web. The water, solutions of dyestuffs or chemicals and various emulsified masses are brought in contact with a finished paper web or one in the process of formation by means of a suitable arrangement. The colouring matter can also be sprayed on the paper web, as it passes around a cylinder, the colour being uniformly distributed over the paper surface by means of a distributing plate. This plate is placed at a proper angle and is provided with a run-off channel to collect the colouring solutions.

Printing Ink Made in India.

A printing ink industry has already been started in Bengal, and there is reason to believe that this industry will be successful in Burma, says a correspondent of the *London Chamber of Commerce Journal*, as there is abundent raw material for the manufacture of lamp black which is so necessary in the manufacture of printing ink. As for linseed oil, Burma will have to depend on the supply from other parts of India, but a useful substitute can be found locally. The garjan oil (Kenyensi) is a drying oil as it is, and a very large quantity is available in Burma; this may be used instead of boiled linseed oil.

THE desire to get something for nothing figures largely in every failure.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer. The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

8 Feeders sold during the last weeks.

Printing Crafts Guild, Manchester.

A Lecture on Newspapers.

The members and friends of the Printing Crafts Guild, connected with the College of Technology, Manchester, assembled in good numbers at the College on Friday evening, April 13th, to hear Mr. Ernest Fisher (Fry's Metal Foundry), deliver a lecture on "Newspapers: A Retrospect and a Forecast." Mr. Fisher who has managed a newspaper office, and been practically associated with newspapers a great many years, gave some interesting facts on the subject.

The chair was taken by the president (John Taylor, Esq.), who, in introducing the lecturer, said he had known him ever since he became a printer, and recalled that he had been for many years a technical instructor.

In dealing with the "Retrospect" part of the lecture, Mr. Fisher went back to the time of rock carvings, baked clay tablets, cylinders, papyrus, parchments, and other means of recording thought and giving it to the public, showing not only many excellent lantern slides, but actual specimens of the materials used in the olden days, some of them dating as far back as Anno Domini 200.

Many interesting sidelights were given on the early days of the free Press agitation, the part that coffee houses used to play, and eventually how the opposition broke down and newspapers began to appear regularly. Mention was made of how many of the small provincial towns of England were actual pioneers of the Press, Norwich, Exeter, Worcester, Stamford, Sherborne, Winchester and Salisbury, each being remarkable for their early enterprise, oft-times getting their news circulated by the aid of mounted couriers before the London papers arrived.

Tracing the progress of technique, Mr. Fisher told how the illustrated Press came to be introduced, and how in the seventies a block took some three or four days to make, it could now be made in about half-an-hour after the negative had been delivered.

After an account of the introduction of composing machines, pictures of practically all kinds were shown on the screen, leading up to the present-day machines, and a cinematograph film, kindly lent by the *Daily Mail*, entitled "The Making of a Great Newspaper" was shown which brought forth rounds of applause and was much appreciated. This film is in many ways a remarkable production, reaching as it does from the days of Caxton to the present day, showing the actual operations and preparations which go to make up this enterprising newspaper, from the felling of trees for paper to the printed sheet.

Mr. Fisher then discussed what is likely to be the position of newspapers in the future. He did not think we should get our papers for a halfpenny again if produced by present methods. He hoped we should not, they being already too cheap even at a penny. But with a totally new method which had every indication of being perfected the newspaper might possibly be again sold at a halfpenny, and it would be a much better production, being printed by the litho-offset process.

By the courtesy of the *Manchester Guardian* the lecturer showed specimens of the product of the wonderful Murray Multiplex Machine, which transmits printed messages from London in actually typed words which are received in Manchester two seconds after the operator has dispatched them from London. Messages are sent along the same wire in the opposite direction at the same time, four machines giving 200 words per minute. The *Manchester Guardian* is the only newspaper in this country to have it installed. Other mechanical devices were shown which are uncanny to the uninitiated.

Probably the most important feature of the lecture was that part which related to the "Forecast." By the kindness of Messrs. Hunters, Ltd., who lent many interesting slides of their new photo-typesetting machine and camera equipment, Mr. Fisher predicted that the printing office of the future would be a very different place from what it is at present. The camera would be found in practically every office used for printing productions in some shape or another. There were shown newspaper specimens admirably printed by the offset method, including both letterpress and illustrations.

Newspapers in war-time was a subject which provided not the least interesting part of the lecture, dealing as it did with the difficulties of production both in this country and in France and Belgium. A Chinese newspaper and other quaint publications were on view, and created a good deal of interest.

At the close, a hearty vote of thanks was accorded to Mr. Fisher, who suitably responded.

British Capital and Canadian Paper.

According to the United States statistics the Republic has an annual consumption per capita of 40 lb. of news-print and of 60 lb. of other grades of paper. The United States production of news-print is being rapidly overtaken by the Canadian output. The time is in sight when Canada will assume a world lead.

At the present time the United States is dependent on Canada for 95 per cent. of its news print supply and 85 per cent. of the news-print manufactured in Canada goes to make the newspapers of the United States. A tree growing in an Ontario forest a week later appears in the form of a newspaper read in Chicago.

It would certainly appear as being very advantageous to both Canada and the United States for producers to complete the manufacture of their product in Canada, writes Dom Atlas in the *Financial News*, but it is a great pity that the capital which has developed the Canadian part of the industry has not been all British and that the Canadians could not establish more British mills to supply the world's needs in news-print. Much of their output goes to Australia and New Zealand. The dividends, of course, go to U.S.A.; likewise, the Customs preference for goods manufactured in British countries.

Be fired with enthusiasm—not by the boss.

Printers' Managers and Overseers Association.

Manchester and District Centre.

The April meeting was held in the Mitre Hotel, when President Fred. E. Robinson had a large gathering to support him. After the reading of the minutes, Mr. Clarence Lea, letterpress overseer, Messrs. John Albinson, Ltd., Oldham, was admitted to membership, and being present received a hearty welcome along with Mr. P. Ball, of the Liverpool Centre.

Manchester was almost unanimous that to hold the Leicester conference on a Friday evening would not be conducive to wise decisions, as delegates travelling from distances would probably be jaded with being so long within closed doors, and an evening's relaxation would be a relief. Furthermore, unity in getting together at an early hour on the Saturday morning would almost be impossible. The conference delegates may be relied upon to work hard, and afterwards they will be able to enjoy the feast of pleasure which Secretary Crane and his band of workers are sure to have in readiness.

Mr. Walter H. Richardson, of the Miehle Printing Press and Manufacturing Co., Ltd., gave the members a thorough talk about the Vertical Job Press, insomuch that those present at the meeting are eager to have the opportunity of seeing such a press actually working. The press is a unit in itself and its claims are that it can be printing a greater percentage of its chargeable time than any similar class of machine at present on the market, it being able to print 90 per cent. of the jobbing work which comes into the average printing office. It occupies very little floor space, and vibration is reduced to a minimum. Speeds of 2,000 impressions per hour, advancing by speeds of 400 up to 3,600 per hour give a good range for the stock that has to be handled.

Mr. F. E. Robinson thought that the type line and paper line being marked on the chase was a very good feature, and the two eccentric jacks on which the chase rested would prevent unlocking to get the type into position with the gripper edge of the sheet.

Messrs. Philbin, Paterson, Taylor, Hughes, and several other members put pertinent questions to the lecturer about geared riders, probable stripping of the rubber rollers, checking of spoiled sheets, etc., to which Mr. Richardson replied.

Web Mac.

Mr. W. S. Robson, of Manchester, has been appointed by Messrs. Jas. Wrigley and Son, Ltd., Bury, to act as their representative in the North-Midlands and Yorkshire.

Trade with Occupied Germany.—British traders who desire to secure the delivery of goods from the occupied territory of Germany under the special arrangements made for goods ordered before February 1st, should send either direct or through the Board of Trade full particulars of goods purchased from firms in the occupied territory before February 1st to the British High Commissioner, Inter-Allied Rhineland High Commission, Coblence, and not to Weisbaden.

ANNOUNCEMENT!

THE LANSTON MONOTYPE CORPORATION LIMITED have always endeavoured to introduce labour-saving machinery that is a marked advance on plant already in use; that will produce better quality results, and at the same time give greater output.

After much research and effort covering a prolonged period, an entirely new High-Speed Automatic Cylinder Machine is presented to the Craft which takes a sheet 12½" × 20" and runs up to a speed of 4,000 impressions per hour, handling all grades of stock from a thin Manifold to Cardboard.

The machine, which will be known as the MILLER "HIGH-SPEED" *is built along the lines of established practice* which alone makes the high out-turn possible, which fine output cannot be attained by any other machine of its size and character.

For a particular class of work, certain printers prefer a cylindrical to a platen impression, and to all such we definitely say that in their own interests they should see the MILLER "HIGH-SPEED." The first of these wonderful machines will be on view at our Showrooms during the next few days.

Our Offices and Showrooms are at

43/44 FETTER LANE, LONDON, E.C.4

THE ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED.

A Specialised Trade Protection Office for Paper Makers, Merchants, Agents, Wholesale Stationers & Allied Trades.

OBJECTS AND POINTS OF VITAL INTEREST TO THE TRADE.

Enquiries. Precise up-to-date Status Reports furnished by this Society which operates exclusively in your trade.

Collection of Accounts. Trade protection specialisation makes it possible for this Society to render a valuable service in the connection mentioned and, through up-to-date and efficient methods, costs are reduced to a minimum.

Insolvencies. This department will be under the control of an accountant with 15 years' experience in this class of work, and fullest investigations will be conducted and Meetings of Creditors attended free of charge.

The Society will be controlled by a directorate to be elected from the principal houses in the Trade.

Managing Director, Accountant & Valuer: PARKIN S. BOOTH.

Described by the "Chemist and Druggist" as "The Live Wire of the Trade Protection World."

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from .....192.....*to*.....192..... *and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—*

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.

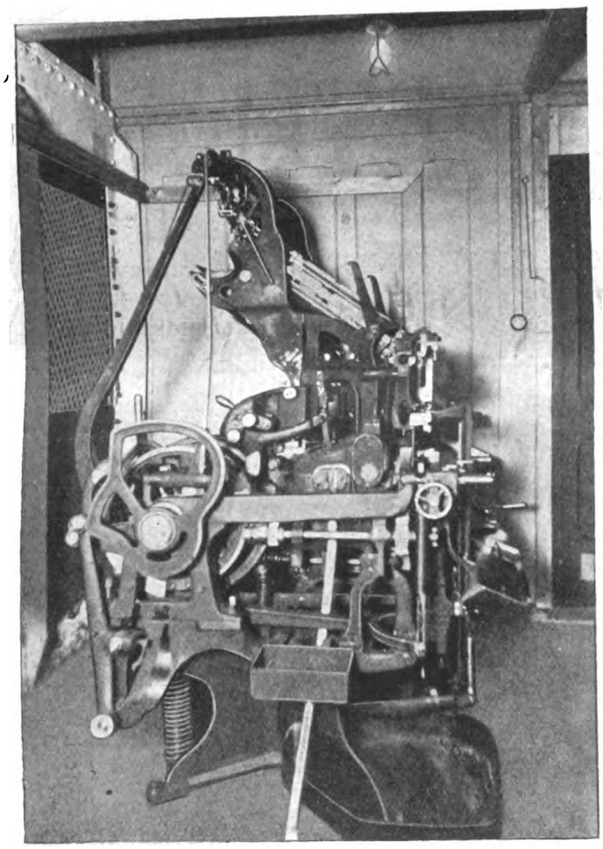
All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.

Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.

The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.

In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:



Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—

Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.

Problems of Lighting in Printing Works.

By LEON GASTER, F.J.I.

The subject of the lighting of printing works has already been dealt with in two able papers presented by Mr. F. W. Goodenough and Mr. Justus Eck in 1912. This discussion afforded much valuable information on conditions in good installations, and many of the suggestions in regard to lighting apply equally well to-day. But there have since been some notable developments in illuminants that may modify pre-war practice, such as the introduction of the gas-filled lamp, the development of "artificial daylight" and the use of vitreosil globes and cylinders in gas lighting.

Economy of Good Lighting.

I may take as a starting point a sentence in Mr. Goodenough's paper in 1912: "I doubt if there exists any industry in which good lighting has more effect on the successful running of the concern than is the case in the printing trade." The keen competition in the printing industry is based on service as well as price, and the printer who can render superior service can command a better price. Service in printing involves chiefly accurate, neat and quick work, each of which requires good illumination. Delay in any of the various stages of composition, make up, press work and binding may make all the difference between profit and loss. Excessive revisions of proofs represent not only lost time, but needless cost, and in many cases this may be charged to poor lighting. On the editorial side we have likewise a need for meticulous accuracy combined with rapidity of execution.

In discussions before the Illuminating Engineering Society it has been repeatedly pointed out that the cost of good lighting forms but a small fraction of the total cost of production. In printing offices this is particularly true, for highly skilled labour is employed, costly machinery is used, and overall charges are commonly high. If we estimate that the cost of artificial lighting amounts to 1s. a man per week, and that the wages he receives are about £4—£5 a week, it is seen that cost of lighting forms about 1 per cent. of the wages bill. This is confirmed by the author's experience in cases where the wages bill varied from £20,000 to £500,000 per annum, and the expenditure on lighting from £200 to £5,000. In many cases less would be paid, and the fraction would be even smaller. An idea of the loss that may arise by inadequate lighting is afforded in a contribution by Mr. F. H. Bernhard to the *Electrical Review*, U.S.A. (Aug. 24th, 1918). In a large printing works it was found that after the conditions of illumination had been thoroughly modernised the general efficiency of work was improved by 25 per cent.

From the operator's side the importance of good lighting should also be emphasised. I understand that defects of eyesight are exceptionally frequent among compositors, which may be ascribed partly to work under inadequate lighting. Improved lighting means not only greater visual comfort, but a more cheerful work room. Journalism may likewise be regarded as an exacting intellectual occupation.

The installations described in the former discussion before the Society were in the main typical of good modern methods. But one still finds newspaper offices in which antiquated methods are employed. Unshaded lamps are too frequent, and the simple conical cardboard shades used throughout some works must now be regarded as obsolete. In most sections of a works the aim should be to provide general illumination by lighting units of high candle power, placed high up so as to be out of the range of view. A series of drop lights terminating in lamps of small candle power is inefficient, unsightly and inconvenient. Nevertheless, the general lighting sometimes requires to be supplemented by a few local units, as many printing processes require lighting of this nature. In one respect the printing industry has an advantage over some other trades. Each machine has its allotted task, and is invariably used for the same purpose. It is worth while, therefore, to scheme out suitable lighting, recognising that it should not require continual adjustment—as may happen in factories where the nature of the work and the duties required from machines change from time to time.

Composing Room.

The lighting of compositors' frames still forms an important problem. The writer has observed three main methods of lighting: (1) unshaded or imperfectly shaded lamps placed over the centre line so as to illuminate the cases on either side; (2) lamps equipped with suitable reflectors used in the same way; and (3) general lighting from overhead lamps, *e.g.*, semi-indirect lighting with sources situated between frames so that the light comes over the worker's shoulders. The first method cannot be recommended. The exposed filaments are troublesome to the eyes of the workers and the proportion of light reaching the cases is very low. But if the lamps are equipped with suitable reflectors and their distance above the top-line of the frame is suitably selected, it is possible by method (2) to obtain very good illumination on the actual inclined face of the frame. Some compositors still prefer local lighting of this description. It is, however, usually desirable to supplement this mode of lighting by general illumination from overhead sources —(*a*) in order to throw light on the drawers below the inclined face, which would otherwise be insufficiently illuminated; (*b*) to ensure adequate lighting of gangways between frames; and (*c*) to eliminate an undue contrast between the illuminated frame and the surroundings.

The alternative method of depending on overhead light is much more feasible with modern illuminants than with the low candle power lamps of the past. It has the merit that the light comes from above and behind the worker and there is less likelihood of inconvenient reflection from the surface of the frame. In addition, the drawers receive a better illumination. Thus in a recent installation of this kind it was found that the illumination on the cases was 6—8 foot-candles, and even drawers quite low down still received one foot-candle.

The question whether individual local shaded lights or good overhead general illumination is better for compositors' frames is one on which one would like to hear the views of the compositors themselves, and the reasons why they prefer certain arrangements to others. In the discussion before the Society in 1912 values in general ranging from 5—10 foot-candles (average) were recorded. In view of the fact that considerable variations in illumination at different points on a frame are often in evidence, it would seem that the average illumination, whether provided by general or local lighting, should lie within these limits. In good modern installations 5 foot-candles is doubtless usual. But there are still many works where much lower values would be recorded.

The lighting of linotype or monotype matrix boxes is usually effected by adjustable local lights placed about 18 inches above the keys and screened on the side facing the worker. This is a process that needs strong local lighting, as the operator has not only to see the keys, but to distinguish the more or less illegible handwriting of the contributions he is dealing with. Such sources need very careful shading. Average values recorded by Mr. Eck for linotype machines were up to 25 foot-candles on the matrix box, 4·3 on the keyboard and 4 on the copy. A recent test in a printing works by the author gave 4-8 foot-candles on the keyboard, 4—8 on the "copy" and 4 on the setting drum (measured vertically)—the latter being a particularly important spot in view of the small letters and numbers on the drum that have to be distinguished.

It would appear that the illumination of the manuscript, at any rate, should not be

Abstract of a paper read at the meeting of the Illuminating Engineering Society held at the House of the Royal Society of Arts on Tuesday last week, when prominent representatives of the printing industry attended. The discussion which followed Mr. Gaster's paper is reported on another page.

less than 4—5 foot-candles, in view of the small type or imperfect handwriting that the operator frequently has to decipher.

The Machine Room.

In machine rooms it is obviously desirable that the surroundings should be light in colour and the illumination very fully diffused so that all interstices in complicated machinery are clearly revealed. I would suggest that, in the interests of safety, the illumination at floor-level should not be less than 0·5 foot-candles, irrespective of the illumination provided for the actual work. On laying-on and taking-off tables, where sheets are placed and inspected, a value of about 5 foot-candles is desirable, and this value is exceeded in some well-lighted works recently visited. The point may be raised whether, for the examination of first sheets, general diffused lighting is sufficient. The printer, in judging the impressions of type and blocks, is guided very largely by small indentations in the paper, and it is possible that these would be revealed more fully by oblique unidirectional lighting. It might, therefore, be good practice to supplement the general lighting by a local adjustable fitting, the position of which with regard to the paper could be altered according to the needs of the operator.

In this department the importance of good lighting can hardly be over-estimated. The author has met cases in which constant breakdowns and vexatious delays were occurring in a badly-lighted room, but practically ceased when modern and adequate illumination was installed.

The proper illumination of the machinery, especially the huge rotary presses of the present day, is something of a problem. The conditions resemble somewhat those met with in textile factories. One may do everything possible by the placing and shading of the permanent general lights, and by the use of light surroundings, to promote good diffusion of light. But it is hardly possible by the aid of general illumination alone to ensure that all the requisite parts of such complex machinery will be well illuminated and clearly seen. This is a question that might well receive some attention from designers of such machinery, who should bear in mind the desirability of important parts being easily accessible and readily inspected. They might go further and embody in the design of the machine suitable facilities for the permanent mounting of supplementary protected lamps illuminating the vital parts where adjustments are made. In the absence of such facilities the attendant must rely on the use of portable lamps or special pendant lights at essential points. As a matter of principle no unprotected lamp should be inserted within the machine, as the trouble arising in the event of a lamp being broken would be considerable. The lamps must be so situated or used that a flood of light can be directed on the part inspected without the operator's eyes being dazzled by glare from an exposed mantle or filament, or inconvenient shadows being cast by his body.

In rooms for packing and despatching the conditions of illumination are simple, and in lofty rooms semi-indirect lighting affording 2-3 foot-candles should answer requirements.

Strength of Illumination.

At this stage it may be useful to give some indication of the order of illumination for various processes, as measured on the actual place of work. In the following table are assembled in the first column a set of values based roughly on the readings given in the papers by Messrs. Eck and Goodenough in 1912; in the second column a few figures just obtained by the writer in a well-lighted modern printing works, and in the third and fourth columns the values recommended respectively by the Home Office Departmental Committee on Lighting in Factories and Workshops (Third Report) and in the Code of the American Illuminating Engineering Society. The figures are interesting as showing the great variations met with in different works for identical processes, and also as an indication that the values indicated in the Home Office Report are such as can readily be complied with in practice.

The values of illumination mentioned throughout the paper are not in any sense final recommendations but are merely used to illustrate conditions met with in typical modern installations. While practice in different works varies, it should be possible, by means of tests conducted in co-operation with those employed in the industry, to determine desirable minima based on scientific investigation. But it must, of course, be recognised that the mere provision of suitable numerical values of illumination *alone* is not sufficient to ensure adequate lighting and that attention must be paid to such important factors as absence of glare, avoidance of inconvenient shadows, etc.

Process.	Illumination (Foot-candles). Limits of values given by Mr Eck and Mr. Goodenough.	Author's tests in 1923.	Home Office Third Report. Recommended Minima.	Code of American Illuminating Engineering Society.

Proof Reading	3—10	5—10	3	5—10
Packing, Folding, Despatching, etc.	2·5—6	—	3	2—5

The making of process blocks, lithographic work, engraving, etc., is a special subject in itself and the need for good illumination here is particularly vital. Engraving processes are frequently mentioned as an instance of "fine work" requiring specially high illumination, and as the operator is here concerned with small projections and indentations of the surface, local adjustable lights seem desirable in addition to moderate general lighting. In etching and lithography the conditions are different and operators seem to prefer a very highly diffused source, with an extensive luminous area, which is reflected in the more or less polished material in which they are working.

Colour printing again is a process requiring highly-specialised illumination, as one needs not only an exceptionally high illumination, but a quality of light enabling colours to be revealed in the same manner as by daylight. For the mixing of inks and pigments light with a spectrum very closely resembling that of daylight is essential. The developments in "artificial daylight," which have been the subject of several recent contributions to the proceedings of this Society, are of very great interest to colour printers, and in many cases the system has been used with benefit and has enabled work to be carried on successfully when daylight failed. In installing such systems it should be recognised that the loss of light through absorption and consequent greater expenditure of energy to obtain the requisite illumination is of little moment, provided the advantage of being able to work consistently by artificial light is obtained. It is expensive to attempt to light the entire room by this means. The aim should be to concentrate the light at the place of inspection, which should be screened from the general uncorrected artificial illumination, and to obtain an illumination which approaches normal daylight not merely in colour but also in intensity.

Editorial, etc., Departments.

I come now to an important section of the work of producing a newspaper, namely, the editorial, proof-reading and other departments concerned with the examination of "copy." The matter sent in to a newspaper is still largely written by hand, often in hurried and crabbed writing and on flimsy paper that makes it still more difficult to distinguish. Even matter presented in proof often does not compare favourably with the appearance of the type in the finished production. Its examination is often conducted at high pressure, as the printers are waiting for the return of copy; yet extreme accuracy both in the editorial and proof-reading departments is vital to the reputation of the paper.

Journalists, therefore, are entitled to illumination just as suitable for their needs as that provided in the printing section. In many editorial offices the lighting is done in a very improvised and unsatisfactory manner. Lamps are used without shades and are allowed to become extremely dirty. In some cases the outlets are wrongly placed in regard to the furniture and drop-lights have to be "fetched across" by means of cords. An editor's or sub-editor's room should contain suitable general lighting preferably of the semi-indirect type, supplemented by a well-shaded table lamp. Proof-readers also in general would prefer a special lamp over their work. In view of the arduous nature of the work, 5 foot-candles on the desk, which can easily be provided by the aid of modern lighting appliances, should be the minimum. The lower portions of lamps should be frosted with a view to preventing troublesome striations and inequalities in the illumination, a common defect when local lamps are used.

Trade Within the Empire.

Imperial Economic Conference.

The general business of the Imperial Economic Conference, to be held in London in October, will be to study the possibilities of co-operation in the development of the resources of the Empire and the strengthening of economic relations between its constituent parts. It is officially explained that this will involve consideration of:—

(1) Ways and means for the fuller development of the natural resources of the Dominions and the Colonies.

(2) Inter-Imperial commerce, shipping, and communications generally.

(3) Co-ordinated action for the improvement of technical research.

(4) The organisation of economic intelligence.

(5) The unification of law or practice in the Empire in certain matters affecting trade development.

The progress of co-operation in oversea settlement on the lines laid down in the resolution on the subject passed by the Imperial Conference of 1921, as well as the possibilities of further progress, will also come under review.

The work of the various bodies which have already been established on an inter-Imperial basis for the purpose of economic co-operation will also be considered, and in all probability certain aspects of the external commercial relations of the Empire will be included in the general survey of the Conference. These include, for example, the question of mutual co-operation amongst the various Governments to safeguard their economic interests in relation to foreign countries; proposals for promoting international arrangements for the more equitable treatment of commerce; and the position of Government enterprises as regards taxation and legal liability.

MESSRS. C. E. CORKE AND CO. have appointed Mr. L. B. Warner as their representative for the Midlands. He is the son of Mr. A. Warner (Olive and Partington's well known manager and representative), and was educated at King's College, Taunton. He is an officer in the R.A.S.C.

Printers and Paper Distribution.

By FREDERICK JOHNSON.

(*Continued from page 294.*)

As a rule, papermakers in this country trade as individuals, and they have a difficulty in co-operating and deciding how their wares should be disposed of. A few of them go in for fairly wide advertising campaigns, and unwisely endeavour to ignore the claims of the old-time paper merchant. These mills create large distributing costs, which in course of time will more than equal the overhead costs of the paper merchant. Their selling methods are misdirected. I have in my mind, for instance, one well-known paper which was largely stocked by leading paper merchants. The mill then decided to advertise and ignore the merchant. The consequence is that there are to-day at least eight or nine specific papers competing against the original. This could easily have been avoided and an increased tonnage retained, at no additional cost to the printer.

I sincerely hope that mills will accept any criticism in the kindliest spirit, because the situation is very largely controlled by them. Our mills are seriously handicapped by foreign competition, especially from the Continent. I often wonder how certain British mills exist at all. It seems extraordinary that large quantities of competitive foreign papers are permitted to come into our markets uncontrolled, when many mills to-day are far from working full time, and not a few are hard put to it to fill their machines even in normal times. Nevertheless in Great Britain we make certain classes of papers second to none; we make papers that are successfully exported, and it is an accepted fact that British mills offer the best value. The competition amongst British mills themselves is to a large extent unnecessary, as the lack of standardisation in their papers leaves much to be desired.

I am not in a position to discuss foreign paper mills from the Continental side, but I am going to show you that the American papermaker has this question of distribution settled to the complete satisfaction of the mill, the merchant, the printer, and last, but by no means least—the consumer. My experience has always been that whilst the task of distributing American papers was comparatively easy, immediately I entered into the British paper arena I came up against obstacles. It does seem that considering the comparatively small area of these islands, the British mills ought to limit and clearly define their distributing centres. We seem to have so many people in London selling actually the same paper from the same mill. Then again, paper mills in this country apparently consider they are within their rights in selling a paper merchant large quantities for warehouse stock, and then, after the merchant has advertised widely the line by sampling, making no effort to see that the merchant benefits as a distributor. In other words, the papermakers' representative quotes anybody the same price. This is constantly occurring, and is one of the chief reasons for successful foreign competition. The British papermaker never appeared to me to interest himself in his distributor and enlist his patriotic service to minimise foreign tonnage. The Master Printers must insist upon the necessity of a definite policy of distribution—not from the merchant, but from the paper mills; and this should be done soon, because these questions are overlooked when trade is brisk and only become acute when we are looking for business. We must all unite in preventing troublesome developments, otherwise the printer may become a paper merchant and the paper merchant may become a printer, and make confusion worse confounded.

As to whether future trading will trend towards the elimination of the paper merchant, it should be remembered that the merchant's business originated for reasons of economy, and to-day practically the whole of the paper products of the United States mills are distributed through the paper merchants.

How America Distributes Paper.

During my visits to the United States I have always been struck with the close fraternity between the papermaker, the paper merchant (or "jobber," as he is termed) and the printer, who are constantly meeting and discussing paper supplies. In the United Stated the prices are set by the papermakers as a body, both for the paper merchant and his distributing expenses, and the printer. When the American paper merchant sends out his price list he shows prices per 1/25 reams, 26/50 reams, 5, 10 and 25 ton lots, all on the same price list. No agent or other supplier enters into the transaction. In America, other than for export, what are known here as paper "agents" do not exist. Each paper mill has its own representative as an employee. In dealing with the distribution question economy is my chief point. The plan of the American papermaker does not demand high prices on account of selling profits. The majority of American paper mills includes an advertising manager and the printing and advertising usually emanates from the mill direct to the printer and the consumer. Paper for printing, however, is not supplied to the consumer.

In the first place the mills standardise the whole of their output and reduce the number of their actual lines to a minimum. Consequently they can concentrate on the selling of this limited number of lines which they brand, and you can readily see that the limitation of their qualities is a form of economy to commence with. The mills then decide the number of distributors in each large city who are to handle their lines. If the products are ordinary book papers, boards, writings, then a fair number of paper merchants are selected according to the size of the various cities. If the products are high grade, and used only by the discriminating buyer, then the line is placed with only one house. These houses are known as service houses, and they are expected to carry a fairly representative stock of the mills papers. Please bear in mind all this time the mills themselves are working for the service houses, and the mills' employed representatives or salesmen are constantly calling upon the printer, and even upon the consumer—and the advertisements of the mill brands are widely published. In America they advertise paper even in monthly and weekly magazines, and in some cases in the newspapers, and all to the benefit of the printer.

I represent to-day a group of twenty-six American mills, and I recently corresponded with the president of this group on the subject of distribution, and he clearly outlined the method which I have mentioned. He said that, of course, the mill reserved the right to deal direct with large converters of papers, such as boxed papeterie and envelope manufacturers and important users of special industrial papers, the requirements of which both as to quantity and grade necessitate that they are handled by the mill.

The distribution profits are based upon the necessary expenses for distributing in small lots, but immediately large quantities are involved only nominal commission profits are allowed, and in my opinion this is more economical than any scheme prevailing in this country. So that you get a situation where all the samples, or practically all, are sent direct from the mill to the printer. On these samples are printed the names and addresses of all the merchants distributing the line. The merchants, too, in their turn, assist in advertising the mills' products, and in every case the names of the mills are disclosed.

Standardisation of Papers.

There is almost an unlimited field for the British papermaker to economise by standardisation. The number of lines made by individual mills in this country is astonishing, and cannot possibly lead to economy. You will scarcely credit a statement that the group of U.S.A. mills to which I have referred, during the period of reconstruction of their goods reduced their number of named lines from 1,500 to 65. They found they had an almost unlimited number of watermarks, and on carefully considering the matter they decided to scrap the very large proportion referred to. They were wise, for their decision has turned out very profitable to all concerned.

Statistics, by the way, are too badly needed in this country. For instance, printers have no authentic guide to paper production costs, whereas in the U.S.A. there is published monthly an index which shows the comparative market costs of wood pulp, rags, paper scrap, supplies, chemicals, other materials and labour, from 1913—which year is standardised as 100 and against which the comparison shows an average of 202 on February 1st, 1923. In this return of statistics a continous rise took place up to January, 1921, which is shown as 272, and certain variations to date are as follows: October 1st, 1921, 169; January 1st, 1922, 177; September 1st, 1922, 185; January 1st, 1923, 193; February 1st, 1923, 202.

Before reducing the number of lines as above mentioned, it was necessary to consult the users and big buyers of paper who had impelled the company to undertake the reform by their organised demand for standardisation and simplification. The seven American national associations of printers and buyers of printing controlling 95 per cent. of the paper used in the graphic arts, are as follows: United Typothetæ of America, National Association of Stationers and Manufacturers, National Association of Steel and Copper Plate Engravers, Association of National Advertisers, National Association of Purchasing Agents and Direct Mail Advertising Association. From a careful canvass of these bodies the countless uses to which paper is put were authoritatively established and the foundation laid for their scientific analysis and classification. Eventually, as stated, out of a series of 1,500 papers the same standardisations were reached in 65 papers only.

I am in favour of always handling mill brand papers. I am not a believer in private watermarks of any description whether for the consumer, the printer or the paper merchant. I do not state this in any critical spirit, but private watermarks are one of the things that lead to direct purchases by consumers. I do not think there are conditions under which private watermakers can be called economical, though their use will always continue.

Any effort made on the part of the printers in reference to the distribution of paper will be met in full sympathy by the paper merchant, but in conjunction with the total distribution of paper from mill to consumer—that portion referring to the printers would only be part of a big scheme which would include other departments of trades necessarily utilising tonnage for their specific needs. Take for instance publishers—much as I am in favour of all paper to be printed being supplied direct to the printer, you could hardly expect a publisher to permit a printer to purchase the paper, although the cost of handling it should be allowed for by schedule.

What Constitutes a Consumer?

When discussing the question with my colleagues of the wholesale paper business, we have at times found it difficult to define consumers whom we can legitimately supply. Especially in the wrappings section of the paper business does the printer and the smaller supplier meet. Whilst the issue as to the channel for supplying paper to be printed is clear enough, it is not arranged for even by custom of the trade where the consumer actually uses paper by the ream. It would be interesting to have printers' views on this subject. A great deal of paper for resale is sold to stationers' shops—considerable quantities are also disposed of possibly by paper merchants to wholesale drapery houses. It seems to me that the printing trade would be unwise to endeavour to control the selling of paper in small quantities, even although the printer may be doing work for the buyer. I have no experience in supplying paper in this way, but there are such a very large number of individuals and firms who style themselves paper merchants to-day that we must exercise patience and not necessarily presume that the large paper merchant is not to be permitted to supply a consumer, whereas the small paper merchant pursues a free and unfettered policy.

To take this matter a step further, are you aware that so many business houses style themselves "printers, paper merchants, bookbinders, etc., etc."? There exists an extraordinary proportion of houses possessing plant who write for quotations under the trade heading of paper merchants. So it is evident that the necessity for the paper mills controlling and legislating is very urgent. We must at least endeavour to get regulations that will be adhered to be by upright trade houses, and regulations not made for the purpose of evasion.

Federation of Master Printers.

Annual Meeting, Cost Congress, etc.

The secretary of the London Master Printers' Association circulated last week a revised abridged programme of the meetings and other functions commencing on May 26th next, when the L.M.P.A. is to entertain the Federation in London for the Federation's annual gatherings.

The daily events as now arranged are as follows:—

SATURDAY, MAY 26TH.—Evening: Reception by the Lord Mayor and Sheriffs at the Guildhall, 8 p.m., followed by music and dancing from 9 p.m. to 11.45 p.m.

SUNDAY, 27TH.—Morning: Church service, Westminster Abbey, 10.15 a.m. (seating accommodation will be provided for visitors). Afternoon and Evening: Concerts, visits to art galleries and other places of interest, and usual music at hotels.

MONDAY, 28TH.—Morning: Cost Congress, Hotel Great Central, 10.30 a.m.; ladies' excursion by motor charabancs, 9.45 a.m.—alternative routes (*a*) St. Paul's Cathedral and the Tower of London (*b*) *via* Buckingham Palace and The Mall to Houses of Parliament, Westminster Abbey and the Tate Gallery. Afternoon: Luncheon at Hotel Great Central, 1 p.m.; cost congress resumed, 3 p.m.

Arrangements are being rapidly completed for the cost congress, addresses having already been promised by popular speakers on "The Essential Features of the Federation Costing System"; "Causes of Estimate Variation: Some Remedies"; "How the Costing System operates during a period of Trade Depression"; "Price Cutting: its Effect on our Craft"; "The Burden of Over-equipment," etc.

TUESDAY, 29TH.—Morning: Annual general meeting, Hotel Great Central, 10.30 a.m. Afternoon: Ladies' excursion at 1.15 p.m. by motor charabancs to Hampton Court, tea at the Court Restaurant; annual general meeting resumed, 2.30 p.m. Evening: Annual banquet at Hotel Great Central, 7.15 p.m.

WEDNESDAY, 30TH.—Whole day excursion (in two parties A and B) by rail and river to Marlow and Windsor. Both parties will leave Paddington by special train at 8.48 a.m. Party A will detrain at Windsor, visit the Castle, have lunch at the Castle Hotel, make the trip to Marlow in the afternoon (tea will be served on board) and leave Marlow for London by special train at 6.10 p.m. Party B will go on by train to Marlow, leave by steamer for Windsor, lunch at the White Hart Hotel, visit Windsor Castle, return to the Hotel for tea, and leave Windsor for London at 6.45 p.m. Both parties arrive back at Paddington about 7.30 p.m. Visit to London School of Printing.

THURSDAY, 31ST.—Outdoor recreations, including golf, cricket, etc. It is proposed to arrange a golf match between London and the Provinces at Totteridge, when it is hoped that Harry Vardon will be in attendance.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

SWITZERLAND.

A dealer in Zurich wishes to get into touch with a British firm of general importers and exporters from whom he proposes to buy carbon papers to the value of 6,000 to 10,000 francs per annum. The British firm, however, would have to purchase from the enquirer Swiss products to a like amount. (Reference No. 520.)

EGYPT.

The Sudan Government, Khartoum, Sudan, invites tenders from well established firms of general stationers for the supply of stationery required by the Government. The Sudan Government also invites tenders from well established firms of papermakers and envelope manufacturers for the supply of paper and envelopes required by the Government. Specifications, conditions and form of tender can be obtained on application to the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. (Reference Sudan/Stores/Req./39-2.)

Veterans in the House of Truscott.

We have learned with interest of the large number of veteran employees associated with Messrs Jas. Truscott and Son, Ltd.

In the composing department, Mr. A. De Jersey has been with the firm for 65 years, and is still at work. There are five other veterans in this department who have served for over forty years. They are: Messrs. C. Perman (56 years), W. Smith (54 years), M. Rushbrook (49 years), G. Perman (48 years), and Steel (44 years), a total of 316 years of service with the firm for these six veterans.

It may be added that five other members of the L.S.C. have served between 36 and 40 years with this house, whilst the Perman family have achieved what must be a unique record. The total aggregate service of the father and two sons of this family is 146 years: Mr. Perman, the father, worked for 42 years, and the two sons, Messrs. C. and G. Perman, have so far worked for 56 and 48 years respectively. The sons of the two latter are also working with Messrs. Truscott. The Perman family, therefore, have done 91 years' service with the firm, *i.e.*, from 1832—1923.

Long service records in the binding department of Messrs. Truscott's are as follows:—Messrs. H. Gillman, 55 years; H. Joselin, 54 years; T. Deverell, 50 years; C. Deverell, 47 years; W. Evans, 43 years; R. Burrows, 42 years; and J. Cartwright, 40 years.

In the machine department are Messrs. Cannon, 60 years; Rutt, 48 years; and White, 40 years.

In the numbering department are Messrs. Walters, 54 years, and Page, 45 years; whilst in the ruling department is Mr. Newton, who has been with the firm for 55 years.

Paper Industry of Bavaria.

Reporting on trade and industry in Bavaria, H.M. Consul at Munich states: Paper manufacturers record a decline in export business and the increase in railway freight rates has led to a falling off in sales to Northern and Central Germany. In the wholesale paper trade business has been very dull. The home demand for colours has been small, and exports have also declined.

IDEAL, Well built, MODEL FACTORY to be sold Freehold at Cricklewood—north light, saw-top roof, perfect daylight—size 230-ft. by 70-ft. clear floor, also offices—steam-heated, electric light, power, etc.; immediate possession; suit any manufacture. Leopold Farmer and Sons, Factory Specialists and Auctioneers, 46, Gresham-street, Bank, E.C.2, and Kilburn, N.W. 14113

MODERN FACTORY and PLANT for sale by private contract. The works of the Ruby Cycle Co., at Altrincham, freehold, admirably situated, built on the most modern lines in 1910 and 1920, electric power and light laid on, own gas plant, everything on one floor, with large range of automatic machinery and tools. Most suitable for any modern industry.—Apply, R. H. Lord, J. B. Boyd, Wrigley and Co., 53, Brown-street, Manchester. 14097

THE Executors of the Will of STEPHEN SEAWARD TAYLER, deceased, having by a Judgment dated the 29th November, 1922, recovered possession of 8, Stonebridge-road, Tottenham, have in their possession certain chattels found upon the premises presumably the property of William Hudson. He or his legal representatives should apply to Messrs. Finch, Turner and Tayler, Solicitors, 84, Cannon-street, E.C., before the 2nd June, 1923, otherwise such chattels will be sold by public auction. 14128

THE PRINTERS' PROVIDENT ASSOCIATION, 39-40, Shoe-lane, E.C.4, is able to supply all branches of efficient labour for the Printing and Allied Trades at short notice; no fees—Telephone, Holborn 527. 14119

TWO Very Well Lighted TOP FLOORS to Let, together or separately, in Stonecutter-street, off Shoe-lane, E.C.; floor area 2,400 sq. ft.; rent for the whole £550, including rates and taxes.—Leopold Farmer and Sons, Factory Specialists and Auctioneers, 46, Gresham-street, Bank, E.C.2. 14115

Tenders.

METROPOLITAN BOROUGH OF GREENWICH.

Contracts for Books, Bookbinding and Stationery.

THE Council of the Metropolitan Borough of Greenwich is prepared to receive TENDERS from Trade Union Houses for

(1) BOOKS and BOOKBINDING, and
(2) STATIONERY and OFFICE SUNDRIES,

for a period of three years from June 24th, 1923.

Printed forms of tender and conditions and schedules of requirements, with "Standard Prices," can be obtained and samples seen at the Town Hall, Greenwich-road, between the hours of 10 a.m. and 4 p.m. on week-days (Saturdays between 10 a.m. and 12 noon). A deposit of One Guinea will be required, which will be returned to the Depositor on his sending in a bona-fide tender.

The Contract will contain a clause providing for the adjustment of the contract price according to any variation in the cost of labour and/or material.

Tenders, on printed forms, sealed up, and endorsed on the envelope "Tender for Books and Bookbinding" or "Tender for Stationery and Office Sundries" as the case may be, must be sent to the Town Clerk, Town Hall, Greenwich, before 10 a.m. on Monday; May 28th, 1923.

The Council does not bind itself to accept the lowest or any tender.

FREDERICK J. SIMPSON,
Town Clerk.

Town Hall, Greenwich, S.E.
April 19th, 1923. 14108

H.M. STATIONERY OFFICE.

SALE of LITHOGRAPHIC, LETTERPRESS and ELECTRICAL PLANT and MACHINERY at the premises of Messrs. Malby and Sons, Little Gray's-inn-lane, Gray's-inn-road, E.C., including:—

FLAT-BED LITHO PRINTING MACHINES.
LITHO TRANSFER PRESSES.
ELECTRIC GENERATING SET, by Holmes and Co.
10 ELECTRIC MOTORS, 2, 2½ and 8-h.p.
2 PLATEN PRINTING MACHINES.
A Small Quantity of TYPE, etc.

Tenders for the purchase of the above are invited by the Controller of H.M. Stationery Office, and should be delivered not later than the morning of Thursday, May 17th, 1923.

Tender forms, with permission to view may be obtained on application to the Controller, H.M. Stationery Office (Printing and Binding Division), Princes-street, Westminster, S.W.1. 14125

Grout Engraving Co., Ltd.

25th Anniversary Commemoration Dinner.

The directors and staff of the Grout Engraving Co., Ltd., of Bridewell-place, E.C., and Bromley, Kent, foregathered at the Holborn Restaurant on the 14th ult., to celebrate the 25th anniversary of the inception of the firm. Mr. Alfred Grout, governing director, occupied the chair, supported by his colleague, Mr. F. G. Watson.

The employees of the City and Bromley staffs made a presentation of a silver cigarette box and silver cigar case to Mr. Grout and Mr. Watson respectively.

The chairman, replying to the toast of "The Firm," proposed by the Father of the Chapel, thanked the staff for their handsome gifts, on his own behalf and on the behalf of Mr. Watson. In the course of his remarks he recalled several humorous incidents that had happened during the 25 years of the firm's existence. He informed his hearers that the Federation of Master Process Engravers had at Manchester that week inaugurated a scheme of unemployment insurance, which he hoped would mitigate the hardship to employees arising from periodical trade depressions. He further announced that in order to relieve Mr. Watson of some of the strain his work entailed, Miss M. Crossley had been appointed a director.

Toasts to the Bridewell staff and the Bromley staff were pleasantly interspersed amongst a musical programme.

MR. ROBERT GEORGE PULLEYN, who joined the firm of James Willing, Junr., in 1878, has resigned his seat on the board of James Willing, Ltd., late of the Strand.

United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MAY 3, 1923.

Printers and Light.

IT were verily a sorry jest of Fate that those who labour to broadcast mental illumination by means of the printed page should be doomed to do their work under faulty and injurious defects of lighting. Yet to some extent this is the actual state of affairs. We gladly give publicity in this issue to a meeting at which representatives of the printing industry accepted an invitation from illuminating engineers, users and providers of artificial light being thus able to meet and discuss lighting problems of mutual interest. As was indicated in the discussion, the engineers did not fail to feel the true get-together spirit that actuates the printers' Joint Industrial Council. Not only did the co-operative outlook of printing trade employers and employed receive adequate expression, but this same state of mind impressed itself upon the meeting, with the result that suppliers and consumer—not always on the best of terms—were able to listen with interest and appreciation to each others' points of view, to the benefit of both. We think it would be a pity if this excellent beginning were not immediately followed up. The joint committee of representatives of the printing trade and of illuminating engineers—of which some suggestion was made—should at once be constituted, for such a committee would facilitate united action in the direction of improved lighting in printing works, a matter which is vital to the health and efficiency of the industry.

* * *

Circulars Posted Abroad.

IT is good to hear that the Postmaster-General is bringing before Parliament a Bill to stop the posting from abroad of printed matter of British origin. The loss to our postal revenue and the danger to the printing trade involved in this practice is indicated in the fact that the last Post Office statistics show that more than 230,000 circulars and similar documents issued by British firms were posted abroad every month, resulting in a yearly loss to our revenue of about £12,000. It will be remembered that public attention was drawn to this matter by the Joint Industrial Council of the Printing and Allied Trades, it being pointed out to advertisers that there were still a large number of unemployed printers in this country. The volume of such postings has decreased of late, partly on account of the objections raised in this country, and partly, no doubt, from the fact that foreign printers appear to find it impossible to produce English composition free from error or to prevent their printed matter carrying on its face the suggestion of foreign origin. It should be clearly understood that the British printing industry is not asking for anything in the nature of a protective measure, but the claim is made that action in this matter is necessary in the interests of our own postal revenue, as well as to prevent the quite unfair competition that is made possible by the depreciated currencies in Germany and elsewhere.

Personal.

MR. R. A. AUSTEN-LEIGH, president of the Federation of Master Printers, was called away to Italy on account of the health of Mrs. Austen-Leigh, and was therefore unable to address the meeting of the South-West London Master Printers on Tuesday as arranged.

MR. A. E. GOODWIN, secretary of the Federation, stepped into the breach and gave a comprehensive review of the legislative programme of the organisation, Mr. E. G. Cole (the S.-W. president) being in the chair.

MR. F. HECKFORD, chief chemist to John Dickinson, will inaugurate a series of addresses on "The Peculiarities and Pitfalls of the Printing Craft" next month, dealing with paper.

LATER news of Mrs. Austen-Leigh's health is more reassuring, and Mr. R. A. Austen-Leigh is returning from the Continent this week, and will be present at the Home Counties Alliance meetings at the week-end.

MR. GEO. F. HUSSEY, M.P., president of the South Australian Master Printers' Association, who is on a visit to this country, will address a meeting of the West and North-West Master Printers on Tuesday, May 15th, at Westbourne Park Institute, Bayswater, W.

MR. ERNEST ZAEHNSDORF, of the well known bookbinding house, has, on the invitation of the British Broadcasting Co., consented to give a lecture by wireless, entitled the "Romance of Bookbinding."

A ROYAL ACKNOWLEDGMENT.—The Duke of York has written a most gracious personal letter to Sir Adolph Tuck, asking him to convey to the directors and staff of Raphael Tuck and Sons, Ltd., his very cordial thanks for the wedding card sent to him on the occasion of his marriage and to tell the various artists responsible for the work how much the Lady Elizabeth Bowes Lyon and himself admire and appreciate the work, adding the gratifying footnote "I hope that both directors and staff will fully realise what pleasure they have given to us."

PICTURE POSTCARD WORDING.—We gather that further correspondence has passed between Sir Adolph Tuck on behalf of the picture postcard industry and the Postmaster-General, as the result of which it appears that Sir William Joynson-Hicks intends to leave over until next year any alteration in the regulations affecting picture postcards. There is so much to be said in favour of the removal of the restrictive regulation as to the nature of the five words allowable on picture postcards, especially at this time when trade and employment generally are so much in need of assistance, that it is probable that this urgent matter will be raised in the House of Commons.

THE next meeting of the Association of Master Printers of South-East London is to be held at the Bridge House Hotel, London Bridge, on Tuesday next, commencing at 4 o'clock, when Mr. S. Goss (of Messrs. Baines and Scarsbrook) will read a short paper entitled "Our Trade Organisation: Some Criticisms and Suggestions."

The Lighting of Printing Works

Printers and Engineers Confer.

Special interest and promise attaches to the meeting last week of the Illuminating Engineering Society, at which was delivered Mr. Leon Gaster's paper on "Some Problems in the Lighting of Printing Works," of which we publish an abstract in another part of this issue. The occasion attracted a good attendance, amongst those present being many well-known representatives of the printing industry, and Mr. F. W. Bridges, called upon at short notice to act as chairman, took the opportunity to invite several of these to speak for the industry in regard to the important question of the lighting of printing works.

Mr. Gaster's paper, which elicited warm approval from many of those who spoke in the discussion, was followed by a short series of lantern slides showing lighted interiors of printing works. These were commented on by the lecturer, defects and advantages of the lighting being indicated. One point stressed was that lighting by means only of shaded local lamps hanging from the roof had the depressing effect of apparently bringing the ceiling down to the level of the shades.

Printers' J.I.C. Interested.

The Rt. Hon. C. W. Bowerman, M.P., was the first whom the chairman called upon to take part in the discussion. He contrasted present lighting conditions with those of his early days as a compositor, when the only illuminant was a tallow candle stuck in one of the boxes of the case. After stressing the advantages of the electric light over its predecessors, he gave his opinion in favour of placing lamps above the compositor's frame rather than beside it, on account of greater freedom from glare. He stressed the interest which lighting problems hold for the Joint Industrial Council of the Printing and Allied Trades.

Mr. A. E. Goodwin disclaimed special knowledge of the subject of lighting, though he remarked, amid laughter, that he had been busy lately endeavouring to illuminate several problems in the printing world which were still dark in some directions. He referred with pride to the fact that the Printers' Joint Industrial Council was the only such Council to have a Health Committee; that Committee had a lady chairman, whom he was very glad to see present. He said that so far as he knew the mind of the employers, if there was still defective lighting in many printing works this was not due to lack of desire to see proper conditions installed, but due to the difficulty of getting the best possible advice on this particular problem. He hoped the result of the lecture would be to set more people thinking and investigating the question, a solution of which was in the interests of efficiency and would, therefore, benefit, not only the printing industry, but also the general community, as it would tend towards cheaper printing.

Mrs. A. Bridge (Chairman, Health Committee, J.I.C.) expressed on behalf of the Joint Industrial Council appreciation of the lecture, and said that the Health Committee of the Joint Industrial Council had already given very careful attention to the subject of lighting, mainly on account of suggestions and requests for assistance from representatives of the Home Office. She believed many printing trade employers were experimenting in the matter. Their greatest difficulty had been to ascertain what was **really meant by "foot-candles" of illu**mination. That evening's proceedings would help the Health Committee in its future work.

Mr. A. E. Holmes, referring to the relative advantages of general lighting from the roof and of local lighting just above the compositor, suggested that no rule could be laid down, as some workers preferred the one method and some the other. He, personally, shared the lecturer's dislike of having everything in darkness above the level of local lamps, and he liked the idea of having arc lamps above the passage between the frames. He suggested the blending of these two methods by having arc lamps for general lighting and a smaller light for the individual frame to dispel local shadows. He preferred electric light to gas on all grounds, particularly on those of health and cleanliness. The readiness of employers in the printing trade to take up questions of improving working conditions was most encouraging to those on the workmen's side, and he was sure everything would be done to assist the Illuminating Engineering Society in securing better lighting in printing offices.

Mr. E. Pontis, who intimated that he was a working electrician, emphasised the difficulty he had experienced of pleasing people in the printing industry. However powerful the lights installed there was always a complaint of "not enough light." He thought there was often too much light with consequent harm to eyesight. The problem was not the amount of light but its application.

Mr. George Isaacs referred chiefly to lighting in machine rooms, and one point made was the need for some method of indirect lighting underneath the staging of large presses, so that the worker going under the machine would not get the glare of the lights in his eyes. He stressed the importance of lighting in respect of the prevention of accidents, and bore tribute to the willingness of present-day employers in the printing trade to do anything possible to make working conditions safer.

Semi-Indirect Lighting Successful.

Mr. J. R. Riddell suggested that there was no readier means of waste in the printing office—apart, perhaps, from wasted labour—than in lighting. Their illuminating friends had not been very helpful in this respect, chiefly because they would insist upon putting their pet theories into operation. A great deal depended on the position of the light. Personally, he agreed that semi-indirect lighting was the best for all departments, with the exception of the linotype and monotype, and similar positions where local lighting was required. He should have liked to hear of suitable lighting to protect the eyes from the glare of new type. Seeing how largely lighting depended upon constructional features, he suggested that in erecting a building special consideration should be given to the question of lighting. In conclusion, he would like to pay a tribute to the helpful manner in which a public department had co-operated with printers in this matter of lighting. Recently the printing trade in London had instituted a new printing school, and, by assistance of the officials in a public department, the school was provided with what was probably the finest lighting in any school in the country. He extended an invitation to anyone present who cared to come and see the semi-indirect lighting in the London School of Printing.

Mr. G. W. Mascord, who urged that good lighting and plenty of it never injured anyone, recalled some of his own long experience of lighting in printing works. Inverted arc lamps had given the finest illumination of any lighting tried. The arcs had to be dispensed with during the war, and Cooper-Hewitt mercury vapour lamps had been substituted with great success, use being made also of incandescent electric lamps. If the Joint Industrial Council could give help in the matter of lighting, it would be doing a wonderful thing. The great aim should be to get the light to approximate as nearly as possible to daylight. That printers had not better light was the fault of the illuminating engineer.

Mr. J. G. Clark (a member of the Illuminating Engineering Society) said that this was the best co-operative meeting of the Society he had attended, those who used light and those who provided it meeting together to learn each other's points of view. Taking up Mr. Goodwin's allusion to the difficulty of getting advice, he thought one **good outcome of the meeting would be** that the printing trade would learn that there was quite a lot of good advice available if asked for. In respect of the possibilities of reducing working costs by installing better lighting he said those of them who bought books would be glad to hear of reduced working costs in the printing trade. Re printers' eyesight, he had been impressed by the small number of those working in printing offices who wore spectacles. He stressed the value of proper reflecting shades for lamps; they economised energy and also diminished glare. It was important, too, to see that a light arranged to suit one man was not a source of glare to another.

The Engineers' Difficulty.

Mr. G. Campbell laid emphasis on the difficulty of meeting the demands of the printing trade, and said that though one person might agree a given system of lighting was "splendid," another would say it was "rotten." He suggested the need of some central independent authority that could lay down standards of lighting for different classes of work—some definite standard which they, as manufacturers, could know they had to attain to. He gave a striking illustration of the need for some such criterion. As the engineers found that although they put in what they considered the best possible installation, the workers sometimes objected, they experimented in one instance by leaving in the old lighting whilst installing new. The new installation was used for a fortnight, despite complaints. Then they switched off and reverted to the old lighting, with the result that the workpeople at once asked to have the new. Mr. Campbell concluded by citing figures to show that there are big possibilities of getting increased light at reduced costs by improved lighting installations.

Mr. P. J. Waldram stressed the need that printers should make better use of daylight, by whitewashing walls opposite windows and by the more thorough cleaning of windows—it being possible for glass which appeared reasonably clean to absorb 30 to 50 per cent. of the light. He regretted so little attention had been given to the "daylight" lamps, and drew attention to one which he saw in the room.

Mr. F. E. Lamplough thereupon stepped forward and demonstrated the effect of this lamp. He referred to his own work in the production of "daylight" lamps, and pointed out that this example gave a light markedly whiter than the incandescent electric lamps near by.

Mr Gaster then briefly wound up the discussion. In the course of his remarks he referred to the difficulty that had been mentioned of dealing with "foot candles," and said that there was now an instrument which could be used easily, somewhat as a thermometer was used, foot-candles being indicated directly. This enabled illumination to be easily ascertained on the spot. It should be remembered, however, that the mere intensity of lighting meant nothing unless one took into consideration the attendant conditions—in respect of glare, shades, reflectors, etc. He closed with a very cordial expression of the Illuminating Engineering Society's willingness to co-operate with the printing industry in solving lighting problems.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

N.R.P. CO., LTD.—Capital £13,500 in 12,000 ordinary shares of £1 and 12,000 deferred shares of 2s. 6d.; to adopt an agreement with J. Robertson, and to carry on the business of printers, photographers, stationers, etc. Private company. Subscribers: H. E. Gem and R. A France. First directors by subscribers. Registered office: 9 and 10, George-Yard, Lombard-street, E.C.3.

PAWSON AND BRAILSFORD, LTD.—Capital £15,000 in £1 shares; to acquire the business of printers, publishers and stationers carried on at Sheffield as "Pawson and Brailsford." Private company. First directors: J. J. Greaves, W. E. Gray, B. H. Pawson, G. E. Scott, T. H. Warskett and C. H. Sutton.

ENOCH AND SONS, LTD.—Capital £21,000 in 15,000 "A" ordinary, 4,000 "B" ordinary and 2,000 "C" ordinary shares of £1 each; to take over the business of music publishers, carried on by E. S. Enoch, C. D. Enoch and A. V. Broadhurst, at 58, Great Marlborough-street, W., as "Enoch and Sons." Private company. Subscribers: S. A. Jarrett and W. J. Jarrett. Life directors: E. S. Enoch, C. D. Enoch and A. V. Broadhurst.

G. H. HUDSON-HARNELL MANUFACTURING CO., LTD.—Capital £5,000 in £1 shares; to acquire the businesses of manufacturers of fountain pens, etc., stationers and dealers in all articles appertaining to the stationery trade carried on by G. H. Hudson and Co., of 65-66, Basinghall street, E.C., and the Harnell Manufacturing Co., of 65A, Westow-street, Upper Norwood, S.E., as the G. H. Hudson-Harnell Manufacturing Co. Private company. First directors: B. Samuels, G. H. Hudson, H. F. Hardy and P. Harris.

SIDEREUS, LTD.—Capital £300 in 1s. shares; manufacturing, wholesale and retail dealers in cinematograph films and apparatus, stationers and booksellers, printers, publishers and bookbinders, etc. Private company. Subscribers: H. D. Hardwicke and G. Serra.

J. H. GUTTERIDGE, LTD.—Capital £1,000 in £1 shares; to acquire the business of upholsterers, etc., carried on as "J. H. Gutteridge," to found, organise, manage, control, edit, publish, print or support periodicals, journals, brochures, books and other publications, and to carry on publicity and advertising to advance the interests of the upholstering and furniture business. Private company. Directors: J. H. Gutteridge, L. E. Gutteridge, R. P. Rose and R. N. Rose.

F. MITCHELL AND CO. (LONDON), LTD.—Capital £3,000 in £1 shares; to take over the business of a waste paper merchant, carried on at 45, Fetter-lane, E.C., as "F. Mitchell," and to adopt an agreement with F. A. Mitchell and to carry on the same and the business of manufacturers of and dealers in paper, paper bags, cardboard, parchment, account books, etc. Private company. Directors: F. A. Mitchell and Mrs. L. M. Mitchell. Registered office: Soanes Wharf, 22, Upper Ground-street, S.E.

VANILY-CO CHOCOLATE MANUFACTURING CO., LTD.—Capital £1,500 in £1 shares; manufacturers and wholesale dealers in the Vanily-Co specialities, manufacturers of all kinds of boxes and cases wholly of card wood, metal or otherwise, etc. Private company. First directors: J. Allott and F. Hargreaves. Registered office: King-street, Heckmondwike, Yorks.

H. CORMACEY AND CO., LTD.—Capital £2,000 in £1 shares; to acquire the business carried on at Mitre House, 18-19, Queenhithe, E.C., as "H. Cormacey and Co," and to carry on the business of paper and board merchants, agents, shippers and contractors, paper mill representatives, papermakers, reelers, cutters, glaziers, stainers, etc. Private company. Subscribers: J. Webster and H. Cormacey. Registered office: Mitre House, 18 19, Queenhithe, E.C.4.

E. WORSLEY AND CO., LTD.—Capital £5,000 in £1 shares; to acquire the business carried on as E. Worsley and Co.; to adopt two agreements with E. Worsley, and to carry on the business of pager agents and contractors, etc. Private company. Directors: E. Worsley, W. B. Tattersall and R. Worsley. Registered office: 19, Ludgate-hill, E.C.

IMPERIA PUBLISHING CO., LTD.—Capital £2,000, in £1 shares; publishers of books, magazines, journals, newspapers and other literary works and undertakings, booksellers, bookbinders, printers, stationers, etc. Private company. Subscribers: H. Morgan, R. G. Broad and E. G. Kerley. First directors by subscribers. Registered office: 19, Charing-cross-road, W.

D.M.A. CO., LTD.—Capital £1,000, in £1 shares; advertising and publicity experts, contractors for advertising in newspapers and other publications, and in and on railways, trams, buses, cars, hoardings, theatre, music hall and cinema programmes, etc. Private company. Subscribers: J. E. Barber and S. Barber. First directors: J. E. Barber, A. W. Thorpe. Registered office: Bank Chambers, Albert street, Derby.

GILBERT ADVERTISING CO., LTD. (London).—Capital £1,000, in £1 shares; advertising agents and contractors, etc. Private company. First directors: W. S. Worthington and E. R. Gilbert.

MAJOR DAWSON, LTD.—Capital £4,000, in £1 shares; to acquire the business of an advertising agent and turf correspondent carried on by T. P. Fox at 91, Kirkgate, Bradford, as "Major Dawson." Private company. Directors: T. P. Fox and B. F. Greenwood. Registered office: 91, Kirkgate, Bradford, York.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

"GRIMSBY TIMES" AND TELEGRAPH CO., LTD.—Satisfaction in full on February 26th, 1923, of debentures dated December 8th, 1914, securing £6,000.

JOE MELLOR, LTD. (printers, etc., Stacksteads, Lancs).—Particulars filed of £600 debentures authorised March 29th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

HAZELL, WATSON AND VINEY, LTD.—Satisfaction to the extent of £100 on February 7th, and £200 on March 23rd, 1923, of mortgage debentures dated August 10th, 1894, securing £40,000.

C. H. STAFFORD AND CO., LTD. (lithographers, etc., Yiewsley).—Particulars filed of £6,000 debentures authorised April 11th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

GEO. ROOBOTTOM AND SONS, LTD (printers, stationers, etc., Birmingham).—Particulars filed of £300 debentures authorised April 16th, 1923, charged on the company's undertaking and property, present and future, including uncalled and unpaid capital, the whole amount being now issued.

REDDITCH INDICATOR CO., LTD. (printers, publishers, advertising agents, stationers, etc., Redditch, Worcs).—Satisfaction in full on March 26th, 1923, of debentures dated September 19th and November 21st, 1893, and May 25th, 1897, securing £1,300.

COLLIERY GUARDIAN CO., LTD.—Satisfaction in full on April 4th, 1923, of debentures dated February 6th, 1902, securing £1,000.

MATHER AND CROWTHER, LTD. (advertising agents, etc., London).—Satisfaction to the extent of £1,000 on December 30th, 1922, of debentures dated January 14th, 1904, securing £9,000.

CORNWALL PRESS, LTD. (London).—Satisfaction in full on April 11th, 1923, of mortgage and Land Registry Charge dated January 27th, 1921, securing £175,000.

BRIGHTER LONDON, LTD. (newspaper proprietors, etc.).—Particulars filed of £1,500 debentures authorised by resolutions of January 26th, February 2nd, March 2nd, and April 16th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital; the amount of the present issue being £500.

RICHARDSONS, PRINTERS, LTD. (Grimsby).—Satisfaction in full on February 6th, 1923, of debenture dated August 9th, 1918, securing £400.

RICHARDSONS, PRINTERS, LTD. (Grimsby).—Particulars filed of £1,300 debentures authorised April 9th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

EASTERN MORNING AND HULL NEWS CO., LTD.—Particulars filed of £10,000 debentures authorised January 11th, 1923, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £6,000.

R. FLETCHER, LTD. (publishers, etc., London).—Issue on January 3rd of £100 and on April 16th, 1923, of £50 debentures, parts of a series.

STANDARD CATALOGUE CO., LTD.—Issue on April 11th, 1923, of £6,000 A.S.C. (New Series) debentures, part of a series already registered.

PI-RA, LTD. (in voluntary liquidation), (photographic picture post card manufacturers, etc., Watford).—Satisfaction in full on April 11th, 1923, of charge dated May 22nd, 1922, securing all moneys due to Barclays Bank.

J. M. OUSELEY AND SON, LTD. (publishers, etc., London).—Debenture dated April 19th, 1923, to secure £350, charged on the company's property, present and future, including uncalled capital. Holder: H. de L. Walker, 173, Cromwell-road, S.W.

JUDGES, LTD. (photographers, picture post card manufacturers, etc.).—Charge on 50, Havelock-road, Hastings, dated April 12th, 1923, to secure £300. Holders: Hastings Permanent Building Society.

LETTER FILES, LTD. (Southwark).—Particulars filed of £400 debentures authorised by resolutions of February 23rd and March 31st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

BERRY AND ROBERTS, LTD. (wholesale stationers, etc., London).—Particulars filed of £16,500 debentures authorised April 17th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

G. E. HOUGHTON, LTD. (photographers, fine art dealers, etc.).—Mortgage on 158, Northdown-road, Margate, subject to rent charge dated March 29th, 1923, to secure all moneys due or to become due from company to Lloyd's Bank not exceeding £750.

WIGGINS, TEAPE AND CO. (1919), LTD.—Conveyance dated March 29th, 1923 (supplemental to trust deed dated November 3rd, 1920, securing £500,000 debentures of which £350,000 have been issued and are now outstanding), charged on certain land and premises at Flackwell Heath, Little Marlow, Bucks. Trustees: National Provincial and Union Bank of England.

EBURITE PAPER CO., LTD.—Trust deed and land registry charge, both dated April 10th, 1923, to secure £30,000 debentures charged on leasehold buildings No. 50-56, Formosa-street, and 1-4, Amberley-wharf, Paddington; garage and buildings adjoining Bloomfield-road, or capital redemption policy and all other assets present and future, including uncalled capital. Trustees: M. Falcon, Horstead House, Norfolk; and G. H. Morse, Thorpe St. Andrew, Norfolk.

BANKRUPTCIES, etc.

RE WALTER ERNEST EYRE, law stationer, 24, Portugal-street, W.C.—This debtor failed in January with liabilities £412 against assets £1 13s. 2d., and last week he attended for public examination at the London Bankruptcy Court. Replying to the official receiver, debtor said he commenced business in June, 1900, as partner in a firm of law stationers, and since 1910 he had traded alone. From November, 1915, until July, 1919, he served in H.M. Army in France, during which time the business was managed by his wife. He attributed his insolvency to his household and personal expenses having exceeded the profits. The examination was concluded.

RE T. G. O'SULLIVAN, publisher, etc., 5, Green-street, Leicester-square, W.C.—The public examination of this debtor was held on April 20th at the London Bankruptcy Court, the accounts showing liabilities £3,478 against assets valued at £250. In the course of his evidence the debtor stated that he commenced business in November, 1919, as an advertising contractor and publisher under the style of "T. Gerald O'Sullivan." In February, 1920, he decided to separate in name his Catholic publications from his Church of England and Nonconformist publications, and thereupon commenced trading as the Cathedral press for Catholic publications, the Anglican Church press for Church of England and Nonconformist publications, and T. Gerald O'Sullivan for publications of a non-sectarian nature. He subsequently formed the Cathedral Press, Ltd, and the Anglican Church Press, Ltd., to take over those branches of the business, but both companies went into liquidation. Witness also for a time carried on branch businesses in Dublin and Birmingham. In January, 1922, he executed a deed of arrangement in favour of Mr. Albert Willmott, C.A., 14, Old Jewry-chambers, E.C., who carried on the business a short time and then proceeded to wind up the estate. Witness attributed his insolvency to lack of capital, general depression in trade, and heavy overhead charges. The examination was concluded.

The Bookbinder

Notes and News.

State of Trade.

Trade is indifferent in the bookbinding world both in the letterpress and stationery spheres. Earlier promises of improvement have not altogether been fulfilled. Customers are loth to place their contracts and orders are kept down strictly to immediate requirements. Official inquiries are scarce and small as compared with what we still call normal. The banks are livening up to some extent in their stationery buying, but here again the edict has gone forth for strict economy. Publishers are finding it difficult to push the pace in book consumption and many London trade houses are finding it correspondingly difficult to keep their machines going. On the whole it is the larger houses that are feeling the pinch of order hunger, for it takes so much to put them on normal capacity.

A Wonderful Wire-Stitcher.

The Smyth-Horne demonstration of bookbinding machinery at Leeds is voted a success by the promoters of it. A great amount of interest has been shown by prospective users, and, better still, some concrete orders have been taken on the spot. The Christensen double-headed wire-stitcher is a machine with a human sort of movement which simply eats up magazines and booklets at a prodigious rate. Several girls sit to the travelling link which runs to the wire heads from a distance of two or three yards, and they build up progressively a two, three, four or five section catalogue or magazine. The last girl drops on the cover, and then the gathered and collated product makes a dart to the wires and two or three more weird movements to its place on the stacked pile. The limit of speed is the limit of putting an open section on the arm.

The Brackett Binding Machine.

If we mention another item from the exhibit it must be the Brackett Binding Machine which attaches the strip of cloth or paper on the back of quarter-bound flush work and glues on the sides at a separate operation. Without attempting any description it is enough to say that the machine could be pitted against a gang of half-a-dozen expert trip binders and the machine would beat them hands down.

Time-Docket's Success.

Evidence is accumulating that the time-docket is proving a more than useful safeguard against undercharging in those districts which have recently adopted it. Some old fallacies have received a death blow, and in the light of progressive experience old figures are giving place to new. In at least one case that came beneath our notice it was possible to secure an advanced price on a repeat estimate order for a very large quantity of books by producing docket evidence of cost.

Good "Duxeen" Work.

Some attractive specimens of binding are being issued by the Dux Chemical Solutions Co., Ltd., to demonstrate "Duxeen" in actual use. The book-cover by Messrs. Leighton, Son and Hodge is a remarkably fine example of colour blocking and serves to bring out the advantages of "Duxeen" for this class of work. A recent price circular lists three qualities: Single texture, 33-in. at 5½d. yard, 38 in. at 6½d.; double texture, lined brown or white, 33 in. at 7½d. per yard, and 38-in. at 8½d.; double texture, solid, 33 in. at 8½d. yard and 38 in. at 9½d.

Imitation Leather.

A comparatively new imitation leather material is now on the market under the registered name "Subletha." We had some experience of this material during its experimental stages and hold out great hopes for it. In many ways it is distinctly different in character from most other imitation leathers, and it has the true leather look and feel. Our own tests showed eminently satisfactory results against friction, flame, damp, water, etc., and we understand that since our early acquaintance with it "Subletha" has been improved very considerably. In this event it should certainly have a corner of the market to itself.

The Charm of Marbling.

It is a remarkable thing that the art of marbling should have been confined to the bookbinding industry for so long. Its real possibilities do not seem ever to have been investigated or exploited in other spheres. Perhaps the careful guarding of the secrets of the process in days not so far back may account for this to some extent. At last, however, we have observed a near approach to marbling effect in fashionable millinery establishments where the latest fad for colour has led the hat artists to embellish their materials with coloured patterns which smack suspiciously of the marbling trough so far as effect is concerned.

The Market for Materials.

There is little to record of materials for bookbinding. Prices are practically unaltered, unless we except bookedge locks which have undergone another slight decline. In other directions prices are very firm and leathers in particular are exhibiting a hardening tendency. Within recent days we have seen special offers of red glazed basils at 7½d. per square foot and roller basils for quarter binding averaging 25 in. by 25 in at 20s. per dozen skins.

Strawboard Prices Firm.

Goldleaf is being quoted 43s. per 1,000 for 3¼ in. best deep No. 1 grade, and 61s. 6d. per 1,000 for 4 in. x3¼ in. Strawboards are firm at £10 per ton with the usual extras. A recent concession in freightage charges is welcome to the large importer but makes practically no difference to the cost per ton. Recent imports have been very heavy and the Dutch mills are busy. If this means anything, no price reduction can be anticipated.

Present Bookbinding Conditions.

From the Public Library Point of View.

During the war bookbinding prices increased enormously while the quality of materials deteriorated in an inverse ratio to the price. Libraries of all kinds, not public libraries only, were very short of money during the war period and for some time beyond both relatively and actually. Their incomes all too often remained the same while their expenses increased. The result was that comparatively little binding was done. This of course was an advantage to the country as it reduced the demand for leather and fabrics. It left large numbers of books waiting to be bound. At the end of 1919 the Public Libraries Charter of Freedom was signed and during the year that followed, a great deal of these arrears of work were put in hand. This gave a somewhat fictitious idea of the amount of business to be done, and the trade expanded to meet what was perhaps a temporary rush. Coupled with this was a great increase in the nation's reading, which may or may not be permanent, and is already showing signs of fluctuation. Altogether there is little doubt that a false idea of the amount of permanent work to be had spread amongst bookbinding firms. Nevertheless, as the conditions of public libraries improve, so the permanent volume of work will more nearly approach the high peak of the temporary post-war rush.

Public library binding, as it is termed, is highly specialised work. Most of it is standardised and of a straight-run type. It includes the work of co-operative libraries and institution libraries of a type similar to public libraries The total annual number of books of this kind rebound annually is approximately a million and a quarter. Roughly, one may say that the odd quarter of a million volumes are rebound by local firms; the remaining million volumes are rebound by the few firms specialising in this class of work. There are eight or ten of these firms competing, and there is not enough work to go round. The result is that prices have been dropping appreciably in the desire to secure work. The librarian regards this with equanimity and approval so long as it continues and is not accompanied by a cheapening of the quality of work or materials. Certainly binders' wages have been reduced, perhaps to a point below which they cannot be further reduced. There is a suspicion that in some classes of work the quality of the materials has been somewhat less than in pre-war times. But this can be said of most of the things we buy. In the long run an undue cheapening of materials will not benefit anyone—librarian or bookbinder or workman.

It is these falling prices that make us view with a certain amount of apprehension the proposal to form a municipal bindery for London libraries, or, alternatively, to unite all the libraries of London for the placing of one huge binding order. We do not think the proposal is ever likely to materialise; but if it should, we are doubtful about its success.

A library home bindery is seldom a success except in the very largest libraries; although a repairs department may very well be an excellent adjunct. Every library does some of its own repairs and it is only a question of degree as to how far this may be developed or enlarged with advantage. In the establishment of a library home bindery and any comparison in cost with the usual contractual system, care should be taken to make sufficient allowance for lighting, heating and other overhead charges. The subject of home binderies is too large for treatment in this short article. The proposal to form a London libraries bindery or bindery contract is rather larger than a home bindery, and the considerations are large and varied. For instance, should the library where the books are bound before they are tattered and torn, and where they are never rebound twice, pay as much as the library whose books are in circulation long after they should have been burned? Again, if the binding for all the London libraries should be formed into one

Digitized by Google

huge contract, the number of firms able to compete would be reduced. And unless the contract were for a sufficiently long period it would not be worth while for a firm to lay down more machinery for a year's extra work. It is doubtful if real economy results from such schemes as these. The proposal is too large in the one way and not large enough in the other.

Some improvement has taken place in the paper, as well as in the quality of case binding, during the past two or three years. That is not saying a very great deal perhaps. But it is a great deal to know that there are few if any books, on such hopelessly poor paper or in such inferior case bindings as there were five years ago. Most books, such as libraries purchase, are now worth re-binding once. There are still large numbers of books, and probably always will be, of poor quality materials. It is for such books as these that the *Librarian* has begn in consultation with various binders with a view to securing a binding which, while good enough for books of poor quality paper or of ephemeral interest, is cheaper than the styles with which every librarian is familiar. It would not be fair to compare these cheap bindings with the better bindings of good paper books on the issues-cum-price basis. The only comparison is between these books in cheap binding and in standard bindings. There, we are able to say, after extensive tests, that the advantage is all in favour of the cheap binding. A word of warning, however: do not use the cheap binding for good paper books; and do not use the good binding for the cheap paper book. To illustrate the use of the issues-cum-price test we may give an example of cost.

Poor paper and standard binding—

2s. 6d. + 30 issues = 1d. each issue.

Poor paper and cheap binding—

1s. 9d. + 30 issues = .7d. each issue.

The poor-quality paper book will not give more issues in a standard binding than in one of the *Librarian* cheap style bindings.—THE *Librarian*.

To Bookbinders!

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of the various associations — employers', trade union, technical, etc.—connected with the bookbinding industry are also invited. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. As the publishers have no end to serve save the presentation of matter of interest to the various branches of the trade, the pages of this journal are open to all employers and employed, trade unionists and non-unionists, for the free discussion of trade matters.

Technical Students' Reunion.

The Stationers' Company and Printing Industry Technical Board is providing an opportunity for technical printing students to meet at Stationers' Hall on Saturday, May 12th, at 6 p.m., for a social evening. A programme has been arranged comprising dancing, concert and cards.

It is a pleasing feature of the Board's work that it not only sets examinations and arranges craft lectures with a view to encouraging craft efficiency, but it also recognises the value of social intercourse between the workers in the various sections of the trade.

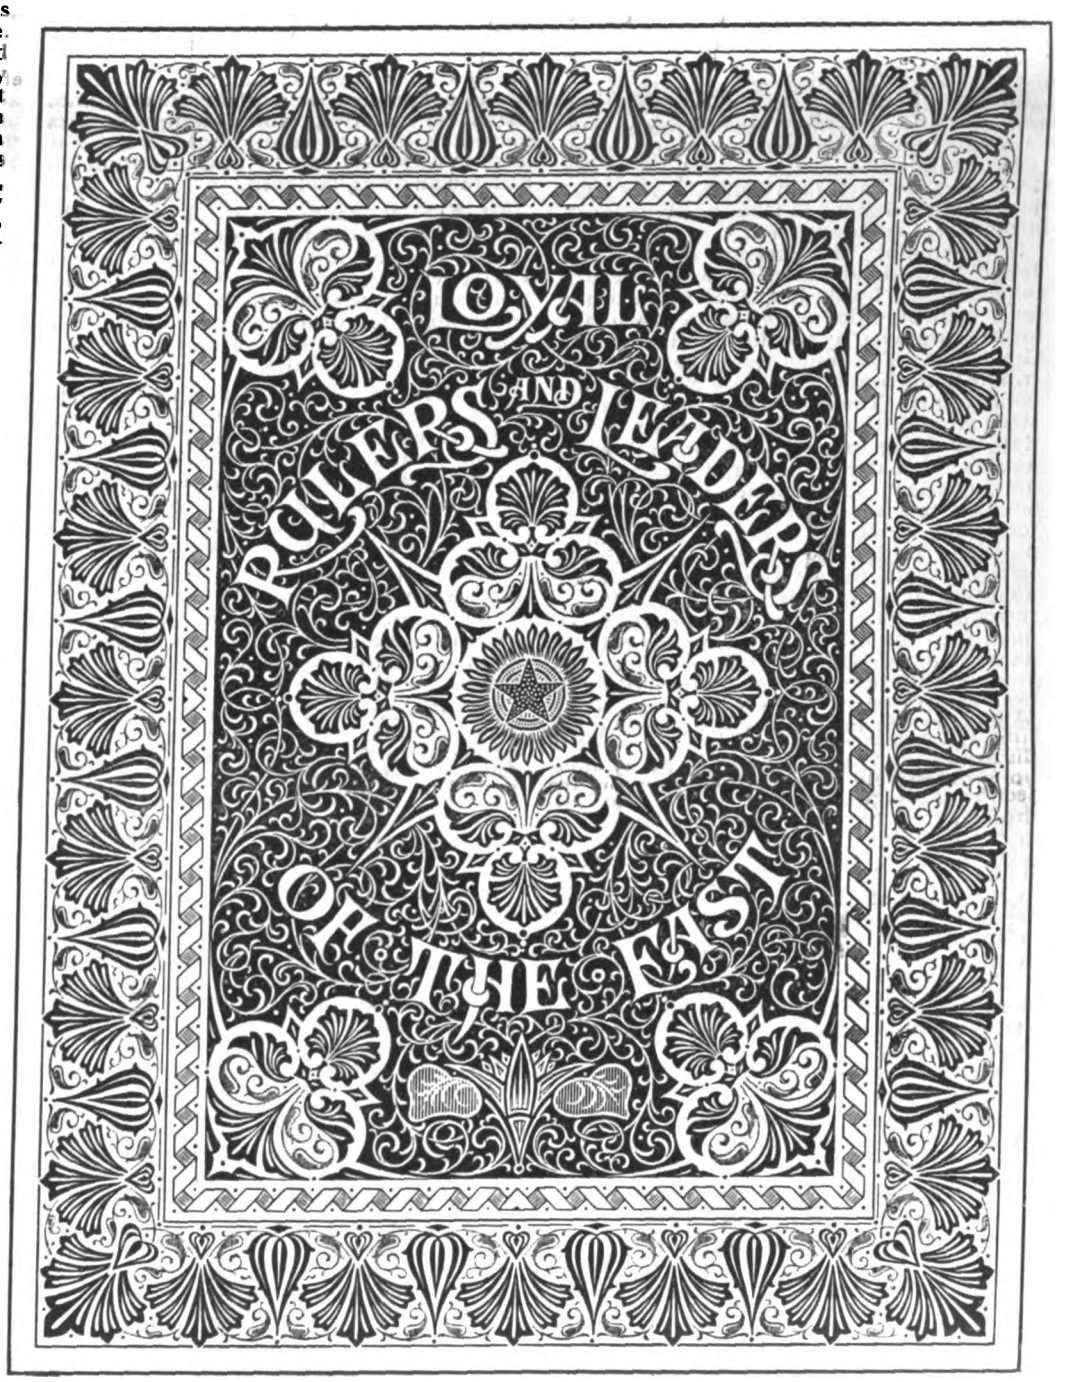
Craft examinations are being held at Stationers' Hall during the week commencing Monday, May 7th, at 6.30 p.m.

GERMAN UNEMPLOYMENT.—Out of a reported membership of 64,108 trade unionists in the printing industry of Germany 8·4 per cent. were reported to be unemployed at the end of February, comparing with 1·7 in February last year. In the bookbinding industry 4·4 per cent. were unemployed at the end of February out of total reported membership of 97,406, the percentage in February a year ago being 0.9.

The Building Up of Design.

Address by a Bindery Craftsman.

There was a good attendance of members of the Printing, Bookbinding and Kindred Trades Overseers' Association on Tuesday at St. Bride Institute, Bride-lane, E.C.1, the chair being occupied by Mr. H. Milton (president). At the conclusion of some brief routine business an interesting lecture on "Book Designing" was given by Mr. Harrison (Messrs. Zaehnsdorf's), the substance of which was as follows:—



The question of design was dealt with as a real practical issue, and the speaker declared it was not his intention to deal with any "high falutin'" features, which after all, generally resolved themselves into pious expressions of opinion. Rather was it the aim of the discourse to expound some of the well established principles which govern the designing of ornament and show how they might be applied.

After explaining the bearing of these principles on most historic examples, the speaker proceeded with an analysis of them. He showed how the very beginning of the simplest form of ornament was the repetition of some single element such as a dot or line, and how by the introduction of variety in size only, began to make it quite decorative. Still maintaining the principle of repetition and introducing alternation of a new element, such as a line or a dot, gave the simplest form of this principle. By introducing more than two elements, repetition in series was shown. This principle of repetition with its infinite possibilities of variety was shown to be the basic principle of many fine examples of historic ornament.

The next feature to be analysed was the principle of radiation in its several forms. Its value to the designer was claimed to be inestimable and amongst the many historic examples referred to it was claimed that the Greeks relied on it for the wonderful effect they obtained in most of their decoration.

Balance and symmetry were next considered and their values explained. The static and dynamic in ornament were claimed to be features of expression which varying circumstances demanded. Gradation was also considered a useful feature and used with good effect. Parallelism, it was maintained, gave a completeness to a scheme that was very satisfying. The subordination of one feature to another in any scheme of design was just as necessary as the subordination of one individual to another in our daily life.

Harmony and contrast were shown to have a great bearing on the construction of ornament. Mass and space were explained as opposed to even distribution. The geometric or organic element in design to be found in some of the finest historic examples called for much attention and interest, which was

Cover Design (Reduced) of "Loyal Rulers and Leaders of the East," published by Zaehnsdorf Limited.

Size of Original: 11¼ ins. by 8¼ ins.

Digitized by Google

followed by an examination of the organic element and the blending of the two.

The study of historic examples and its bearing on the education and training of the designer called for much comment, also the examination of the character of the ornament offered a means of understanding the temperament of the peoples of past ages. As striking examples the Grecian ornament was contrasted with the Japanese and both with the French Rococo.

The next phase was one of practical application of the several principles enumerated, when the speaker as a practical designer and craftsman in the bookbinding trade, gave several examples of how he himself built up his designs. Amongst the most interesting were designs for four of Shelley's poems, when the speaker dealt with symbolic treatment of designs for books. The madness of "The Cenci" with the wild growth of the poppy as representing the death flower, the solitude of "Alastor," the triumph of "Adonais," the unrequited love portrayed in "Epipsychidion" and the ascendency of the Greek over the Turk in "Hellas." The relation of the design to the poem in each instance was made apparent.

In concluding, Mr. Harrison referred to a design (illustrated herewith) which he was commissioned by Mr. Zaehnsdorf to execute for a book chronicling the services and the loyalty displayed by the Eastern rulers in the Great War. The design was to be a Western tribute to the beauty and glory of Eastern decorative art. The first thing he did was to steep himself thoroughly in the art of the East, studying many books containing examples of Eastern art, and looking at nothing else for some considerable time. He felt that this was to be a decorative effort for a book which had to occupy a prominent position. He found a difficulty in getting a lettering with an Eastern atmosphere by adapting Western letters. Eventually he introduced letters of a semi-gothic treatment into the ornament, giving the balance he wanted. Mr. Harrison then explained the principles of repetition and alternation of tone as utilised in working out the design, and showed examples of the various stages in its production.

At the conclusion of the lecture expressions of appreciation were very cordially made by Messrs. Milton, Esler, Hunt and Long.

The president moved a hearty vote of thanks to Mr. Harrison for his interesting address, and Mr. G. A. Eden, in seconding, suggested that the thanks of the meeting were due also to Mr. Zaehnsdorf—(and he was present)—for introducing Mr. Harrison to them.

The vote of thanks having been heartily accorded, Mr. Harrison briefly returned thanks, and said his coming to address them had been a pleasure.

A vote of thanks to the chairman closed the proceedings.

A report of the ordinary business of the Association is held over till next week.

Trade Union Matters.

TYPOGRAPHICAL ASSOCIATION EXPULSIONS.—The Executive Council of the Typographical Association publish the names of a further long series of members who have been expelled from the Association because of arrears of subscriptions. A list is also published of members who will be expelled if their arrears are not cleared off by May 17th.

EXCESSIVE FINES.—The secretary of the Yorkshire Centre of the Printers' Managers and Overseers' Association, in a letter to the Executive Council of the Typographical Association, stated that his Committee consider that the fine of £10 imposed upon one of their members, who is also a member of the Bradford Branch of the Typographical Association, is vindictive, and a contravention of the terms of settlement of the dispute last year. The Executive Council, after consideration of the communication, have decided there is no reason to alter their previous decision.

A PROTEST and an appeal, signed by the L.S.C. Pioneers and Veterans' Chapel, is being made amongst members of the London Society of Compositors on the new rule on superannuation. The signatories, who speak on behalf of the members taking superannuation before the new rules came into force, say they are not asking for any sum beyond the capacity of the Society, but claim as a right to participate in any increase in the benefit, and that the same rule should govern all the members.

Trade Notes.

POSTAL CHARGES.—In view of the misapprehension which exists as to the reductions in postal and telephone charges, the Postmaster-General points out that, as he announced in the Press on April 18th, the postal reductions will take effect on Monday, May 14th, 1923, and the telephone reductions on Sunday, July 1st, 1923.

THE Health Committee of the Joint Industrial Council is meeting next week to confer with representatives of the British Ink Manufacturers' Association on the question of substitutes for bronze powders.

PRINTERS' FIRE INSURANCE.—The Federation of Master Printers has been able to secure special concessions from all the fire insurance offices for printing works equipped with efficient sprinkler installations. Details of these concessions can be obtained from the Federation at 24, Holborn.

MR. E. E. ALEXANDER, M.P., of Leyton, who is keenly interested in all questions relating to the printing industry, has taken up in Parliament the question of the new regulations issued by the Ministry of Health dealing with labels for condensed milk, and it is hoped that the representations made will have satisfactory results.

EVERYTHING points to a very successful week-end for the Home Counties Master Printers, whose annual gatherings on Friday, Saturday and Sunday next were referred to last week, when we published the programme of events. There has been a good demand for accommodation, and last-moment applicants will doubtless swell the numbers.

THE final 3s. 6d. per week reduction under the present agreement from members of the Typographical Association becoming operative this week, a revised schedule of wages is being issued to the provincial members of the Federation of Master Printers.

MR. VALENTINE KNAPP, ex-president of the Newspaper Society, is one of those who have conveyed to the *Surrey Mirror* congratulations upon the smart erection of their new "Cossar" web printing machine, and upon the excellent printing of the *Mirror* upon the new machine.

MESSRS. VICKERS, LTD., the Broadway Press, Wilmington, were, at Dartford Police Court last week, summoned in 15 cases for employing girls on Saturdays beyond the legal hours, in other cases for employing girls on Sundays; in five cases for employing girls without obtaining medical certificates; and also for failing to keep a register of the young persons employed. It was decided that the case would be heard again in three weeks. The defendants were ordered to pay a fine of £5 for failing to keep a register, and £3 on each of the five summonses for failing to obtain medical certificates. On behalf of the firm it was stated that these offences were due to the neglect of an employee.

SPEAKING at a discussion on "Paint and Print in Avertising" at a meeting of the Faculty of Arts, in London, last Thursday, Mr. T. S. Barber said that as a result of developments in the methods of reproduction we were within measurable distance of morning papers with illustrations and advertisements in colours. Already journals were printed in America in colours by rotary machines.

WORKS MAGAZINES.—Editors of works magazines and staff journals held their third annual conference at the offices of the Industrial Welfare Society on Friday. Mr. Robert R. Hyde, director of the society, who presided, said that the fact that some sixty editors of work's magazines had met together for the third year in succession to compare notes was a testimony to the value of their labours. Works magazines were playing a valuable part in spreading the industrial renaissance.

STATE OF TRADE.—The Leicester Chamber of Commerce, in reporting upon the past week's trading conditions, remarks that the best news by far for the printing and bookbinding trade is the reduction in the postal rates announced by the Chancellor of the Exchequer. This will be received with satisfaction by the whole trade, and their various organisations, and will do more to stimulate the slight improvement than any individual action can possibly do. In the letterpress section improvement has been maintained, more catalogues and leaflets being issued, although nothing to compare to pre-war time. Bookbinding is still quiet; large orders are few and far between; although prices of materials have been reduced the volume of work in this section does not come up to expectations. Large orders of litho work are not yet being put in hand, and there is some slight fall during the last month. Although most of the larger firms are remaining on full time, it is with considerable difficulty they are keeping their machines at work. Unemployment is very little, if any, above normal. The paper box trade is showing slight signs of improvement.

ONE case of lead poisoning was reported in the printing industry during March.

A VERDICT of "accidental death" was returned at the Islington Coroner's Court in respect of Mr. E. G. Taylor, of Stroud Green, employed as cashier at Hunters, Ltd., St. Bride-street. He was knocked down by a cyclist in Victoria-road, Hornsey, and sustained a fracture of the skull.

THE interment took place on Monday at Elswick Cemetery, of Mr. John Ripley, the oldest member of the printing profession in Newcastle.

AN inquest was held on Monday, at Lambeth, by Mr. Ingleby Oddie, on Frank David Burrage, aged 16, a compositor's apprentice, of Woodside-road, Sidcup, Kent, who was run over by a motor omnibus and killed in Stamford-street, S.E. Verdict: "Accidental death."

THE death occurred suddenly last week of Mr. Thomas Shaw, of Stockport, late with Messrs. Rylands and Sons, Ltd. (printing department).

THE death occurred in Edinburgh on Saturday of Mr. Isaac Donald, who was for many years chief reporter of the *Evening Dispatch*.

THE late Mr. Thomas Evans, of Redditch educational publisher, who died December 10th, left £27,227.

THE late Mr. Richard Pelton, of Tunbridge Wells, bookseller and stationer, who died January 8th, aged 89, left £26,453.

The Perkins Golden Wedding.

Merry Party Entertained.

In a large gathering which assembled at the Holborn Restaurant on Friday evening, April 27th, to celebrate the silver wedding of Mr. and Mrs. W. A. Perkins were a large number connected with the printing world, the following (most of them accompanied by their ladies) being among those who attended:—Messrs. Joseph Mortimer, O.B.E., C. J. Drummond, M.B.E., J.P., W. E. Hebditch, G. F. Wilbraham, C. F. Sach, H. P. White, J. A. Goodall, H. M. Gurr, James Chandler, Geo. Hardy, George Peckham, Percy Newton, and J. Christmass. The Cornwall Press, to which Mr. Perkins is attached, was represented by Messrs. Cyril Smith, J. Griffiths, and A. England, with Mr. Griffiths, jun., from Messrs. Iliffe's Tudor-street house. Officers or members of the following organisations (with which either Mr. or Mrs. Perkins or both are or have been connected) were numbered among the company: Printers' Pension Corporation, Readers' Pensions Committee, Society of Somerset Folk in London, Somerset Arts Circle, Society of Crewkernians in London, Alexandra Palace Lodge of Freemasons, 1541, Alexandra Palace Chapter, Golders Green Club of Masonic Instruction, Samson Lodge of Instruction, Golders Green and Child's Hill Conversative Association, Kennington Conservative Association, National Union of Teachers, London Teachers' Association, Association of Correctors of the Press and London Society of Compositors.

The programme included dancing to delightful selections supplied by Mr. G. Hardey's orchestra, with vocal and instrumental music by Mrs. A. England, Mrs. Wills, Miss Griffiths, Mr. and Mrs. F. Cousins, Mr. Brook-Flowers (hand bells), a recitation by Miss Fairman, and Somerset dialect items by Mrs. Fred French and Mr. John Perkins (brother of the host and head master of the Sir John Cass Foundation School, City).

The evening was voted a delightful one.

Many valuable gifts were received from individual members of the societies named above and from personal friends, as well as combined presentations from the Golders Green Club of Masonic Instruction (of which Mr. Perkins is secretary), from the officers of the Alexandra Palace Lodge (of which he is a Past Master), and from members of the committee of the Golders Green and Child's Hill Conservative Association (of which he is chairman).

PICTORIAL MACHINERY LIMITED

(Specialists in Machinery and Plant for the Graphic Arts)

We are craftsmen workers endeavouring to give the best machinery and appliances for the production of printing surfaces for Offset Lithography or Photogravure from the reel or printed on flat-bed machines (in monochrome or multi-colour) or any other process. We are specialists in the production of plant for repetition work, the Patent Lithotex Step-and-Repeat machine being unique in this direction, a machine which has been constantly improved and always kept up-to-date. The Lithotex printing frames in various sizes in metal and wood, are solid appliances possibly not the lowest in price, but undoubtedly the best in practice, so every user testifies. Special Cameras for all classes of process work and for any expert work where a photographic negative is required.

Pictorial Machinery Ltd. make a point of not only selling plant but maintaining a staff of expert craftsmen for assistance to the trade and thus provide service as well as plant, knowing full well that in developing new processes users and printers require assistance and advice in addition to plant.

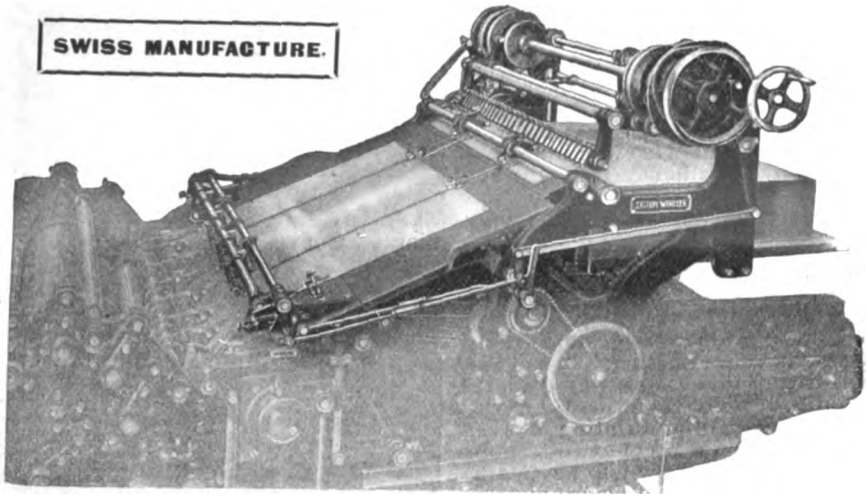
Photo-mechanical apparatus of any description of work in the Graphic Arts repaired, restored, designed to customers' own specification.

Just this,
What are you doing
about the Lithotex Process?

PICTORIAL MACHINERY LIMITED

7, FARRINGDON ROAD, LONDON, E.C.1.

Telegraphic Address: "Pictograph, London," 'Phones: Central 3215, 3216



Managing Director ... ... FREDERIC T. CORKETT, F.R.P.S.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer.
The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

8 Feeders sold during the last weeks.

COME AND SEE IT RUNNING IN LONDON.

Photo-Litho as the New Conqueror

Mr. Frank Colebrook's Address.

(*Continued from Page 291.*)

Continuing his reference to Mr. Corkett's work, Mr. Colebrook remarked that the Step-and-Repeat machine was rather a projector than a camera; it was certainly a wonderful machine, which served for either lithographic or letterpress operations. He had lately visited the works of the engineers who made this camera, and he saw a Step-and-Repeat machine being made for an Australian photo-engraver. It embodied certain improvements suggested by this Australian craftsman, clearly a leader under the Southern Cross. One improvement was an automatic time-exposure control. It was wonderful what the human element had accomplished with the Step-and-Repeat machine, but human physical variation and uncertainty had to be guarded against, and this was now done.

Mr. Corkett had lent, and Mr. Colebrook showed, many Step-and-Repeat and other prints, and among them a specimen of flat-bed gravure, *i.e.*, work done from flat plates on a flat-bed lithographic machine converted to gravure work. Photo litho work also was lent and was shown in which the grain of the metal was made to serve in place of any artificial screen. A continuous-tone negative was placed in contact with a zinco plate coated with a certain solution, and the printing proceeded in the ordinary way. The word "Printex," he said, was still used by the Pictorial Machinery Co., and was applied to its process as adapted to textile roller making, and also to a Mechanical Negative Printer. The accuracy of the "Step-and-Repeat" machine was claimed for the Printex Mechanical Negative Printer, and there were high hopes that it would do, and at a much lower price, all that was claimed by any foreign machine purporting to cover the same field of operation.

Merging of Processes.

We had been accustomed to think of printing as relievo (represented by type, wood or metal blocks or ornaments), or as planographic (represented particularly by lithography which indeed lithography's inventor called chemical printing), or as intaglio (represented particularly by ordinary copper-plate engraving and photogravure). To-day, the best established concepts were being questioned. Might not these various printing methods shade into each other? Lithographers did not despise the help of slight relief. Letterpress printers certainly did not despise, but coveted, the power of planographic offset printing, and, in the quest of such power, were more than willing to modify their requirement of deep relief. Half-tones had been regarded as almost impossible printing subjects thirty-five years ago, even where they were fairly deeply etched; but now, a 400-line half-tone, with perhaps a 300th of an inch depth, seemed manageable. The letterpress man was tending to do with ever less and less etching.

Mr. Ronald Trist apparently had a message for the craft as to the possibility of treating clear spaces in such a way as to prevent their showing "monks" and "friars," where no mark should be. Signs of processes moving towards each other might offer for our notice and yet fail to be noticed or fail to carry suggestion. Yet happily we had in our ranks printers like Ira Rubel, the lithographer, whose observation led to offset printing being introduced. They vindicated our repute for vigilance and alertness. To the vigilant and alert there might well be suggestion in this closer coming together of litho and letterpress. Were we about to see very shallow letterpress plates printed by a rubber offset method? Were we about to see a revival of Wharf-litho? Twenty years ago Mr. Hilldyard, whose fertile mind was still at our service, had challenged our attention for Wharf-litho, *i.e.*, for lithographic printing operating without water. Mr. J. R. Riddell, now principal of the London School of Printing, being then in charge of machines for Messrs. Forman's, the famous lithographers and letterpress printers of Nottingham, prepared many plates to be printed by Wharf-litho methods upon the demonstration machine which was being run upon Mr. Harvey Dalziel's premises or possibly on premises adjoining in Ploughcourt, Fetter-lane. The speaker well remembered examining plates then produced by Wharf-litho. It might well be that a revival of Wharf-litho in a possibly better form, was to be among the features of these still early twenties of this century.

The Sperati Process.

The Sperati process was another method of which Mr. Colebrook spoke. He said he went to the Savoy Hotel to see the Sperati prints there being shown. By Mr. Sinclair's courtesy, he was able to show them what the process accomplished. In the Savoy Hotel he saw an operator working on a celluloid plate, bearing a collotype like architectural subject. The high lights and clear spaces were chemically treated. Ink was rolled freely over the whole surface. This was not, as with collotype, a case of printing from an image on a support which itself was placed upon glass. The celluloid sheet could be simply laid upon any convenient surface. The method no doubt suited certain subjects much better than others. Did it lend itself to phototype printing? That, he put before them as another consideration, and he thought they might possibly hear more of it in that connection.

One interesting co-operation of relievo printing and lithography was witnessed by the lecturer when he was visiting the late Mr. Horsley, then controlling the publicity of that very enterprising line, the old North-Eastern Railway Co. Mr. Horsley had great faith in the convincing power of the camera. He would produce a Gigantographic half-tone poster photographically, showing the famous red roofs of Whitby, or it might be a roof-scape of Knaresborough, or of Richmond in Yorkshire. One of these large-sized specimens of Gigantography was quite satisfactory as touching the main body of the sketch, but the sky was not at all equal to the other part of the subject. There was some talk between the Leeds printer concerned and Mr. Horsley and the lecturer as to what was best to be done, and the conclusion was to take out altogether the sky as produced by the Gigantographic method of enlarged half-tone, and instead, simply to treat the sky part with original litho work.

Mr. Colebrook felt we were only at the beginning of realising what photogravure could accomplish. We must distinguish between mere inverted half-tone and real photogravure. Inverted half-tone gave you hollows all of the same depth. Even that was not to be undervalued. You had the advantage of being readily able to print by rotary. You had not, however, the advantage, deriving from "the third dimension," that was, from the component grains or dots of the picture embodying unequal intensity, because of embodying unequal depths of pigment, this was the characteristic gain secured through employing the process of gravure in its fullest comprehension. In true gravure the hollows in the deep shadows were deeper than the hollows in the lighter parts.

The speaker drew attention to the increasing use of photogravure for newspaper work. Incidentally, he said, the octavo issue of the "Encyclopædia Britannica" had been printed entirely from process plates, by reduction from the large quarto pages of the first edition.

Mr. Colebrook remarked that the colour book "jacket" produced by offset had appeared. Publishers had ordered three-colour plates pretty largely for their jackets; doubtless they helped the sale. If offset litho exhibited the desired brilliancy it might be increasingly availed of for this jacket service. Messrs. Lorilleux and Bolton had just produced duotone offset inks, and other ink makers no doubt were giving great attention to offset requirements.

Miehle-Lithography.

Sometimes a machine designed for one method was adapted for another. One of his most prized friends in the craft was the late Mr. Mark Smith, of what was formerly known as the Manchester Guardian Printing Works. He saw in those works a Miehle two-revolution letterpress machine which Mr. Mark Smith had adapted to print lithographically, *i.e*, from a metal plate mounted type high. It could be quickly changed back from a litho to a letterpress. The damping gear was easily detachable.

It had been remarked of late, in warning to the engraver, that a number of big litho printers had set up process departments, and had found it difficult to make them pay, and therefore were out to capture work that formerly went to block makers. It had to be remembered, however, that two could play at that game. Some process engravers had put in photo-litho plant. They were probably out to capture work that formerly went to the lithographer.

The speaker recalled that Mr. Gamble had written some wise words in the review of process work which he contributed to the 1923 Process Year Book. He said (p. 12): "Printers and process workers are watching with great interest the relative progress being made by offset and rotary photogravure; and there is much speculation as to which process will eventually be most widely adopted. As a matter of fact, the two processes should not be competitive, but auxiliary to each other. Each has its special field of usefulness." Mr. Colebrook said he would extend that philosophising to the wider field, and apply it to photo-litho in its relation to letterpress work.

One thing emerged very plainly, he said—we should all do our best with the means at our hand, and this best which we should all do, very few of us could quite claim that we actually did.

"We will try to close at seven," said Mr. Poulton; he added that he wished members to feel that they could come to these Association gatherings without too large a slice out of the day. There was questioning and discussion, and Messrs. Brigenshaw, Northam, Griffiths, Mason and the president were among those who took part. Mr. Colebrook, who had compressed his main talk into very little over half an hour, briefly replied, and the gathering broke up.

Paper Trade Golfing Society.

Match with London Solicitors.

A match by singles and foursomes took place at Sandy Lodge Golf Club on April 19th between the Paper Trade Golfing Society and the London Solicitors' Golfing Society, the latter winning by 8½ to 3½ on the day's play. Scores:—

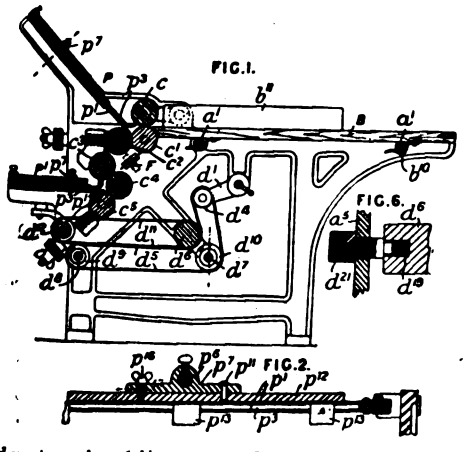
New Inventions

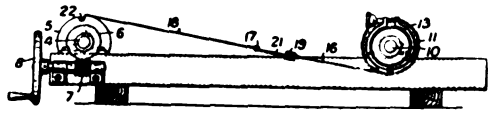
Loose Book Covers.



Messrs. Gale and Polden, Ltd., and Mr. F. Sabatini have patented a device for temporarily securing a book 8 in a cover 1 which consists of a wire frame 7, through which a number comprising approximately one-third of the leaves is passed, and two plates 2, 3 secured to the back of the cover and formed

with hooks 5, 6, the frame 7 being sprung over these hooks and secured in position by a hook 7^{iv} and eye 7^{x} provided at one of its corners. The frame 7 may be hinged to one of the plates 2, 3 and the plates may be secured to the back of the cover by eyelets 4, or tongues struck up from the plates and clinched in slits in the back of the cover.

Paper Folding Machines.

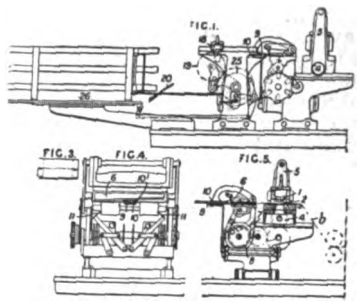


The Canadian-American Machinery Co., Ltd., has patented an invention whereby machines for folding paper by the aid of rollers and buckling plates as described in Specifications 14631/07, 1:653/08, 14893/14, and 123,475, constructed with a switch plate which can be set to direct a folded sheet to a delivery device or to a subsequent folder, and with stop plates which are adjustable angularly to suit the angle at which the front edge of a sheet is disposed to the side edges. The sheets are fed from an adjustable table B to rollers c, c^1 which direct the leading

edge to a buckling plate P formed of spaced members p^1, p^3 of which the plate p^1 is slotted to receive stops p^{13}, Fig. 2, depending from a stop plate p^{12} which is angularly adjustable about a pivot p^{11} on an adjustable block p^7 secured by a screw to a rod p^6, a wing nut p^{16} holding the plate p^{12} in the desired angular position. The first fold is produced as the buckled paper passes between the rollers c^1, c^2. A switch F is then set so as to direct the folded sheet to a second set of folding rollers c^3, c^4, c^5 and a buckling plate P^1, the twice-folded sheet passing to delivery bands and belts d^{11}, d^8; or the switch may be set to direct the folded sheet to the delivery device without passing to the folding rollers c^3, etc. The second set of buckling folders may be replaced by an ordinary knife folder. The feed table B is fitted with guides b^{11} and is formed of two outer sections which are secured on rods a^1 by means of screw actuated clamping rods, which can be released to enable one or more leaves to be inserted between the outer sections. These leaves are held in place by springs b^{10} embracing the rods a^1. The delivery belts d^{11} pass over a driven roller d^6 and a roller d^{12} carried by an adjustable bracket. The roller d^6 is bored at its ends to receive a supporting axle d^{10}, Fig. 6, which passes through the frame part a^5, and is formed with a knurled head d^{21} and with shoulders where this engages the frame and adjacent to the roller d^6. The belts d^8 pass over spools d^4 carried by adjustable arms d^1, and over spools d^9, d^{10} secured to axles d^7, d^8 which can be removed axially when it is desired to remove any of the spools.

Flexible Printing Plates.

In an invention patented by Messrs. Penrose and Co., Ltd., W. Gamble and M. Owen flexible printing plates are applied to cylinders by attaching one end of the plate in a gap in the cylinder, extending the plate tangentially to the cylinder and connecting its free end to a straining device, rotating the cylinder to wind the plate upon it while under tension, and finally securing the free end of the plate to the cylinder. As shown the printing cylinder 5 is mounted on a shaft 4 adapted to be rotated by worm gear 6, 7 and hand-wheel 8. One end of the flexible sheet 18 is secured in the gap 22 and the other end



to a clamp bar 17 connected by a chain 16 to a sprocket wheel 11 on a spindle 10 the rotation of which can be retarded by a band brake 13 or by weights, springs, or other means. To maintain the bar 17 parallel to the spindle 10 it is connected to the chain 16 by a chain 21 having its end secured to the ends of the bar 17 and passing round a toothed wheel carried by a block 19 on the end of the chain 16. The free end of the sheet is finally pressed into the gap 22 by a bar adapted to fit the gap and to be bolted therein, or a narrower fixing bar may be employed, the edge of the sheet extending beyond the bar across to the other side of the gap and serving to collect ink which is thus removed with the sheet when the printing is concluded.

Oiled Paper.

According to an American patent, oiled paper is made by applying the oil to portions of the paper only. The paper is passed over a roll which turns in a bath of oil. After the oil has been applied, the paper is passed between three calender rolls and wound up in a roll. Diffusion and permeation of the oil through the paper fibres are secured in this manner.

Box-Making Machine.

This invention relates to the parts of a machine concerned in operating upon a strip of scored paper or other material, cemented for assemblage, to produce collapsed rectangular boxes of the form indicated in Fig. 3. The prepared strip b first passes under punches 1, Fig. 5, acting in conjunction with matrices 2 to cut the requisite notches and flaps in the blanks; the holder carrying the punches is given a reciprocating motion by eccentrics 4 and rods 5. The punching means can be regulated in position with reference to a knife 6 to which the strip next passes, in accordance with a particular length of box being made. The knife is caused to operate by a

lever 7 deriving motion from a cam 8. After severance, the strip passes on to a thin plate 9 against which it is held by a hand- or pressure-operated device 10 having down-turned edges 10^1, Fig. 4, designed to fold down the sides of the strip. Folders 11, operated by lever and link mechanism from a grooved cam 13, next come into operation to fold up the sides of the strip against the plate, and having done this they move clear of the plate which is now caused to move forward to bring the folded box between rollers 18, 19, Fig. 1, which apply the pressure necessary to make the box sides adhere together, and then discharge it on to a plate 20. This plate 20 is caused to oscillate by lever and rod mechanism operated by a cam 25, and delivers the boxes into a receiving compartment 26, wherein they are retained by hooks which are moved aside to permit the passage of the boxes by lever and link mechanism operated from a cam, and return to place as the plate 20 regains its normal position. The patentee is Mr. L. Chambon.

Sizing Paper.

According to a United States patent, loaded paper stock is sized by treating the filling material while in suspension with a dilute colloidal aqueous solution of a free rosin size. The materials are mixed until physical actions take place which indicate that the proper mixing has been obtained. The size is then added to the paper stock in the beating engine.

WITH their lively "Notes for Buyers," Spicers, Ltd., are sending out some attractive paper samples. In a neat folder there are selected specimens of writing, account book and manifold papers; coloured printing, surface and enamel papers; printing and art papers; and wrapping papers. A second folder contains a few productions of the firm's factories, such as cards, envelopes and other specialities.

FLAT BED OFF-SET.

Have your Litho converted by the Flat Bed "Off-set" Specialists and make your Short Runs pay.

U.S. Paper Exports.

Writings, Envelopes, Papeteries, and Cover Paper.

Information obtained from the Department of Commerce, Washington, for the month of January, shows the total export of writing paper (except papeteries) to have reached 691,984 lbs., of the value of $96,058. By far the largest market is the Philippine Islands, which took 360,312 lbs. ($36,519). Mexico comes next with 71,532 lbs. ($10,556).

Apart from Canada, which altogether took 20,308 lbs. ($5,773), the principal remaining markets are represented by the South American States, including Venezuela, 27,381 lbs. ($4,519) and Cuba, 18,843 lbs. ($3,176).

Among what might be considered outside markets, Australia takes a foremost place as a consumer of American writing paper. Consignments to that country in January represented a total of 46,548 lbs. ($6,962). England received 7,361 lbs. ($1,604), British South Africa 2,628 lbs. ($351), and New Zealand 1,038 lbs. ($354).

Chinese consumption of writing paper from the United States in the month amounted to 25,345 lbs. ($5,667), while Japan had a consumption of 4,715 lbs. ($489).

Envelopes

Exports of envelopes from the United States in January totalled 217,653 lbs. ($42,550). The principal market was Cuba, with 71,044 lbs. ($13,386). Then came Canada, 33,236 lbs. ($7,140); Mexico, 25,859 lbs. ($5,642); Philippine Islands, 21,875 lbs. ($2,630). China again took a fair share of the American supplies, namely 7,749 lbs. ($1,227).

England's share is represented by 2,033 lbs. ($1,811), and among the more important of British colonial markets may be mentioned Jamaica, 4,147 lbs. ($605); Australia, 2,942 lbs. ($842); British South Africa, 2,365 lbs ($364); Straits Settlements, 2,285 lbs. ($334); and British India, 1,314 lbs. ($261).

Cover Papers.

The markets for cover papers are more restricted than in the classes just mentioned. Total exports from the United States were 87,475 lbs. ($15,551). The principal customer was Canada, which in January absorbed 53,301 lbs. ($9,964). Other important consumers were: Cuba, 14,835 lbs. (£1,670); England, 9,286 lbs. ($2,115); Australia, 2,438 lbs. ($536); British India, 1,512 lbs. ($210); and then Guatemala and Mexico.

Papeteries.

Papeteries sent abroad by the United States in January aggregated 25,497 lbs., representing a value of $8,167. The chief markets were Mexico, Dutch East Indies, Cuba, the Argentine, Philippine Islands, the Dominican Republic, Straits Settlements and Venezuela.

U.S. News-Print Exports.

During November the exports of American news-print were as under to the countries mentioned:—

News-Print.	Pounds.	Dols.
Canada	342,539	14,087

Australian Notes.

Goss Press Installed — Dissolution of Partnership—New Sydney Company—Paper and Stationery Imports — Commonwealth Board Mills' Profit—Cumberland Paper Board Mills' Recovery—Italy and Writing Paper.

(From Our Sydney Correspondent.)

THE *West Australian* newspaper has installed an octuple Goss printing press capable of printing 60,000 16-page papers per hour. The press is from Chicago, but the driving equipment is by Messrs. Witton, James, Ltd., of London.

DISSOLUTION of partnership is announced between Arthur McQuitty and Walter Thos. Frost, carrying on business at Nos. 451A, Kent-street, Sydney, under the style of Arthur McQuitty and Co.

A NEW company has been registered under the style of Chas. E. Blanks, Ltd., with a capital of £10,000, in £1 shares, to carry on business in Sydney as advertisers, contractors and publishers. The subscribers to the memorandum include W. E. Blanks, J. M. Barker, G. D. Blanks, C. R. Blanks, W. H. Blanks, J. N. Ryan, and W. C. Young.

IMPORTS of paper into Australia continue to rise in value comparing the period of 1922 with a similar period in the preceding year. Under the heading of paper and stationery, imports into the Commonwealth for July–October represented a value of £2,075,552, whereas in the corresponding period of the previous year the figure was £1,556,034.

STATISTICS are available of the imports into New South Wales during November. According to this, printing paper received was of the value of £74,767, which compares with £60,019 in November of the previous year.

THE report of the Commonwealth Board Mills, Ltd., for the year ending August 31st, states that after providing for the whole of the expenses of the year's business there remains an amount of £3,049, and this with the balance forward from previous year, £7,692, totals £10,741. After writing off £1,431 for depreciation of No. 1 plant the balance is £9,310. The board has decided to pay the 8 per cent. on the cumulative preference shares for the twelve months, which amounts to £1,316, and in order to conserve the financial strength of the company to place £5,000 to reserve, carrying forward the balance of £2,993 to next year.

IT is further stated that the output of the mill has been materially increased, and it was expected that this increase would be more than maintained during the current twelve months. The "slump" in European trade during the company's financial year had a very serious effect on prices realised for its products.

THE directors of the Cumberland Paper Board Mills, Ltd., have adopted a rather novel course in issuing a report covering the four months from July to October, the object apparently being to prevent shareholders from being misled by the many conflicting reports which have been circulated relative to the company's financial position and future prospects. Leaving the deficit as at June 30th out of account and after allowing for depreciation and the usual charges, the report records a net profit of £7,647 during the period. If this rate is maintained the returns for the year should show profits of about £23,000, as against a loss of £7,276 in the previous year. A reference is then made to the settlement of an old pulp contract involving an appropriation of £9,791, and the writing off of preliminary expenses and orders on hand to the extent of a further £2,000, which have increased the deficit of £14,664 to £18,815. This, however, may be reduced by an approximate amount of £6,800, which, it is stated, is the profit for the two months to December 31st.

THE question of dealing with the deficit by a reduction of capital has been considered, but the directors have decided not to recommend this course. It is pointed out that the contingent liability on the preference shares now amounts to £17,396, so that even under the present improved conditions the resumption of payment of ordinary dividends appears to be still remote.

NEWSPAPERS are referring to the desire of Italy and France to improve their trade with Australia and they aspire to do this direct and not through London, as is the case at present. Among the articles upon which Italy means to concentrate is included writing paper.

Board Imports into Australia.

The statistics below relate to imports into Australia of boards during the twelve months ended July, 1921. The figures appearing first in order relate to the quantity or the value of the various classes, and represent the "country from whence goods" were imported, while those given in parenthesis refer to the quantity or value of the goods "according to the country of orgin."

Millboards, etc.

Imports under the heading of "millboards, greyboard, leatherboard, manilla board and woodboard" amounted to 3,813 tons, of the value of £265,542, the contributions made by the different countries being shown as follows: United States, 1,542 tons, £115,241 (1,413 tons, £109,141); Sweden, 1,161 tons, £75,804 (1,234 tons, £80,010); United Kingdom, 487 tons, £44,610 (439 tons, £41,713); Canada, 411 tons, £16,682 (542 tons, £22,987); Norway, 145 tons, £9,118 (132 tons, £8,386); Denmark, 50 tons, £2,432 (nil); France, 12 tons, £1,062 (1 ton, £134); Netherlands, 4 tons, £411 (8 tons, £873); Italy, 1 ton, £134 (nil); and New Zealand, £48. Finland was responsible for 31 tons, of the value of £1,176, and Belgium, 13 tons, of the value of £1,070.

The quantities and values of the goods received by the various importing States stand as follows: New South Wales, 2,203 tons. 139,916; Victoria, 1,111 tons, £88,393; Queensland, 255 tons, £22,443; South Australia, 225 tons, £13,539; Tasmania, 11 tons £134, and Western Australia, 8 tons £1,117.

Cardboard and Pasteboard.

Merchandise under this heading was received into the Commonwealth during the period mentioned to the extent of 389 tons, of the value of £35,851, and was consigned as follows: United Kingdom, 178 tons, £17,487 (175 tons, £17,221); United States, 121 tons, £12,135 (121 tons, £12,240); Denmark, 48 tons, £1,882; Finland, 48 tons, £1,882); Sweden, 25 tons, £1,164 (25 tons, £1,164); Italy, 17 tons, £3,078; Switzerland, 17 tons, £3,078.

Shipments received by the different States were: New South Wales, 280 tons, £26,555; Victoria, 49 tons, £2,437; South Australia, 28 tons, £3,068; Western Australia, 24 tons, £2,801; Queensland, 5 tons, £570 and Tasmania, 3 tons, £420.

Coated Boards.

Imports of coated boards amounted to 158 tons, of the value of £17,266. Supplies from the United Kingdom stood at 95 tons, £9,419; other countries being represented as follows: Sweden, 30 tons, £2,650; United States, 30 tons, £5,027; Norway, 3 tons, £163, and France £7.

The share of New South Wales was 111 tons, £12,238; followed by Western Australia, 24 tons, £2,505; Tasmania, 13 tons, £1,505; South Australia £19 and Victoria £6.

Strawboards.

Receipts of strawboards, which include corrugated strawboard, stood at 3,071 tons, of the value of £67,771. The consignments from the different countries are shown to be: Japan, 2,027 tons, £43,597 (2,025 tons, £43,589); Netherlands, 516 tons, £11,898 (978 tons, £22,296); United Kingdom, 470 tons, £11,073 (48 tons, £1,378); Straits Settlements, 38 tons, £695; United States, 20 tons, £508.

New South Wales took 1,351 tons, £30,893, the shares of the other States being as follows; Victoria, 1,046 tons, £22,829; Queensland, 403 tons, £8,233; Western Australia, 159 tons, £3,450; South Australia, 105 tons, £2,205; and Tasmania, 7 tons, £161.

Cardboard Boxes.

Imports under this heading, which comprise cardboard boxes, cut and shaped or finished, and strawboard made into bottle envelopes, were of the value of £5,777. The supplies from the United Kingdom stood at £3,759, while Japan was responsible for £1,776, United States £234, other foreign countries £6 and Hong Kong £2.

The values of the goods received by the different importing States were: New South Wales, £5,559; Victoria, £155; Queensland £58 and Western Australia, £5.

British Trade with Australia.

Meeting of Manufacturers and Representatives' Association.

At the annual general meeting of members of the Australian Association of British Manufacturers and their Representatives, held at Melbourne, February 22nd, 1923, the retiring president, Mr. J. D. Campbell, in addressing the meeting, drew attention to the gratifying increase in the membership of the Association, now numbering 850 (506 British manufacturers and 344 representatives) and referred to the satisfactory financial position.

In connection with the close co-operation that exists between the Association and Mr. S. W. B. McGregor, H.M. Senior Trade Commissioner in Australia, Mr. Campbell stated that when it was announced that the Geddes Economy Commission had recommended the abolition of the Trade Commissioner Service, the Association had cabled direct to the Board of Trade strenuously opposing such action; and this cable was cited by the Chancellor of the Exchequer in the House of Commons as having influenced the decision of the Government to continue the Service.

Referring to Tariff matters, Mr. Campbell said that the Association was satisfied in the main as to the protection afforded to British trade and the sympathetic attitude of the Tariff Board, but pointed out the lack, in the anti-dumping legislation, of protection for British trade against the dumping of foreign goods from countries whose currency is not depreciated. The Association proposes to approach the new Commonwealth Government on this point.

The President referred to three matters which, in the opinion of the Association, are serious handicaps to the development of British trade with Australia, and which call for immediate rectification. Firstly, the oppressive postal rates between Australia and Great Britain; secondly, the Customs Duty levied on catalogues issued by British manufacturers; thirdly, the disappearance of the pre-war weekly mail service to and from Great Britain.

In dealing with the general position of British trade with Australia, Mr. Campbell drew attention to the remarkable recovery during the past few years as gratifying evidence of the ability of the British manufacturer to re-capture the trade as soon as conditions permitted him to make the attempt.

An interesting address, dealing with the position and prospects of British trade with the Commonwealth was delivered by Mr. S. W. B. McGregor, H.M. Senior Trade Commissioner in Australia.

Mr. Robert W. Knox was unanimously elected President of the Association for the year 1923.

Paper Wrappings for Bread.

An Urgent Health Necessity.

Agitation on behalf of the hygienic distribution of foodstuffs is making headway, and Messrs. Spicers, Ltd., have issued two very useful pamphlets on this subject, one entitled "Clean, Enticing Bread," which emphasises the simplicity of the method of wrapping loaves, and the other "Wrapping for Profit" ("by a baker who does it.")

The first pamphlet shows that the recent introduction of the practice of bread wrapping has demonstrated that loaves can be automatically wrapped fresh from the oven, and delivered absolutely clean, pure, wholesome and appetising, in some cases at a cost no greater than that of unwrapped bread, and in all cases at a cost which is infinitesimal compared with the advantages it gives.

Cost is probably the question which will be the main consideration on the part of bakers. but the second pamphlet clearly demonstates the economy as well as the advantage of this system. The baker who is responsible for setting forth his experiences in the second pamphlet says: "In weighing up the advantages and the disadvantages of wrapping I had not taken the potent power of publicity into account, neither then did I realise as I have since come to learn that the public will pay an extra ½d. a loaf for wrapped bread." He goes on to say that he began by wrapping a percentage of bread, but the system quickly attracted new customers, and because of the hygienic method adopted, trade which had been casual became regular.

"In short," he writes, "within 10 weeks I had increased my total output by 100 per cent., which meant that my wrappers were costing me nothing, because I could afford to work on a smaller percentage of profit with a bigger turnover."

Advantages of Waxed Paper.

The same authority also declares that no paper lends itself to the needs of the baker so well as waxed paper, which is germ-proof, dust-proof, and also air-tight. This means that the loaf once wrapped does not lose weight by evaporation; therefore the same overweight allowance has not to be made.

As to the dangers of distributing bread without protection, it is scarcely necessary to produce evidence in order to convince people of the fact. Dr. Inman, the bacteriologist to the Brompton Hospital, however, when he made cultures from the crusts of loaves bought off delivery barrows in the streets in the West End of London obtained cultures of streptococci from them. "As many as one in five of the loaves were contaminated," he observed. In some other experiments which he made, Dr. Inman was able to show that bacteria remain alive and virulent on bread for over three weeks, and he adds that this is the case with all the bacteria causing diarrhœa, typhoid and dysentry.

The Remedy.

The remedy, of course, as Dr. Inman observes, is a simple one. Machinery has been perfected which takes the freshly baked bread and wraps it automatically in a dainty, hermetically-sealed envelope of waxed paper. Waxed paper affords an absolute protection for the bread. The wax paper itself is completely sterilised during the process of manufacture. This, wrapped automatically round a sterile loaf, provides bread that is in a condition from every point of view ideal. Incidentally, the additional keeping qualities of wrapped bread are of considerable value to the housewife. So long as it is kept in its wrapper, it will remain fresh and palatable. Moreover, bread being very obsorbent of odours, the wrapper affords protection from other foods in the larder.

Several of the leading bakers in the country have for some time been wrapping their bread. Their success has been so phenomenal that numbers of others are following suit as rapidly as machinery and supplies can be obtained.

The Spicer pamphlets have been very well prepared and in addition to the forcible arguments used, the illustrations—especially that of the baker who has dropped a loaf of bread in the mud—ought to convince everyone of the urgent necessity for the proper and systematic wrapping of foodstuffs.

Portuguese Import Duties.

A Portuguese Decree of March 27th provides for maximum and minimum rates of duty in the New Customs Tariff as from April 20th. The duties are shown in escudos and centaves.

Items on the import list concerning the allied industries are as follow:—

Articles.	Max. Es. Cts.	Min. Es. Cts
	per ton.	per ton.
Rags, clippings, cuttings and pulp of any kind or quality for the manufacture of paper	0 50	0 30

Portfolios and book covers, put together or not, with or without engravings or ornaments	1 60	0 80

The export list includes the following rates of duty: Paper, 10 per cent. *ad val.*; wood pulp for the manufacture of paper, 20 per cent. *ad val.*

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*

The following is a letter we have received from The Fisher Bookbinding Co. (1912) Ltd.—one of many unsolicited testimonials.

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

Master Printers at Eastbourne.

A Round of Social Functions for the Annual Meeting of the Home Counties Alliance.

At Eastbourne on Friday and Saturday last there assembled a large number of master printers and their wives for the annual meeting of The Home Counties Master Printers' Alliance and for the social functions connected therewith. That the beginning of the meetings coincided with the anticyclonic spell was only a continuance of the good fortune that always attends the Alliances on such occasions, and a pleasant week-end was spent by the sea and the Downs.

On Friday evening the visitors were welcomed by the Eastbourne and District Master Printers' Association, when a conversazione was held at the Saffrons Rooms. Mr. D. R. Duncan, president of the Association, and Mrs. Duncan, received the visitors. During the evening a vote of thanks to the Association was voiced by Mr. G. S. Unwin and Mr. D. Greenhill, president and past-president of the Alliance respectively, to which Mr. Duncan replied, referring to the presence of the Mayor of Eastbourne (Councillor G. B. Soddy), the Town Clerk (Mr. Fovargue) and the chairman of the Advertising Committee (Councillor Cave). There were also present at this gathering Col. H. R. Fletcher and Mr. A. E. Goodwin, vice-president and secretary of the Federation of Master Printers, Mr. Albert Bennett, past-president of the Alliance, and others. Mr. Percy D. Michael, secretary of the Alliance, anounced to the regret of all present that a telegram had been received stating that Mr. R. A. Austen-Leigh, president of the Federation, was unable to be president owing to the illness of his wife.

The company enjoyed in the course of the evening an excellent musical programme, to which the three daughters of Mr. A. le Pine Strange, of Eastbourne, largely contributed.

Many more visitors had arrived by Saturday morning—and, by the way, one overheard gossip across the buffet tables on the relation between printers who have installed the Costing System. At 10 o'clock the company assembled at the Queen's Hotel, the *pro tem.* headquarters of the Alliance, to receive final instructions for the day. While the ladies and the non-executive members enjoyed the sun and the seaside air, the Organisation and Propaganda Committee and the Executive Committee held meetings.

The Saturday Lunch.

The visitors then assembled for lunch, Mr. Unwin presiding. The toast of "The Mayor and Corporation of Eastbourne" was proposed by Mr. F. S. Oxley (Alliance chairman), and the Mayor (Councillor Soddy), in responding, paid a tribute to the printers of the town (against whom they had no complaints until the use of a Costing System appeared to raise their prices!) and referred to the need for costing in other industries.

Colonel H. R. Fletcher, vice-president of the Federation, responded to the toast of the Federation, which was proposed by Mr. T. J. S. Guilford (Alliance treasurer). Colonel Fletcher said that the ultimate object and aims for which the Federation was brought into existence was not the adjustment of wages and conditions. It had not been behind in taking action with regard to the increased Schedule A assessments. The Federation would be powerless without the co-operation of the alliances and associations and he urged that it was necessary to keep still closer together.

Mr. A. E. Goodwin, in proposing "The Home Counties Master Printers' Alliance," said the organisation of the Federation had developed by great "rhythmic movements," and there was at present a great wave of enthusiasm for the installation of the Costing System. That was why "The Home Counties Merry Picnics Association" had brought its members' wives to Eastbourne to let *them* know that the installation of the Costing System meant more holidays at Eastbourne! (laughter). The Alliance by its propaganda showed that it understood that advertising paid, and it was for every printer to let his customers know that the reduced postal rates which the Federation had been instrumental in securing enabled double the quantity of printed matter to be sent at the same cost. He congratulated the Alliance on its secretary, Mr. P. D. Michael, and its past presidents, Mr. Bennett and Mr. Greenhill, and coupled with the toast the name of the president, Mr. G. S. Unwin.

In responding, Mr. Unwin referred to the assistance that had been rendered to the Alliance by members of other alliances and by the Federation officials, and also spoke of the work of the secretary.

Annual Meeting.

After a civic reception by the Mayor and Mayoress at the Town Hall, the ladies of the party departed for a char-a-banc excursion over the Downs, and the members of the Alliance assembled for the annual general meeting.

In the annual report of the executive, which the meeting adopted, reference was made to the Hastings Corporation having entrusted the Federation Costing Committee with the revision of its printing and stationery schedules and conditions; to Mr. Albert Bennett, the first president of the Alliance, having withdrawn from active business life owing to the unsatisfactory state of his health; and to Mr. T. J. S. Guilford having declined to be nominated for re-election to the Alliance treasurership, owing to the larger part of the membership of the Thames Valley Association, of which he is hon. secretary, being located within the London area.

The financial statement, presented by the treasurer, Mr. T. J. S. Guilford, showed an excess of income over expenditure for the year of £100, and total assets of £512.

Election of Officers.

The chairman then proposed as president for the ensuing year Mr. S. F. Oxley (Windsor).

Upon the resolution being seconded by Mr. H. H. Potts (Hastings) and carried with enthusiasm, the chair was taken by Mr. Oxley, who proposed a vote of thanks to the retiring president, to which Mr. Unwin briefly replied.

The following officers were also elected:—Chairman, Major W. H. Barrell (Portsmouth); vice-chairman, Mr. A. le Pine Strange (Eastbourne); treasurer, Mr. D. Greenhill (Watford); auditors, Messrs. A. C. Roberts, Wright and Co.

Mr. Greenhill, in proposing a vote of thanks to the retiring treasurer, Mr. Guilford, moved a resolution that he be made an honorary member of the Alliance and its executive.

The motion was seconded by Mr. Bennett, supported from the chair, and carried amid much applause.

The Alliance and Federation subscription for 1923-24 was fixed at $\frac{1}{5}$d. in the £ on wages paid, and a grant of 20 guineas to the Printers' Pension Corporation was agreed to.

The chairman "exercised his privilege of breaking the rules of the Alliance" by bringing forward business that was not in the agenda, in expressing the thanks of the Alliance to its secretary.

Mr. Unwin seconded the resolution, which was adopted enthusiastically.

Confidence and Pride.

The chairman then called upon Mr. Goodwin to address the meeting.

Mr. Goodwin said that there was unmistakably more confidence and pride being shown in the organisation, which was largely due to the Alliance movement and to the work of individual members. There were eternal topics for consideration—how to reach non-members and to stimulate interest. The Alliance had done much by propaganda, but printers were more difficult to reach by the printed word than any other class, because they were so apt to lose the message in looking for details. He hoped the week-

Digitized by Google

THE L&M CUTTER AND CREASER

Specially designed for the accurate cutting and creasing of carton work at high speed.

SPECIAL FEATURES

Built on similar lines to the Miehle Press, and all the desirable features of the latter, ensuring dead register, smoothness of working, etc., are incorporated in it.

The tympan or cutting plate on the cylinder is held at the front and rear edges by special locating and clamping devices.

The cards are fed to the front lays in the usual manner, and are then taken by the cylinder grippers at the front edge of the tympan plate with a small amount of over-lapping gripper edge.

The cylinder with the card around the tympan plates comes into contact with the forme in the same way as on the two-revolution printing machine.

The card is taken directly off the cylinder by a special gripper delivery mechanism.

Delivery grippers and pads are adjustable.

An endless band travelling at the same surface speed as the cylinder extends from the point of take-off to beyond the point of release of the delivery grippers.

Another endless band on the delivery carriage receives the card from the first endless band.

The card is transferred from the first to the second endless band at the commencement of the outward stroke of the delivery carriage; the second band rolls away from under the card, leaving it to fall directly on to the pile delivery.

The delivered cards are jogged up so that they can be easily stripped.

There are no tapes or sticks in the pile delivery. From the point of take off from the cylinder until the card is deposited on the pile it is supported by endless bands.

It is easily handled, and requires no special knowledge on the part of the operator.

This Cutter and Creaser can, if desired, be supplied with a specially designed pile hoist for raising the cards to the feed board.

end spent at Eastbourne would not keep the members of the Alliance away from the annual meetings of the Federation to be held in London at the end of May. The London Alliance had declined to make use of the beauty spots in the Home Counties area for the Federation meetings rendezvous, but they had nevertheless been compelled to arrange an excursion into the Home Counties to Windsor and the district. An additional reason why the members of the Home Counties should attend was that they would probably be called upon in the near future to receive the Federation, and they would need to see how much better they could do it than London. (Laughter.)

The meeting closed with a vote of thanks to the Eastbourne Association for entertaining the Alliance; and in responding, Mr. D. R. Duncan, the president, said all the thanks were due to the other member of the committee, Mr. A. le Pine Strange.

The official part of the programme concluded with a second visit to the Town Hall, where the Mayor and Mayoress entertained the visitors at tea.

Mrs. D. Greenhill, on behalf of the ladies, expressed thanks for the arrangements made specially for them and referred to the kindly solicitation of Councillor and Mrs. Soddy for their welfare.

A £2,650 Grolier Binding.

Lord Powis's Collection Scattered.

Some wonderful bindings figured amon the books dispersed at the recent sale a Sotheby's of the Earl of Powis's Library removed from Powis Castle.

Little sympathy goes out nowadays to an noble owner compelled to sell his family pos sessions, yet those who know the facts coul not fail to admire the fortitude of the Earl o Powis when he elected to witness the publi sale of his library—states the author of a interesting account in the *Daily Telegraph* One recalled, he says, the Earl of Pembroke watching the dispersal of his famous book in June, 1914, when the buyers from the Con tinental capitals assembled for the last time Mr. Edmund Dring, of Messrs. Quaritch carried off as the chief prize the Cicero in a Grolier binding at the big sum of £2,650. In 1895 we remember Lord Lisburne's Grolier Ovid, which Mr. Tom Hodge — then of Sotheby's—declared to be the most perfect of its order which he had ever seen, startling the company by fetching £425. Prices march with time, and there is a Grolier Club in New York. Yet by the irony of fate Jean Grolier, Treasurer of France (1479-1565), who was a blend of a Mæcenas and a Henry Huntington in his superb patronage of bookmen, lives today not, as in the words of Erasmus, the ornament of France and the protector of savants —but as a name associated with his love of stately bindings. And, save for the Gascons, the names of the French and Italian craftsmen who executed this beautiful work for him remain anonymous. Although, too, an elaborate treatise has been written on Grolier's bindings, it does not contain a reference to this Powis Cicero, Venice, 1534-37, bound to Grolier's order, as shown by the inscription, "Io Grolierii et Amicorum." In the British Museum there are upwards of thirty noble Grolier bindings. The Chatsworth library, now in Mr. Huntington's possession, contained twenty-five. There are seven in the Spencer-Ryland's library at Manchester, six in the Bodleian, and three at Eton, including the 1550 "Epistolæ ad Fridericum Nauseam," and the Aldine 1535 "Juvenalis, Persius." Jean Grolier was a generous patron to those Venetian artists in printing, the Aldi, the elder of whom dedicated to Grolier the 1517 Terence.

This Grolier Cicero even had the pas of that early monument of the printer's skill, the Fust and Schoffer Cicero "De Officiis," issued at Mainz in 1465, and the second classic to be printed. But it shares with the "Lactantius" of Subiaco the distinction of being one of the first two books in which Greek type (for quotations) was used. Dr. Rosenbach took this at £1,300. Coming from Welshpool, the library is rich in Welsh literature, but before this section should be mentioned George Gascoygne's "a Delicate Diet for Daintie Mouthde Droonkardes," in which much dry admonition is given to those addicted to "carowsing and quaffing." This also goes to America at £910, along with Thomas Churchyard's "The Worthines of Wales," £130, and the 1546 "Commendacion of Welshmen," £75. A second edition of the Cicero "De Officiis" (1466) reached as much as £1,000 (Quaritch).

Italian News-Print Duty.

The *Gazzetta Ufficiale* (Rome) for March 15th contains a Royal Decree, dated March 11th, which provides that the import duty on "paper, white or coloured in the pulp, not sized, in rolls, destined for newspapers" is to be 2 gold lire per 100 kilogs. without any "coefficient of increase." The former duty was 5 gold lire per 100 kilogs.

Trade Notes.

A CORRESPONDENT wishes to get in touch with the manufacturers of a machine which makes the marks on both sides of a 12-inch wooden ruler.

BRITISH CASEIN CO. (1911), LTD.—Petition for winding up, presented by Mander Bros., Wolverhampton, to be heard in High Court on May 15th.

A MONOTYPE INSTALLATION.—The *Hants. and Sussex News* for April 25th contains a two-column article (illustrated) descriptive of the mechanism of the Lanston monotype machine that journal has recently installed. In the course of the article it is stated that not only is the machine giving every satisfaction, but there is reason to believe that this latest installation will open up a new era in the history of the paper, which was started nearly 40 years ago.

ARRANGEMENTS are being made for a visit by members of the Association of Master Printers of West and North-West London to the Apsley Paper Mills of Messrs. John Dickinson and Co., Ltd., in June next. Those wishing to attend are asked to intimate their intention to Mr. J. R. Burt, the non. secretary, 187, Edgware-road, Paddington, W.2, as soon as possible.

THE third annual sports gala of the Leeds and District Printing and Allied Trades will be held on July 14th on the Headingley Athletic Grounds, Leeds.

ON Saturday the members of the Rochdale and District Printing Trades Guild went by char-a-banc to the works at Broadheath, Altrincham, of the Linotype and Machinery Limited. A very interesting afternoon was spent visiting the various departments. Machines were seen in the various stages of completion, and the visitors were impressed by the great care and skill given to obtain accuracy in the work, where a thousandth of an inch is considered a big error. Tea was served at the works.

DAMAGE which may reach £10,000 was caused by a fire at the Sunfield Printing Works, Stanningley, Yorks, the property of the West Riding A.B C. Publishing Co. The outbreak originated in the stereo department, which was destroyed, along with practically the whole of the jobbing machinery and two monotypes. The linotypes were not touched.

CAXTON CONVALESCENT HOME.—The committee of the Caxton Convalescent Home, at Limpsfield, Surrey, report that the income from all sources was well maintained during 1922. The number of patients who stayed at the home during the year was 355, an increase of 14 on the figures for 1921. The total number of patients admitted since the home was opened has been 4,443.

IN a written reply to Mr. Sturrock in Parliamentary Debates, Sir William Johnson-Hicks states that, according to the best estimate which can be framed the average cost of collection, handling, conveyance and delivery of an inland letter, weighing not more than 1 oz. is slightly over one penny.

PLUVIUSIN ART LEATHER CLOTH.—We have received some excellent specimens of the two new qualities of Pluviusin art leather cloth which has recently been placed on the market by the Winterbottom Book Cloth Co. Quality 1010 is quoted at 8s. per yard (48 by 50 in. wide), and quality P.P. at 6s. 6d. per yard (50 in. wide). Plate designs are 2d. per yard extra. This high-grade material, it may be mentioned, is double coated and consequently does not require lining. For such purposes as flush cut covers, loose leaf notebooks, etc., Pluviusin art leather is especially suitable.

WILLS.—Mr. William Benjamin Hammond, managing director of the Birmingham Lithographic Co., £8,305; Mr. Abraham Lincoln Lambert (57) for 34 years on the staff of the *Yorkshire Post* (net personalty £548), £580.

THE Executive of the Amalgamated Society of Lithographic Printers has expressed thanks to Mr. F. O Roberts, M.P., for his efforts in Parliament on behalf of army pensioners.

RECEIVING ORDERS have been made in respect of William Baker Oxley, Holme-on-Spalding Moor, Yorks, stationer, and Harold Empson and Henry Russell Verdon, 15, Gorton-street, Charles-street, Manchester, printers.

A MEMORIAL bronze tablet to the late Sir Edmund Robbins, K.B.E., for 37 years manager of the Press Association, was unveiled by Viscount Burnham in St. Bride's Church, Fleet-street, yesterday (Wednesday).

HAVING twenty previous convictions against him, including terms of penal servitude totalling sixteen years, Arthur Smith, 44, a printer, was sent to penal servitude for three years at the Middlesex Sessions on Saturday for stealing a purse from an actress as she was alighting from a tram at Wood-green.

VISCOUNT BURNHAM on Saturday opened the News Agencies' Sports Ground, which has been provided by the directors of the Press Association, Exchange Telegraph Co., and Central News for the use of their staffs at Wembley Park.

THE death is announced of Mr. Alfred John Pearce, for upwards of forty years the editor of "Zadkiel's Almanac." Mr. Pearce was in his 83rd year.

THE *New Witness*, which was founded in 1912 by the late Mr. Cecil Chesterton, and edited since his death by Mr. G. K. Chesterton, has ceased publication, and the first number of *G.K.C.'s Weekly* will shortly appear.

MR. A. J. CROWHURST, *Folkestone Herald*, was recently elected chairman of the Kent District of the Institute of Journalists at the annual meeting of that body.

THE death occurred on Monday at Stockwell, London, of Mr. James Hawkesford, who was for many years a sub-editor on the *Birmingham Daily Mail*, and later chief sub editor and then news editor of the *Edinburgh Evening News*. He subsequently came to London, where he was for a long time connected with the *Globe*, the *People* and the *Sun*. He was working up to the time of his death for the Press Association.

THE directors of Thomas de la Rue and Co., Ltd., announce that they have appointed Mr. Sydney Lamert chairman and managing director, and have accepted the resignation of Mr. Stewart de la Rue from the board, and that these changes are approved by a very large majority of the shareholders.

L.C.C. ADVERTISING.—An expenditure of £8,000 is recommended by the London Higher Education Sub-Committee for printing prospectuses and handbills in connection with facilities at the polytechnics, technical institutes, schools of arts, trade schools, and evening institutes. The sum so expended last financial year was £7,000.

MR. G. H. EWART, Mr. J. W. Ewart, and Mr. S. Ewart having resigned from their offices of directors and managing directors, and Mr. A. Sainsbury from the office of director and secretary of Messrs. Ewart and Collis, and their resignations having been accepted, the change took effect from Saturday.

MR. AUSTIN HARRISON has relinquished his financial and editorial interest in the *English Review*, which he has conducted since 1910. The review will continue to be published, under new management, and at the reduced price of 1s.

MR. W. R. HEARST'S journalistic interests are now increased by the acquisition of two more daily papers—the Baltimore *American*, a morning journal, and its evening companion, the *News*. He has acquired them by purchase from Mr. Frank A. Munsey after negotiations that have been carried on for about a year. Mr. Hearst is now the owner of nine morning and eleven evening papers, published in different parts of the United States.

BOOKS and printed matter received by Canada during the nine months ended December, 1922, were of the value of $8,111,655. Of this amount the United States sent goods to the value of $6,502,949, the United Kingdom's contribution being $1,274,601.

THE request which the Newspaper Society has made to its members to support the diamond jubilee appeal of the Newspaper Press Fund on the occasion of the dinner at which the Prince of Wales will preside is meeting with good support, and it is hoped that every member of the society will take the matter up.

THE Berlin correspondent of the Exchange Telegraph Co. states that the cost of printing a pre-war 1,000 mark note to-day is 400 marks. To save expense the new notes are mostly printed not from copper plates, but in a form of ordinary book printing.

Trade Union Matters.

L.S.C. UNEMPLOYED. — A satisfactory decrease in L.S.C. members signing the out-of-work book continues. During the week ending April 21st the members thus signing reached 812, as compared with 820 in the previous week, 830 in the week ending April 7th, and 822 during the last week of March. The 812 given in the *L.T.J.* as unemployed for the week ending April 21st shows up well when contrasted with the 1,154 for the corresponding week of last year.

UNUSUAL PRINTING FEATURES.—The quarterly report of the Leeds Typographical Society, reporting on unemployment, states that "a peculiar and unusual feature is the large proportion of machinemen unemployed. Another feature is an increase of 1,000 hours overtime along with an increase of 1,500 hours of short time, which appears to emphasise the general unsteadiness of the trade." After a note on the reduction of 3s. 6d. in wages, which makes a total reduction of £1 per week since October, 1921, the report adds: "So far, the increased volume of printing which was to follow the reduction in wages has not materialised. At present all available evidence goes to show that the customer is not receiving that consideration in the shape of an adequate proportion of the decreased cost of production which is his due."

T.A. FINANCE.—The voting on the stabilisation of the financial position of the T.A. has resulted in the E.C.'s recommendations being endorsed. Branch secretaries are to suffer a 25 per cent. reduction in the money paid from headquarters; the benefits are to remain untouched, and to provide for this the subscriptions will be increased approximately by 2d. per week. We learn that the forthcoming half-yearly balance-sheet will show that the drastic retrenchment schemes have met with success.

T.U.'S AND FAIR PRICES.—At a recent meeting of the Norwich branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, the group secretary stated that in respect of their own trade, he could assure them it was no idle talk when employers stated that printing and binding work was being done at cut prices. In the majority of such cases, he suggested, it was unfair competition, and not done at a loss, but to a great extent could easily be adjusted by the employers' organisation endeavouring —in similar fashion to or in co-operation with the workers' organisations—to assure that public and semi-public printing, bookbing, etc., be placed with fair-trading employers only.

L.S.C. JUBILEE.—The London Society of Compositors celebrates its jubilee in July, and the occasion is to be marked by a fête at the Crystal Palace. Mr. C. W. Bowerman, M.P., also celebrates this year the jubilee of his connection with the Society, which he joined in 1873, becoming news secretary in 1889, general secretary in 1892, and Parliamentary secretary in 1906.

MANCHESTER MECHANICS.—The proposal to reduce the wages of mechanics employed in printing offices in the Manchester area by £1 a week was discussed at a meeting of the men in the Manchester headquarters of the Amalgamated Engineering Union, of which they are members. In the end it was agreed to submit the matter to arbitration, a course with which the employers had already signified agreement. It is proposed that the reduction should be made in three instalments —10s. on May 1st, 5s. on August 1st, and 5s. on November 1st. There will be no change pending the arbitration.

T. A. EXECUTIVE COUNCIL.—The election for the Executive Council of the Typographical Association have resulted in the return of Messrs. H. V. Marsh and J. Mellor (Manchester), H. J. Harvey (Blackburn), E. G Yates (Watford), L. P. Bristow (Aldershot), G. W. Chuter (Reading), F. O. Roberts, M.P (Northampton), W. Wesson (Nottingham), W. Colby (Hull), T. Dove (Sheffield), S. Oaten (Bristol), W. J. Vernon (Plymouth), J. D. Harvey (Newcastle), C. Powis (Cardiff), M. Hartney (Limerick), H. Portch (Tonbridge), and G. Holmes (Manchester). Messrs. F. Dunn (Birmingham), W. Bottomley (Leeds), J Morgan (Liverpool), and H. T. Whitney (Belfast) were without support. Mr. J. D. French and Mr. H. Skinner will continue as president and secretary respectively.

Master Printers Federation.

Legislative Programme Explained by Mr. Goodwin to the South-West London Association.

In the absence of Mr. R. A. Austen-Leigh, the president, Mr. A. E. Goodwin, secretary of the Federation of Master Printers, attended the meeting of the South-West London Master Printers' Association on Tuesday (last week) at the Central Hall, Westminster, and delighted the members and visitors with a running commentary on the legislative programme of the Federation. Mr. E. G. Cole, the president of the branch organisation, was in the chair, and in opening the proceedings thanked the members for the honour they had conferred upon him in electing him as their president.

Mr. Goodwin first of all referred regretfully to the enforced absence of Mr. Austen-Leigh.

Postal Rates.

Coming to the legislative programme of the Federation, Mr. Goodwin first of all mentioned the question of postal rates. This work, however, he said, was very largely at an end, but he wished to say that the policy which had been pursued by the Federation had been fully justified. Their members should realise the value of the concessions that had been obtained with regard to printed matter, so that their customers might take advantage of the greater weight which was now allowed to pass through the post.

Mr. Goodwin went on to indicate the importance of reduced railway rates, which particularly affected printers in the transport of paper. The necessity of looking after the interests of printers in regard to the railways was important in view of the efforts of other industries to secure special treatment. One particular aspect of the matter referred to was a proposal of the railway managers that printed matter should be placed in the same category as stationery, which at present was charged at a higher rate than ordinary printed matter. The suggestion was to slightly reduce the rate for stationery and increase that for printed matter, providing a flat rate for both articles. That was strongly opposed, and the Federation were able to obtain a classification which made it quite clear that the printed matter rate was to remain as at present, namely, in a lower category than that of stationery. It might be another six or twelve months before that new classification came into force, so that the benefit of the Federation's action would not be felt immediately; but at any rate the interests of printers had been safeguarded for the future.

Foreign Printed Matter.

The speaker then dealt with the Merchandise Marks Act and the activities of the Federation in watching the interests of printers in regard to that measure. He gave instances where the identification of foreign printed matter was easily destroyed. An important discrimination was made by Mr. Goodwin between printed matter which was sold and that which was simply distributed as advertising matter in this country, and he pointed out how difficult it would be to trace even foreign printed post cards or colour work which came into this country if it was necessary to prosecute the small shopkeeper who was dealing in these particular articles. Accordingly, the suggestion had been made, and the Board of Trade would probably fall in with it, to insert the word "distribute" into the measure, so that even if foreign goods were distributed and not sold, it would be a penal offence to distribute foreign goods not properly marked.

Both with regard to the restriction of printed matter coming into this country, and also in connection with the amendment of the Merchandise Marks Act, Mr. Goodwin had endeavoured to make it plain that British printers were not asking for any measure of protection. Master printers held that they were quite able to meet fair competition and had no need of any measure of protection so far as printing was concerned. They did ask, however, that the public should know whether the goods they were buying were produced in this country or abroad. If they chose to buy foreign printing, then at all events they should know what they were getting. Of course, it might be difficult to get the Merchandise Marks Act through the House of Commons this session, but he thought the representations they had made to the Government would have some effect, and when the measure was produced it would be one which would be of some service to the printing industry.

In this respect, as in others, Mr. Goodwin emphasised the importance of having the support of the organisation which represented the workers. They found it a great advantage in going to Government departments when they were authorised to speak, not only on behalf of 5,000 master printers, but also with the support of 250,000 workers. That was one valuable aspect of the Joint Industrial Council.

After dealing with the Rating of Machinery Bill, Mr. Goodwin mentioned the new regulations issued by the Ministry of Health dealing with labels for condensed milk. These were now printed in this country. The danger of that printing going abroad would be that the printers now doing the work would have to fill up with orders which were now being executed by their confréres in this country. The assistance of Mr. Alexander, the member for Leyton, was acknowledged in this connection.

Municipal and State Printing.

Coming to the subject of municipal trading and the call for economy, reference was made to the activities of the Public Authorities Mutual Supply Association. The Federation is doing its best to bring to the notice of public authorities the fact that so far as printing for such bodies was concerned, they were more likely to get this work efficiently and economically carried out by the actual contractors in the locality. It was shown that in Scarborough attempts at municipal printing did not mean economy, and the ratepayers of Newcastle had been convinced that it was not economical to have three foremen to about seven workpeople. (Laughter.) The starting of these municipal experiments, said Mr. Goodwin, was one they wanted to watch with great care and vigilance, because they created difficulties, quite apart from their far-reaching effect upon municipal contracts.

With regard to the Government printing works at Harrow, Mr. Goodwin mentioned that for the first nine months' working there was a loss of £32,000, and in the next year there was a deficit of over £23,000, but they were now told that the works were being carried on at a profit. Of course, it was perfectly obvious that a surplus might be made if a considerable portion of the work was not being done at competitive prices. However, the Federation had succeeded in obtaining a promise from the Government that there should be an inquiry into the work of the State printing establishments, and they were getting ready for that inquiry, which would take place sometime in June.

Other directions in which the Federation was making its influence felt was through the Confederation of Employers' Organisations, upon which they had a representative, and through the committee of the same body, which was dealing with the question of Unemployment Insurance and Workmen's Compensation.

Paper Supplies.

A very energetic committee of the Federation had been taking up the vexed question of the supply of paper and stationery direct to consumers instead of through the ordinary trade channels, and he thought that when they were able to issue their report it would be shown that important promises of reform had been made. The very fact the committee was in existence was doing a great deal to check this particular form of competition.

As soon as they could, they wanted to deal with the question of standardisation of paper and he believed that in that direction it would be found that considerable economy would result if paper was properly standardised as to sizes and some definite regulation decided upon as to reamage.

The latest idea was to deal with the standardisation of blocks, and already a very encouraging response from the block makers had been received. If they could get a standardised thickness of metal, he (Mr. Goodwin) thought their members would welcome it. (Hear, hear.)

The Costing Movement.

In speaking of the forthcoming annual gathering of the Federation, Mr. Goodwin dealt with the costing movement, and mentioned that there had been widespread demand for the installation of the system. The difficulty was to supply experts quick enough to take advantage of this demand. Some Alliances had asked that experts should be specially provided for their districts. Mr. Goodwin said he would like to see one or two men specially set aside for this purpose in London, but the proper atmosphere must first be created by the local associations. They heard more and more of reckless competition, but the more one studied the question at close quarters, the more one was convinced that the only real remedy was a more intensive campaign for correct costing.

Discussion.

In the course of the discussion which followed the address, Mr. Hutchings suggested that the identification of foreign printed matter might be the means of advertising the country from which the printing came. The speaker also urged that there should be uniformity in the rating of machinery, while in regard to employers' liability the increase of rates was entirely unjustifiable.

In answer to Mr. Hutchings, Mr. Goodwin referred to the various concessions which have been secured for the master printers by the Federation from the insurance companies. With regard to competition from abroad, he maintained that British printing could stand on its merits. The idea that better colour printing could be done in Germany or anywhere else had been exploded. British printers were jealous of their reputation, and they did not wish to see German picture post cards proceeding from this country to Canada or Australia and giving a false impression as to the quality of British printing.

Mr. Walmsley, after observing that it would pay some of the paper merchants to consider the printer, went on to explain that much of the competition of which they complained amongst printers arose from the fact that they had no idea of the time taken on a job. While they had a sound system of arriving at an hourly rate, no indication had been given as to how they were to calculate the operation time. He therefore asked whether it would be possible for the Costing Committee to consider some recommendation to the members on this aspect of the subject.

Mr. Goodwin explained that the policy pursued had been first of all to eliminate the most fruitful source of error, and one they could standardise with the least amount of difficulty. Members would admit that it was a great thing to get anything like a standard of what was the real hourly cost, and now a good deal was being done with reference to standardising operation costs. Investigations would prove that there was need for more education as to this particular piece of work.

Mr. Boyle drew attention to the valuable address given to the Central London Districts Association by Mr. Johnson on the question of paper standardisation, and Mr. Goodwin, in reply, observed that the standardisation of watermarks and sizes had not been overlooked.

The president (Mr. Cole) moved a hearty vote of thanks to Mr. Goodwin for his address, which had been full of enlightenment, and showed the value which members obtained for their subscription to their association and the Federation.

Mr. Wise, in seconding the resolution, thought Mr. Goodwin should be proud of the fruit which had sprung from the costing seed he had planted.

The resolution was warmly carried, and Mr. Goodwin, in reply, made a reference to labour matters, observing that the moral of the existing dispute in London was that there should be more complete organisation of the industry. He spoke of the close touch which was maintained with the trade union leaders, and declared that the Joint Industrial Council was the one hope the industry possessed for peace in the future.

NEWSPAPER PRESS FUND.—Yorkshire District.—At a meeting of the West Riding District of the Newspaper Press Fund at Leeds recently a presentation of an oak desk, travelling bags and books was made to Mr. F. R. Huxtable, in recognition of his 15 years' secretaryship of the district.

THE new Egyptian postage stamps are of special interest. For the first time Egypt's postage stamps have been issued bearing the portrait of its ruler, and the method used in the printing is a new one known as collogravure, by which, it is claimed, a more realistic result can be obtained than by any other method. Messrs. Harrison and Sons, Ltd., of St. Martins-lane, London, are the printers.

YOUR safety is in the hands of the other fellow; his safety depends on you. Play the game!

WEST & NORTH-WEST London Master Printers' Association

10th Annual Meeting.

The 10th annual meeting of the Association of Master Printers of West and North-West London was held at the St. Pancras Town Hall on Monday, April 23rd, when they were the guests of Alderman Harold Trill, J.P., Mayor of St. Pancras, who is a member of the Association. There was a fair attendance, and Messrs. Boyle, Mizen, Cole, Chivers and Whyte favoured the meeting with their presence.

The committee's report—a short one—expressed regret that the work of the year had not come up to their desire in attainments. Disappointments in attempts to secure speakers on subjects desired had been frequent and the attendance at meetings held had not been encouraging. Five members' meetings had been held, five lunches and the committee had met four times. Seven new members had been enrolled. As a consequence of the absence of special effort, the treasurer was able to "regret" a substantial balance in hand.

The first part of the meeting was occupied with the election of officers, Mr. J. Emlyn Jones becoming president and Messrs. R. F. Hunger and Harold Trill vice-presidents, and the committee was strengthened by the inclusion of Messrs. P. G. Crannis, N. E. Davis and S. Goss.

A social half-hour with refreshments followed, and after the transaction of some business the Mayor put the crowning touch to the meeting by a racy and informal address, giving some of his experiences as a councillor of 15 years' standing. His subject was announced as "The Printer as a Councillor." His advice to the printer was to leave printing topics to the milkman and go in for milk, but he apparently specialised in horses and drains, and had not failed to gather much useful information in devoting much of his time to those and kindred matters in his municipal career. He appealed to his audience when he criticised a system of tendering that made it possible for a firm with many years' knowledge of the requirements of a council to be supplanted by one from distant parts on a speculatory figure, and asked if it was not possible for headquarters to draw up a model contract and specification that would make such a gamble impossible.

To the officers for their services in the past year and to the Mayor for his hospitality, votes of thanks were passed with unanimity.

Edward Lloyd, Ltd.

The accounts for the two years ended December 31st, 1922, have now been published. The profits for the period, after crediting the amount of E.P.D. to be refunded, and allowing for depreciation, making provision for bad and doubtful debts, estimated corporation profits tax, and contingencies, amount to £194,219, making, with the balance brought in from December 31st, 1920, a total of £215,683. After deducting head office expenses, etc., and paying the two years' preference dividends and the interim dividend on the ordinary shares of 3d. per share, tax free, for the year 1922, there remains £94,653. The directors now recommend a balance dividend for the year 1922 on the ordinary shares of 1s. 3d. per share (free of income-tax), making 7½ per cent. for the year, carrying forward £19,653.

The report states that the average of the profits for the two years, after making provision for company expenses, shows a decrease of £21,330, as compared with 1920, a year of severe depression in trade, and a decrease of £126,567, as compared with 1919, a more normal year. This decrease was chiefly due to the writing down in the value of the heavy stocks of raw material in 1921, which was greatly in excess of the amount recovered in the return of E.P.D., and to reduced production in that year as the result of the coal strike.

IMPORTS of paper and stationery into Australia during the seven months ended January last were of the value of £3,717,159, as against £2,893,418 in the corresponding period of the previous year.

SPECIAL PREPAID ADVERTISEMENTS

• Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MAY 10, 1923.

A Practical Test.

A NOVEL feature has been arranged for the next meeting of the East and North-East London Master Printers' Association, to be held at the Langthorne Restaurant, Stratford, on the 16th inst. In place of the usual address members are being asked to come furnished with specimens of common every-day jobs—the bread and butter work of the small jobbing office—such as posters and window bills, handbills, circulars, concert programmes, dockets, etc. These will be examined by each member who will be asked to estimate the composition time on each job. Interesting variations are anticipated, and the results, when tabulated, should provoke a lively and helpful discussion. It is hoped that this incursion into the realities of printing office experience will prove of more than intellectual interest to those participating, and should furnish material for more satisfactory time estimating. Incidentally it will show that the members are out to help each other in a practical manner by this interchange of actual experience.

* * *

Advertisements Regulation Bill.

PRINTERS are naturally concerned with the subject of advertising from several points of view, and their interests are bound to be touched in one way or another by the Advertisements Regulation Bill, the second reading of which Lord Newton moved in the House of Lords on Tuesday. The measure is designed to prevent the disfiguration of the countryside by hoardings. To avoid opposition the bill purposely does not apply to towns, save those of historic interest. Lord Newton declared that advertising was necessary. He had no hostility to advertisements, in their proper place, and that was in the columns of the Press. He was more influenced by a well-worded advertisement than by all the glaring hoardings. The Bill was duly read a second time.

Paper Imports for the Quarter.

THE Board of Trade returns of British trade for the month of March are now available, thanks to a settlement of the labour difference with the Stationery Office. Imports of paper and cardboard, etc., into the United Kingdom last month amounted to 874,707 cwts., a decline on the corresponding month a year ago of 109,345 cwts. Last month's value—£929,325—reveals a difference of £165,220 compared with the £1,094,545 for March twelve months ago. Paper and cardboard imports for the first quarter of the present year and for the two preceding years were as follows:—

Jan.-March,	1923 ...	2,676,230 cwts.	£2,844,293
,,	1922 ...	2,081,533 ,,	2,508,404
,,	1921 ...	1,344,963 ,,	3,105,614

As regards the quantity received during the first quarter of the year, there were increases of 594,697 cwts., or 28·5 per cent., compared with the corresponding three months of last year, and of 1,331,267 cwts., or 98·9 per cent., contrasted with January-March, 1921. The value for the first three months of the year denotes an advance of £335,889, or 13·3 per cent., compared with the corresponding period twelve months ago, but a decline of £261,321, or 8·4 per cent., against January-March, 1921. All classes of paper goods imported during the quarter, with the single exception of "other sorts," show appreciable increases upon last year's figures. The largest item on the list is packings and wrappings, and the 865,405 cwts. represent 32·3 per cent. of the total quantity received, an increase of 222,332 cwts. compared with the 1922 quarter. Strawboards form the next largest section—818,285 cwts.—and represent 30·5 per cent. of the total, an increase of 250,693 cwts. While the volume of imports of coated paper and stationery has remained about the same, "millboards" have risen from 141,974 cwts. last year to 259,724 cwts. during January-March. With regard to the countries sending "printings and writings" to the British market, supplies from Norway (134,897 cwts.) and Sweden (110,091 cwts.) have been more than maintained, showing an increase from the former country of 7,276 cwts. and from the latter of 9,512 cwts. The United States increased her shipments from 1,298 cwts. to 4,777 cwts., while a slightly less amount has been received from Germany, viz., 33,284 cwts., against 37,762 cwts. in January-March last year. The arrivals of packings and wrappings from Sweden (308,471 cwts.) have been considerably augmented, and represent an advance of 102,502 cwts. Next in order of bulk were the consignments from Germany (185,115 cwts.), that country increasing her supplies to the extent of 77,413 cwts.; the larger arrivals occurring during March no doubt being responsible for this result. Appreciable increases are also noticeable in the supplies from Norway and Finland, while those from Canada and Belgium remain on a similar level as during January-March twelve months ago. The only noteworthy feature in the returns relating to the imports of coated papers are the larger shipments from Germany, which rose from 7,852 cwts. during the first quarter of last year to 14,171 cwts. in January-March.

* * *

Paper Exports—Big Australian Shipments.

SHIPMENTS of British paper, etc., to Colonial and foreign markets last month amounted to 300,590 cwts., compared with 137,935 cwts. in the corresponding month last year. Though the exports did not reach quite so large a figure as during the individual months of January or February, satisfaction will be felt that they are higher to the extent of 96,005 cwts. than the average monthly figure last year. The value of the exports—£615,551—marks an increase of £154,669 compared with March last year, when the figure was £460,882. The quantity and value of the exports for the three corresponding quarters were:—

Digitized by Google

Jan.-March, 1923 ...	1,021,839 cwts.	...	£2,104,267
,, 1922 ...	404,051 ,,	...	1,463,923
,, 1921 ...	461,888 ,,	...	2,926,507

It will be noted that the quantity dispatched abroad during the first quarter of this year registers the substantial advance of 647,788 cwts. (or 152·8 per cent.) over last year, and of 559,951 cwts. (121·2 per cent.) contrasted with the corresponding quarter of 1921. Printings, not coated, are again by far the largest item, amounting to 686,522 cwts., an increase of 487,645 cwts. compared with last year, and altogether representing 67·1 per cent. of the total quantity of paper and cardboard sent abroad. Packings and wrappings continue to occupy a prominent position, the figures under this heading having risen from 64,448 cwts. in the first quarter of last year to 118,427 cwts. during January-March. Of the fourteen classified varieties enumerated in the British paper and cardboard export list, paper bags and roofing paper were the only descriptions to show a falling off. Concerning the markets to which "printings" were sent, it is eminently satisfactory to notice that 783,038 cwts. went to British Possessions, compared with only 103,434 to foreign countries. Australia continues to occupy the premier position as a market for British printings, the quantity consigned to that Colony reaching 411,315 cwts. in the March, quarter, or no less than 59·9 per cent. of the total exports of this class of merchandise. The figure represents the big advance of 334,526 cwts. over Australia's consumption in the corresponding quarter of last year. British India and New Zealand are also greatly improved markets, the former increasing her takings from 21,103 cwts. to 63,625 cwts. while the latter shows an advance from 18,126 cwts. to 57,420 cwts. British South Africa, Canada, Ceylon and the Straits Settements all exhibit an improving tendency. The United States is shown to be a better market for British printings than was the case a year ago, the shipments to that country—20,553 cwts.—comparing with only 1,608 cwts. during January-March, 1921. With regard to the export of writing papers all the Colonial markets with the exception of Ceylon show improvement contrasted with the first three months of last year.

Good News from Australia.

MR. A. W. FOSTER, the secretary of the Papermakers' Association, has received good news from Australia this week. Both directly and through the Federation of British Industries representations had been made to the Commonwealth Government to refrain from increasing the import duties on certain classes of paper. From a letter written by the Melbourne representative of the Federation it is learned that "on advices received from the Department of Trade and Customs, under date March 6th, the operation of deferred duties on writing and typewriting paper (plain), not less than 16 in. by 13 in., has been postponed to January 1st, 1924." This is an important concession, and those who have been working to obtain this result are to be congratulated upon the success of their efforts In view of the improvement in the export of British paper, the decision in Australia is gratifying to those concerned.

Rating of Machinery Bill.

THE Rating of Machinery Bill is coming before the House of Commons on the 11th inst., and the Federation of Master Printers is now receiving a large number of replies from Members of Parliament intimating their readiness to support this measure. We understand, however, that some important local authorities are opposing the Bill, and a lively debate is therefore anticipated. The main purport of the measure is to secure uniformity of practice throughout the country. It is obviously unfair that in some districts no machinery is assessed for local rates at all, whilst in other parts machinery for motive power is assessed, and in others again everything in the nature of machinery comes in for assessment. There is surely much to be said for the justice and the desirability of more uniform practice in this matter.

Personal.

VISCOUNT BURNHAM gave the principal toast at the annual dinner of the Czech Society of Great Britain on Tuesday night at the Trocadero Restaurant, London.

COLONEL SIR JOSEPH REED, the outgoing chairman of the committee of management of the Press Association, was presented by the staff with a silver tea service at Byron House, Fleet street on Tuesday.

THE address by Mr. E. Zaehnsdorf on "The Romance of Bookbinding" will be broadcast from London by wireless on Saturday next, May 12th, at 7.15.

MR. S. GOSS, a director of the firm of Messrs. Baines and Scarsbrook, Ltd., was the invited speaker at the monthly meeting of the South-East London Master Printers' Association at the Bridge House Hotel on Tuesday. Mr. Goss took as his subject, "Our Trade Organisation, Some Criticisms and Suggestions," and was listened to with a great deal of interest by the members present.

MR. A. E. GOODWIN is rivalling the claims of "Johnny Walker." He attended the dinner of the Wholesale Stationers in London on Wednesday night last week and by 11 o'clock the next morning he was present at the annual meeting of the North-Eastern Alliance in Newcastle. Friday found him at Eastbourne for the Home Counties gatherings, and on Monday he was in Bristol.

MR. GEO. W. JONES is producing the elaborate programme for the forthcoming Cost Congress at the Dolphin Press, Gough-square, and it will be circulated to members in a few days.

THE officials of the London Master Printers' Association, headed by Mr. Whyte, are making elaborate arrangements for the Federation annual conference. It is a large scheme of organisation.

MR. H. M. RICHARDSON, secretary of the National Union of Journalists, has been elected a member of the Executive Council of the Printing and Kindred Trades' Federation.

MR. TOM CLARKE, who for the past four years has been news editor of the *Daily Mail*, has resigned that post to join the staff of the *Melbourne Herald*.

MR. F. A. SKERRATT, of the Thames Paper Co., was responsible for a wonderful performance in the competitions of the Paper Trade Golfing Society at Sunningdale last week.

IN the competition for the Blackfriars Cup he came out first with a score of 73 net, which is a record for any amateur player. In fact, only Taylor, the professional, has hitherto presented such a card.

WHEN it is remembered that the weather was very unpropitious, rain and wind both troubling the players, Mr. Skerratt's achievement is all the more creditable. Naturally, Mr. Skerratt was the object of warm congratulations upon his fine effort.

MR. F. J. DOHERTY, the managing director of the Cumberland Paper Board Mills, Sydney, Australia, is at present visiting this country on important business in connection with this well-known papermaking concern.

MR. DOHERTY was one of the strongest supporters of Mr. James Holland during his great fight for British preference in Australia.

North-Eastern Master Printers.

Annual Meeting in Newcastle.

The annual meeting of the North-Eastern Alliance of the Federation of Master Printers was held on Thursday last week at Newcastle-on-Tyne.

Preceding the meeting luncheon was served at Tilley's Restaurant, the function being attended by representatives from all the towns in the north-eastern area.

Mr. W. H. Thomas, of Middlesbro', presided, and offered the toast of "The Federation of Master Printers," which was responded to by Mr. Sydney Reid, of Newcastle, past president of the Federation.

At the annual meeting the following officials were elected for the ensuing year:—President, W. H. Thomas; vice-president, C. Allan; hon. treasurer, W. Doig; auditors, Messrs. Curry, Brown and Co.; representatives on Federation Council, Messrs. Thomas, Bowes and Leslie-Smith; representatives on Federation J.I.C., Messrs. Thomas and Bowes; representatives on Labour Committee, Messrs. Leslie-Smith and C. Allan; representative on Finance Committee, Mr. W. H. Thomas; representative on Organisation Committee, Mr. W. H. Thomas; representative on Costing Committee, Mr. C. F. Bowes; representative on Voters' List Committee, Mr. J. Parmley.

Mr. A. E. Goodwin (secretary of the Federation) attended the gathering, and in the course of an address mentioned that the Admiralty were spending over £100,000 on the erection and equipment of a printing works. He thought that not only Tyneside people and those on the Clyde, but the British people generally would prefer this money to be expended on ships if it were to be spent at all.

Mr. Goodwin proceeded to express satisfaction at the recent action of Newcastle Corporation in adjusting wages and working conditions at the education printing plant to somewhat nearer the conditions generally observed in the trade. He instanced the serious stoppage in London which had delayed the publication of the *London Gazette* for the first time in its history, as a difficulty created by giving Government work to firms outside the employers' organisation, and stated that the existence of the State printing works had created difficulties in settling disputes.

Reference was then made to the improvement in the prospects of the printing trade in general, and the speaker urged local firms to point out the importance of the concessions in the local rates which would come into operation about the middle of this month.

In conclusion, Mr. Goodwin congratulated the North Eastern Alliance on their work during the past year, and alluded specially to the work Mr. W. H. Thomas, of Middlesbro', was doing on the Health Committee of the Joint Industrial Council.

Ludlow Plant Agreement.

An agreement has been reached between the London Master Printers' Association and the London Society of Compositors for the working of the Ludlow Plant. According to this there shall be alternative methods of working the plant: (a) By keeping certain men for handling the plant, at the rate of £4 16s. per week, such men to be available for other work as required; or (b) by any man using the plant for the production of his own jobs, in which case there would be no alteration in the rate of wages paid. The firm to have the option of either method of working, but the two methods are not to be in operation in one office. No apprentice is to be engaged on the plant where method (a) is in operation except in the recognised proportion of one apprentice to four journeymen so employed. The agreement comes into operation following the pay day this week, the rate being payable on the pay day in the week ending May 19th.

MESSRS. CHARLES BRISCOE AND CO., LTD 77, Knightrider-street, London, E.C.4, carry very useful stocks in numerous paper lines. They have regular stocks of glazed coloured printings in various sizes and substances, also unglazed coloured printings. Offers are made of cream wove bank at special prices.

DIVIDENDS AND REPORTS.

SUNDAY PICTORIAL NEWSPAPERS. — Profit for year ended February 28th, 1923, after deducting all working, office and other expenses, and providing for corporation tax, contingencies, etc., and placing £40,000 to reserve, amounted to £201,084, plus £12,447 brought forward. Interim dividends on ordinary shares were paid, leaving £14,157, which it is proposed to carry forward.

LANSTON MONOTYPE.—The Lanston Monotype Co. announces interim dividend of 2 per cent., less tax, on ordinary shares, payable May 19th.

WIGGINS TEAPE AND CO.—Report of Wiggins Teape and Co. (1919) for 1922 shows, after providing for depreciation and directors' remuneration, but subject to corporation profits tax, balance of profits, including adjustment of taxation reserves £30,216, of £164,426, plus £926 brought in. Directors recommend dividend of 5 per cent., less tax, on ordinary shares for year, providing for corporation profits tax £5,900, writing off expenses of increase in capital £5,052, and carrying forward £17,055. Directors report that the fusion of interests with Alex. Pirie and Sons has been carried through with a minimum of disturbance to the sales organisations and customers of both companies.

CHARLES MORGAN AND CO.—The trading for 1922 has resulted in a loss of £5,546 (against a loss of £36,263 for 1921), increasing the debit balance brought in from 1921 to £34,126. The report states that the loss for 1922 is largely attributable to the fact that for the greater part of the year values were still falling, and also to losses on exchange and removal expenses. During the early part of the year the business was considerably disorganised through the enforced move into the new freehold premises in High Holborn, but the directors state that this having now been effected, their anticipation that an improvement would result in economy in working is proving to be correct. They add that prices are now more stabilised, and recently there has been a distinct improvement in business, both at home and abroad, and it is anticipated that the result of the current year will be satisfactory.

NEW COMPANIES.

NELSON EASEY, LTD.—Capital £100; advertising agents or contractors, printers and publishers, etc. Private company. Subscribers: Miss M. I. Chambers and H. N. E. Jollingham.

STEPHENS AND EYRE, LTD.—Capital £10,000; to take over the business of a wholesale stationer and printer carried on by J. C. Eyre at Fairfax-street, Bristol, as "Stephens and Eyre." Private company. Subscribers: F. T. Love and W. T. Pearson. Registered office: 57, Broadmead, Bristol.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

"KING'S SHIPS" PUBLISHING CO., LTD.—Debenture dated April 18th to secure royalties payable under an agreement dated April 4th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Com. H. S. Lecky, C.B., A.M., R.N., R. N. Detention Barracks, Chatham.

NEW LEADER, LTD. (newspaper proprietors, etc., London). Particulars filed of £5,000 debentures authorised February 16th, 1923, charged on the company's undertaking and property, present and future, the amount of the present issue being £3,500.

LIMEHOUSE PAPERBOARD MILLS, LTD.—Particulars filed of £20,000 debentures authorised April 20th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

BANKRUPTCIES, etc.

RE JOHN MCKERROW, chromo-lithographer and designer, late of 22, Carroun-road, Fentiman-road, S.E.—The creditors met last week at the London Bankruptcy Court, when the official receiver reported that about the end of 1917 debtor took premises at 22, Carroun-road, Fentiman-road, London, and carried on business there in his own name, but heavy overhead expenses had crippled it. In July last year owing to want of money, he agreed with three other persons whereby in consideration of money lent to him, he had to account for all receipts. He was unable to account for a small portion of the receipts and since January last the lenders had carried on the business on their own account. Debtor estimated his liabilities at £1,700. His present position was due to heavy overhead charges and poor trade. The estate remains in the hands of the official receiver.

POLYGON MANUFACTURING CO., LTD., manufacturers of ink, etc., 40-46, Banner-street, St. Luke's, E.C.—The report of Mr. G. D. Pepys, official receiver and liquidator, has been issued to the creditors and shareholders. The winding-up order was made last January on the petition of a creditor and accounts have been lodged showing liabilities £54,786 against assets valued at £20,994 and a deficiency of £44,896 as regards contributories, the capital issued and allotted being returned at £11,276. The company was registered in August, 1921, with a nominal capital of £20,000 and was formed, *inter alia*, to carry on the trade or business of manufacturers, buyers, sales agents, and brokers of ink, printing and office equipment, and other goods, but the principal business actually engaged in was the manufacture of glass bottles and ink. The failure of the company is attributed to want of working capital, but in the official receiver's opinion it was due to mismanagement. The liabilities include £46,685 in respect of loans advanced for the purposes of the company and the assets in the opinion of the official receiver are grossly overvalued and will not produce anything like £20,994.

Re JOHN FREDERICK ATKINSON, lately carrying on business at 31, Essex-street, Strand, publisher.—The first meeting of the creditors of this debtor was held at Bankruptcy Buildings, Carey-street, W.C., on May 1st. The receiving order was made on April 17th, 1923, on a creditor's petition, the act of bankruptcy being the failure of the debtor to comply before March 8th, 1923, with the requirements of a bankruptcy notice. One proof of debts had been lodged for £1,313 14s. Debtor had not attended for his preliminary examination and no statement of affairs had been lodged. The case being a summary one remains in the hands of the official receiver.

Re UNITED PRESS, LTD., St. Bride's House, Salisbury-square, E.C.—The statutory first meetings of creditors and contributories of this company were held at Bankruptcy Buildings, Carey-street, W.C., on May 4th, when Mr. J. B. Thampson, official receiver, presided. The chairman reported that the company was promoted by Mr. Mark Crombie Steedman and Mr. Howard Corbett, as a private company on May 20th, 1922, with a nominal capital of £125,000. The objects of the company were to acquire and carry on the business of publishing Lloyds Periodicals, formerly carried on by United Newspapers (1918), Ltd. The assets which the company purchased had previously been acquired by Messrs. Steedman and Corbett in April, 1922. The statement of affairs showed as regards creditors ranking liabilities £46,859 8s 8d., and after allowing for debenture holders claims (£14,788 12s. 10d.) the net assets were estimated to produce £47,599 3s. 7d., thus

Digitized by Google

showing a surplus of £639 14s. 11d. The total deficiency as regards contributories amounted to £105,460 5s. 1d. The creditors put forward two separate nominations for the liquidatorship, viz., Mr. C. H. Nathan, C.A., and Mr. Albert Wilmott, C.A. The shareholders nominated Mr. C. H. Nathan as liquidator. The official receiver was unable to inform the meeting as to the result of the voting on the liquidator. The result will be reported to the Court and the appointment made by the Registrar in due course.

Czecho-Slovakia Paper Industry.

Surveying the industrial situation in Czecho-Slovakia, Dr. Hodac, Secretary-General of the Federation of Czecho-Slovakia Industrials, says:—Employment in the wood pulp industry is good. In the paper industry it has improved somewhat in regard to a few kinds only, while in the manufacture of cigarette paper the dismissal of workmen had to be continued. So far, the paper factories in Slovakia have not resumed work.

Sir William Robertson Nicoll.

By the death of Sir William Robertson Nicoll, who passed away on Friday at his residence at Hampstead, literature and journalism lose one of their foremost representatives. Although he was bred a son of the manse, and although his first work was done as a Free Kirk minister in Aberdeenshire, it was as a writer and critic, rather than as a preacher that he will best be remembered. His first literary adventure in London was as literary adviser to the famous publishing house of Hodder and Stoughton, who readily took up his idea of starting the *British Weekly*. This was followed by the "Bookman," which was thought at the time to be a venturesome undertaking, but, surrounded as he was by such men as Barrie, Walter Pater, Edmund Yates, Swinburne, Watts-Dunton, A. C. Benson, A. E. W. Mason, and other brilliant writers, it almost reached the importance and influence of the *British Weekly* itself. Sir William was a great reader, and his library in his rambling old home at Frognal, contains about 25,000 books, 5,000 of them being memoirs In his library, too, is the original manuscript of Barrie's "The Little Minister." His successor in the editorial chair of the *British Weekly* is the Rev. J. M. E. Ross, who about eighteen months ago took over the Press directorship of the Scottish Churches Missionary Campaign.

Mr. Edgar P. Woodman.

We regret to announce the death, which took place on Friday, at his Dulwich residence, of Mr. Edgar P. Woodman, chairman and managing director of the Fisher Bookbinding Co., Ltd., Herne-hill, S.E. Mr. Woodman, who had been ailing for some time, had been connected with the Fisher bindery for some forty years. He originally joined the firm as a representative, and his activities were so successful in extending the turnover that the factories, which were then situated at Carter-lane and at Bride-court, became insufficient for the growing requirements of the business, and it was necessary to take premises behind *The Times* office in Queen Victoria-street. On the death of Mr. Thomas Fisher, the founder of the business, Mr. Woodman started the company afresh, and in 1901 floated the present concern under the style of the Fisher Bookbinding Co., Ltd., purchasing at the same time the Herne-hill premises, where the business has been carried on ever since.

Under Mr. Woodman's guidance the premises at Herne-hill, known as the St. Ann's Works, have been well equipped with plant and machinery, so that to-day the firm is capable of dealing with almost any class of bindery work.

Mr. Woodman, who was in his 58th year, will be greatly missed by a wide circle of friends, for he was at all times of a kindly and genial disposition.

The funeral took place on Tuesday.

Those who attended the cremation at West Norwood Crematorium were: Mr. George Bell (Winterbottom Book Cloth Co.), Messrs. A. C. Nevett, J. G. Bain, H. Judd and Major Robert Leighton (Master Bookbinders' Association), Messrs. Walter Boud (Kelly's Directories), D. Smith (Sell's Telegraphic Addresses), H. Pringle (manager, Westminster Bank, Ltd., Herne Hill), Chas. Taylor (director of Fisher Bookbinding Co., Ltd.), A. W. Brooks, S. W. Heaton, Hedley Miller (London Chamber of Commerce), Henry Quilter, Dean and several other gentlemen representing the printing and allied trades, together with practically the whole of the staff of the Fisher Bookbinding Co., Ltd. A large number of beautiful wreaths were sent.

Picture post cards representing English scenes and printed in France are now being sold in this country.

The Paper Trade Golfing Society.

Successful Spring Meeting.

The Spring Meeting of the Paper Trade Golfing Society was held at Sunningdale Golf Club on Thursday, April 26th, entries for the competitions being received from the following members:—E. W. Allen, Thos. Armstead, Charles Baker, R. F. Baker, A. S. Batchelor, Major F. H. Bowater, Captain Noel V. Bowater, A. E. Brown, George Buchanan, Jas. W. Cooke, Wm. C. Corke, A. W. Dean, W. W. de Buriatte, Cuthbert Dixon, Alan S. Duff, Norman Duxbury, Major A. J. Evans, John Grant, R. G. Harvey Greenham, F. C. Harding, S. A. Harding, G. H. Hedley, R. B. Henderson, C. E. Higgins, H. F. Higgins, J. W. S. Johnston, P. W. Kennett, A. King-Smith, C. King-Smith, E. C. Lait, N. H. Leander, Horace C. Lowen, T. T. Mackenzie, J. Macnaughton, W. Monkhouse, Captain C. R. Mullings, R. D. Oldham, W. H. Palmer, J. S. Pollock, W. C. Powers, E. H. Raynham, A. Ralph Reed, G. C. Robertson, J. Rowley, L. S. Rustad, S. G. Saunders, Lionel Savory, J. Seddon, G. W. Shilcock, F. A. Skerratt, W. Sommerville, A. Dykes Spicer, Douglas Spicer, Lancelot Spicer, Ronald Spicer, J. S. Wakefield, R. C. Wakefield, H. S. Wescott, Wm. Whyte, E. Lewis Winn.

In the final match over 36 holes for the cup presented by the Rt. Hon. Lord Riddell, Mr. S. G. Saunders was successful in beating Mr. S. A. Harding by 2 and 1.

In the morning, a stroke competition took place for the "Blackfriars Cup" presented by Mr. Stanley Cousins. Mr. F. A. Skerratt was successful with a score of 73 net, Major Frank H. Bowater being the runner-up with a score of 77 net. Mr. George Buchanan and Mr. Cuthbert Dixon tied for third place with net scores of 80. Mr. Skerratt therefore becomes the holder of the cup for the first year, and must be congratulated on his very fine score.

A Foursomes Competition against bogey for Society spoons took place in the afternoon, Mr. Cuthbert Dixon and Mr. W. C. Powers being the winners with a score of all square; Major Frank H. Bowater and Mr. R. C. Harvey Greenham being second with a score of 1 down; Mr. J. Seddon and Mr. J. Macnaughton being 3 down.

The following members qualified to enter the competition for the "Spicer Challenge Cup" presented by Messrs. Spicers Limited to be competed for annually under match play conditions:—F. A. Skerratt (73 net), Major F. H. Bowater (77 net), G. Buchanan (80 net), Cuthbert Dixon (80 net), A. S. Batchelor (81 net), H. S. Wescott (82 net), Captain C. R. Mullings (84 net), W. C. Powers (86). Mr. John Grant also returned a net score of 84, but, in view of the difficulty in coming over from Ireland to compete in the competition, has withdrawn his name from the list. The eight lowest scores at the Summer Meeting will also qualify for this competition.

The number of entries for the competitions constituted a record for the Society and the meeting was of a highly successful and enjoyable nature.

An 1847 penny vermilion Mauritius stamp put up for auction in Paris recentry, fetched 122,000 francs (£1,740).

Printers' Managers and Overseers (PARENT) ASSOCIATION.

Delegate Meeting Agenda Discussed.

The May meeting of the Printers' Managers and Overseers Association, falling this year upon May Day, was mainly occupied with considering in advance the long agenda prepared for the delegate meeting to be held at the Grand Hotel, Leicester, on Saturday, June 16th. The chair was occupied by the president, Mr. S. M. Bateman, and there was a good attendance of members to discuss many matters of domestic importance.

The Chairman made sympathetic reference to the recent illness of Mr. Arthur Paul, and was able to report that Mr. Paul had left hospital and was taking a holiday, after which they hoped he would be with them again.

Death of a Veteran Member.

The President made intimation of the death of Mr. Thomas Shaw, an old member of the Association and first president of the Manchester Centre. It was agreed that the secretary be instructed to write a letter of condolence to the bereaved.

Mr. Whittle thanked members for their allocation of £15 to the plate at his recent concert in aid of the East Ham and Upton Park Auxiliary. He reported that he had been able to raise £70, and told of appreciative assistance he had received from provincial Centres.

One new member was elected to the Association, and was personally welcomed by the president. This was Mr. R. J. Alexander (Jas. Truscott and Son, Ltd., Suffolk-lane, Cannon-street, E.C.4. Overseer—composing-room.)

The meeting then considered the following recommendation by the Council: "That Mr. A. H. Wilson be appointed hon. technical secretary in place of Mr. H. Blackwell resigned."

It was explained that Mr. Blackwell wished to resign from the position on account of his not being able to devote as much time as he would wish to the affairs of the Association.

It was agreed, without opposition, that Mr. Wilson be appointed, whereupon that gentleman briefly returned thanks for his election.

To take the position of auditor, vacated by Mr. Jackson according to rule, Mr. C. H. Blenkins was, on the proposition of Mr. Dawson, unanimously elected.

The meeting being thrown open for general business, Mr. Whittle drew attention to the forthcoming united gathering at Leicester, and said it was hoped that a good representative party would go from London.

The Chairman read a letter which Mr. Gill had received from Mr. W. Beattie, an old member now incapacitated and finding himself rather lonely in his home district of Leytonstone. Mr. Bateman recalled Mr. Beattie's songs at past concerts of the Association.

At this point the meeting resolved itself into a special general meeting to consider business to be submitted to the delegate meeting.

Unemployment Benefit and Superannuation.

A long discussion arose on a proposal tabled by the Parent Association to alter Rule No. 24 dealing with unemployment benefit. The object of the alteration was to safeguard the Association's funds by modifying the payments at present allowed, the principal retrenchment being a proposal to confine these benefits to members who joined before the age of 50.

After it had been made clear that due provision would be made for the rights under the old rule of present members who had joined at 50 or over, the proposed alteration was passed.

Another interesting matter to come before the delegate meeting was the question of superannuation for managers and overseers. London delegates were given a free hand to consider and report upon any schemes which the Centres might put forward.

The last item of business was the election of two delegates to attend along with the president and general secretary. After the voting by a show of hands, Messrs. A. E. Jarvis and J. C. Pugh were declared elected, nominations and votes being as follows: A. E. Jarvis, 26; J. C. Pugh, 19; E. H. Berryman, 12; R. H. Berry, 10; S. A. Dawson, 8; J. H. Burton, 4.

In conclusion, the president and secretary both expressed themselves very gratified at the success of the recent annual dinner, and on Mr. Whittle's proposition a hearty vote of thanks was passed to the three dinner stewards—Messrs. E. H. Campling, R. Condliffe and J. A. B. Reed.

The meeting closed with a brief response from Mr. Campling.

LIVERPOOL CENTRE.

The nineteenth annual general meeting of the Liverpool Centre of the Printers' Managers' and Overseers' Association was held at the Angel Hotel on Saturday evening, the president (Mr. Charles Mackie) presiding over a large attendance. The annual report and balance sheet was submitted, showing that the Centre had had a most successful year, and was in a very strong financial position.

The following gentlemen were elected to the various offices: President, Mr. Charles Mackie; vice-president, Mr. Joseph Flesher; hon. treasurer, Mr. Fred W. Martin; and hon. secretary, Mr. Jas. N. Poole. Messrs. H. A. Corris, A. W. Fox and J. Graham were elected to vacancies on the council, and Messrs. W. Maxwell and J. E. Wilson were elected tylers. At the conclusion of the business a successful Bohemian concert was held.

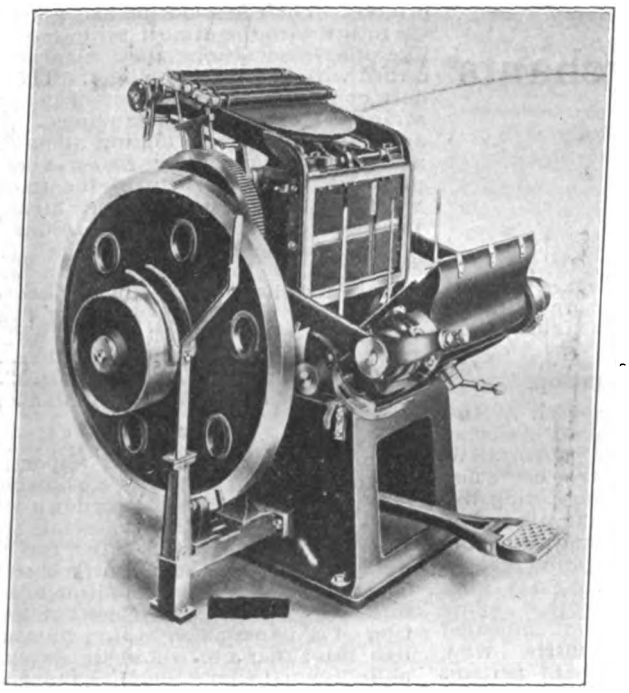
LENDRUM, LTD., have opened a new office at Bombay, which will serve as the headquarters of Mr. E. J. J. Randall, the firm's representative in India and China. Mr. R. D. Fidler has gone out as assistant to Mr. Randall. In further extension of overseas activities, Mr. A. D. Cooke is going to Shanghai. Incidentally, it may be mentioned that all the departments of Lendrum, Ltd., are now located in Temple Avenue, occupying two floors.

British Empire Exhibition.

Progress of the Papermaking Exhibit.



A meeting of the Paper Committee of the British Empire Exhibition was held on Tuesday afternoon, with Sir Fredk. Bowater in the chair. Mr. C. R. Seddon (president of the Papermakers' Association), Mr. Arthur Baker, and Mr. A. W. Foster were among those attending.

It was announced that the Papermakers' Association had decided to issue their appeal for a Guarantee Fund or £4,000. Messrs. Walmsley, as our readers are aware, have undertaken to erect a papermaking machine, which will cost about £5,000, and the £4,000 is required to provide the site, electric and steam power, water supply, foundations and connections for drainage, etc., and the working expenses of the machine for six months.

The members of the committee representing the paper industry are: Mr. C. R. Seddon, Captain W. E. Nuttall, Mr. Arthur Baker, Mr. Parker Smith, Mr. A. W. Foster (Papermakers' Association), Sir Fredk. Becker, Major J. W. Cropper, Mr. Joseph Dixon, Mr. E. B. Fiske, Mr. F. T. Ford, Mr. J. G. Flowerdew Lowson and Mr. W. Leonard Tod.

KELLNER - PARTINGTON PAPER PULP. — Report for the year ended September last shows available balance, after payment of debenture interest and dividend on preference shares, of £46,738. Directors propose dividend of 5 per cent. free of tax, for year, absorbing £45,515, leaving £1,223 to be carried forward, subject to taxation. Previous year 15 per cent., free of tax, was paid on ordinary shares.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*

The following is a letter we have received from The Fisher Bookbinding Co. (1912) Ltd.—one of many unsolicited testimonials.

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

National Association
. . of . .
Wholesale Stationers and Paper Merchants

Relations with Allied Organisations Discussed at the Annual Dinner.

Questions of organisation and relations between allied associations were discussed at the annual dinner of the National Association of Wholesale Stationers and Paper Merchants held on Wednesday, May 2, at the Connaught Rooms. Mr. F. M. Carson, the retiring president, was in the chair, supported by Mr. A. Dykes Spicer (president for the current year), Mr. C. R. Seddon (president of the Papermakers' Association), and Lieut.-Colonel H. Rivers Fletcher (vice-president of the Federation of Master Printers).

Others present were:—Captain W. E. Nuttall, Captain A. H. Smyth, R.N., Messrs. F. L. Armstrong, F. L. Baskerville, F. L. Cayzer, J. W. Cooke, J. Harmer Dalton, C. W. Davidson, W. A. J. Foster, A. E. Goodwin, A. Green, R. G. Harvey Greenham (general secretary), N. H. Hanart, F. Hanchet, F. J. Hanchet, C. J. Healy, H. F. Higgins, H. Holmes, F. Johnson, Alfred Langley, E. S. Lendrum, C. Lowry, A. McArthur, Cecil McCann, E. Montague, G. C. Morgan, Eveleigh Nash, Herbert Oppenheimer, G. E. Oswick, H. H. Roe, Sydney Spalding, Walter Spalding, Douglas Spicer, Rodway Stephens, G. H. Storer, A. G. Taylor, W. S. Tredgold, and C. Youngman.

A pleasant evening's entertainment was provided, the concert following the dinner being given by Miss Annette Bartle (soprano), Mr. Robt. Maidwell (baritone), Mr. Bernard Turner (humorist), and Mr. Herbert Townsend (accompanist). During the reception and dinner musical selections were played by the D'Albert Orchestra.

The speeches during the evening were a useful contribution to the problems facing the kindred associations.

A Difficult Year.

After the loyal toast had been honoured, the chairman, in proposing that of "The Association," referred to the many activities which had been undertaken during the year. The various negotiations upon which they had been engaged had not been easy, and had not always been attended by success. However, so long as the principle was right success would eventually come. With regard to the conditions of trade during 1922 Mr. Carson said there was nothing they could look back upon with any great joy. They had been passing through very difficult times indeed and some of them had to admit that the position at the end of the year was not quite so favourable as at the conclusion of 1921.

Proceeding to demonstrate his contention that the commodity in which they dealt had no intrinsic value, the chairman pointed out that prosperity in the paper trade was dependent upon the general trend of trade in the country. However, he did not think they would have long to wait before an improved state of affairs was reached. Slowly, but, he thought, steadily, the world was recovering from the horrors of the war, and they were also recovering now from the horrors of the peace. (Hear, hear.) After expressing some disappointment at the Budget and remarking on the surplus of £100,000,000 which had not been expected, Mr. Carson said he would suggest to his friend, Mr. Becker, who, since their last dinner had been returned as a member of Parliament, that he should ascertain from the Chancellor of the Exchequer if there were not possibly vast sums unpaid for Income Tax and Excess Profits Duty which they might reasonably expect to come in next year.

Mr. Carson emphasised the need of the trading community for a cheap, a quick and a lasting means of advertising their wares through the country. The distribution of catalogues had been proscribed during the war and a system had grown up of general advertising through the daily papers; but the effect of such advertising was forgotten half way through the day. Therefore they wanted a means of advertising of a more lasting character, such as the printer was able to supply. (Hear, hear.) If they could see an opportunity of restoring catalogues he was perfectly certain it would ensure a large measure of prosperity to their trade. (Applause.)

Importance of Organisation.

Referring to Mr. Seddon's speech at the recent dinner of the Papermakers' Association, Mr. Carson observed that they had all to work together to try and see if they could not get something out of their trade during the coming year, and in this connection he intimated that the question of organisation was paramount. The lack of organisation at present was deplorable. He was glad to see that there was another effort being made in the direction indicated by their customers, the printers, who, rightly or wrongly, felt that perhaps wholesale stationers were branching out in directions which were not satisfactory in their view. He was glad to know that the negotiations had been started between the two associations, and if the master printers would help the wholesale stationers, then the wholesale stationers would help the master printers, and he saw no reason why, with good common sense running throughout the negotiations, they should not be able to arrive at an arrangement which would be mutually satisfactory. (Hear, hear.) For four years they had asked the papermakers for a plain answer to a plain question, but the answer had always been: "the time is not opportune." But the time would be opportune some day. He (Mr. Carson) thought they had pushed negotiations as far as they could; and if the wholesale stationers did not carry them on during the next year, it would not be for want of good fellowship. The door was wide open for any suggestions that the papermakers might in their judgment submit to them.

With regard to the election of Mr. Dykes Spicer as president, Mr. Carson complimented the Association upon its choice, and in congratulating Mr. Spicer upon his appointment he pledged support in the name of the members. (Applause.)

Coming Together.

Mr. Dykes Spicer was cordially received upon rising to respond to the toast. After referring to the annual dinner of the Papermakers' Association and the influential gathering of representatives of the newspaper press on that occasion, Mr. Spicer said on that evening another interest in the paper world was doing the entertaining, namely, the merchants who held stock. (Laughter.) That interest was not so important as the "news" interest, but it still occupied some place in the British paper trade. (Hear, hear.) A great deal had always been said about the healthy relationship that ought to exist between the mill and the merchant. Such relationship was obviously of mutual advantage. There was no doubt that individually as between firm and firm there had never been a time when relations were more cordial than they were to-day. Individual merchant and individual mill stood better together now than they ever did; but they had to recognise that as between association and association—he should not like to say that they did not stand well; they hardly stood at all. (Hear, hear.) What they had to consider was whether it was possible that there should be some relationship between the two associations and whether it was wise. He was quite sure if it was possible and if it was wise, each side had got to do something. They must recognise the fact that foreign competition was the English papermaker's bugbear, just as the problem of the middleman and direct trading was the bugbear of the merchant. Each side, therefore, had to recognise the difficulty of the other side (hear, hear), because nothing had ever been accomplished before that altruistic state of affairs had been reached. What they had to settle was: could they both make it worth one another's while to work together. Therefore, they were glad to welcome among them that night, not only papermakers, but printers. Their Association had got to face the future with the utmost seriousness. Unlike other associations, they were not concerned with questions of wages. They were only concerned with matters of policy and arrangements or understandings. As an association, they were aiming at no narrow advantages, and anything that was done was promoted for the benefit of the trade as a whole. If they got the right atmosphere, they would be able to achieve results which would provide something of a tangible character for the trade. There was no Utopia for that Association to discover and no Paradise for it to reach; but there was real substantial benefit, which, with hard work and persistent effort, could be secured for the benefit of the trade in particular and for its members generally. (Applause.)

Definitions.

Mr. Sydney Spalding was responsible for the toast of "Our Guests." He observed that that night the lion was lying down with the lamb, and, of course, the wholesale stationer was the lamb. (Laughter.) The speaker went on to make some witty observations concerning the correct definition of a wholesale stationer. He presumed that the definition of a papermaker would be something like this: that the wholesale stationer was an individual who sometimes, but not often, paid the price he was asked (laughter), and he supposed the wholesale stationer might possibly say that a papermaker was an individual who seldom, if ever, accepted the price he was offered. (Renewed laughter.) His own definition of the papermaker would be that he was an individual whose working costs were far in excess of his production. (More laughter.) Looking at the amiable faces around them that evening, Mr. Spalding remarked that they could hardly imagine that those present were engaged in fierce competition. However, that night they were all absolutely united and agreed in offering their guests a very hearty welcome. (Applause.)

Good Relations.

Mr. C. R. Seddon, in acknowledging the toast, said as President of the Papermakers' Association he felt that the obligation devolved upon him of increasing by every means in his power the cordiality of the good relations existing between the wholesale stationers and the manufacturers of paper. Their hospitality was an indication of their goodwill, which was heartily reciprocated. They in the paper trade as makers were so accustomed for their hosts to be their guests that he was not at all sure on this occasion whether he was a horse chestnut or a chestnut horse; but he was prepared to back either or both in the selling handicap which had been imposed upon the manufacturers by foreign competition in spite of the weight they were carrying in their saddles by reason of excessive taxation. (Hear, hear.) Although they occupied different positions and their relations varied in character and importance, their combined efforts and united co-operation were necessary to the success of the whole. Whilst the papermaker looked with envious admiration upon the privileged position of the wholesale stationer and paper merchant he recognised that the best for all could only be obtained by establishing links of mutual advantage between them. The increase in membership of the Wholesale Stationers' Association and the growing strength and power of their organisation gave hope that their relative positions might be so co-ordinated as to give to each the return which was due to their respective contribution to the general welfare of the trade. (Hear, hear.) The elements of such were essential to each, and although individually they might be distinct their mutual advantage was clearly obvious. The chairman had mentioned that the door was wide open for mutual understanding. But one door was not enough. If the wholesale stationers wanted to conciliate the papermaker they must provide two doors, one to go in and the other to get out by. (Laughter.) Mr. Spalding had talked about the past. They had heard enough of the past. They wanted to hear something of the future. He believed if they worked together they might look forward to a great improvement in trade. (Applause.) But that night they were not doing business; they were enjoying the contentment which was the result of a good conscience and a very excellent dinner,

and contentment was better than riches, always providing they had got both. (Laughter and applause.)

Master Printers Standpoint.

Lieut.-Col. Fletcher (vice-president of the Federation of Master Printers), in reply, said the meetings which had taken place between his Federation and the Association of Wholesale Stationers had been well worth while, having had the effect of clearing the air considerably and enabling each of their organisations the better to understand the position of the other. He did not forget that in the earlier stages some members on his side were murmuring something about preparing a "black list." Now the much more moderate demand was only for a "white list," which showed that the conferences had not been entirely unsatisfactory from the wholesale stationers' point of view. Perhaps the slight divergence of views on the question of direct trading had obtained undue prominence for the reason that their aims in all other directions coincided exactly. One had only to instance the subject of postal rates in order to appreciate how much they had to gain by joint action. The efforts made by the two organisations were undoubtedly the main factors that influenced the postal authorities in their decision to make concessions in the very near future. (Hear, hear.) Again, the activities of a certain institute were a menace to both stationers and printers. An individual industry would not stand the slightest chance in fighting such a powerful body, but he was confident that their joint efforts, combined with other trades affected, would not be without success. State trading generally constituted a danger to both of them, and here again they had joined hands in combatting this evil. Legislation to amend the Merchandise Marks Act was of equal interest to them both, as well as many other questions which affected their organisations in common with other industries. It was, therefore, no mere platitude to say they had everything to gain by a complete knowledge of each other's aims and ideals. (Hear, hear.) Because of that he was glad to have had the honour of replying to the toast, as it enabled him to say how much the Federation of Master Printers had valued the co-operation of the wholesale stationers in the past and that it looked forward to working jointly with them in future in all that tended to the benefit of the stationery, paper and printing trades. (Applause.)

Mr. Jas. W. Cooke proposed the health of the chairman and spoke of the excellent work Mr. Carson had achieved for the Association during his year of office.

Stationers' Social Society.

Golf and Bowling Arrangements.

Mr. A. E. Mist, the hon. secretary, announces that the Stationers' Social Society have arranged for the annual golf competition for the Horsburgh Cup to be played off on Tuesday, May 29th, at Hadley Wood Golf Club, by kind permission of the committee of that club. Members are to play under lowest club handicap, which is limited to 18, and the competition will be 18 holes stroke play, to be played off in the morning. Entries close on Wednesday, May 16th.

In the afternoon of the 29th the foursome competition against bogey for prizes presented by the committee will be played off, and members are asked to make up their own matches. There will be an optional sweepstake on each round.

The committee have decided not to hold the annual knockout golf competition this year, but hope to arrange for an autumn meeting some time early in October. Communications concerning the golf competition should be sent to Mr. J. W. S. Johnston, 20–21, Queenhithe, London, E.C.4.

It has been decided to hold the bowls competition (on handicap lines) for the Woollacott Cup at New Malden, on Tuesday, June 5th, entries for which will close on May 23rd. In addition rink games will be arranged under the bowling section of the Society during June and July, and members who are interested in bowls are asked to send their names to Mr. Mist (189, Upper Thames-street, E.C.4), in order that notices of such games may be sent to them.

"SLOGGER"

METHOD IS THE BEST

Separation of sheets is accomplished by a blast of air directed through the top sheets of the pile, and this blast of air at the same time frees the paper from dust and fluff, very prevalent in certain types of paper. This dust and fluff would eventually find their way to the ink rollers and duct, and detract from the colour of the ink and spoil the quality of the work. By cleaning each sheet before feeding it, the high quality of the work is maintained, and washing up and brushing out of the forme are therefore minimised.

JOBS from letter-press to any colour work.

SPEEDS to suit any press.

STOCK from tissue to board.

RUNS from 500 upwards.

VOLUME 92. NUMBER 20. [REGISTERED AS A NEWSPAPER.] LONDON: MAY 17, 1923. EVERY THURSDAY. PRICE TWOPENCE.

"The Romance of Bookbinding."

Wireless Address arranged by the British Broadcasting Company and given by Mr. E. J. W. Zaehnsdorf from the London Station.

[An innovation in craft lectures was established on Saturday, when Mr. E. Zaehnsdorf, of the well-known firm of Zaehnsdorf, Ltd., transmitted a lecture from the London Broadcasting Station entitled "The Romance of Bookbinding." The time occupied in delivering the lecture—eight minutes—must have caused Mr. Zaehnsdorf a great amount of thought and preparation to enable him to compress his remarks on such a wide subject into so short a time.]

To the bookbinder credit must be given to a very large degree for the preservation of our national records, whether printed or written. Mankind has always endeavoured to pass to posterity accounts of his daily life, his discoveries and his beliefs. In France and Spain there are some caves which have drawings on the walls, drawn in the Stone Age, depicting hunting scenes and other daily occupations, which give us a clear idea of exactly how the hunt was conducted, the number of animals chased, and the resulting "bag."

For written accounts we must turn to the East. In Babylon some 3,000 to 4,000 years ago men recorded their affairs on clay, which was afterwards baked, and, to preserve the record, it was sometimes enclosed in an outer envelope of baked clay, which was also inscribed, so that, should the envelope be broken, the contents still stood a chance of passing on the valued information. Such tablets may be seen in the British Museum and afford the earliest instance of the duty of a bookbinder.

The Romans used wooden tablets about ½ inch thick, in the centre of which hot wax was poured and allowed to harden. The wax was scratched with a pointed iron stylus (the forerunner of our modern stylographic pen); the other end was flattened, so that it might be used to erase errors, or perhaps to remove the whole of the writing. Two or more such tablets were sometimes strung together with brass wire rings, just like some of our modern loose-leaf pocket books, and in this way we have a very early form of our modern book.

Introduction of Vellum.

Herodotus, the historian (b. 484 B.C.), mentions that some of his writing was on the skins of animals. This fairly gives a date to the introduction of vellum—a material that has been in use ever since, and even to-day vellum is used for documents and deeds and special forms of address. In Roman times books written on vellum were rolled up for storing in the library, which must have presented a very different appearance from the modern public library.

The ancient Egyptians made use of the split stalk of the papyrus, a reed which grows on the banks of the Nile. Three layers of the split stalk were mounted together until a length of some 15 or 20 feet was reached. On this they wrote their hieroglyphics, and specimens may be seen in the British Museum.

Paper was first made by the Chinese thousands of years ago. The date of its introduction into England is a matter of speculation; but it was used extensively in Mediæval times, and assumed great importance on the introduction of printing in the 15th century.

Monastic Binding.

The binding of Church missals and books of devotion was a special feature of monastic life, and considerable craft skill was displayed by the monks in binding their books. Their knowledge of the requirements of a bound book was of the highest, and they solved the problem so well that even to-day we practically copy the methods as practised in the eighth and ninth centuries.

The principles of the binding of a modern novel, though done by machinery, are based on the old monkish ideals.

The reason why we bind a book is to preserve it and afford protection. A printed bundle of sheets of paper would quickly come to grief, some would be lost, dust and dirt would ruin the leaves, and general confusion would prevail. So the bookbinder comes to the rescue, and suitably binds the leaves together, and thus ensures the preservation demanded.

In ancient times vellum was frequently used for the cover, but morocco (goat skin) was a great favourite; sometimes asses' skin was employed, and during the 16th and 17th centuries binders covered the volumes in calf skin. To day, for the best work, we use carefully selected morocco.

Enemies of Books.

Books have many enemies such as fire and water. Louvain is an instance which immediately comes to mind, but every year the fire demon takes his toll from private homes and many beautifully bound books are destroyed.

Religion has in the past persecuted books, and public bonfires, supervised by the public hangman, have been made by religious opponents. The Mahomedans, for instance, held that if a book agreed with the Koran, it was superfluous, and if it disagreed, it was heretical and should be destroyed.

Another enemy is spring cleaning. In the annual spring clean many valuable books have been exchanged as waste paper for a fern or an aspidistra. I have heard even of an instance where the poor books had their covers ruthlessly washed with soap and water. Children are innocent enemies of books, and with paintbox or crayon, or perhaps scissors and scrapbook, have done incalculable damage. A typical instance is the first edition of "Alice in Wonderland." This book is always soiled and the picture of the Mad Hatter's Tea Party is a favourite picture for children to love in an embarrassing manner in a book worth about £50.

Ravages of the Death Watch.

Bookworms do great damage to books, and you may remember Professor Lefroy's lecture to you on the damage to the roof of Westminster Hall by the grub of the Death Watch. The Death Watch will attack books, but the little fellow that especially marks books for his feast is somewhat similar in appearance and rejoices in the Latin name of Anobium Striatium. The repair of worm-eaten books by a bookbinder is a difficult task, but frequently undertaken and the damage repaired in an invisible manner comparable with the feat of repairing the roof of Westminster Hall.

Books have been bound in curious materials, such as a portion of an elephant's ear, or the skin of an animal, lion or tiger, shot on a hunting expedition.

During the War the British prisoners at Ruhleben caught rats and used the skins to bind books, and, though not professional bookbinders, did the work most creditably and proved the triumph of British resource over depressing difficulties.

Binding Curiosities.

The most uncanny book I have ever handled was covered in human skin, but wild horses will not drag from me the name of the owner. I have been asked what the cover looked like. I am sorry to say it looked very similar to pigskin.

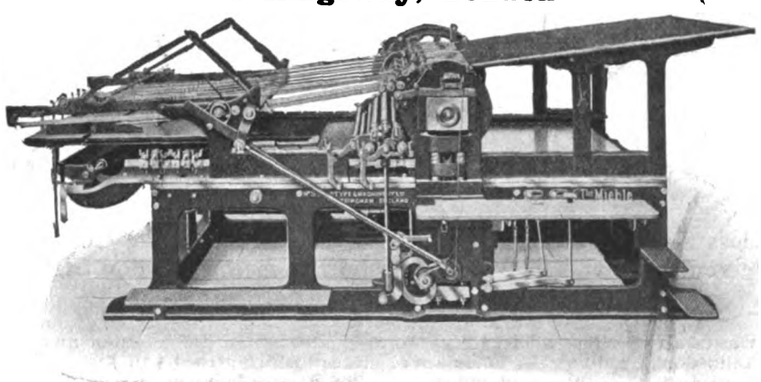
One of the problems of the bookbinder is to bind a miniature book. Such a book I have by me at this moment. It is about the size of the nail on my little finger and weighs but 25 grains. This book is perfect in every way and is a triumph of the binder's skill.

Sometimes books are richly jewelled and studded with pearls, rubies, amethysts or diamonds. The stones may form either the design itself, or form centres from which the pattern springs. Very rich effects are thus obtained.

Of the curiosities, painting of the front edges of the book is the most charming. It is a matter of surprise that front edge paint-

Digitized by Google

Every printer appreciates Miehle work—and so does the buyer of printing. Miehle printing does not cost more than ordinary printing, but it commands better prices.



The Miehle is prepared for a job more quickly than an ordinary press. The rollers are quickly set, the ink duct can be accurately adjusted to suit formes of any kind, make-ready is reduced to the mimimum owing to the scientific construction of the press, and the little make-ready required is quickly effected.

There is no risk in installing a Miehle. It is a sound investment for every printer—a perfect tool and a real asset at all times.

If the work you are now doing is "ordinary," you can raise your standard of printing to the highest level by installing the Miehle.

The Miehle is built in this country, in our Works at Altrincham, Cheshire, and can be obtained only from us.

ing is not seen more frequently. A favourite view or a scene mentioned in the text of the book can be painted on the edge in water colours. The painting can only be seen when the leaves are spread out. This beautiful art was brought to a fine degree by an English bookbinder named Edwards, when Queen Victoria first ascended the Throne. Many ladies are skilful with water colours, and most bookbinders can prepare the book for the artist.

I would like to tell you of the beauties of the bindings of the past; in Italy of Grolier, Maioli and Canevari, and in England of Queen Elizabeth, Mary Stuart and of that clever and brilliant prince, Henry, the son of James I., but time does not permit. Besides, that's another story.

Authors' Consumption of Paper.

Responsibility for Forest Denudation.

An enthusiastic publisher wants to make the best seller responsible for the recent phenomenal activity in the paper and pulp industry of Canada. There may be something in it if newspapers and magazines are included, but otherwise the cold light of statistics would, we fancy, not entirely bear out the contention. If it were, indeed, mainly true, authors would have a lot to answer for, and the lumber companies would be able to divest themselves of much of their responsibility for the deafforestation of the world.

In the Dominion about 9,000,000 spruce trees perish every year to supply us with paper, and the number is increasing at the rate of nearly 400,000 per annum. Now we produced less than 10,000 books in this country in 1922 and America less than 7,000, notwithstanding its greater population. But there it is periodical literature that has the most vogue. On the basis of the average weight of a volume and its average sales, and assuming that one spruce tree is equal to 500 books we can only be held accountable for the destruction of, say, 22,000 trees and America for 14,000.

Thus the voracious assimilator of books may continue to read with an undisturbed mind, not regarding himself as contributing appreciably to the umbrageous mortality roll. But we cannot let the very popular author off quite so lightly. Mr. H. G. Wells must have the death of many spruce trees on his conscience, and the fearful responsibility of Mr. Harold Bell Wright must be incalculable.—*The Financial Times.*

Book and Surface-Coated Paper.

U.S. Exports for January.

Total exports of book paper (not coated) from the United States in January amounted to 1,983,231 lbs., of the value of $211,827. The principal consumer was Cuba, with 529,143 lbs. ($54,013), the Philippine Islands following with 316,619 lbs. ($26,163). The provinces of Canada in combination represented the third largest customer, absorbing 295,890 lbs. ($37,445). Other six-figure recipients included Mexico, 196,356 lbs. ($15,080); and Brazil, 159,347 lbs. ($17,678).

Next in order of importance come Japan, 73,486 lbs. ($6,576), England, 56,017 lbs. ($13,183), and British India 47,470 lbs. ($5,384).

Individual South American States take substantial quantities, representing altogether a very large tonnage. Among British colonies New Zealand took 7,366 lbs. ($834) and British South Africa 2,420 lbs. ($274).

Surface-coated paper was shipped abroad during January to the extent of 386,786 lbs. ($62,350). The principal consumer was again Cuba, which received 232,664 lbs. ($25,128). Other important markets were Canada, 64,109 lbs. ($14,988); Uruguay, 35,420 lbs. ($4,382); and Australia, 34,444 lbs. ($13,469).

BRITISH exports of printed books during the first three months of the year reached 66,008 cwts. (of the value of £683,264). These figures compare with 52,966 cwts. (£636,305) in the corresponding period of 1922, and 83,794 cwts. (£969,173) during January-March, 1921.

HAPPINESS, like the best fruits and flowers' has to be cultivated.

The Process Engravers' Club.

Question of Publicity.

The monthly meeting for May was pronounced to be a great success—"the best yet" was the opinion of all present, at any rate so far as that opinion was expressed. Two gentlemen, prominent in the world of publicity, had been asked to come and address the members upon subjects of which they have an extensive knowledge, and right well did they acquit themselves.

To Mr. Hopton Hadley, advertising consultant and vice-president of the Sales Managers' Association, was allotted the task of telling the meeting how process engravers could be of greater use to the publicity manager. His address was full of interest and practical suggestions, giving many examples of the way in which the members of the club could not only help the publicity man, but at the same time bring greater volume of work to their own houses and so secure greater returns with greater profits. He felt that as process engraving was a progressive craft and that engravers were continually preparing new ideas and combinations and styles they should make them known to the publicity man, who would be pleased to take advantage of them to their mutual benefit.

Mr. Roy Hardy, a member of the council of the Publicity Club, was entrusted with the task of telling how process engravers could increase the volume of demand for process blocks by a co-operative advertising scheme. He considered that a united federation scheme, boldly framed and ably carried out, would fully justify the expense that would be incurred. He pointed out that he did not suggest that individual firms should cease their own advertising What he believed to be the best arrangement was, in addition, a federation scheme in order to raise the status of the craft and to encourage a greater use of illustrations and to especially bring home to those that do not now use illustrations, the necessity of doing so if they were to succeed to the widest extent.

Both speakers very magnanimously offered to co-operate in the production of such a scheme and in launching it without fee or reward should they be requested to do so, as they believed that if the Federation would undertake work on these lines it would react in such a way that all would benefit.

A very animated discussion followed, in which a great many of those present took part; in fact so interesting did the subject seem that the usual hour for closing had long passed when the vice-president called upon speakers to reply to the criticism and the questions raised.

The replies were really very clever and showed that the subjects on which the speakers had spoken were those with which they were quite at home.

The Chairman expressed the thanks of those present for the very valuable information given and expressed the hope that their efforts to be of use would bear fruit and that in the near future good might result from the discussion that evening.

It was pleasing to note that some new members were present at the meeting, and as it was desired to make the Club 100 per cent. strong, efforts are being made to that end. All who are eligible for membership will be welcome.

New Zealand Duty on "Compo Board"

An Order in Council of the New Zealand Government, dated February 12th, 1923, declares that "compo board" consisting of timber with a layer of paper pulp, strawboard, paper, or similar material cemented thereto on one or both sides, being an article which is not specifically enumerated in the Tariff and which is in the opinion of the Minister of Customs a substitute for dressed sawn timber, shall be charged with import duty at the rate of 4s. per hundred superficial feet (the rate applicable to dressed sawn timber), and shall in addition be liable to primage duty at the rate of 1 per cent. *ad valorem*.

AFTER leaving his work at Messrs. Clowes and Sons, Sidcup, Frank David Burrage, 16, printer's apprentice, was knocked down by a bus. He died in hospital the same evening.

Paper Prices.

Factors Working Towards an Increase

At the back of the papermaker's mind during the last three months has been the uneasy feeling that all his efforts towards stability are in danger of defeat on account of the strike in the Swedish wood pulp industry. Sweden is our chief source of supply of chemical pulp, and sent us nearly 200,000 tons last year. The shutting down of the Swedish mills for a period of three months means, therefore, a reduction of production, which is estimated by the Consul-General in London at 160,000 tons of sulphite pulp and 50,000 tons of soda pulp; and as the United States demand is higher than ever before, a shortage on this side is obviously indicated. The output position is not, as yet, definitely reflected in prices, though an upward tendency is visible, and many competent judges are of opinion that paper prices must inevitably advance in sympathy with the upward trend of material cost.

In putting forward these facts, a correspondent of the *Manchester Guardian Commercial* says: That the papermaker is not making an extravagant profit has been quite evident in recent balance-sheets, and is equally clear from a consideration of costs and prices. Moist mechanical pulp before the war was £2 per ton, and dry strong sulphite pulp was £7 10s. To-day the corresponding prices are £5 12s. 6d. and £15, an increase respectively of 128 and 100 per cent. Wages are settled on a sliding scale, which gives 20 per cent. above the cost of living increase (now 75 per cent.), and, in addition, all shift workers are on eight-hour shifts instead of the old twelve hours, so that the increase of labour cost per ton of paper is in the neighbourhood of 150 per cent. Yet the price of news-print is barely more than double the pre-war figure, while wood printings and wrappings are at a still lower level.

The annual dinner of the Papermakers' Association, held just before the Easter holiday, was, as usual the chief social event of the paper trade year, and the company gathered to greet Mr. C. R. Seddon as the first Lancashire president since Lord Doverdale (in those days known as Captain Partington) numbered four hundred or thereabouts. Mr. Seddon's after-dinner speech was full of good things, but perhaps the chief item of oratorical interest was the interchange of views between Lord Burnham and Sir Andrew Caird as to a publicity campaign for the hygienic wrapping of food. It was obvious that Lord Burnham had been deeply impressed by the benefits gained in the United States by this method of protecting foodstuffs from contamination.

MR. HENRIK OGREN has taken over the management of the Elof Hansson Agency, Ltd., 133, High Holborn, London, in succession to Mr. A. O. Tofte. Mr. Ogren lately had charge of the company's office in Hamburg. The Elof Hansson Agency, whose head office, Elof Hansson, is in Gothenburg, are large exporters of paper and pulp from Scandinavia to all parts of the world. Every description of paper is handled—"news," printings, krafts and all specialties—and all brands of pulp and chemicals.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer.
The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

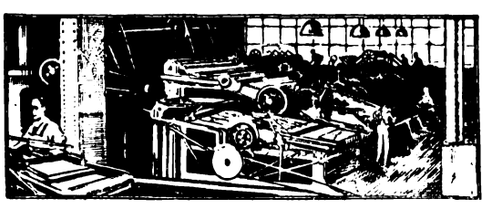
Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

10 Feeders sold during the last weeks



COME AND SEE IT RUNNING IN LONDON.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply-houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

Trade Notes.

AFTER five months the strike of members of the National Union of Printing and Paper Workers at the three London works of Messrs. Samuel Jones has been settled, and work was resumed on Monday morning.

POSTER BALLOT APPEAL ALLOWED.—Magistrates at the London Sessions on Tuesday quashed the recent convictions against Mr. Joseph Weiner, printer, of Covent Garden, W., in connection with what is known as the Poster Ballot Competition. The deputy-chairman said the Court would give its reasons in full at a later date. At Bow-street Police Court, Mr. Graham Campbell had imposed fines and costs on Mr. Weiner, amounting to 50 guineas, for an alleged infringement of the Lotteries Act (1823).

FOR the compulsory winding-up of the British Casein Co. (1911), Ltd., and the Leader Publishing Co., Ltd., orders in the usual form were made by Mr. Justice P. O. Lawrence on Tuesday.

BENN BROTHERS' DEVELOPMENT.—Owing to the proportions to which it has grown, the book department of Benn Brothers, Ltd., has been formed into a separate branch of the business, to be known as Ernest Benn, Ltd. Sir Ernest Benn, chairman of Benn Brothers, Ltd., will be chairman also of the new company, and the managing director will be Mr. Victor Gollancz, who for the past two years has been manager of the book department of Benn Brothers. The directors place in the forefront of their programme the production of books on fine and applied art of the kind which they have produced over the old imprint of Benn Brothers, Ltd., during the last two years. The first book on typography will be a work to be published probably in the autumn from the pen of Mr. Stanley Morison, entitled "Four Centuries of Fine Printing." This development of the book department will involve no change in general direction or financial control, and the address is the same as that of the parent company—8, Bouverie-street, E.C.4.

IN the House of Lords on Tuesday the Advertisements Regulation Bill passed through Committee. The measure seeks to empower local authorities to regulate the display of advertisements and to prevent entirely sky writing by aeroplanes.

SIR EVELYN CECIL obtained the leave of the House of Commons on Tuesday to introduce the Matrimonial Causes (Regulation of Reports) Bill. The Bill, which aims at restricting Press publicity in respect of certain cases, was formally read a first time.

TAX ON ADVERTISEMENTS.—In the House of Commons last week Mr. Hughes asked the Chancellor of the Exchequer whether, with the object of reducing taxation in other respects, he had considered the advisability of imposing a tax on all advertisements in the daily and weekly newspapers, in magazines and other periodicals, and on advertisement hoardings and public and private buildings; and, if so, whether he could give any estimate of the revenue likely to be derived from that source. Mr. Boyd-Carpenter: The suggestions made from time to time as to the desirability of imposing a tax on advertisements have been noted. I am not in a position to give any estimate of the revenue which might be derived from this source.

THE proprietors of the *Western Morning News and Mercury* (Plymouth) and its allied publications, the *Western Evening Herald, Western Weekly News, Naval and Military Record*, etc., whilst being bound under the agreement to take off the final instalment of wages reduction, have decided for the present to pay to each member of the staffs concerned a bonus of 3s. 6d. per week, thus counteracting the May reduction of 3s. 6d. This action has called forth cordial expressions of appreciation from the workpeople affected.

THE North-Western Alliance of the Federation of Master Printers held its annual meeting yesterday (Wednesday) at Carlisle, the proceedings including a luncheon at the County Hotel. Amongst the visitors expected to attend were Mr. R. A. Austen-Leigh, Mr. A. E. Goodwin and Mr. H. A. Bethell.

J.I.C. DISTRICT COMMITTEES.—The Midland Alliance of the Federation of Master Printers is showing commendable interest in developing the local activities of the Joint Industrial Council. Under the auspices of the Alliance, Mr. A. E. Goodwin, joint secretary of the J.I.C., visited Leicester last Friday, and addressed the Leicester District Committee, and on Friday next he is to address the Northampton District Committee.

THE North London Branch of the London Master Printers' Association is to hold its seventh annual meeting this evening (Thursday), at the Finsbury Park Congregational Church Hall, at 7.30, when Mr. Alfred Langley is to address the meeting on the arrangements made for the Federation of Master Printers' annual conference.

THE NEWSPAPER SOCIETY.—At the annual meeting of the Newspaper Society, held at the Guildhall last week, Mr. John R. Scott, of the *Manchester Guardian*, was elected president for the ensuing year; Mr. William Astle, of the *Stockport Advertiser*, and Mr. Arthur L. Woodhead, of the *Huddersfield Examiner*, vice-presidents; and Mr. Valentine Knapp, of the *Surrey Comet*, honorary treasurer.

IN the presence of a large company representative of newspapers and newspaper organisations, Lord Burnham unveiled last week, at St. Bride's Church, Fleet street, a bronze tablet to the memory of Sir Edmund Robbins, for 37 years manager of the Press Association. The tablet, which bears the inscription, "An upright man, an able journalist, and a great organiser," was placed in the church on behalf of the newspapers of Great Britain.

AT the Lloyd Memorial (Caxton) Seaside Home, Deal, on Saturday afternoon a memorial tablet to the late Lord Northcliffe was unveiled by Mr. Cecil Harmsworth, who was accompanied by Messrs. St. John Harmsworth, Vivian G. Harmsworth and Alfred Harmsworth, Brigadier-General W. F. Mildren and Mr. Beattie.

"Is modern journalism worth the price we pay for it?" was debated to the enjoyment of a large audience at the London School of Economics on Tuesday night. The debaters were Mr. C. A. McCurdy, M.P. (chairman of the United Newspapers, Ltd.), and Mr. G. K. Chesterton. Lord Burnham presided. As an outcome of the debate London hospitals will benefit considerably.

OVER 200 members of the Institute of Journalists and their friends attended the annual conversazione of the London District on Saturday afternoon. Mr. Bernard Weller (chairman of the district) presided over the gathering, which was held in the Hotel Victoria in aid of the Institute Orphan Fund.

SIR GEORGE ROWLAND BLADES, M.P., presided at the 77th annual meeting of the Seamen's Christain Friend Society, held at the Haberdashers' Hall, Gresham-street, on Tuesday afternoon, when Alderman Sir George Truscott presented the Carnegie Hero Fund Trustees' framed certificate and cheque for £25 to Mr. W. H. Preece, the Society's Sussex Coast missionary, for an act of self-sacrifice.

A STATEMENT that it is proposed to raise the price of *The Times* and the *Daily Telegraph* from 1½d. to 2d. is denied by the papers concerned.

THE first number of the *Wesleyan Methodist*, a new two-penny weekly, with a picture page and a cartoon, and opposed to Methodist union, was published on Thursday.

MR. W. H. BURCHELL has sent out a useful letter, in which he details the postal concessions which came into force on May 14th. A comparison with the increased charges made on June 13th, 1921, justify his sub-heading "getting back to pre-war postage." Mr. Burchell also sets out the further reductions required, viz., 1d. for the 4 oz. letter and ½d. for all postcards (no restrictions).

BRADFORD "DAILY ARGUS" RETIREMENT.—Mr. Jasper Patterson, who recently retired from the general management of the Bradford *Daily Argus*, went to Bradford more than half-a-century ago. At a gathering held on the 8th inst. to wish him farewell Mr. Patterson described the developments of Bradford newspaperdom during the last fifty years. Conditions were far different in those days, he remarked, and the composing room bill actually amounted to less than they had been paying to one man at the *Argus*. Lads were doing men's work for twelve hours a day, but they were enthusiastic nevertheless. Tributes of goodwill were made by every section of the *Argus* staff to Mr. Patterson on the occasion of his severance from the position he had held for so long.

THE death occurred last week of Mr. James Neville, aged 78. Born in Darwen, on reaching the age of ten years he entered the printing trade with Mr. F. Nicholls, who conducted the *Darwen Examiner*. In 1867 he joined the staff of Messrs. R. and H. T. Timperley at the post office, and four years later went to the *Manchester Courier*.

LAST week's issue of the *British Weekly* took the form of a memorial number to Sir W. Robertson Nicoll, its founder, and, until the day of his death, its editor. It contains a series of personal tributes from men of to-day, among them Lord Riddell, Viscount Burnham, and Sir Ernest Hodder-Williams.

WITH the issue of the May number the *English Review* passed to new proprietors. The price is to be reduced from June to 1s., the pre-war figure. The *Review* will be enlarged to 112 pages, and several new features of interest will be added.

THE late Mr. Walter Hawkins, late chairman of the *Bristol Times and Mirror*, Ltd., prominently identified with the West of England Press Fund and the Institute of Journalists, died March 31st, left £19,321.

MEMBERS of the British Press visiting Rome last week had the opportunity of meeting Signor Mussolini at a banquet given to them by the Italian Periodical Press Association on Friday night.

CHRISTIANIA, Norway, is in difficulties with its newspapers owing to a printers' strike.

Master Printers' Organisation.

Useful Criticism at Monthly Meeting of S.E. Association.

The monthly meeting of the Association was held on Tuesday, the 8th inst., at the Bridge House Hotel, the chair being occupied by Mr. G. Poulton (president). Although not very largely attended, many points of interest to the members were raised, these being the outcome of an address given by Mr. S. Goss, of Messrs. Baines and Scarsbrook, Ltd., on "Our Trade Organisation, Some Criticisms and Suggestions."

The president drew attention to the urgency of applying for tickets to the Federation meetings, explaining that the reception at the Guildhall was something quite special.

Mr. Goss was then called upon to address the members. He wanted first of all to say that he had not had a great deal to do with the official organisations. He thought one was not free to criticise unless he was going to do something to help make things better. It was in that spirit he wished to address them. He aimed at efficiency of their organisation for the sake of the members individually and the craft generally. He would avoid destructive criticism, for there was plenty of that already.

Coming to his first point, Mr. Goss asked who and what constitutes a member of their Association? They had their district associations, the L.M.P.A. and the Federation, London being No. 1 of the Alliances. So far as his own Association was concerned (the W. and N.W. Association), it consisted of members who were operating printers The L.M.P.A. in their rules laid it down that their membership is open to all companies and firms who are members of the district associations, who shall *ipso facto* be members of the Alliance. From this it would appear that a firm, if it had, say, three directors, would be entitled to three votes, or at any rate, nobody would object if they held up their hands at a meeting. He had looked candidly at the Federation and the L.M.P.A. Rules, and it was beyond him to know who governed the votes and who did not. In some dealings with the central bodies it seemed to him they were run to a large extent on lines of expediency, and the question of principle did not matter so long as it worked. He did not like that sort of thing.

He took it that it was their aim to get one hundred per cent. master printers members of their Association. Mr. Goss thought one of their weaknesses lay in the fact that when they got the members they did not take the trouble to keep them. In order to retain the members he thought they should bring forward live subjects for discussion which would interest small printers as well as large.

With regard to another phase of their work Mr. Goss thought a lot more could be done in organising, either by the members themselves or by somebody who was paid to do it. He was in favour of getting paid assistance with suitable remuneration to ensure success.

"Pooling" Experiences.

Mr. Goss next drew attention to the question of "pooling" their experiences. In America, he believed, they spoke of "pooling" experience in all sorts of ways that were quite unknown in England. If it was adopted in this country it would encourage the well-being of the craft as well as the members in the craft. All it called for was mutual confidence among the members.

Speaking of the collection of information Mr. Goss thought members were very ready to take advantage of valuable knowledge they secured, but were not so ready to pass it on to others. Recently he had occasion to ring up Mr. Whyte in order to consult him on a certain question that came before the High Court. After the case was concluded he rang up Mr. Whyte again to ask him if he would like a resume of the proceedings. He (Mr. Whyte) replied that he very much appreciated such an offer, and further stated that members often got advice from Holborn, but usually they forgot to inform Holborn of the result, for future guidance.

Another way Mr. Goss thought the Association could extend its usefulness was by having talks on machinery. There was a lot of talk in the air about photo-litho and offset, and while the question of scrapping their present plant in his opinion was premature, they had to keep alive to the advances being made. With regard to new machines coming on to the market Mr. Goss said too often the only people who seemed to have a knowledge of the machines were the few firms that installed them. The result of this was that when wage negotiations were in progress they often got the employee telling the employer that certain of his machinery was as old-fashioned as Noah's Ark. He advocated the practice of those firms installing new machinery giving the result of their experience to others. Some time ago he installed a certain machine in his own firm's works, and the makers asked if they would be willing to let a prospective customer of theirs see it. Meeting the makers some time afterwards they said his firm was the only one in London they could approach with any hope of letting anyone see the machine.

Proceeding, Mr. Goss said a charge that is often brought against offices is that they are more like rabbit warrens, and were very often dirty. He thought a great deal could be done to improve things in this direction if there was confidence shown amongst members of the Association. He thought that if a man wanted to lay out his office he should be able to go to the Association and be put in touch with various members who could show him over their offices and get their advice. If this method was adopted he was sure it would be an incentive to retaining their members.

Dealing with the question of finance, Mr. Goss said that was a matter which would have to be tackled. At present they paid a halfpenny in the pound on the wages and a half of that went to the Federation. A sum of £5,000 or £6,000 was paid over annually to the Federation, and he often asked himself, if it was worth it.

In concluding, Mr. Goss said he would like again to emphasise the question of the members "pooling" their experience, and he hoped the Association would give it definite consideration. If adopted, he believed it would make a big difference to all of them, and would be helpful not only to the members of the Association but to the trade generally.

Discussion.

The president, in throwing open the meeting for general discussion, said Mr. Goss had not come down with a big stick on anyone. He hoped the members in anything they had to say would offer that kind of criticism which would have within it some alternative conducive to the best interests of the Association.

Mr. J. Lack, in opening the discussion, thought the money paid into the Association was money well spent. If it was twice or three times as much it would be worth it. He expressed warm approval of the debt collecting agency carried on by the Association, and if members did not take advantage of it they were losing one of the best branches of the Association's work. A point that had not been touched upon by the lecturer was the question of co-operative advertising. As an Association and as a Federation they did nothing to advertise their craft, and tell people how to use print. It had been tried in localities and it was found to pay. It was a question, he thought, that should be tackled quickly.

Mr. J. Griffiths, after speaking of the difficulty of attracting members to the meetings, said printers sometimes had a wrong conception of the Association. He thought the organisers should impress on would-be members not to join for the purpose of securing some personal gain from membership, but that they should strongly emphaise the point that it was not what they got out of the Association but what they could put into it for the benefit of the trade as a whole. He was pleased Mr. Goss had dealt with the desirability of interchange of opinion and experience, for he thought it would lead to the mutual advantage of the members generally. He agreed with the previous speaker on the question of co-operative advertising, but believed the best way to adopt it would be through the national organisation.

Mr. F. H. Dawe referred to the question of the imprint, and thought that was one of the most important matters that 24 Holborn had to deal with.

Mr. Brigenshaw, referring to the voting power of the members said a firm—no matter how many directors it might have—only had one vote at meetings. After touching on the question of bad debts, Mr. Brigenshaw spoke of the possibility of securing a permanent hall, where new machinery could be installed as it came along. That question was only in the air at present. It was the custom at the meetings of their own Association for any member who thought of getting new machinery to bring the matter forward, so that members possessing the same kind of machinery could give advice on it. He was perfectly in agreement with Mr. Goss in thinking that the amount paid to the Federation was out of all proportion to the value they received from it. He believed that a greater proportion of that money could more profitably be employed in London affairs as distinct from the country, and that the Association should take up that question seriously. He contended that the Federation was a long way behind other similar bodies in the country. However, he did not wish to cast any reflection on the officials.

Mr. C. Northam also spoke.

Mr. Goss, replying to the discussion, said he wondered if they could not do a lot better with the money contributed to the Federation if a considerable proportion of it was retained to be devoted to some other use.

A hearty vote of thanks was accorded to the lecturer on the proposition of Mr. Fish, seconded by Mr. F. Mason.

The meeting then terminated, with a similar expression of appreciation to the chairman.

The light refreshments served during the proceedings added considerably to the amenities of the evening.

Newspaper Press Fund Dinner.

The Prince of Wales presided over the diamond jubilee dinner of the Newspaper Press Fund, held at the Hotel Victoria on Wednesday of last week. The occasion drew a company of distinction and influence, both in the Press and outside, among those present being Viscount Burnham (president of the fund), Lord Riddell, Sir James Owen, Sir William Berry, Sir Robert Baird, Sir Frederick Becker, Sir Ernest Benn, Sir F. Bowater, Sir Edward Iliffe, Sir Frank Newnes, Mr. Thomas Marlowe, and Mr. F. L. Armstrong.

The Prince of Wales, in proposing "The Newspaper Press Fund," referred to the wonders performed by the newspaper distributor, and then passed on to allude to the cause he had risen to plead. Figures, he said, would prove anything, save that they seldom proved interesting. He did not propose to plunge into a morass of statistics beyond saying that since its creation this fund had distributed no less £160,000 in grants and pensions. Any details which were necessary would, he was sure, be supplied by Lord Burnham. They were met together that night for the sake of others, and he was proud to think that the many splendid institutions of our land established and maintained by all classes of the community bear witness to the fact that the British nation is generous and charitable to the last degree.

Viscount Burnham, replying, said that although three members of the Royal Family had honoured them by taking the chair, his Royal Highness was the first Prince of Wales to do that gracious thing.

The total amount raised for the fund amounted to a record sum of £25,000, which included donations from the King and from the Prince of Wales of £50 each.

The Newspaper Press Fund.

A great cabaret performance is to be given in connection with the Diamond Jubilee of the Newspaper Press Fund. It has been decided to accept the offer of Sir Francis Towle, on behalf of the Gordon Hotels, Ltd., to present a Press Fund Cabaret at the "Midnight Follies," Hotel Metropole, on Friday, May 25th.

In addition to the "Midnight Follies," there will be a number of well-known performers from London theatres, and performances will be given in three parts of the hotel—the Whitehall Rooms, the Café Anglais, and the Restaurant des Ambassadeurs. It is estimated that the performance, which is to be in two parts, will be given before about 1,000 people. The first 300 tickets will be sold at 3 guineas each to include dancing, supper, and cabaret.

Over £1,100 has been realised by an auction of tables for the cabaret. The highest prices (£200 each) were paid by Lord Riddell and Mr. Robert Ruddock.

Printers' International Congress.

British Delegates to Gothenburg.

As we have previously indicated, the printing industry of this country is to be officially represented at the great Jubilee Exhibition which the city of Gothenburg, Sweden, is conducting from May 8th to September 30th. The item of most interest to printers is the International Congress of Printers to be held from Monday to Wednesday, June 4th to 6th. This Congress will have many points of interest, and will include lectures and discussions on the following subjects: Printers' Associations as Employers' Organisations; Cost Systems in the Printing Trade; Some Aspects of Artistry in the Printing Trade; The Standardising of the Sizes and Qualities of Paper; Technical Education and Training; The Necessity of International Co-operation between the Printers' Organisations.

Master printers of this country are to be represented by Mr. R. A. Austen-Leigh (president of the Federation of Master Printers), Lieut.-Colonel H. R. Fletcher, Mr. W. B. Wykes and Mr. A. E. Goodwin, whilst several other members of the Federation are arranging to accompany them, leaving London on Saturday, June 2nd. Mr. R. A. Austen-Leigh is to contribute a paper on the question of international organisation of master printers; Mr. A. E. Goodwin will deal with the training of apprentices; Col. Fletcher will speak on costing; and Mr. Wykes on standardisation of paper, etc.

Mr. George H. Carter, Public Printer of the United States, is to attend the Congress, also Mr. G. F. Hussey, president of the South Australian Master Printers' and Allied Trades' Association, Adelaide.

The official languages of the Congress will be English and Swedish.

Great efforts are being made to render the Exhibition worthy of the occasion. It will illustrate the development of the city in its every aspect. As the chief port of Sweden, of course, Gothenburg has served the export industry of the country very conspicuously; and as pulp and paper are among the principal products of Swedish industry sent overseas, they will be a feature of the Exhibition.

The Export Section, located in close proximity to the Historical Section, has its own grounds occupying an area of some 15 acres of which about 7 acres are covered by the export buildings. The chief of these is the large machinery hall, with a length of 655 ft., a height of 69 ft. and an unbroken span of 115 ft. In the midst of a pretty grove is situated the forestry building, which houses all exhibits connected with or derived from timber, *e.g.*, woodworking, wood pulp, and paper production and the graphic arts. In all these various departments the aim has been so to group the exhibits as to give the visitor a connected history of each industry and of each article of manufacture, from the raw material, through the various stages of production, up to the finished article.

Apart from the utilitarian aspects of the Exhibition, the artistic and social side will be very attractive.

Swedish Paper Prices.

The situation of the Swedish paper mills at the present moment may be summed up as follows: The mills are rather well occupied, but the prices are still unsatisfactory. In consideration of the increase in prices on the pulp market a corresponding advance of the quotations of paper is quite necessary, and the reason why these prices are still very low can only be that the co-operation of the mills with regard to prices is not satisfactory. This applies to practically all kinds of paper.

The quotations of the different kinds of paper, given by *Svensk Travaru-tidning*, are as follows:—

Kraft paper, £24 to £24 10s. per ton; M.G. pure sulphite paper, £22 to £22 10s. per ton; greaseproof, 42/67 gr., £26 to £26 10s. per ton; News-print paper, 50/52 gr. in rolls, £16 per ton; writings, 55 gr. wood free, £34 per ton; printings, 60 gr. wood free, £32 per ton; pulp boards, brown, £16 to £16 10s. per ton; pulp boards, white, £15 10s. per ton.

All quotations are f.o.b. Gothenburg.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines 1/.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines 6d

Sales by Auctions, Tenders, Patents for Sale, Legal and Final Announcements

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

FIRM of Printing Ink Manufacturers require an INK TRAVELLER acquainted with the Midlands; must have practical experience of the Printing Trade; good opening for a suitable man.—Apply, by letter, stating age and qualifications, to V.149, care Jackson's, 19, Cullum-street, E.C.3. 14144

LIBERAL COMMISSION paid to anyone able to introduce and influence orders for Paper and Stationery.—Write, Box 14095.

PAPER and PRINTING MATERIALS.—MAN of good experience wanted for Paper Merchants and Printers' Furnishers in India.—Write, in confidence, stating age, experience, etc., to D, Box 14098.

Situations Wanted.

ADVERTISER desires to Apprentice his son, aged 15, to the Letterpress Machine Depart., in a London Printing House.—J.A.M., 20, Allcroft-road, Kentish Town, N.W.5. 14138

ADVERTISER open to Engagement; Letterpress, Litho and Binding Works, or Office Staff; practical knowledge all departments; 14 years managerial experience.—H. E. Traves, Holly Bank, Kemsford, Woking. 14132

ADVERTISER seeks sit.; thoroughly experienced in Commercial Stationery, Printing, Account Books; highest ref.; mod. salary.—Write, Box 14131.

A SUPERIOR Young Man, with a thoroughly practical experience in Print (Letterpress and Lithography), desires an OUTDOOR SITUATION with a good firm; will do everything to please and give satisfaction for the right offer.—Kindly write, stating terms, Box 14141.

COMPOSITOR, Jobbing (n.s.), requires situation; could take charge.—R. W. H., 14, Helmet-row, Old-street, E.C.1. 14101

COMPOSITOR (non-society), all-round Jobbing, requires situation.—B.C., 13, Old Palace-road, Croydon. 14135

COMP. requires situation; Jobbing, Display, Make-up, Imposition, Stone, etc.; young; (N.S.); good reference; Provinces preferred.—Box 14145.

COMPOSITOR (Society), Jobbing, News, Book, seeks permanency, either as same, Distribution Hand or Assistant to Storekeeper; age 50.—Smith, 75, Lancaster-street, S.E.1. 14139

COMP. (Soc.), young, Job., Disp., Cat., etc., seeks perm.—H., 27, Clifton-road, South Norwood, S.E.25. 14122

LOOSE-LEAF BINDER desires Re-appointment; practical expert, comprehensive knowledge numerous systems, able organise and manage dept.—Write, Box 14142.

MACHINE MINDER (soc.) seeks situation; Two Revs., Wharfes, Slogger Feeder; Colour and Com., Stereo; disengaged.—G. W., 103, London-road, Clapton, E.5. 14100

MONO CASTER MECHANIC, 14 years' experience, seeks change; London preferred.—Box 14103.

PRINTER seeks change (29), Two-rev., Summit, Half-Tone, Colour, Commercial; Norwich or district.—Write, Box 14124.

PRINTERS' WAREHOUSEMAN and CUTTER, all-round experience of General Printing, Keeping Stock, Folding Machines, Stitchers, etc., and Estimating.—C., 430, Hertford-road, Lower Edmonton, N 9. 14111

PRINTERS' WORKING MANAGER, thoroughly practical, desires position with prospects, London district; disengaged; age 36.—G. 21, Parkhurst-road, N.11. 14127

WAREHOUSEMAN-CUTTER seeks sit.; any distance; 20 years experience; good references.—Hay, 145, High-street, Hampton Hill, Middlesex. 14134

YOUTH desires Apprenticeship either in Litho or Letterpress Machining, or in Stereo Foundry; intelligent; C.C.S. scholar.—G. A. Rutherford, 39, Moselle-avenue, N.22. 14126

YOUTH (16½), wanting literary career, requires Position as Pupil in Editorial Office or other such capacity with good scope; just left secondary school; has incentive, originality; commencing salary immaterial.—R. Betteridge, 40, Station-road, Epsom. 14112

Managers, etc.

POSITION desired by educated and experienced man as MANAGER; practical all departments; keen estimator, buyer and up-to-date business methods.—Box 14140.

Agencies.

CONTINENTAL Manufacturer of Account Books is anxious to get into touch with an AGENT in England with a good connection in this class of business.—Box 14130.

Partnerships and Financial.

RULER, BINDER and FINISHER, good all-round man, seeks PARTNERSHIP with Printer or Trade Binder; 15 years' experience; capital available £150.—Box 14118.

PAPER MARBLING (German monopoly).—Capital required by expert workman to start Small Factory.—For particulars write "Marbler," Box 14143.

PRINTER seeks PARTNER with Going Plant; will invest from £100-£200, with services; what offers?—Box 14109.

Machinery for Sale.

ART ROTARY PRESS, by Hoe and Co. (Dble. Feed and Delivery), taking up to size 60-in. by 40-in. each sheet; American diagonal grooved plate cylinder wtth clips to take pica curved plates; a press of the finest printing quality; for sale to make room for a web press; in first-class condition; a bargain.—Newnes and Pearson Ptg. Co., Ltd., Exmoor-street, North Kensington, W.10. 14129

COPPERPLATE PRESSES, "D" ROLLERS, all iron, in working order, for sale cheap to clear.—Box 14093.

FOR SALE, ONE CROSS CONTINUOUS FEEDER as fitted to Mann's Quad Crown Two-Colour Offset Machine; practically new.—Apply, Box 14133.

FORTY-TWO-IN. DIAMOND SELF-CLAMP GUILLOTINE, by Payne; splendid condition; cheap; three good knives.—Chipman and Peddley, 141-5, St. Mary's-road, Ilford. 14137

ROSBACK Perforating, Loose-Leaf Punching, Index-Cutting and Round-Cornering Machine; new; great bargain.—Chipman and Peddley, 141-5, St. Mary's-road, Ilford. 14130

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Miscellaneous

DESIGNS, Line, Half-Tone, Colour, Figure, Lettering, Etc.; first-class work; lowest rates.—Morris Studio, 19, Farringdon-avenue, London, E.C.4. 14099

MODERN FACTORY and PLANT for sale by private contract. The works of the Ruby Cycle Co., at Altrincham, freehold, admirably situated, built on the most modern lines in 1910 and 1920, electric power and light laid on, own gas plant, everything on one floor, with large range of automatic machinery and tools. Most suitable for any modern industry.—Apply, R. H. Lord, J. B. Boyd, Wrigley and Co., 53, Brown-street, Manchester. 14097

THE PRINTERS' PROVIDENT ASSOCIATION, 39-40, Shoe-lane, E.C.4, is able to supply all branches of efficient labour for the Printing and Allied Trades at short notice; no fees—Telephone, Holborn 527. 14119

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MAY 17, 1923.

The Coming Cost Congress.

IT is satisfactory to learn that acceptances for the coming annual meeting and cost congress of the Federation of Master Printers exceed anticipations, record attendances being now promised. From the cost congress agenda (on another page) it will be noted that a wide field is to be covered, and master printers will have an opportunity for frank discussion of such vital matters as "Causes of Estimate Variation" and "Price Cutting." On this occasion the organisers have, wisely we think, reduced the number of subjects on the agenda, thus allowing more time for questions and discussion, and facilitating getting to grips with concrete difficulties and objections. The programme has been planned with a view to tackling the subject of costing in progressive fashion, elementary features being first discussed and approach then made gradually to matters more complicated and of special interest to printers who have installed the Costing System in its entirety. We have no doubt that every printer able to be present will reap much that will prove profitable as well as interesting, and we wish the best of success to those who are active in this important educative movement for improving the general status of the printing industry.

* * *

Printing Prices Reach Bottom.

THE time is now ripe for the placing of printing orders. Costs are more or less stabilised and no alteration can take place for some time at least. According to Mr. A. E. Goodwin, secretary of the Federation of Master Printers, prices for printing have reached bottom for this year. His ground for this assertion is the fact that the wages of letterpress printers in the provinces have just been reduced and there is in existence a national agreement which precludes any further changes for the remainder of 1923. Nor are paper prices likely to help the printer to lower his costs. They, too, have reached rock-bottom; in fact, the tendency is for a rise. With these facts before them, consumers of print might well be induced to place business. But there are other factors now in force which may help to bring a measure of greater prosperity to the industry. New postal rates came into operation on the 14th inst., and advertisers are now able to send through the post twice the amount of printed matter for the minimum stampage. There should, therefore, be a greater call for circulars, booklets and catalogues. It is for master printers to bring these facilities to the notice of advertisers and to do some propaganda work on their own account.

* * *

Trade Board Legislation.

THOSE who are interested in Trade Boards' legislation now know something of the scope of the enactment they have been anticipating with so much expectancy. The Minister of Labour, Sir Montague Barlow, who was the guest of the British Paper Stock Merchants' Association recently, introduced in the House of Commons last week the Government's bill to amend and consolidate the law relating to trade boards. The proposals embodied in it follow in the main the recommendations of the Cave Committee, which reported last year, after a full inquiry into the working and effects of the Trade Boards Acts. This committee came to the conclusion upon a review of the evidence that the system has had beneficial effects. It will be found that the Government accepts the suggestion that the Minister of Labour should not be empowered to apply the Acts unless an unduly low wage prevails in a trade, or some branch of it, and there is a lack of the organisation among the workers necessary for the effective regulation of wages. The proposal is made that the power to apply the Acts should rest primarily with the Minister, and not with Parliament, but a public inquiry is to be held before action is taken. A trade board will be required to fix a general minimum time-rate for the general body of workers in the trade, such rate to be fixed with reference to the lowest grade of ordinary workers in the trade. Power will also be given to fix minimum rates for various workers not classed as ordinary workers in a trade. These include piece-workers, home-workers, and others. The bill will give power to the Minister of Labour, after consultation with the trade board for a manufacturing or productive trade, to set up for any area a district committee for the regulation of the trade.

* * *

Papermakers' Discovery.

AN arresting announcement comes this week from the Springfield Paper Mills, Midlothian. It refers to the discovery of a process for utilising certain waste products of the mills. So important is the new departure considered that fresh capital is to be brought in for the purpose of carrying on the manufacture of the by-product on commercial lines. It is rather interesting to learn of this branching out of the paper industry, which itself utilises so largely the waste products of the earth as its raw materials. The discovery, however, might well have far-reaching effects upon papermaking. In these hard times, of course, it is to be hoped that papermakers are not obliged to resort to other endeavours in order to make profits. But what the new process should do, if it prove successful, should be to lower the cost of manufacturing paper. In any case, it will be welcome news to paper mill owners if they find they can turn this particular waste into a profitable commodity for so growing an industry as electrical work. We congratulate Mr. Leonard Tod (ex-president of the Papermakers' Association) on the enterprise displayed by his company.

Federation of Master Printers.

Programme of Cost Congress.

General particulars of the programme of events between Saturday, May 26th and Thursday, 31st arranged in connection with the annual meeting in London of the Federation of Master Printers were given in our issue of the 3rd instant. We are now able to add the programme of the Cost Congress, which takes place in two sessions on Monday the 28th.

The Cost Congress agenda is as follows:—

10.30 Opening speech by the president of the Federation, Mr. R. A. Austen-Leigh.
10.40. Words of welcome by the president of the London Alliance (Mr. W. Howard Hazell).
10.50. "The Essential Features of the Federation Costing System." Speaker: Mr. A. Williamson, costing secretary.
11. 5. Discussion opened by Mr. John Murdock (Scottish Alliance).
11.15. General discussion, or questions.
11.35. "Causes of Estimate Variation: Some Suggested Remedies." Speaker: Mr. W. H. Sessions (Yorkshire Alliance).
11.55. Discussion opened by Mr. N. Hills Patterson (North-Eastern Alliance).
12. 5. General discussion, or questions.
Interval and luncheon.
3. 0. "How the Federation Costing System Operates During a Period of Trade Depression." Speaker: Mr. W. H. Andrew (Lancashire and Cheshire Alliance).
3.20. Discussion opened by Mr. W. H. Thomas (North Eastern Alliance).
3.30. General discussion, or questions.
3.50. "Price Cutting: Its Effect on Our Craft." Speaker: Major W. H. Barrell (Home Counties' Alliance).
4.10. Discussion opened by Mr. Geo. Eaton Hart (London Alliance).
4.20. General discussion, or questions.
4.40. "The Burden of Over-Equipment." Speaker: Major Dudley P. Forman (Midland Alliance).
5. 0. Discussion opened.
5.10. General discussion, or questions.

Vote of thanks to speakers moved by Mr. E. W. Humphreys (Yorkshire Alliance).

Further reference to the Cost Congress will be found on our Leaderette page.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NETHERLANDS.

An old-established firm of agents at The Hague are desirous of securing the representation for the Netherlands of British manufacturers of bookcloth and all kinds of bookbinders' sundries. Correspondence in English. (Reference No. 608).

The Press Association.

The fifty-fifth annual meeting of the members of the Press Association, Ltd., was held last week at the chief offices, Byron House, Fleet-street. Colonel Sir Joseph Reed (*Newcastle Daily Chronicle*), chairman of the Association, presided. Sir James Owen (*Exeter Express and Echo*) was elected to the vacancy on the Committee of Management, and it was mentioned that Sir Meredith Whittaker (*Scarborough Mercury*), the retiring member of the committee, passed automatically to the Consultative Board.

At a meeting of the Committee of Management, Colonel Egbert Lewis (*Bath Herald*) was elected chairman of the Association for the ensuing year, and Mr. Arthur Pickering (*North Eastern Daily Gazette*, Middlesbrough), deputy chairman. Sir Charles Hyde, Bt. (*Birmingham Daily Post*), Mr. H. D. Robertson (*Glasgow Herald*), and Sir James Owen (*Exeter Express and Echo*) were appointed the Finance Committee.

Personal.

PRINCESS TROUBETZKOY is organising a thé dansant on Friday, May 25th, at the Hotel Cecil, in aid of the Newspaper Press Fund.

VISCOUNTESS BURNHAM, as president of the Society of Women Journalists, took the chair on Tuesday afternoon at the annual meeting, held at Essex Hall.

AT the eighty-third annual dinner of the Newspaper Society held last week at the Trocadero Restaurant, under the presidency of Sir James Owen, the president presented to Mr. Valentine Knapp, on behalf of the Society, in recognition of his services as president for three years, a set of three antique Chinese bronzes and a bookcase bureau and chair. He also asked Mrs. Knapp to accept a gift of diamond earrings and a diamond-studded watch.

THE company included: Lord Riddell, Sir Meredith T. Whittaker and Mr. R. A. Austen-Leigh.

MR. T. P. O'CONNOR, the veteran journalist and Parliamentarian, was signally honoured at the House of Commons on Tuesday, when he was the guest at luncheon of members of all the political parties. The Speaker presided, and presented to Mr. O'Connor a gold snuff box of the George III. period, and the original of a cartoon of himself by "Spy," "to remind him of his earlier days."

MR. GEO. F. HUSSEY, M.P., president of the South Australian Master Printers' Association, attended Tuesday's meeting of the Association of Master Printers of West and North-West London, and gave an interesting address on the general subject of Australia.

TO A series of articles in the *Yorkshire Observer* on "British Business," Mr. A. E. Goodwin contributed on Thursday last an interesting résumé of "Printing: From Caxton to the Linotype."

MR. GEORGE SAMPSON ELLISTON, managing director of Hodgetts, Ltd., publishers, 36-38, Whitefriars street, is a candidate for the vacancy in the Ward of Farringdon Without. Messrs. Hodgetts' publications are mainly concerned with local government and public health administration, and Mr. Elliston hopes that his special knowledge of these matters would make him a useful member of the Corporation. An M.A. of Cambridge, he has, since graduating in 1897, been engaged in the publishing and printing trades, and as a member of the Savage Club, he is known to many of the literary and artistic personalities around Fleet-street.

MR. ROBERT J. WEBBER, one of the directors and the general manager of the *Western Mail*, Cardiff, has been elected acting chairman of the Federation of Southern Newspaper Owners in succession to Colonel Egbert Lewis, who has retired.

MR T. A. LONG has been appointed general manager at the Co-operative Printing Society's Works. Mr. Long was formerly works manager, at one time a member of the Manchester branch of the T.A. and one of the first presidents of the Manchester Jobbing Guild.

Co-operators and a Paper Mill.

At the recent quarterly meeting of the Newcastle Co-operative Wholesale Society, Mr. Scott (Hartlepools) asked when the movement was going in for the manufacture of its own paper. It had been estimated that in order to supply the requirements of the societies in wrapping alone, apart from other uses, three mills at least would be required. The last twelve months had not been a good time for paper mills, but he thought the time had come when the C.W.S. should make every article they could not do without, and which they had to purchase outside. Apparently no information was forthcoming on the subject.

Trade Union Matters.

APPRENTICES' WAGES IN THE T.A.—The council of the Newspaper Society have recommended the following scale of wages for apprentices: 1st year, 15 per cent. of journeyman's wage; 2nd year, 20 per cent.; 3rd year, 25 per cent.; 4th year, 30 per cent.; 5th year, 35 per cent.; 6th year, 40 per cent.; 7th year, 45 per cent.

AN OVERTIME POINT.—At a recent meeting of the Executive Council of the Typographical Association a report was read from the secretary of the Bangor Branch that four members had worked overtime until 3 a.m., and recommenced work at 8 a.m., the usual hour of starting. Not having had an eight-hours' break they charged double time in accordance with the National Wages Agreement. The firm challenged the claim, and stated they would consult the masters' organisation on the point. The Executive Council endorsed a letter that had been sent by the general secretary giving the opinion that the men were entitled to double payment.

THE T.A. AND LEVER BROTHERS.—The Liverpool Branch of the Typographical Association have forwarded to the union headquarters at Manchester copies of correspondence between the Branch and Lever Brothers in an endeavour to arrange an interview on the question of the working of that firm's printing establishment. The efforts had been unsuccessful, and the Branch recommended the Executive Council to declare the office a "closed" one, on account of the firm's failure to carry out the recommendations of the Conciliation Committee of the Joint Industrial Council. It was decided to report the matter to the Printing and Kindred Trades' Federation.

MR. R. W. SEDDON has been elected the auditor for the Typographical Association.

A BALLOT of the members of the National Union of Journalists on the question of continuing affiliation to the Trades Union Congress has resulted as follows: For affiliation, 802; against, 943. This means that direct affiliation to the Trades Union Congress will be withdrawn. The membership of the union is between 4,000 and 5,000.

PROGRESS is being made towards the formation of a band by the Central London branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. Musician members of the Union are invited to communicate with Mr. A. H. Hodgkiss (conductor) at 220, Blackfriars-road.

New Publications.

MESSRS. A. W. PENROSE AND CO., LTD. (109, Farringdon-road) send us a copy of the revised edition of their booklet "Half-Tone Stops and Screen Distances"—originally published in 1897, and based on the Penrose Diaphragm System, devised by the late J. A. C. Branfill and William Gamble, which was patented in 1896. This was the first attempt to bring about a really useful method, and the system has been used by operators all over the world. Considerable new matter has been added in order to bring the book up to date, and operators will find it a most useful aid to their work. The price of the book is 2s.

MESSRS. HARMER, ROOKE AND CO., LTD., philatelic auctioneers, London, have issued an interesting brochure, "The Cradle of the Postage Stamp," in connection with the London International Stamp Exhibition at the Royal Horticultural Hall, May 14th to 26th. Mr. Fred. J. Melville is the author of the letterpress, and an illustration shows the premises of Perkins, Bacon and Co., bank-note engravers, at 69, Fleet street, as they existed in 1840. Messrs. Harmer, Rooke and Co. now have their offices on this historic site.

A NEW trade journal that has just made its appearance under the title of the *Scottish Retail Drapery Journal*, published by the Scottish Retail Drapers', Outfitters', Garment Makers', and Milliners' Federation, (Glasgow: 207, West George-street),

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WALLASEY PRINTERS, LTD.—Issue on April 21st, 1923, of £200 first and £900 second debentures, parts of a series already registered.

L. UPOOTT GILL AND SON, LTD. (printers, etc.).—Issue on April 27th, 1923, of £510 debentures, part of a series already registered.

WADDILOVE AND CO., LTD. (printers, etc., Bradford).—Satisfaction in full on April 11th, 1923, of debentures dated November 2nd, 1899, securing £1,050.

NAPIERS, LTD. (printers, stationers, etc., Cardiff).—Satisfaction in full on February 28th, 1921, of debenture dated October 11th, 1913, securing £550. (Notice filed May 2nd, 1923).

ARTHUR LOWE, LTD. (printers, etc., Sevenoaks).—Particulars filed of £1,500 debentures, authorised May 1st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

PAWSON AND BRAILSFORD, LTD. (printers, stationers, Sheffield).—Debenture dated April 30th, 1923, to secure £7,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: J. R. Townend, Sheffield and R. T. Hindley, Mosley-street, Manchester.

A. WHEATON AND CO., LTD. (stationers, printers, etc.).—Mortgage on 223 and 224, High street, and 99 and 100, Queen-street, Exeter, dated April 19th, 1923, to secure all moneys due or to become due from company to L. J. C. and Midland Bank.

GREENSLADE AND CO. (READING), LTD. (stationers, printers, etc.).—Satisfaction to the extent of £10,000 on April 23rd, 1923, of debentures dated May 30th, 1921, securing £20,000.

AGENDA PRESS, LTD. (stationers, etc., London).—Debenture dated April 25th, 1923, to secure £300, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Miss N. V. L. Smyth, 400, Old Ford-road, E.

SMYTH-HORNE, LTD. (bookbinding and printing engineers, etc., London).—Satisfaction to the extent of £1,000 on October 23rd, 1922, and £1,000 on April 27th, 1923, of debentures dated November 17th, 1919, securing £23,000.

GLOUCESTER GALLERIES, LTD. (fine art publishers, etc., Bishopston, Bristol).—Particulars filed of £3,000 debentures authorised April 28th, 1923, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £500.

HENDON PAPER WORKS CO., LTD.—Mortgage, and as collateral security thereto, a mortgage debenture both dated April 20th, 1923, to secure all moneys due or to become due from company to Bank of Liverpool and Martins, not exceeding £100,000, charged on various properties in Ryhope, Grangetown, Hendon Grange, Sunderland and Bishopwearmouth, and the company's undertaking and property, present and future, including uncalled capital.

BRIGHTER LONDON, LTD.—Issue on April 20th, 1923, of £150 debentures, part of a series already registered.

JOHN ALLEN AND SONS (IVYBRIDGE), LTD. (millers, manufacturers of paper, wood pulp, rags, etc.).—Particulars filed of £12,500 second mortgage debentures authorised April 11th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, subject to £16,456 debenture stock and a debenture for £25,000, the whole amount being now issued.

BANKRUPTCIES, etc.

Re JOHN RISSEN, LTD., printers, stationers, etc., Clerkenwell House, Clerkenwell-green, E.C. The compulsory order to wind up this company was made on the petition of John Dickinson and Co., Ltd., paper merchants, and on May 9th the statutory first meeting of the creditors and shareholders was held at the London Bankruptcy-buildings, Carey-street, W.C. The accounts filed under the liquidation showed unsecured debts £18,070; preferential claims £1,733, and debenture bonds £10,228, making a total indebtedness of £30,032. Assets valued at £15,699, and comprising cash £10; stock, £7,424; machinery and fixtures, £4,000; lease, £1,500; good book debts, £2,685, and doubtful and bad debts amounting to £599, but expected to realise only £79. The deficiency in assets to meet the liabilities is estimated at £14,333, and the account with the contributories discloses a total deficiency of £21,883. The official receiver reported that the company was registered in November, 1912, with a nominal capital of £10,000 in shares of £1 each to carry on business as printers, stationers, etc., but the primary object was to acquire as a going concern the business of a manufacturing stationer, then being carried on by Mr. John Rissen, and which he had established in 1904. He was appointed managing director for life at a salary of £550 per annum. The purchase price of the business was £4,500, payable in cash, the company further agreeing to discharge the existing liabilities, which according to the balance sheet, amounted to £9,746. The assets taken over by the company were valued at £14,246. The issued capital was £7,550. The directors on November 14th, 1912, passed a resolution to issue 100 debenture bonds of £50 each, and at the date of the winding up order £10,000 odd was owing on those securities. The trading account showed a total loss of about £4,000 on the years 1913, '14 and '15; a profit of about £4,500 on the next three years; a loss of £4,103 in 1919; a profit of £2,132 in 1920, and losses of £3,513

Digitized by Google

and £10,786 in 1921 and 1922 respectively. The losses in 1919, 1921 and 1922 were largely due to the heavy fall in the price of paper, leather, strawboards and cloth, and consequently in the manufactured stock. A receiver for the debenture holders was appointed on November 17th, 1922, and he had reported "I think there is very little doubt that there will be no surplus available for the unsecured creditors or the third debenture holders. The assets having been over-valued in the statement of affairs." The failure was attributed to lack of capital, trade depression, and other causes. It was decided at both meetings for the liquidation to be left in the hands of the official receiver.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

D. H. Sadofsky and L. P. Sadofsky, wholesale picture postcard and fancy goods dealers, 34, Brook-street, Hull, under the style of the Princes Supply Co.

Mary Seed and F. B. Gabbutt, booksellers and stationers, 4, Preston New-road, Blackburn, under the style of Seed and Gabbutt.

L Burrell and Marie Burrell, newsagents, booksellers, printers and stationers, 26, High-road, Woodford Green, Essex, under the style of L. and M. Burrell.

Chas. Marsden and Sons, Ltd.

The report of the directors for the year ended September 30th last shows that the balance carried forward from last year was £130,052, from which £24,998 has been written off as depreciation of assets (promotion charges). The preference dividend paid this year absorbed £11,250, leaving £93,804. The directors recommend that the sum of £130,795, being loss on stock depreciation, be put to suspense account. They have hopes of a better adjustment with the Revenue than they have so far succeeded in obtaining, as the company has been severely penalised owing to the incidence of their accounting periods and consequently suffered great injustice in comparison with others. When this is done the loss on trading is £10,233, and the profit left to credit of profit and loss account from last year is reduced to £9,274.

The company has acquired since last year the business of Messrs. Chadwick and Taylor, Ltd., Ordsall Hall Paper Mill, Salford, which has been reconstructed and is doing well.

Tamworth Mill has been finished and a new machine by Walmsleys is erected. The nineteenth ordinary general meeting is being held at Tamworth to give the shareholders an opportunity of seeing the new plant, which has cost £90,000.

Mr. Stanley Cousin's health has necessitated his resigning, and Mr. G. Ralph Hall Caine, C.B.E., M.P., late Deputy Paper Controller, and Messrs. Samuel Chadwick and William Chadwick have joined the board and will offer themselves for re-election.

Alex. Pirie and Sons.

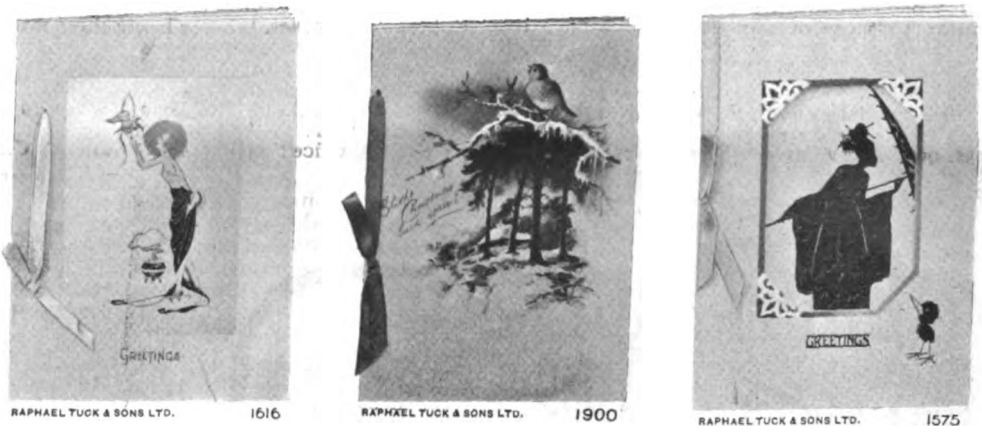
Accounts of Alex. Pirie and Sons for 1921 showed loss of £15,481 after crediting reserves for contingencies and estimated recovery of excess profits duty, reducing balance of profit brought in to £28,788. Out of this dividends on 4½ per cent. first preference and 7 per cent. second preference shares have been paid, leaving £1,288 carried forward to 1922. Report states, in order to provide further capital for Pirie's Photographic Paper Co., in connection with erection of new mill, the company has guaranteed repayment of £150,000 redeemable debentures, together with interest, issued by that company in 1921.

Report for 1922 states that credit of profit and loss account, including balance brought in, amounts to £55,153. Directors recommend dividend of 4½ per cent., less tax, on consolidated ordinary shares for year, to provide £2,600 for corporation tax, carrying forward £653. During year Wiggins Teape and Co. (1919) acquired majority of consolidated ordinary shares, and as from July 1st interests of both companies have been closely associated. Directors are of opinion that this association is proving of material benefit to both companies in bringing about economy in management and distribution and intensification of export trades.

New Season's Greeting Cards.

Another Fine "Tuck" Display.

Once again Messrs. Raphael Tuck and Sons, Ltd., are inviting the trade to inspect their new season's showing of Christmas and New Year cards, which, together with the same firm's many other artistic productions, go to constitute what is justifiably termed their "World's Art Service." Last year's array of "Tuck" greeting cards attained so high a level of excellence that one might have been pardoned the opinion that high water mark had been reached and that no further advance could be expected. Yet in the display of upwards of 3,000 different designs comprising the 1923-4 collection one finds the same superb quality of workmanship and the same bewildering profusion of new designs, whilst the novelty and up-to-date character of many of the latest productions make one feel that the famous house of Tuck has succeeded this year in "going one better" upon even its own formidable past record.



This year, again, Messrs. Raphael Tuck and Sons have had the honour to produce Christmas cards for Their Majesties the King and Queen, Queen Alexandra, H.R.H. the Prince of Wales, and H.R.H. Princess Mary. The King's card is as usual historical in subject, the scene depicted being the landing of William Prince of Orange at Brixham in 1688. The Queen's card pictures the happy girlhood of Mary Queen of Scots, and Queen Alexandra's recalls the gratitude evoked by "Queen Anne's Bounty." "The Founding of Eton College" is the subject of the Prince of Wales' card, whilst a charming flower garden scene is the main feature of Princess Mary's. These designs, reproduced in a wide range of qualities for the use of the public, are sure to be a popular series.

Egypt and the East figure prominently in many designs, some of which embody genuine Egyptian hieroglyphics. Eastern subjects, which always lend themselves to attractive artistic treatment, are especially apposite this year in view of the great public interest aroused by the recent Luxor discoveries, interest which will be re-awakened in October and November next at the re-opening of the tomb.

Even more popular than last year will be the famous "Pot Pourri" (perfumed) series, in which a magnificent range of new designs has been produced. Some of these, we note, embody flower designs with petals imitated in real satin, a new departure giving remarkably rich effects. The well-known Broderie d'Art is another series which, in the wide variety of new designs that have been evolved, will add to its already great popularity.

Giving very striking effects by contrast with a black background, the "Ebonite" and "Jet Gems" series are assured of a big public. The "Broadcasting" series, again, strikes in with a popular craze and should be much in demand. The "Olde English Tapestry" and "Colour Gravure" series are other outstanding items, whilst the "Dry Point Etchings" series gives wonderful value for the small prices asked.

Space forbids to go further into detail in indicating the range and charm of the new "Tuck" collection, but we counsel all who are concerned with the retailing of greeting cards to lose no time in acquainting themselves with the wonderful selection of cards which the enterprise and great resources of Messrs. Raphael Tuck and Sons, Ltd., enable them to put on the market.

Envelope-Making Machinery.

Serviceable "Foldex" Models.

As the manufacture of envelopes by machinery, both in Europe and America, goes back beyond the memory of living man, the design of the machines—the result of the study of a multitude of capable mechanics—has, by a process of refinement, become somewhat stereotyped. The more important features of any one machine are therefore more or less similar to those of any other machine. It may, in fact, be said that detail and workmanship alone in these days differentiate the various types one from another. This is natural, since the operation to be performed is essentially a simple one, and it is reasonable to suppose that most methods of performing it have been by this time discovered, and tested exhaustively.

The "Foldex" Envelope-Making Machine.

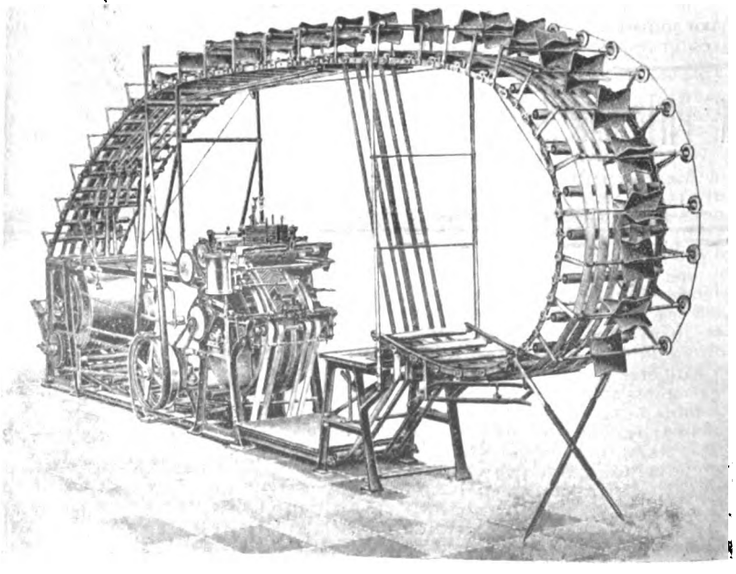
Consequently, the makers of the "Foldex" machines, which are illustrated herewith, do not claim to have developed any startling novelty in design, but rather to have applied their 40 years of experience in envelope machine manufacture and use to a combination of the best features hitherto known. They further claim that by the use of the best and carefully tested materials and the greatest care in manufacture, they produce a machine that will run indefinitely without skilled and expensive supervision, provided that it is properly cleaned and oiled.

Practical experience, they state, has shown them that the normal speed of envelope machines cannot satisfactorily be increased beyond a figure of 120 per minute, this speed, as it happens, being also the limiting capacity of the normal operator. Hence, including no other factor, it might be inferred that all machines, run on this given speed, would give the same output. And so indeed they would if all machines would run continuously. The makers of the "Foldex" have justified the contention that their machines will run continuously, day in, day out, all the year round, and that the human element, the individuality of the operator, alone affects the output. In this connection it should be noted that a few days' practice suffices to train a girl of ordinary intelligence to manage the machine with excellent working results.

These envelope folding machines are made in three types—(a) fixed sizes, (b) partially adjustable, (c) wholly adjustable. Each has its own particular application according to the type of work required, the extent of plant owned by the manufacturer, and the demand of the consumer. The large manufacturer will naturally prefer several machines, each working on a definite fixed size, with an additional one or two of the adjustable types for sizes out of the usual run. For the small manufacturer, making envelopes of various sizes according to the fluctuating demand of his market, the adjustable type will make its own special appeal. Naturally, the latter type of machine is a little slower in operation.

The several excellent features of the "Foldex" machines, tend to bring them more and more prominently before the discriminating notice of envelope manufacturers. Owing to the dipping action of the gummers, no special kind of gum is essential. The speed of working approximates to the ideal conditions, for one worker per machine. The quality and accuracy of the machines are deserving of careful attention. Every machine is given a thorough trial, and an extended "running in" before emergence from the factory, minute attention being paid to detail, and accurate folding of the cuttings. Each part of the machine is composed of that material which, after careful testing, has proved to be the best adapted for its specific purpose. The handling of the cuttings, more particularly in respect of the method of conveyance across the machine to the folding box, is so designed that the most delicate paper is uninjured in the process. The compact nature of the "Foldex" machine is evident from the dimensions 4½-ft. by 4½-ft. by 5-ft. (height)—a factor of considerable importance in works where space is somewhat limited. The power absorbed by one of these machines is ½ to ¾ h.p.

Gumming Machines.



The Rotary-Flap-Gumming-Machine (as illustrated) is designed especially for straight gumming, and is capable of feeding four of the "Foldex" envelope folding machines, *i.e.*, its normal out is 480 per minute.

Its predominant feature is the long, circular and overhead travel of the cuttings after the flap-gumming operation. During this travel, the cuttings are exposed to the action of a series of rapidly rotating vanes, and are finally returned to, and deposited on a central table. The convenience of this arrangement is obvious from the illustration. The normal height of the "Foldex" rotary gummer is approximately 10 ft., but this can be modified to suit any special demand, occasioned, for instance, by lack of adequate headroom. The overall length of this machine is 25 ft. with a width of 4 ft., and the power absorbed in driving the machine is similar to that required by the previously mentioned type, that is ½-¾ h.p. Two independent clutches are provided (for gummers and separators respectively), and control of the feeding and delivery of the gummed cuttings is centralised.

The range of gumming is adequate for all normal requirements, the limits being 2¾-14 in.

In actual practice a combination of four folding machines and one rotary gummer will give a greater output than four machines of the self gumming type, with an approximately equal amount of floor space, less initial expense, and a decrease in complication of machinery and supervision required. The makers are prepared to state beforehand the output of any particular machine on any given size, and to ensure that production in actual work.

The envelope trade is highly specialised, and yet at the same time in few other trades do the improvements in machinery take longer to penetrate. There are hundreds of machines running in large factories and producing less than 50 per cent. of the output that a modern machine will produce, and produce continuously. The old and inefficient machine is worse than a bad debt. In the face of modern machinery in a rival factory it is strangling and ruining its owner. Thus it behoves all concerned to acquaint themselves with the advantages which present-day machinery has to offer.

The Rotary-Flap-Gumming Machine.

Paper Mill Apprentices.

Some Quaint Provisions Against Misbehaviour.

In the brochure which has been issued by the Chirnside Paper Mills, entitled "Historical Account of Papermaking in Berwickshire," reference is made to two documents which throw an interesting sidelight on the conditions of labour which obtained in the early days. The first is a form of indenture, and the second a notice for the apprehension of runaway apprentices. Not only is the language quaint, but the wages and hours mentioned represent a great contrast with the conditions which prevail to-day.

The particular indenture reproduced refers to the date 1843, and provides for a service of seven years. The apprentice "binds and obliges himself to serve his said masters by night and by day and to obey all their lawful commands, keep all their secrets, and do not act prejudicial to their interest, but on the contrary to prevent the same to the utmost of his power."

After undertaking various other obligations of a moral character, the apprentice further "binds and obliges himself when employed at dry work to work from six in the morning until eight at night, and when employed at the vat to work the same hours as the journeymen do—and also to attend the engines at all times when desired."

There are also, of course, obligations on the part of the masters—in this case Y. Trotter and Son—who were "to pay to the said apprentice for the first four years the sum of 4d. sterling for every felt washing in lieu of the usual sum allowed to apprentices for the purchase of clothes, but he shall have no assistance in washing the felts."

For the remaining three years the apprentice was to be allowed "at the rate of the sum of forty shillings sterling per annum for the purchase of his clothes." This allowance, however, was provisional upon his conduct being satisfactory to his employers.

Over and above the allowances mentioned, the apprentice was to be paid "the following sums, viz.: When he is fourteen and under fifteen years of age the sum of four shillings and sixpence sterling per week; when he is fifteen and under seventeen years of age the sum of five shillings and sixpence sterling per week; when he is seventeen and under nineteen years of age the sum of six shillings and sixpence sterling per week: when he is nineteen and under twenty years of age the sum of seven shillings sterling per week and when he is twenty and under twenty-one years of age the sum of eight shillings sterling per week: And in addition to the above sums he shall be allowed when employed at couching the sum of one shilling sterling per week and when making the sum of one shilling and six pence per week, as extra allowance."

Apparently it was no uncommon thing for apprentices in those days to run away. Certain provision is made in the indentures covering such a contingency. The brochure sets out in detail a notice concerning the running away from Broomhouse Paper Mill of three apprentices, a reward of five guineas being offered for their apprehension. Two of them were recovered, but the last heard of the third apprentice (so far as the information in the brochure is concerned), he was "offering himself to the sea-service."

Scottish Notes.

(From Our Own Correspondent.)

THE upward tendency in prices of white papers is not helping business and the home trade especially continues decidedly dull. So far there is little sign of increased advertising as a result of the very meagre advantage offered in postal rates, and reductions in freight are being discounted by the enhanced cost of papermaking materials.

THE burning question as to whether printers and papermakers should also be wholesale stationers is being discussed without any reference to the ultimate consumers—the British Public, who may have something to say if they find that paper has to bear too many profits before reaching their hands. This may be a difficult matter for associations to settle, as the different members have all their own interests to consider; but it is a question that needs settlement if trade is to progress satisfactorily.

AS A broad principle, it may be allowed that a trader's profit must be justified by work done and risk incurred; and if printers hold larger stocks than are needed by their immediate requirements, they must get a price that will justify their extra expenditure and warehouse rent and yield them what may be considered as a dealer's profit. Then a mill with ample warehouse accommodation and, say, one machine may find it advantageous to hold stocks and sell them to large consumers and dealers needing only small supplies, and in reality they would not interfere with other mills who sell only to wholesale stationers, for they would require to make practically a dealer's profit on their transactions to make their business a success.

AGAIN, a paper dealer, rather than keep large stocks, might prefer to push his trade amongst the largest consumers, and thus do to a great extent the trade of an agent. In this way he would be of as much use to a papermaker as an ordinary agent, and his interests should be guarded, *i.e.*, he should have a profit to cover his risk of bad debts and the interest on his outlay in addition to the ordinary agent's commission.

WITH frank open dealing on the part of the different traders and common honesty there is no reason why any class of individuals should be "taboo." All have their uses and the various attempts in some quarters to eliminate agents and small dealers will only react upon those who make them, as they will ultimately have to sell at reduced profits with a less efficient staff of sellers.

MESSRS. CHARLES E. CORKE AND CO., papermakers' agents, 45, Ludgate-hill, London, have been appointed sole selling agents for the north of England for M. Peterson and Son, Moss Mills, Norway, the manufacturers of the well-known Moss pure kraft paper. Messrs. Corke, with branches in Bristol, Birmingham and Manchester, thus represent Messrs. Peterson throughout the whole of England and Wales. Moss pure kraft is made in sheets or reels, M.G. and unglazed, d/c 16 lbs. and up.

Paper for Stamps.

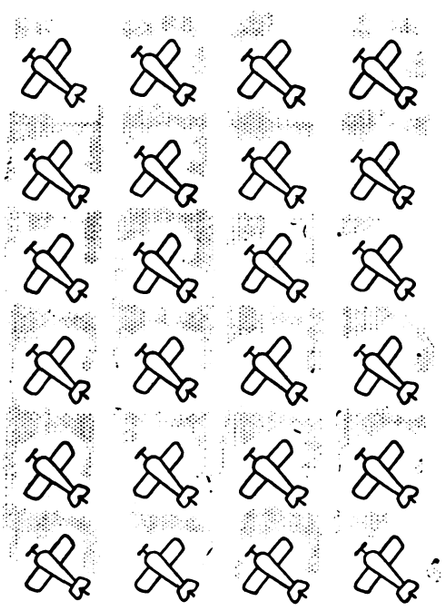
Process of Manufacture at Roughway Mills.

An interesting description of the manufacture, at the Roughway Paper Mills, near Tonbridge, Kent, of paper for postage stamps was prepared by Mr. Fred J. Melville for the *Exhibition Times* and *Congress Chronicle*, issued in connection with the London International Stamp Exhibition and the tenth Philatelic Congress of Great Britain, 1923. The date of the Exhibition at the Horticultural Hall is May 14 to 26.

The article is profusely illustrated by photographs taken by Mr. Melville, who is a well-known writer on stamp subjects. We are indebted to Mr. Melville for permission to reproduce part of his article, and for the use of the illustrations.

ROUGHWAY MILLS, NEAR TONBRIDGE, KENT.

Roughway Mill used to belong to the Turners, who also owned Chafford Mills, now dismantled, where the watermarked paper was made for all the British surface-printed stamps from their earliest introduction. Roughway began to make stamp papers about fifty years ago, and for a long period manufactured all the English and Colonial stamp papers until the mill was closed down in 1912. Its closing down was temporary, and philatelists have evidence of it in the temporary passing of those coloured papers, and the sensation of the "white-backs."



But Roughway has been quickened into life again, and as always, it specialises in watermarked papers. Its huge battery of "dandies" include the India "star," and "Court fee" papers, the Crown over CA, formerly the Roman and now also the Script, and postage papers for Egypt, the Sudan, New Zealand, Australia, several Indian native states, Palestine, Mesopotamia, and others. It was at Roughway that the special watermarked paper was made for the Aero stamp, which is to be printed at the Exhibition by Messrs. Thomas De La Rue & Co., Ltd., and the purpose of my visit to the mill was to witness the making of this paper.

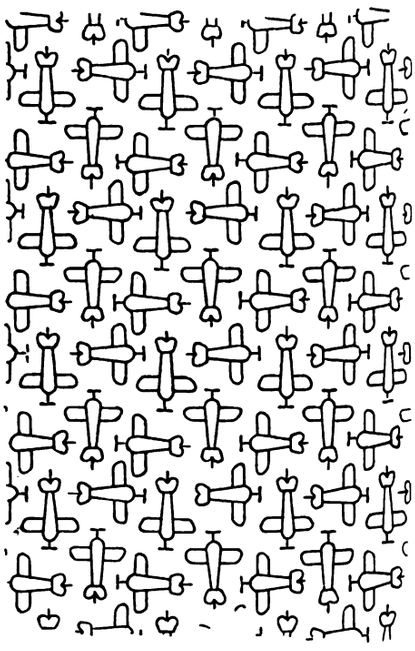
I wrote of the "wizardry" of paper-making, for it is indeed an affair of magic. The fairy's spell which changes Cinderella's rags into the most radiant raiment is equalled by this sorcery which turns dust-laden rags into fine paper of spotless cream.

The paper made here is entirely produced from rags, and long experience of the production of paper for stamps has proved that cotton rags are the best basis for this purpose; linen, which is the ideal thing for bond papers, is too hard to suit the needs of the stamp manufacturer. So in the process of cutting up the rags, a work done by women, who draw the rags over a knife, the cotton rags are separated from the linen ones, and all are graded into qualities: (1) supers, (2) seconds, and (3) thirds. Only the first class is used for making the stamp paper.

After going into the details of cleaning the rags and beating the fibres, we take up Mr. Melville at the dandy roll. He writes: The dandy roll on the machine on the occasion of my visit, was a special one, bearing the aeroplane device for a watermark. This was made by Messrs. Edwin Amies & Son, of Maidstone, who have been paper mould and dandy roll manufacturers for generations. The original Amies started the business in 1793. They have made the moulds and dandies for a great number of the watermarked papers known to philatelists, and learning of our plans for producing an aero stamp at the Exhibition, Mr. Ernest H. Amies, the present head of the firm, generously offered to make a special dandy roll for the occasion.

As a matter of curiosity it may be recorded that on the one dandy were two styles of the aerial watermark, one pane being of the "cut-to-register" kind (i.e., what philatelists call a single watermark, one device to each stamp) and the other pane an "all-over" watermark (multiple). Messrs. Amies will show the dandy at the Exhibition.

CUT-TO-REGISTER WATERMARKS.



So our paper passing under this dandy roll on the machine receives its watermark, and passes over steam cylinders for drying, and then through a bath or tub of gelatine size, and on over the air dryer, whence it passes over surface-calenders and is rolled up at the dry end of the machine.

The roll of paper, sometimes three-quarters of a mile long, has then to be cut up into sheets, and this requires special care with watermarked paper, on the "cut-to-register" plan. There is no difficulty in slitting the roll into the requisite widths, and our roll was first so slit to produce two narrow rolls, one of single and the other of multiple aeroplane watermark. The latter was cut into sheets of equal size, the watermark being all over the paper, no special regard for register being required.

On the other hand with a single or "cut-to-register" watermark the paper has to be cut with extreme precision or the watermark will not be in register on the printed stamps. This is usually done by hand, the paper being threaded on to needles which pierce the register marks at right and left. But Roughway possesses an ingenious machine of its own, specially designed and patented by Mr. Harry Cremer, J.P., the Managing Director. The roll of paper is drawn over the machine and is then cut to exact register. These machines whilst being simple and effective reduce the cost of cutting considerably below other methods now in use, and are very accurate.

The present predominance of the "all-over" or multiple watermark in stamp-printing is due to the fact that the printer is saved the trouble of getting his stamps in register with the watermark. At most mills, too, it is more costly to produce a cut-to-register watermark than an all-over one because the cutting by the old hand method is a slow business But in the general interests of security, and that is one of the chief objects of a watermark, the cut-to-register, accurately cut, and accurately printed, is no doubt a greater safeguard against counterfeiting, requiring just that perfect precision in cutting and in printing that the counterfeiter is unlikely ever to be able to attain without the most elaborate machinery.

Paper is peculiarly susceptible to a variety of influences, and an important feature in the making of paper for stamp-printing is to ensure its even quality and its mature condition. The ingredients, even the rags, are stored in bins for months before they are used, and the sheets of paper when made are not sent straight off to the printer. The paper is then loft dried, which enables it to take up its natural amount of moisture by being hung up in racks in a room controlled in supplying the correct amount of ventilation. After this process the paper is stacked away for six to eight weeks, at the end of which time it has become thoroughly matured, and is then in a right condition to work kindly on the printing machine.

MULTIPLE AERO STAMP WATERMARKS.

All this is a slow business, but one which saves endless trouble and waste in printing. Cheaper materials and more rapid production have been applied to the production of stamp paper at home and elsewhere, but the net result is never economical, for what is saved in the actual cost of

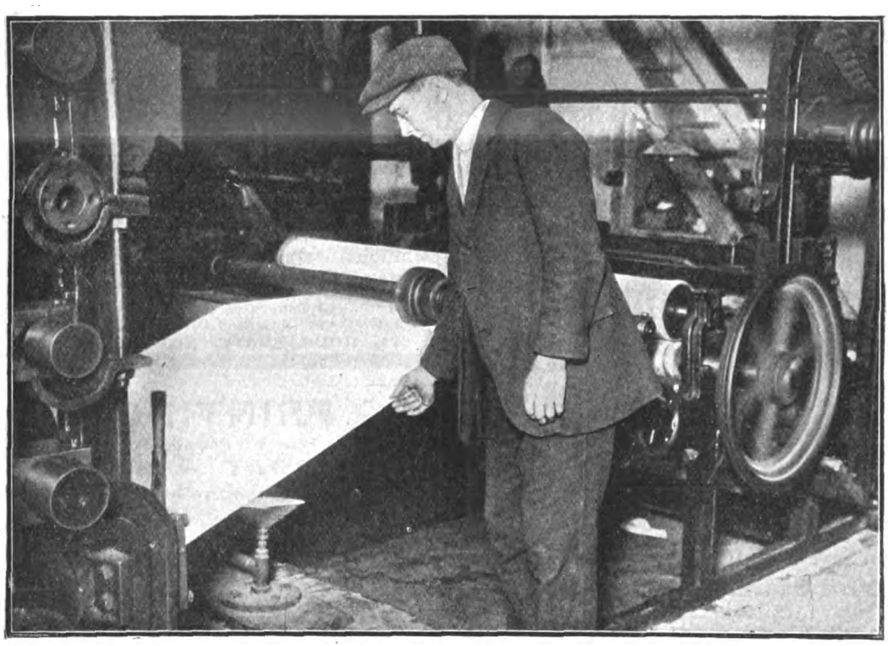
the paper is lost in the heavy percentage of rejects from the printed sheets.



The sheets when cut are frequently tested on glass frame gauges. For each kind of watermarked paper made, a glass gauge is prepared showing the complete watermark arrangement together with the register marks. A sheet laid on its appropriate frame and examined against a light must correspond exactly in respect of watermark and cut. These gauges are also very useful for securing correct register to start with.

TESTING FOR REGISTER.

The last stage in the work is the sorting, examination and counting of the sheets. I took up several sheets that had been thrown out for repulping, and it was difficult for the untrained eye to detect even the slightest flaw. But there was just one tiny speck in the large sheet, no bigger than this full stop. The keen eye of the examiner had found it and the sheet was thrown out. The sheets are counted twice and are passed on to the packers, who pack and seal each ream separately with the special Government seal.

Roughway is only a one-machine mill, but it can cope with a vast output of paper in its special class. Devoting its output exclusively to the best class of watermarked rag papers, its employees have been working stamp papers the greater part of their lives, and even the old machine seems to know its work is important and exclusive, and to take a pride in rolling out its creamy lengths of perfect paper. Mr. A. E. Larkin, foreman of the *salle*, or finishing house, whose memories of paper-making go back to the "crown" and "anchor" days of British stamps, is one of the oldest employees at the mill, and his reminiscences, if he could be persuaded to write them, would provide some useful data for philatelic history.

DRY END OF MACHINE: PAPER PASSING FROM CALENDER OVER AN ELECTRIC LIGHT WHICH SHOWS UP THE WATERMARK.

On behalf of the J.P.S. and the Exhibition Committee I should like, in conclusion, to place on record our great appreciation of the interest taken in our endeavours to produce a perfect aero stamp on the part of the firm of the Roughway Mills, Ltd., and of Messrs. Edwin Amies and Son, the dandy-roll makers. To Mr. G. O. R. Cremer, the assistant managing director of the mill, my thanks are specially due for his helpful and instructive guidance through the processes of papermaking, and for the facilities he afforded me for visiting this historic mill.

Directors :
SIR ADOLPH TUCK, BART.
MR. GUSTAVE TUCK.
SIR ARTHUR CONAN DOYLE.
CAPT. DESMOND TUCK.

Raphael House,
CITY,
LONDON,
May, 1923.

YEAR by year it is our privilege to record the latest story of the achievements of our "WORLD'S ART SERVICE" and to-day at the threshold of a new Season, we lift the veil upon a new collection of Christmas and New Year Cards, Postcards, Calendars, Gift Books, Pictures, Art Novelties, etc., the result of yet another twelve months' careful and ceaseless labours, which is resplendent with Art Treasures, unapproached in their beauty and craftsmanship.

Thanks again to this all-embracing "WORLD'S ART SERVICE," which has made Raphael Tuck and Sons a household name in every corner of the Globe, these Gems of Art will not lie hidden through the ages, but will at once be brought within the reach not only of the highest but of the most humble, and cast their rays upon countless homes.

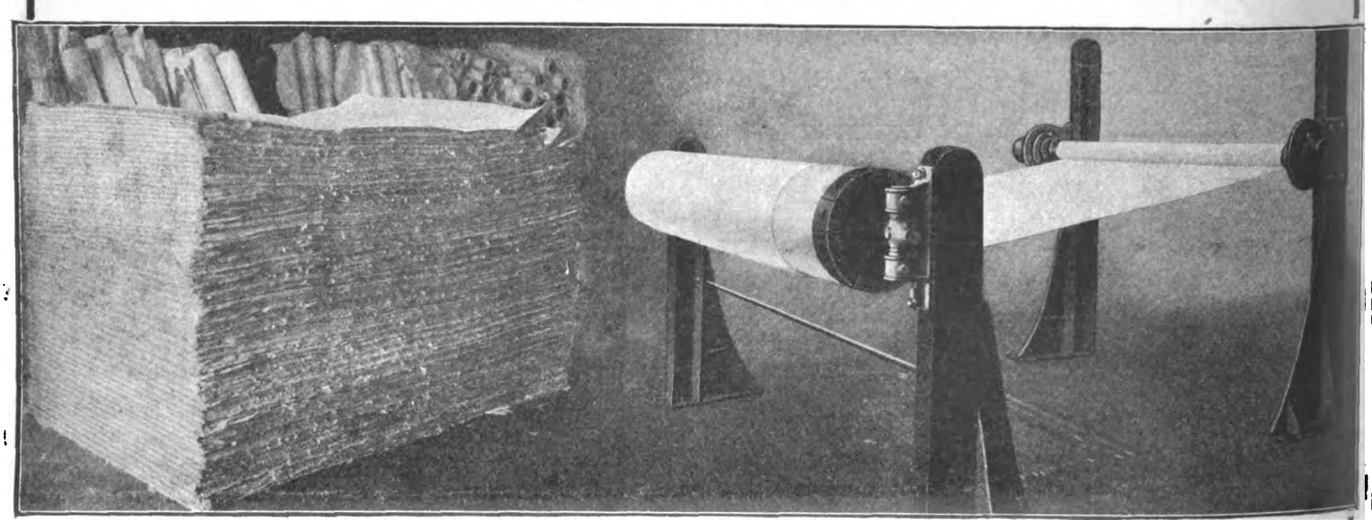
Christmas and New Year Cards. The World-wide reputation enjoyed by our Christmas and New Year Cards will be more than eclipsed by this year's wonderful collection, which comprises upwards of 3,000 different designs embodying a host of distinctive features and combining between them all that is choicest in the Arts of East and West.

Calendars, Juvenile Gift Books, Toy Books, etc. High in the "WORLD'S ART SERVICE" rank our this year's magnificent collection of Art, Fancy and Block Calendars, Gift Books, made familiar by our choice juvenile "Raphael House" and "Treasure House" Libraries, Toy Books, Painting Books, Panoramas, Father Tuck's Annual, Little People's Annual, delightful Dressing Dolls, Baby Books, etc., etc.

Pictures and Picture Postcards. A splendid range of Novelties which space forbids us to enumerate and for the details of which we refer our friends to the complete illustrated catalogue "THE WORLD'S ART SERVICE" now in preparation.

L'Envoi. Such is the latest chapter which it is our privilege to add to the history of Raphael House.

It will we feel sure prove a cause for congratulation by all our friends, old and new, both at home and across the seas, that it has been possible for us to bring our "WORLD'S ART SERVICE" to a degree of perfection undreamed of in the past.



In thanking you for your personal share in the dissemination of our manifold Art publications during so many years, we trust we may ever venture to claim the continuance of your valued interest in "THE WORLD'S ART SERVICE."

Very faithfully yours,

Raphael Tuck & Sons Ltd

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting.
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Photo-Engraver and Printer Should Co-operate.

An Appeal for a Greater Spirit of Friendly Helpfulness Between Craftsmen in the Graphic Arts Industries.

By WILLARD R. JILLSON.

Photo engraving and printing are interdependent. Much of the world's business today is made possible by a prodigious use of printers' ink in conjunction with letterpress illustrations produced by the photo-engraver. Photo-engraving is a new art, if compared with printing, but statistics prove beyond controversy that modern advertising began to develop with the birth of photo-engraving, less than fifty years ago, and that scarcely a periodical leaves the press to-day without some illustration or emblem bearing testimony to the truth of this assertion—that photo-engraving and printing are interdependent and should go hand in hand wherever publicity in any form is desired through the printed page. Without the half-tone illustration and the line etching on zinc, all forms of printed matter, from the daily newspaper to the library *edition de luxe*, would revert to the use of the wood-cut or the steel engraving, which reached their greatest usefulness less than half-a-century ago.

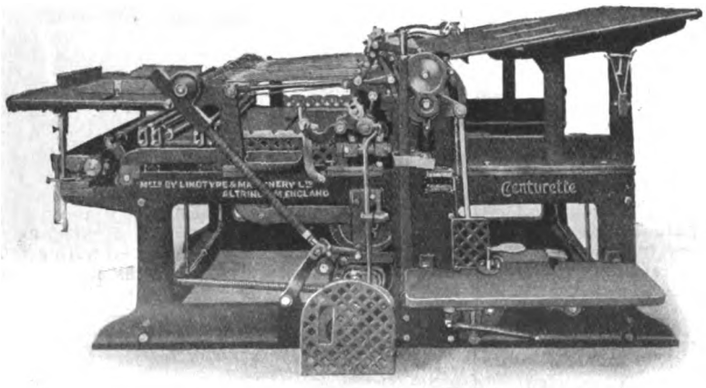
In making an appeal, therefore, for the highest type of friendly co-operation between printers and engravers, we feel that it is self-evident that the two crafts are inalterably linked together by the nature of their product and that if those engaged in these industries will take the time and interest necessary to inform themselves more intimately in regard to the practical application of their allied art, much of the trouble now arising between the printer, the engraver and the ultimate buyer of the completed booklet or catalogue, will be avoided.

The writer has had the rather unique experience of having been both a printer and a photo-engraver over a period of forty years, having learned the printer's trade, so-called, in the newspaper and job office of his father, who also learned the printing trade when a small boy. Having been "to the manner born," as it were, we feel at liberty to speak without bias, and when we say that both engraver and printer are frequently at fault, we are sure the experience of others will bear us out in the statement. Too often one tries to lay the blame for poor results on the other, while the dissatisfied customer, knowing little, if anything, of the technicalities of printing or engraving, is at a loss whom to believe, and goes away disgusted, with a justifiable conviction that the art of photo-reproduction for printing purposes is far from perfect.

There is little consolation for the disappointed buyer to be told by the engraver that the "cuts" were all right, but that they were not printed on suitable stock; or that poor judgment was exercised in the grade of ink used. Instances of this kind are altogether too common. No one seems to be willing to take the blame for producing an unsatisfactory piece of work. And the regrettable feature of it is that there is no reason why every printing job, where half-tones or line plates are used, should not be absolutely perfect. Lack of co-operation in almost every case is the factor which leads to unsatisfactory results. This leads us to repeat a slogan, well known in the printing trade: "See your printer first."

So far, for the sake of argument, we have dealt mostly in generalisations, which, perhaps, for the purpose of a direct appeal to both printer and engraver, are not quite specific enough to be of real value. Therefore a review of the more frequent causes for complaint where the printing of photo-engraved plates is concerned may serve to bring about the co operation so essential to good work.

In the first place it must be remembered that a large percentage of engraving orders are handled either by correspondence or telephone. The engraver, therefore, has only the written instructions of the customer, or telephonic communication to guide him in filling an order. If these instructions are inadequate, delay must ensue, or the engraver must use his own judgment and take a chance on having interpreted his customer's wishes correctly. This is risky business. It may be seen, therefore, that lack of care in ordering can easily lead to no end of annoyance and vexation. Sizes should be plainly marked on the copy, where possible, and if the photograph or drawing to be reproduced is of such nature that to mark it would mar its value or appearance, the instructions to the engraver should be attached to it, plainly written or typed. The width and height should be designated, crop marks indicated, half-tone screen to be used and the finish desired—that is, square, with line; square, without line; silhouette, vignette, or combination half-tone and line. It is plain to see how the omission of any one of these necessary details would leave the engraver in doubt.



In designating the size, care should be exercised in advance to determine by rules of proportion what the dimensions of a plate will be when reduced by photographic methods from an original drawing or photograph. To many advertising experts and printers details of this nature are very simple and it would seem almost superfluous to refer to them here. But a very short expereince in an engraving shop will demonstrate the fact that even old buyers of engravings pay little or no attention to such details. They bring in a copy and leave instructions to make it fit a given space. This cannot be done in every instance. The proportions of the original frequently make it impossible to get the desired width without cropping the plate either top or bottom in such a way as to spoil its effectiveness. A sliding rule or logarithmic circular scale should be among the properties of every well-regulated office where engravings are used or ordered. A simple method of determining reduction, where the copy will permit, is to draw a diagonal line from the lower left-hand corner to the upper right-hand corner of the drawing, then measure off the desired width on the base line, and draw a perpendicular line from this point to a point of contact with the diagonal line. This will determine the height on reduction. Care must be exercised, however, that all lines are true with the face of the copy, especially if they are drawn on the reverse side of a photograph. The word "long" should never be used to designate a dimension. Width is from left to right; height is up and down.

The engraver's work is unique, in that his plates must be made to fit exactly in the space for which they are intended, and the same care should be exercised in filling out an engraving order that an accomplished tailor employs when fitting an individual with a custom-made suit of clothes.

So much has been written in regard to the proper half-tone screen to use on any predetermined weight or quality of paper, that the subject would seem to have been worn threadbare. And yet this is an important element in good printing, one that gives rise to many disappointments and one that may easily be avoided. It is of little consequence that the engraver's proofs, which have been carefully drawn on a hand press, upon heavily coated proving stock, look clean and beautiful. If they will not print that way in the printer's run, it is evident something went wrong, either with the plates or the printing. When buyers of engravings get the fact firmly fixed in their minds that there is a half-tone screen suitable for each grade of printing paper, from "news" stock to the finest super-coated, they need have no anxiety as to results. If the engraver can be furnished with the sample of the stock upon which his half-tone is to be printed, there will seldom be any difficulty, unless a cheap, thin, job ink

is used, which was never intended by the ink-maker for any such purpose. Half-tone inks are stiffer and have more body than ordinary job or book inks and should be specified where half-tone illustrations are used.—*The American Printer.*

Manufacturer, Merchant and Agent.

(From Our Scottish Correspondent.)

WITH reference to our last week's "Notes," it would be a pity if the paper trade in this country was stereotyped in the way that it is done in America, for the mentality of the two nations is different. In the first place, a man who makes his livelihood by selling is likely to be a more efficient salesman than one who is simply a mill nominee and gets a salary for his work.

THEN a dealer who can only buy a particular paper from another dealer is not likely to push that make, and a trader whose profit is strictly limited by trade price lists, though it may make him energetic in increasing his overturn, may also make him less inclined to attend to the special interests of his customers, a point that British traders get some credit for. Most small consumers of paper are quite ignorant of the technicalities of what is really an intricate business and have to rely upon their suppliers. If the dealer has no time to consider his customers' interests, he is not so likely to retain his custom.

THERE is a good deal we can learn from our American cousins as regards trading matters. They are frank and open in their methods and not too reticent as to the value of their wares; but customs that suit a large country like America are not always so suitable for a small country like this. Moreover, we are hampered by complicated coinage, weights and measures, which greatly handicap us in our foreign trade. If we could get these remedied, it would be a much simpler matter to standardise our sizes of paper.

IN this country we believe greatly in individual effort, and the selling ability of a man has its limits. He may do very well with one or two dozen samples to show, but if he has to offer several hundreds, he cannot do them all equal justice and naturally will make his choice. So agents representing one or two mills can, if well supported—and this is very essential to success—do a better business for them than if they had to offer for a syndicate owning perhaps 10 or 20 mills. Theoretically, a printer should make his profit on printing, not on selling paper; but there is no logical reason why a printer should not also be a wholesale stationer; and what are called manufacturing stationers really do combine several distinct branches of trade in their business. When profits are limited by mill price lists, there is less inducement for traders to deal in such articles.

U.S. Board Exports.

February Figures Relating to Paper, Straw and Bristols.

Exports of Bristols and Bristol boards from the United States during February reached a total of 445,805 lbs. ($28,481). Paper board and strawboard dispatched abroad came to 3,118,419 lbs. ($164,108). Cuba is the principal market for Bristols and Bristol board, taking 284,344 lbs. ($12,793). Canada followed with, 69,798 lbs. ($5,279). An important market is Japan, which received 51,069 lbs. ($5,347) while Australia took 7,435 lbs. ($1,315).

Of the total exports of paper board and strawboard the provinces of Canada took the largest proportion, namely 1,860,007 ($86,004) Other important consumers were China 288,995 lbs. ($15,423), Cuba 276,455 lbs. ($12,995), Japan 233,898 lbs. ($13,275), England 105,354 lbs. ($6,921). Then follow New Zealand 70,271 lbs. ($6,569), and Australia, 21,073 lbs. ($2,311).

THE *Berlin Evening News*, which recently published its first issue, is the first Berlin newspaper to be printed in English. The price is 250 marks a copy.

Paper Bag-Making Machine.

Successful Action by Manufacturers.

In the King's Bench Division last week Mr. D. O. Evans, paper bag manufacturer, of Finchley-road, was sued by Messrs. Ewart and Collis, Ltd., machinery manufacturers, of Euston-road, who claimed £629, the balance of the price of a No. 4 paper bag-making machine, or the return of the machine.

The case for the plaintiffs was that the machine, worth £900, was supplied in 1921 under a hiring agreement, under the terms of which £150 was to be paid on delivery and the balance, plus interest, by nine monthly instalments. Defendants paid the deposit, but had only paid £138 of the balance, leaving £629 owing.

For the defence it was alleged that the machine was unsatisfactory, and damages were claimed amounting to £5,000.

Mr. Mayer, K.C., for the plaintiffs, said paper bags were made by the million by very interesting and expensive machinery. This particular machine turned out bags at the rate of 85 a minute. There was great difficulty in getting the deposit and first instalment, and nothing had been paid since. There was no truth in the allegation that there was anything wrong with the machine. Plaintiffs had supplied defendant with other machines previously, but not a penny was paid until the bill reached £1,818.

Judgment.

His Lordship, in giving judgment, said the defendants alleged that the machine would not work and yet the evidence showed that 30 tons of bags had been turned out and sold within eight months. Nowhere in the correspondence was there any complaint of any specific defect. No facts had been given to the Court to show that the machine did not turn out all that was required of it. In a case like this in which about £5,000 was claimed by the defendants as damages consequential upon the alleged defects in the machine, it was of the most vital importance that the defendants should disclose all the books and documents bearing upon the claim, and the fact that that was not done threw suspicion on the claim. On the whole, he (the Judge) arrived at the conclusion that, except for a minor defect, the machine was perfectly good, and therefore, there would be judgment for the plaintiffs for £618 9s. 8d. with interest, and the counter-claim would be disallowed.

A stay of execution was granted with a view to appeal.

British Empire Exhibition.

Progress of the Papermakers' Guarantee Fund.

The Papermakers' Association are definitely committed to a guarantee fund in connection with the papermaking machine which is to be installed at the British Empire Exhibition next year, the executive committee having passed a resolution in favour of the proposal. In response to a circular appeal which Mr. Foster has issued to the members of his Assotion, some substantial promises have already been received. The total sum up to the present is over £2,000, but as £5,000 is aimed at it will be necessary for those who have not yet replied to the circular to do so as soon as possible.

The offers of subscription so far received include the following:—

100 Guineas.—Edward Lloyd, Ltd.; A. E. Reed and Co.; Star Paper Mill Co., Ltd.; Cooke and Nuttall, Ltd.; East Lancashire Paper Mill Co., Ltd.; Donside Paper Mill Co., Ltd.; Empire Paper Mill Co., Ltd.; Imperial Paper Mills; Reed and Smith, Ltd.; Olive and Partington, Ltd.; and Sun Paper Mill Co.

£100.—Peter Dixon and Son, Ltd.; North-Eastern Paper Mill Co., Ltd.; Fisher and Co.; Chas. Marsden and Sons, Ltd.; Darwen Paper Mill Co., Ltd.; Thomas Owen and Co., Ltd.; and Thames Paper Co., Ltd.

£50.—British Paper Co., Ltd.; John Wild and Son; Hendon Paper Works; and R. and W. Watson.

30 Guineas.—Wm. Tod, Jun. and Co., Ltd.; John Tod and Son.

£25.—P. Garnett and Son.

20 Guineas.—W. Howard and Son and T. B. Ford, Ltd.

Modern Lithographic Developments

Forthcoming Series of Articles.

We receive numerous requests for reliable information regarding the developments of photo process lithography and its possible consuming inroads into the domains of typography and engraving. Those developments are such as to raise the question whether there is any immediate fear of this planographic process usurping the work hitherto belonging to the relief and intaglio processes of typography and engraved plate printing.

With a view, therefore, of keeping our wide circle of readers supplied with accurate and reliable information as to the actual position and prospective possibilities of offset lithography and analagous photo litho developments, we have arranged with that well-known lithographic and photo-process expert, Mr. Joseph Goodman, F.R.P.S., author of the standard text books on "Modern Metalithography," "Colour and Colour Printing," etc., for both America and the British Isles, to write us a monthly article dealing with developments of these crafts and their inter-relation to the sister crafts of printerdom.

Mr. Goodman is very popular as a practical technical craft writer, enjoying world-wide reputation. He was for many years teacher of the Lithographic and Photo Procees Classes of Liverpool and Manchester Municipal Technical Schools. For several years also he travelled the whole of the British Isles demonstrating and instructing litho and process craftsmen in the latest and most expert methods of working metal plates. He is also conversant with Continental methods, having worked some of his wander-years of experience in both Germany and Belgium. He has been foreman and manager of lithographic establishments, as well as journeyman, so that he will approach the subject with a full appreciation of the variety of interests involved in the matters whereof he writes.

Portuguese Customs Tariff.

Among the "Preliminary Provisions" to the new Portuguese Customs Tariff is one relating to "Tare Allowances (Art 44)." This states that "when the net weight is established by the legal tare allowance, the following percentage shall be deducted from the gross weight, according to the nature of the goods and packages":—Paper and cardboard of all kinds, bales and bundles: Plain, 2; with boards, and with boards and iron hoops, 5; paper, painted or stamped, cases, when put up in rolls, 15; caustic soda, iron drums, 3.

THE proprietor of the Amsterdam *Telegraaf* has bought the *Nieuws van den Dag*, an old-established daily paper of Amsterdam, and has had it incorporated with his popular daily, the *Courant*, also published in Amsterdam.

Trade Notes.

AT the Dartford Police Court on Friday, Messrs. Vickers, Ltd., The Broadway Press, Wilmington, were charged with employing girls during prohibited hours on Saturday afternoons and Sundays, in December, January and February. The cases had been adjourned to enable Mr. J. Lloyd Edwards, H.M. Inspector of Factories, who prosecuted, to amend certain dates. Mr. Norman T. Baynes, for the defence, pleaded guilty in several cases where the dates were not in dispute and not guilty in others. Penalties were imposed amounting to £63, and the defendants were ordered to pay 22s. costs.

WE are requested to state that Messrs. Empson, Hall and Co., printers, stationers, etc., of 30-32, Charles-street, Manchester, are in no way connected with Messrs. Harold Empson and Henry Russell Verdon (of 15, Gordon-street, Charles-street, Manchester), against whom a receiving order was recorded in a recent issue.

CO-OPERATIVE NEWSPAPER.—At the Co-operative Congress which opened at Edinburgh on Monday, there was an interesting debate on a proposal of the Central Board, moved by Mr. George Brownhill, chairman of the Co-operative Publishing Company, to establish a co-operative daily paper, which it was estimated would cost at least £500,000 to launch and maintain for the first year. The motion of the Central Board asked for power to canvass societies during the year with a view to a report on the scheme being brought forward at next congress. The motion was carried, and the canvass will therefore take place.

NEWSPAPER COSTS AND PRICES. — *The Times*, announcing yesterday that on and after June 4th the price of the paper will be 2d. daily, explains that under present conditions 1½d. is not an economic price. "The general costs of newspaper production are, for the most part, still at the highest point reached after the war." Paper, adds *The Times*, still costs more than it cost in 1914; there has been no reduction in the war-time rate of printers' wages; and carriage and distribution are items which stand at more than double the pre-war figure. The *Daily Telegraph* also announces an increase in price from 1½d. to 2d. on and after June 4th, and says that it is acting by arrangement with *The Times*.

PRINTERS' CHARITY SPORTS.—The Printing and Allied Trades Charity Sports Association has arranged for the twentieth-eighth annual charity sports (under A.A.A. Laws and N.C.U. Rules) at Stamford Bridge Athletic Grounds, on Saturday, June 23rd, at 2.30 p.m. sharp. There will be a long series of interesting events, and the L.S.C. Military Band will be in attendance. Entries close first post Monday, June 18th (to hon. secretary, W. C. Jewell, 21, Shandon-road, S.W.4), and particulars and tickets can be obtained from Mr. H. F. Parker, 8, Albion-road, Wandsworth-road, S.W.4; the Falcon Hotel, Gough-square, Fleet-street, E.C., or from any member of the committee.

THE Civic Press, a Glasgow trade union-owned printing concern, has decided to go ahead with a development scheme. A site for new premises has been secured in the Garscube-road area, and building will begin at an early date.

THE annual general meeting of the London Master Printers' Association has been provisionally arranged for Thursday, June 14th, at 12 noon, at Stationers' Hall.

THE next meeting of the South-West London Master Printers' Association will be held on Tuesday, June 5th at Stanley's Restaurant, 235, Lavender Hill, Battersea, 6.30 for 7. Mr. F. Heckford (chief chemist to John Dickinson and Co., Ltd.) will speak on "The Peculiarities and Pitfalls of the Craft" from the papermaker's point of view. Mr. M. Skeins, the general manager of John Dickinson, will also be present and will be pleased to answer questions.

J.I.C. DISTRICT COMMITTEES. — Following the recent successful meeting at Leicester, which was addressed by the joint secretaries of the Joint Industrial Council, Messrs. A. E. Goodwin and A. E. Holmes, on the subject "What the Joint Industrial Council is Doing," a meeting was held at Northampton on Friday last, addresses being given by the same two speakers. Arrangements were made for an inaugural meeting for a district committee in this important centre. The organisation committee of the J.I.C. has in hand an attractive leaflet headed "The Great Opportunity," which will shortly be circulated to employers and workpeople.

GOVERNMENT AND ADVERTISEMENTS.—Official publications and forms are to be permitted in future as a medium for advertisements, is stated in a reply given by Major A. Boyd-Carpenter (Financial Secretary to the Treasury), in Parliamentary Papers last week. The revenue derived is applied as an appropriation in aid of the Stationery Office Vote. An advertisement which appears on a National Health Insurance form has brought in £135. Subject to the space not being required for official purposes, it is proposed to allow advertisements to be printed on certain forms used in connection with income-tax, including receipts, but not including demand notes.

NEWSPAPER PRESS FUND.—Princess Marie Louise presented the prizes after the bridge tournament on Thursday afternoon at Chesham House, arranged by Lady Burbidge and Mrs. Braham in aid of the Newspaper Press Fund. Over a hundred tables were sold. The tournament was very well supported, and many prizes were given. This was the first occasion on which Chesham House had been used for any but Russian charities, it being lent as an appreciation of the services of the Press to Russian refugees.

MR. GEORGE ROBEY will be one of the 16 "star" artists in the super-cabaret at the Hotel Metropole to-morrow (Friday) evening, when a special performance in aid of the Newspaper Press Fund will be held. Many tables have already been booked, but seats at three guineas each can still be had. The project has the enthusiastic support of the Prince of Wales, who is chairman of the Diamond Jubilee Newspaper Press Fund, and many eminent people have secured tables.

TECHNICAL STUDENTS' REUNION.—On Saturday, May 12th, a large number of technical students and their friends met at Stationers' Hall, and wound up the session by a social evening, which comprised singing, dancing and whist. Mr. Edward Unwin, a Past Master of the Company and chairman of the Stationers' Company and Printing Industry Technical Board, welcomed the students.

BLOCK PRINTING DEMONSTRATION.—Members of the Newcastle Print Collectors' Society were greatly interested on Tuesday of last week in a demonstration in printing from blocks and plates, given at the exhibition of colour printing in King Edward VII. School of Art, Armstrong College. Mr. Walter S. Corder, president of the Print Collectors' Society, explained the various processes of printing from blocks, and gave demonstrations of wood-cut printing, using for this purpose a small table printing press. Mrs. Clephan gave a demonstration of colour printing from wooden blocks, by the Japanese method, using six different blocks to reproduce one of her own delightful Swiss drawings. Mr. A. Heslop explained the process known as mezzotint printing, and Mr. Bullock made prints in black and white from wooden blocks in the Japanese method. The use of a small etching machine was also explained and demonstrated.

THE *English Review* from the June number will be reduced to 1s., under the new proprietorship; it will be enlarged, and new features added. Mr. Austin Harrison, who has resigned his position as editor, will continue to contribute articles on foreign affairs.

THE *Cambria Daily Leader*, which had 48 pages in its issue of last Friday, claims to have achieved one of the biggest things in provincial evening paper journalism.

A NEW monthly journal about to be published is the *Baxter Times*, which will be devoted entirely to Baxter, Le Blond, Kronheim, Dickes, Fawcett, and the many other oil colour printers of the nineteenth century. It is to be published on the 10th of each month, price 1s. 3d., by the Courier Press, Leamington, Spa.

MR. JAMES CALLINGHAM, founder of the *Insurance Record*, and for 52 years a member of the editorial staff of the *Morning Advertiser*, died at Wimbledon on Friday, aged 87.

NEWS has been received by mail from Toronto of the death of the Rev. Dr. James A. Macdonald, former editor of the Toronto *Globe*

THE death occurred last Thursday at Buenos Aires of the distinguished Argentine journalist, Edward T. Mulhall, who in 1900 founded *La Argentina*.

THE late Mr. George Palmer Wright (77), of Birkenhead, letterpress printer, left £1,972 (net personalty £1,881).

THE late Mr. Charles Morrison Pattullo, of Gallery, Montrose, N.B., papermaker, a director of the Donside Paper Co., who died January 11th last, left £29,429. Testator was the owner of 100 "B" ordinary shares in the British Distribution Co. of the nominal value of £1 each, but on which only a shilling per share had been called up. These £1 shares (1s. paid) have been valued for probate at £214 per share.

TO *The Times* of Friday last, Mr. A. E. Goodwin, secretary of the Federation of Master Printers, contributed a vigorous letter in reply to certain criticisms regarding the use of posters. The use, importance and general high standard and pleasing effect of the modern poster received due emphasis, and the letter deprecated indiscriminate criticism on the subject.

STATIONERS' SOCIAL SOCIETY. — Attention may again be drawn to the fact that the annual golf competition for the Horsburgh Cup will take place on Tuesday, May 29th, at Hadley Wood Golf Club. Those interested in the bowling section are also looking forward to a pleasant meeting on Tuesday, June 5th, when the competition for the Woollacott Cup will be played off at New Malden.

AT a pleasant and successful dinner to American correspondents in London given last week at the Lyceum Club, representatives of English newspapers were invited, and Miss Elizabeth Craig, wife of Mr. Arthur E. Mann, London correspondent of the *New York World*, presided. The American Consul-General (the Hon. Robert Peet Skinner) was one of the speakers.

THE British Delegation to the forthcoming Advertising Convention at Atlantic City is now complete, and numbers 110. It is hoped that the next Convention will be held in London.

WONDERFUL TYPECASTING.—A remarkable feat in typecasing is credited to the Lanston Monotype Co. of America. There has been produced a leaden type, of standard length, at one end of which, on a surface just one-sixth of an inch square (12 points) has been superimposed the Lord's Prayer, by casting. Under an ordinary magnifying glass the outline of the letters may be discerned, but a powerful microscope shows that each letter is a perfectly cut capital. The letters are only ·006 inches high. There are 61 words, one dash, four commas, five periods, one semi-colon and a hair-line border, outside of which are the words "Lanston Monotype Machine Company, Philadelphia."

WITH a view to simplifying the circulation of news and general information concerning Canadian matters, the Canadian Government has decided to establish in London an official Press Bureau, and has appointed Mr. W. T. Cranfield as director, with offices at 9, John-street, Adelphi.

RUSSIAN INTERNATIONAL BOOK COMPANY.—H.M. Representative at Moscow reports that a mixed company has been formed, under the title of "The International Book Company," for the sale of foreign publications in Russia and the export of Russian books abroad. The company is also empowered to sell educational matter and apparatus of all kinds, stationery, photographic supplies, cinematograph films and accessories, and to act as an agent for advertisements. The capital of the company is 100,000 gold roubles, and is to be subscribed by the People's Commissariat for Foreign Trade, the Supreme Council of National Economy, and the Russo-German Company "Kniga." The latter company has a capital of 100,000 marks, and carries on the sale in Moscow of German and Russian books printed in Germany.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

Andrew Currie, Joseph Quantrell Hebden William Walter Shaw, and Vernon Possnett instructors of letterpress printing, Scotforth, Lancaster.

E. W. Andrews and H. V. Coles, paper mill agents, 181, Queen Victoria-street, London, under the style of E. W. Andrews and Co.

WEST & NORTH-WEST

London Master Printers' Association

A Chat About Australia.

The principal feature of the meeting of the Association of Master Printers of West and North-West London, held on Tuesday of last week at the Westbourne Park Institute, was the presence of Mr. George F. Hussey, M.P., president of the South Australian Master Printers' Association, who gave a chatty address upon the state of things "down under."

An agreeable prelude was provided by social intercourse with the aid of excellent light refreshments, after which about a score of members, including a few visitors, settled down for the business of the evening, the chair being occupied by the Association's genial president, Mr. J. Emlyn Jones.

Preliminary business included the election of two firms to membership, and some indication was given of the nature of future meetings. Arrangements are being made for a party of W. and N.-W. members to visit Messrs. John Dickinson and Co.'s Apsley Mills on Tuesday, June 12th, when it is expected that the outing will prove a very interesting and instructive one.

Mr. J. R. Burt reported briefly upon points of interest that had been dealt with at recent meetings of the L.M.P.A. council.

Arising out of this, expression was made by Mr. Emlyn Jones of the Association's very high appreciation of Mr. Burt's efforts on the council in furtherance of matters of special interest to the W. and N.-W. Association.

A resolution dealing with a financial matter was brought forward by Mr. S. Goss, but the meeting realised that the subject called for more thorough discussion than time permitted on this occasion. It was accordingly agreed to postpone the discussion to a later meeting.

Mr. G. F. Hussey's Address.

Mr. Hussey received a very cordial ovation on being introduced by the president. He prefaced his remarks by recalling a visit he paid to England somewhere about 45 years ago, when he worked for nine months with Messrs. Morton and Burt.

With the aid of a large map Mr. Hussey then proceeded to give his hearers a considerable amount of information about the Australian Commonwealth. He pointed out that though it had an area equal to the greater part of Europe, its population was only a little over half that of London. Mr. Hussey stressed the fact that Australia's population is almost entirely of British descent, and all speak exactly the same language, there being only some 155,000 foreigners in the whole country. An attractive picture was painted of the climatic and occupational conditions in Australia. In regard to climate, some high temperatures were mentioned, but it was pointed out that it is possible there to bear without discomfort very much higher temperatures than would be endurable in the humid atmosphere of this country. Many statistics were given relating to imports and exports, the savings of the people, the large extent of their life insurance, etc., showing the prosperity of the country and its inhabitants. An outburst of applause marked a reference to the low rate of income tax in Australia—evidently a matter that appealed very strongly to heavily-taxed London printers.

Printing Trade in Australia.

Proceeding to touch upon Australia's printing industry, Mr. Hussey intimated that Australian master printers are pretty well organised, there being a number of master printers' associations in the various important towns. He regretted, however, that it had not been found possible as yet—owing to inter-state jealousy—to form a federated body, corresponding to the Federation of Master Printers in this country.

There was only one state, he said, Queensland, in which the printing trade had a body similar to our own Joint Industrial Council. It was formed very much on the same lines as our own J.I.C., and, although only about 18 months old, had done very satisfactory work, the stabilisation of prices and the establishment of the costing system being amongst the matters in regard to which it had proved useful. Queensland was leading the way in respect of the costing system, and a large number of offices in that state had the system installed.

Some light was thrown on a matter which is rather perplexing to printers in this country—the Australian methods of negotiating wages. Mr. Hussey made it plain that there is no uniform national practice in Australia, but different parts of the country fix their own wages in their own ways. Thus New South Wales has a State Arbitration Court, where a judge, after hearing arguments on both sides, fixes wages for the different classes of work. Queensland and Western Australia have similar Arbitration Courts. In Victoria they have wages boards, in which equal numbers of employers and employed meet and discuss wages, under the supervision of an impartial chairman, to whom usually it falls to make the final decision. Tasmania, too, has a wages board, as also has South Australia, though latterly there has been established in this state an Arbitration Court, to which an appeal can be made.

The speaker referred to the Government printing offices run by each of the States, and said that no Government work was given out to private firms—except rush work, such as the printing of electoral rolls. (Laughter.)

Mr. Hussey concluded by handing round for inspection a large number of interesting booklets of Australian views.

Linotype Operators and Machinists Wanted.

A short discussion followed the address, and elicited a few further points of interest. The speaker intimated that Queensland was the one state which, because of prevalent unemployment, had not encouraged immigration. Though it was chiefly on the farms that immigrants were required, there were openings also in the cities, including some in the printing trade. Mr. Hussey said he was commissioned to take back with him a number of linotype operators and machine operators.

At the close of the meeting a very cordial vote of thanks was passed to Mr. Hussey, the proposition being moved by Mr. Burt, seconded by Mr. Emlyn Jones, and supported by Mr. Alfred Langley.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CUBA.

The British Vice-Consul at Havana reports that a local firm of importers and exporters, commission merchants, agents, etc., are desirous of receiving quotations and samples of bank note green for the manufacture of green engraving ink for steel plate engraving. (Reference D.O.T. 7969/F.L./C.C./2.)

AUSTRALIA.

The managing director of a Melbourne firm of ink manufacturers is at present in this country with the object of obtaining agencies of British manufacturers of stationery and fancy goods for his firm. He would be pleased to discuss this matter with any British firms interested. (Reference No. 593.)

CANADA.

A manufacturers' agent in Vancouver, who already represents a British manufacturer of advertising calendars and handles shop display fixtures for a Canadian firm, desires to secure the representation, on a commission basis, for British Columbia of British manufacturers of fancy leather goods, notepaper, twines and fine cordage. (Reference No. 566.)

NEW ZEALAND.

The office of H.M. Trade Commissioner in New Zealand has written to the Department of Overseas Trade stating that, with a view to revising the particulars on file in that office regarding goods manufactured by British firms, they would be glad to be furnished with copies of the latest catalogues of interested manufacturers, or with any other up-to date data concerning British productions. In particular, catalogues are desired in respect of wire stitching machinery, etc. Catalogues or other descriptive literature will be welcomed in general from any British manufacturers interested in trade with New Zealand. Catalogues should be forwarded direct to H.M. Trade Commissioner in New Zealand, 11, Grey-street, Wellington, New Zealand. Reference D.O.T. 11143/E.D./G.C.)

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The May meeting of the Association was held on the 15th inst. at St. Bride Institute, Bride-lane, E.C.4. There was only a fair muster of members, and in the unavoidable absence of the president and vice-president Mr. W. H. Longley was voted to the chair.

After the minutes of the previous meeting were read and confirmed, Mr. Forsyth, one of the stewards for the annual dinner, was asked to state what arrangements had been made so far with regard to this event. His statement having been discussed, it was agreed that the function should take place at the Trocadero Restaurant, Piccadilly-circus, on Saturday, November 17th.

The secretary then read a letter from Mr. J. R. Riddell inviting the Association to pay an official visit to the Central London Printing School on Thursday, May 31st, at 2.30 p.m.

The chairman said the secretary, in acknowledging the letter, had accepted the invitation and had at the same expressed thanks to Mr. Riddell for his consideration. Mr. Longley then asked members to inform the secretary as soon as possible if they intended being present on that occasion.

A discussion next took place regarding the difficulty many overseers were experiencing in carrying on the work in the foundries owing to the frequent practice of men leaving their employ to go into other establishments.

Other speakers expressed the view that the inconvenience that had been mentioned was inevitable in view of the shortage of labour. They thought, however, that the difficulties were only temporary and that they would right themselves in the course of time.

On this same question other speakers believed the difficulty could be got over if overseers when engaging hands inquired first if the men they were taking on were causing any inconvenience in the work of the foundry they were leaving.

A proposition moved by Mr. Clark that a booklet containing the names and private and business addresses of the members be printed was unanimously agreed to.

A useful discussion on one or two other questions concerning trade problems and practices followed next, and the meeting was then brought to a close.

Wholesale Stationers.

The thirty-eighth meeting of the National Council of the National Association of Wholesale Stationers and Paper Merchants was held at the Council Chamber on Thursday, May 3rd, the new president of the National Association (Mr. A. Dykes Spicer) being in the chair.

Full information was conveyed to the meeting with regard to the representatives appointed by the various district associations to serve on the National Council during the ensuing year.

Mr. J. W. Cooke (Messrs. Butt Bros. and Cooke, Ltd.) and Mr. H. Holmes (Messrs. Charles Morgan and Co., Ltd.) were unanimously appointed chairman and vice-chairman respectively of the National Writings and Printings Section.

Mr. J. Harmer Dalton (Messrs. Dalton and Morgan) and Mr. W. E. Adlard (Messrs. Evans and Adlard) were unanimously appointed as chairman and vice-chairman respectively of the National Wrapping Paper Section.

A report was brought forward in connection with the progress which had been made with regard to the Scandinavian General Trade Rules, the matter being fully discussed by the meeting.

The president outlined the negotiations which were taking place with the Federation of Master Printers. It was hoped that a meeting of the Joint Committee would be held at an early date, and a general discussion took place on the matters then to be considered.

The Association had taken up very seriously the question of the revised schedules of tariff valuations which had been brought into effect by the Indian Government for the purpose of levying customs duties in British India. A report was now laid before the meeting giving details of the recent revision brought into force as from February 15th, 1923, by which reductions had been made.

The next meeting of the National Council will be held on Thursday, July 12th, 1923.

IN THE HIGH COURT OF JUSTICE
CHANCERY DIVISION
MR. JUSTICE SARGANT
In the Matter of The ALDINE PUBLISHING CO. [illegible] Limited and Reduced
and
In the Matter of the COMPANIES (Consolidation) ACT, 1908.

NOTICE IS HEREBY GIVEN that a Petition presented to the High Court of Justice, Chancery Division, on the 9th May, 1923, for confirming a Special Resolution reducing the capital of the above Company from One Hundred and Twenty-Six Thousand Five Hundred Pounds divided into 65,000 Preference Shares of One Pound each 60,000 Ordinary Shares of One Pound each and 1,500 Management Shares of One Pound each to Thirty-Five Thousand Five Hundred and Seventy-Five Pounds divided into 65,000 Preference Shares of Ten Shillings each 60,000 Ordinary Shares of One Shilling each and 1,500 Management Shares of One Shilling each is directed to be heard before His Lordship Mr. Justice Russell on Tuesday, the 26th day of June, 1923, and any Creditor or Shareholder of the said Company desiring to oppose the making of an Order for the reduction of the Capital of the said Company may appear at the time of hearing by himself or his Counsel for that purpose and is required to give two clear days' notice in writing of his intention to appear with the grounds of his objection to the undersigned Solicitors of the Company. A copy of the Petition may be seen by any Creditor or Shareholder at the office of the Company and a copy will be supplied by the undermentioned Solicitors on payment of the regulated charges for the same.

Dated this 17th day of May, 1923.

R. T. WATKIN WILLIAMS,
MASTER OF THE SUPREME COURT,
Turner and Co.,
89, Chancery-lane, W.C.2,
14148 Petitioners' Solicitors.

The Stationers' Company.

Lieut.-Col. J. R. Truscott presided over a luncheon of the Livery Committee (of which Mr. R. A. Austen-Leigh is chairman and Mr. J. R. Riddell hon. sec.) at the Hall on Wednesday last week.

Sir Donald Maclean gave an address on "Parliamentary Institutions." Referring to the Company, he said that he was delighted to find himself with so old and distinguished a Guild. The Company had borne a very great and distinguished part in the fights for the liberty of the subject, and for securing freedom of speech. Their association with the House of Commons had been long and intimate. He did not know how many present realised the reasons which were behind the desire of the old Parliamentarians for suppressing reports of proceedings. They wished to be free to say anything they liked of anyone, and particularly they did not desire the King to be acquainted with their doings. The City, however, fought for the publication of proceedings, and got it, and the outcome was Hansard and the Press.

Mr. C. F. Clay moved a vote of thanks to the speaker.

In seconding, Mr. Henry Hill said that the House of Commons and City institutions had everything in common. They were both democratic in their inception. Both must adapt themselves to the needs of the day. They must deal with things as they were—remedy evils, and sweep away abuses. Only on such lines could they continue. The vote was unanimously carried.

The chairman announced that the annual general meeting of the Court would take place on Wednesday, June 27th.

IN connection with the holding of the annual gatherings of the Federation of Master Printers in London next week, the Worshipful Company of Stationers is inviting members of the Federation to a reception at Stationers' Hall on Tuesday next, commencing at 3.30.

"FARMAND" for May 10th describes the Norwegian paper market as brisk, prices being somewhat better than some weeks ago. So far the improvement in prices is by no means satisfactory, and exporters hope for a further improvement later on.

Blocks and the Printer.

A CASE which we report on another page raises once more in rather challenging fashion the question of the custom of the trade in regard to ownership in printing blocks. When the printer makes or obtains a block in the process of producing printed matter for a customer, to whom does the block belong after use? Though every case must be judged on its merits, there is, we believe, a well-established custom of the trade that blocks produced incidentally to the execution of a printing order belong to the printer unless the customer specifically arranges otherwise and is accordingly charged for the blocks as a separate item. It would seem, however, that in the Nuneaton case the judge holds that if, without making blocks a separate item, the estimate is increased in view of the cost of blocks, the blocks belong to the customer. We should be interested to see the case carried further.

* * *

Posting from Abroad.

IT is satisfactory to note that steps are now being taken to deal effectively with the practice of posting from the Continent circulars, etc., issued by British firms for delivery in this country. The text just issued of the Bill introduced into the House of Commons by the Postmaster-General provides that "regulations may be made for preventing the transmission and delivery by post of postal packets (wherever printed or produced) posted abroad and addressed to a person resident or carrying on business in Great Britain or Northern Ireland by or on behalf of any person also so resident or carrying on business, if the amount in sterling of postage paid or payable is less than the amount of postage which would have been payable if the packet had been sent as an inland packet." Possible penalties for evasion include destruction of postal packets insufficiently paid.

The Price of Paper.

PAPER prices have not materially altered since we last wrote. Here and there printings and writings have advanced a farthing a lb., and users are being advised to fill their requirements before the prices rise considerably. This we believe to be good advice, although it is to be feared that consumers have heard about possible advances for so long that they do not take it seriously. The more calculating buyers are already acting up to their opinions, and are laying in a bigger supply of bread and cheese stocks. The policy adopted by certain mills is to make large quantities of staple stocks for storage against the later period when a heavier demand will coincide with higher prices.

* * *

Paper Imports Growing.

IMPORTS of paper and cardboard last month exceeded the quantity for April last year by 198,035 cwts. (27·9 per cent.), and eclipsed that for the corresponding month of the preceding year by 575,261 cwts. (173·4 per cent.), the actual figures for April of the three respective periods being: 1923, 906,857 cwts.; 1922, 708,822 cwts., and 1921, 331,596 cwts. April's figures exceed those of March and February, but fail to reach the January total. Receipts of packings and wrappings were on a large scale (297,499 cwts.), an increase of 90,308 cwts. over the quantity received in April last year, and represent a proportion of 32·8 per cent. of the total imports during the month. Contrasted with April last year, all the countries dispatching "packings and wrappings" to the British market have appreciably increased their consignments. The leading position on the list is occupied by Germany, with 87,566 cwts., an increase of 44,619 cwts., that country being closely followed by Sweden (82,675 cwts.), which thus exceeds her shipments of last year by 16,084 cwts. While supplies from Norway, Finland and Canada are considerably augmented, those from Belgium remain at practically the same level. Printings and writings (181,081 cwts.) did not come forward quite in such volume as other of the principal classes of paper imports; they only show an advance of 710 cwts. compared with April last year. A feature in regard to the returns of printings and writings is the large consignment of 111,032 cwts. from "other countries." Some amendment of this classification is obviously required. Of the countries enumerated as sending this class of manufacture, Sweden occupies first place with 27,547 cwts., a position held last year by the United States, which were then credited with 50,539 cwts., as against only 1,111 cwts. last month. Supplies from Norway (24,915 cwts., against 26,253 cwts.) have declined to some extent, while those from Germany have nearly doubled (14,941 cwts. against 7,674 cwts.). Shipments of strawboards (277,161 cwts.) and millboards (97,836 cwts.) have been heavy compared with twelve months ago; the former class increasing by 50,740 cwts. and the latter by 46,436 cwts. The value of the imports for the month (£983,247) marks increases of £198,044 (25·2 per cent.) compared with last year, and £310,724 (46·2 per cent.) contrasted with April two years ago. During January–April paper and cardboard imports—standing at 3,583,087 cwts.—show an increase of 792,732 cwts. (28·4 per cent.) compared with the corresponding period of last year, and a very much bigger increase of 1,906,528 (113·7 per cent.) over the 1921 period. The total value of paper, etc. imports during the first four months of the year reached £3,827,540, a figure which represents increases of £533,933 (16·2 per cent.) compared with last year and of £49,403 (1·3 per cent.) over the corresponding period two years ago.

MR. FRANCIS C. SMITH (who was associated with Messrs. Spalding and Hodge, Ltd., for many years) has started in business on his own account as a paper agent and merchant at 30–32, Ludgate-hill, London, E.C.4.

Personal.

SIR G. ROWLAND BLADES, M.P., has been appointed a governor of the United Westminster Schools in the place of Sir William Dunn.

MR. ALFRED LANGLEY has been re-elected vice-president, and Mr. J. H. Williams treasurer, of the London Master Printers' Association.

CONGRATULATIONS to Mr. F. A. Perry, of West Ealing, who was last week elected president of the Ealing Chamber of Commerce.

MR. PERRY, who is well known and respected in the printing trade, was for two years president of the West and North-West London Master Printers' Association, and is still a member of the L.M.P.A. Council. He is also chairman of the committee of the London Tivertonians' Association.

AT the conference of master printers at Carlisle last week there was made a presentation of a silver rose bowl to Mr. Edward Wilson (Kendal), the bowl bearing an inscription testifying to the North-Western Master Printers' Alliance's grateful recognition of his valuable services as hon. secretary and treasurer.

MR. JAMES GALLIE, J.P., of Edinburgh, the ex-president of the Employers' Federation of Envelope Makers and Manufacturing Stationers, has been invited by his colleagues on the Council of that body to a complimentary dinner, which, it is understood, will take place on May 31st.

MR. T. H. CUNANE, of Messrs. A. M. Peebles and Son, Ltd., has been appointed as lecturer, during the summer session, at the College of Technology, Manchester, on "The Application of Paper to Printing."

MR. ALFRED STRAND, foreman at Messrs. Veile and Roberson's printing office, Faversham, has just completed 50 years' service in that office. He went to Faversham in May, 1873, under the late Mr. Richard Lancefield, the then proprietor of the business. Mr. Strand is a Canterbury man, and learnt his trade in that city. His two sons have followed in the same trade, and the elder is manager to a printing firm in London.

MR. J. W. CALVERT, the senior proof-reader of the *Hull Daily Mail*, has retired after a total service of 53 years on that paper.

MR. ST. JOHN ADCOCK, who has for many years been associate-editor of the *Bookman* with the late Sir William Robertson Nicoll, has been appointed editor of that magazine.

Federation of Master Printers.

The number of visitors who have indicated their intention of attending the annual meeting and cost congress of the Federation of Master Printers in London from the 26th to the 31st instant is already a record for these functions. At the time of going to press, somewhere about 750 applications had been received and further demands were pouring in daily.

The souvenir programme of the gatherings is not completed at the time of writing, but we understand this is to be a most interesting and useful production. The outside takes the form of a leather treasury note case, with pencil, pockets being provided to accommodate such things as the book of tickets. This case also serves the purpose of a cover to the souvenir programme, which will make a substantial pamphlet. It contains not only a list of events, but a great deal of most readable reading matter concerning historic places in London, this matter being from the pens of Mr. H. W. Westbrook and Mr. C. T. Jacobi. The souvenir programme is monotype-set throughout, and the London Master Printers' Association is indebted to the Lanston Monotype Corporation for generously defraying the cost of its production.

A copy has reached us of the separate programme of the Cost Congress, a neat and tasteful production, set entirely on the Linotype and printed by George W. Jones at The Sign of the Dolphin in Gough-square.

Ownership of Printing Blocks.

An Interesting Lawsuit.

At Nuneaton County Court, before His Honour Judge Staveley Hill, the *Nuneaton Chronicle*, Ltd., sued Francis George Curtis, a partner in Taberer's, a local printing firm, for £16 3s. 6d., for damages for illegally removing certain printing blocks without any authority and using them for the purpose of obtaining orders, also for loss of business.

For plaintiffs it was said that previous to becoming a partner in Taberer's, defendant was employed by plaintiffs from February, 1915, to May, 1922, as a general foreman. In May, 1920, an order was given to Mr. Curtis in the course of his employment, and as a representative of the *Chronicle*. Before the order could be executed, the *Chronicle* had to buy a special printing block, and this they bought from Cassell's, London, and paid £1 3s. 6d. for the block, and when it came it was under the control and in the custody of Curtis.

The defence urged that the blocks belonged to the customer and a custom of the trade was alleged in support of this.

Mr. A. F. Cross, editor and managing director of the *Nuneaton Chronicle*, in giving evidence, said the blocks belonged to the *Chronicle*. If the blocks belonged to the customer he would have been charged so much for them. There would have been a separate item on the bill.

Mr. W. V. Young, manager *Midland Daily Tribune* and allied papers, called as witness, said that speaking from 33 years' experience of the trade, he considered the blocks were the property of the printer, unless the customer paid for them, in which event the fact was usually shown on the invoice.

Plaintiffs admitted that the cost of the block increased to some slight extent the amount charged to the customer.

His Honour, in giving judgment for defendant with costs, held that the block became the property of the person charged with that additional cost. In these circumstances the *Chronicle* had no right over the article.

Master Printers at Carlisle.

The North-Western Alliance of Master Printers and Allied Trades held their annual conference in Carlisle on Wednesday last week. There were 50 delegates present, who in the forenoon assembled in the County Hotel where they were introduced to Mr. R. A. Austen-Leigh, president of the Federation, and Mr. A. E. Goodwin, secretary of the Federation and joint secretary of the Joint Industrial Council, by Mr. Charles W. Robinson, president of the Alliance.

Later a visit was paid to Messrs. Hudson Scott and Sons, Ltd., a firm which has earned a world-wide reputation for their printing on tin.

Luncheon was held in the County Hotel, Mr. Charles W. Robinson presiding.

Mr. A. Creighton in proposing "The President of the Federation, and the North-Western Alliance" apologised for the absence of the Mayor (Mr. R. Dalton), who was at Scarborough on civic business. He welcomed them to the city.

Mr. Austen-Leigh, in reply, thanked Mr. Creighton, and in the course of his remarks traced the growth of the Federation to its present state of organisation. They had, he said, a band of loyal and devoted servants at Holborn who were looking after the interests of the Alliances, and in Mr. Goodwin they had one of the most capable officials. Like many other trades they had many difficulties to contend with, but given co-operation both in the districts and in London, he believed that they would emerge successfully through all their future difficulties.

Mr. H. A. Bethell, president of the Lancashire and Cheshire Alliance, submitted the toast, "The Commerce and Prosperity of the City of Carlisle," and Mr. W. Theodore Carr replied.

Mr. A. E. Goodwin, in submitting "The Local Printing Industry," commented on interesting features of the printing trade of Carlisle, and touched on many general matters of importance to the industry.

Mr. F. N. Hepworth replied, after which Mr. E. Langley (Barrow), submitted "The Visitors," to which Mr. T. Ridley replied, and Mr. Austen-Leigh proposed "The Health of the Chairman" to which Mr. Robinson responded.

Trade Union Matters.

T.A. EXPULSIONS.—The Executive Council of the Typographical Association publish a further long list of names of members who are warned of expulsion if their arrears of subscriptions are not cleared off by June 14th. The list includes 17 members of the Oxford branch, 13 at Newcastle, 12 at Leeds, 12 at Norwich, and 11 at Belfast.

SETTING LINOTYPE MATTER.—At a recent meeting of the Executive Council of the Typographical Association a report was presented by Mr. T. Dove, the Sheffield representative, on an interview he had with two firms in Chesterfield who had introduced into their office linotype matter set in a non-society office. The firms in question stated that there was only one society firm in the town with a linotype machine, and they could not cope with the work. Mr. Dove said he had proposed to these firms that he would arrange with a Sheffield firm to do their linotype work, and they had agreed to this course.

FIFTY YEARS IN THE T.A.—Mr. Charles Morgan of Rochdale has completed fifty years membership of the Typographical Association. Next month he will be 72 years of age and is still actively engaged in the trade. For the last 31 years he has been employed as overseer of the jobbing department at the *Rochdale Observer*, where he has a total service of forty-six years. A native of Wolverhampton, he came North over fifty years ago. He has held various offices in the T.A and is at present a trustee of the local branch.

The Samuel Jones Strike.

As mentioned last week, a settlement has been reached in the dispute between Messrs. Samuel Jones and Co., Ltd., and the National Union of Printing and Paper Workers. This unfortunate dispute has lasted just over five months—from January 8th to May 12th.

It will be remembered that the dispute arose over the introduction of non-union labour in the person of a young woman whom the firm engaged to be trained as supervisor in their sample and publicity department. Messrs. Jones and Co. inform us that quite early on, it was made known to them that the union would place no difficulties in their way with regard to their retaining the services of the young woman in question, but there was then another difficulty which proved to be by far the greater, and that was that the firm had filled up all the places. They had to treat these people fairly and promised them that if they made good, they would retain them. This cause it was that led the strike to last such a long time. However, at the end of 18 weeks a settlement was arrived at by the firm agreeing to take back 195 of their old workers out of the 238 who struck, thus enabling them to retain those in their service who had made good.

Wages in Manchester Newspaper OFFICES.

It is interesting to learn that another trade union connected with the printing industry has submitted matters in dispute to the Industrial Court. A sitting of the Industrial Court was held in Manchester on Tuesday, May 15th, to consider the question of the wages of engineers and electricians engaged in morning and evening newspaper offices in Manchester. The Court was constituted of Sir Wm. McKenzie, Mr. Mackie Bryce, and Mr. F. S. Bulton.

The employers' case was presented by Mr. F. L. Armstrong, general secretary of the Newspaper Society, and the workers' case by Mr. Gorman, of the A.E.U.

Terms of reference were whether the reduction of 20s. a week already effected in the printing and newspaper industry should be applied to the existing agreement of engineers and electricians engaged in Manchester newspaper offices.

The Court reserved its decision.

IF you habitually become tired, you will soon find yourself retired.

DIVIDENDS AND REPORTS.

WILLIAM TOD, JUN., AND CO.—Accounts for year to March 31st show loss of £10,210. Scheme is being put forward for transfer of undertaking to new company to be formed with capital of £200,000, which will acquire right of manufacture from paper mill waste of new material designed for use in place of vulcanite or ebonite. Holders of present preference shares will be given option of exchange into 8 per cent. preference shares in new company, carrying right of conversion into ordinary shares within next five years. In alternative they will be paid out in cash at par, plus 5 per cent.

NEW COMPANIES.

HADDEN BEST AND CO., LTD. — Capital £30,000 in £1 shares; to acquire the business of printers carried on at 26, Fetter-lane, and 5, West Harding-street, E.C.4, as "Hadden Best and Co.," and to carry on the business of publishers, stationers, booksellers, manufacturing stationers, lithographers, photographic printers, envelope manufacturers, cardboard, railway ticket, paper bag, cardboard box and carton manufacturers, etc. Private company. Directors: W. Leighton, D. Leighton, A. L. Leighton, M. W. Leighton, B. Leighton, and P. L. Leighton. W. Leighton, D. Leighton, A. L. Leighton, M. W. Leighton and P. L. Leighton are joint managing directors. Registered office: 5, West Harding-street, E.C.4.

HEDQVIST, ERICSON AND CO., LTD. (LONDON). —Capital £1,000 in £1 shares; agents, exporters, importers and manufacturers of and dealers in paper, boards and pulp, and articles made therefrom, tickets, millboards, and wall and ceiling papers, stationers, printers, manufacturers of and dealers in cotton and other yarns, imitation leathers, and rubber and waterproof goods, and articles manufactured therefrom, manufacturers of and dealers in paints, varnishes, printing inks, etc. Private company. Subscribers: G. Runc and T. Rasmussen. Subscribers appoint directors.

ARGENTOGRAPHICA (U.S.A.), LTD. (LONDON). —Capital £40,100 in 40,000 preferred ordinary and 50 deferred ordinary shares of £1 and 1,000 founders' shares of 1s.; to carry on in the U.S.A., and elsewhere (except in Great Britain), the business of photographers, photographic printers, photolithographers, sensitive plate and film manufacturers, engravers, film producers, printers, stationers, paper and boxmakers, cardboard manufacturers, manufacturers of and dealers in fancy, picture and other cards, etc. Private company. Subscribers: W. G. Sinclair and C. H. Goodwin. First directors: W. G. Sinclair, P. J. Mitchell and A. H. Stevenson.

HARVEY AND CO. (NORTHAMPTON), LTD.— Capital £2,000 in £1 shares; to carry on the business of a wholesale stationer carried on by Annie B. Harvey at Barrack-road, Northampton, and that of printers, lithographers' stereotypers, electrotypers, photographic printers, engravers, envelope manufacturers, papermakers, paper bag and account book makers, boxmakers, cardboard manufacturers, etc. Private company. First directors: Mrs. Annie B. Harvey, A. B. Blackmore and G. A. Clayson. Registered office: 16, Barrack-road, Northampton.

W. N. SOLEY, LTD. (London).—Capital £1,000 in £1 shares; to acquire the business of manufacturers of and dealers in plain and fancy boxes, carried on at 6, Bradford-avenue, E.C., as "W. N. Soley," and to carry on the business of manufacturers of and dealers in folding and collapsible packets, show cards, advertisers' novelties, fancy goods, advertisement slips, pattern cards, show cases, stationers' sundries, etc. Private company. Subscribers: H. W. N. Soley and W. Morris.

HALTON AND TRUSCOTT SMITH, LTD.— Capital £5,000, in £1 shares (3,500 preference); to adopt agreements (a) with E. G. Halton, (b) with W. Troughton and (c) with H. Truscott Smith, and to carry on the business of publishers, wholesale, retail and export booksellers, importers and exporters of books and maps, map publishers and salesmen, advertising agents, printers, bookbinders, papermakers, stationers, etc. Private company. Directors: E. G. Halton, W. Troughton and H. Truscott Smith.

CLERY AND SMALLEY, LTD. — Capital £2,000, in £1 shares; to take over the business of advertising contractors and consultants and publicity agents carried on by R. L. Clery and R. Smalley, at 5, Cathedral-yard, Manchester, as "Clery and Smalley." Private company. Directors: R. L. Clery and R. Smalley. Registered office: 5, Cathedral-yard, Manchester.

U.K. SALES SERVICE, LTD. — Capital £1,000, in £1 shares; advertising contractors and general agents, etc. Private company. Directors: F. Jackson and B. E. Howes. Registered office: 23, King-street West, Manchester.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

ROSAMOND LITHOGRAPHIC CO., LTD. (Manchester).—Debenture dated May 2nd, 1923, to secure £400, charged on the company's property, present and future, including uncalled capital. Holder: Miss M. Smith, Groveyard Farm, Mobberley, Cheshire.

E. R. ALEXANDER AND SONS, LTD. (printers, etc.)—Mortgage on 301, High-road, and 1, Lyttleton-road, Leyton, dated May 4th, 1923, to secure all moneys due or to become due from company to Barclay Bank, Ltd.

MORGAN REEVE CO., LTD. (advertisers, printers, London). — Particulars filed of £2,000 debentures authorised May 2nd, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

WALLASEY PRINTERS, LTD.—Issue on May 4th, 1923, of £200 second debentures, part of a series already registered.

HARRISON, JEHRING AND CO., LTD. (publishers, etc., London).—Satisfaction to the extent of £500 on April 21st, 1923, of debenture dated September 29th, 1922, securing £15,000.

OVERSEAS PRESS, LTD. (London).—Debenture dated May 3rd, 1923, to secure £3,000, charged on the company's undertaking and property, including uncalled capital. Holders: Argus Printing Co., Ltd., 10, Temple-avenue, E.C.

J. PARKIN, LTD. (news agents, stationers, printers, etc., Middlesbrough). — Mortgage dated May 1st, 1923, to secure £1,250, charged on certain freehold premises in Middlesbrough. Holder: Mrs. A. Oliver, 95, Cambridge-road, Middlesbrough.

BENFLEET AND CANVEY PUBLISHING AND TRADING CO., LTD. — Mortgage debenture dated May 9th, 1923, to secure £200, charged on the company's undertaking and property, present and future. Holders: Wickes and Andrews, Ltd., 145, Upper Thames street, E.C.

BRIGHTER LONDON, LTD.—Issue on May 1st, 1923, of £600 debentures, part of a series already registered.

AUCTIONEERS, LTD.—Debenture dated April 17th, 1923, to secure £2,500, charged on the company's undertaking and property, including uncalled capital. Holder: Mrs. E. H. Evans, Manor House, Hamstead Staffs.

Wiggins, Teape & Co. (1919), Ltd.

Presiding last week at the fourth annual general meeting of Wiggins, Teape and Co. (1919), Ltd., Mr. L. W. Farrow referred to the mission to Australasia which the chairman, Mr. P. W. Holden, had undertaken at the request of the board.

Proceeding, Mr. Farrow mentioned that the year under review had again been a period of depressed trade, and consequently of limited demand for the goods they manufactured. Their machinery was not yet fully occupied, and they were therefore not yet able to show more than average results. The aim of the directors, however, was to maintain and stimulate the consumption of fine papers by keeping prices as low as possible and turning out every sheet for which they could find a market. The result shown had been contributed to by the fusion of interests with Alex. Pirie and Sons, Ltd., whereby economies in manufacture and distribution had been effected. The demand for their goods had increased so gradually and so steadily that they were led to believe that the increase would not only be maintained, but would expand.

With regard to the cost of raw material, Mr. Farrow observed that this for some time had been increasing, and it had only been possible to maintain the present price level of their products owing to the expanding demand for their goods.

The photographic paper branch of the company was making steady, if rather slow, progress. It was, however, retarded by present-day conditions, amongst which he particularly mentioned the increased postage on postcards, which had almost killed the picture postcard trade. It had also to contend against a confidence in foreign paper engendered by thirty years or more of experience. With one or two exceptions, however, the photographic trade of this country was using their papers in increasing quantities, and he hoped that they would shortly be able to inspire sufficient confidence in their product to secure orders for the bulk of the tonnage used in this country.

The report and accounts were unanimously adopted, and a dividend of 5 per cent., less income-tax, on the ordinary shares was declared.

"Bridge" Paper Mills, Ltd.

Winding-Up Petition.

A petition for the winding-up of the "Bridge" Paper Mills, Ltd., has been presented by the Dorland Agency, 16, Regent-street, S.W. Date of hearing, May 29th, in London.

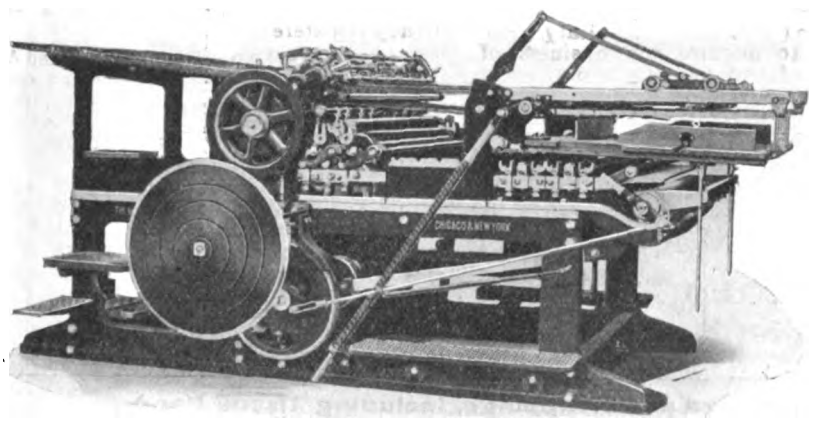
The . . .



American Miehle Company's THREE-ROLLER Two-Revolution Press.

SPECIFICATION.

Type matter locked in Chase, 24 in. × 38 in.

Largest sheet which can be delivered, 26½ in. × 41½ in. (approximately Double Royal).

The Inking arrangements on this machine are adequate for all requirements. The Three-roller Press has a pyramid of eight rollers and riders over the forme, three of the rollers being inkers.

Gear side view of the American Miehle Company's Three-roller Two-Revolution Press.

Over-all measurements:
Width 7 ft. 10 in.
Length with sheet delivery 12 ft. 3 in.
Practicable speed per hour 2,400.

✖ ✖

THE American Miehle Company's Three-roller Two-revolution Press will handle satisfactorily every class of work undertaken by the Jobbing Printer. It will print the heaviest and lightest formes with equal ease. It registers to a hair and delivers faultlessly. It is an American Miehle Company's Press, in no way inferior to that Company's regular Four-roller machine, bearing the same high reputation, and giving the fullest satisfaction where installed.

This machine may be seen running by appointment.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer.
The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

12 Feeders sold recently.

COME AND SEE IT RUNNING IN LONDON.

Oxford Master Printers.

Amongst those attending the annual meeting last week of the Oxford Master Printers' Association were Mr. Frederick Steele, ex-president of the South-Western Alliance, Mr. George F. Jones, J.P., secretary of the South-Western Alliance, and Mr. A. E. Goodwin, secretary of the Federation.

The officers for the ensuing year were elected, Mr. Vincent, late Mayor of Oxford, being chosen as president, Mr. F. J. Hall and Mr. H. J. C. Alden as vice-presidents, and Mr. Duncan Cross first secretary.

Mr. Steele gave a breezy talk on the importance of strengthening the employers' organisation, and stressed the help which they expected to receive from an intellectual centre like Oxford.

Mr. Goodwin held the attention of his audience on a number of topics which are interesting the Federation at the moment, emphasising particularly the great importance of correct cost-finding during the present difficult times.

In a report on Argentina's import trade it is stated that paper is principally obtained from Europe owing to higher United States prices.

The Dorset Year Book.—We are indebted to Mr. Stanley I. Galpin (the honorary editor) for a copy of "The Dorset Year Book, 1923." Published by the Society of Dorset Men in London," it appeals first of all to natives of the county; but so interesting and varied are the contents that the well-printed and admirably arranged volume will make a wider claim. There is a wealth of literary and historical association and of natural beauty in Dorsetshire, and this happy collection of articles and illustrations shows how well the editor of the Year Book is in touch with the past and present events connected with his native county. A page map of Dorset affords a useful introduction. Copies of the issue can be obtained from the hon. secretary of the Society, Mr. Wm. Watkins, 274, Gresham House, Old Broad-street, London, E.C.2, price 2s. 6d. (by post 3s.).

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

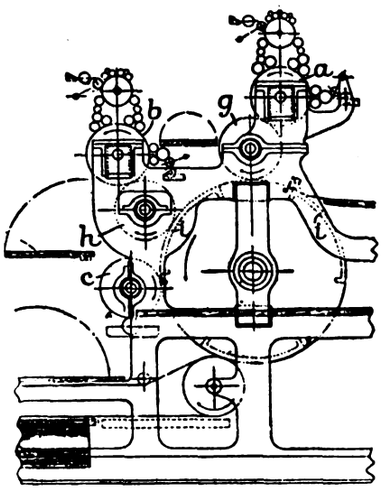
New Inventions

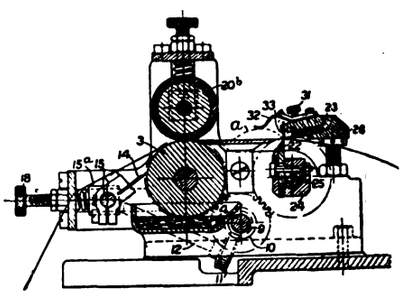
Sheet-Feeding Apparatus.

Messrs. Linotype and Machinery Limited and Messrs. C. L. Stern and A. V. Bugler have patented a sheet-feeding apparatus, especially applicable for machines for printing multi-colour impressions, constructed with a pile feed board which is interchangeable with the delivery board of the machine so that a pile of printed sheets may be taken direct from the delivery to the feeding apparatus from which the sheets may be fed in one direction if they are to receive a second impression on the same side or in opposite direction if the sheet is to be printed on the reverse side, the second feed comprising an

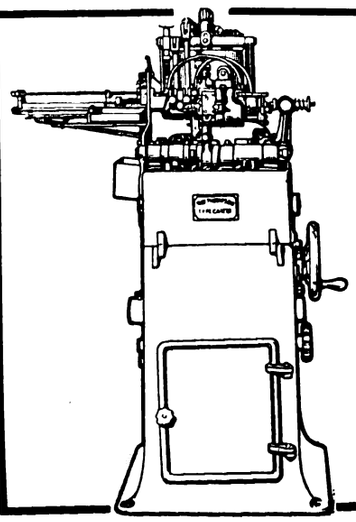


arrangement of tapes for reversing the sheet. As shown in Figs. 1 and 4, a pile of sheets on a board 1 can be registered against either of two lays 57, the sheets being placed against the left lay of 57 and forwarded to feed-rollers 5 and bands 6 if a printed sheet is to have a second print superimposed on the first print. If a sheet is required to be printed on the back of a prior print, the board 1 is rotated about a vertical axis and the edges of the sheet are placed against the right lay 57 and the sheets are separated and fed to rollers 8 and tapes 9, 11, 12 and are reversed and fed to the same path as taken by the sheets fed by the rolls 5. The sheets are separated by similar feeding members 2, 3, which act independently to advance a separated sheet to the rolls 5 or 8, or which may act collectively to advance the separated sheets to either of these rolls. Each separating mechanism as 3, Fig. 4, comprises a frame as 3 which is adjustable on rails 18 by gear wheels 19 which can move over fixed racks 23 on the rails. The sheets are separated by rising and falling suction devices 32 carried by a vertically reciprocating shaft 24 on a bearing 28 which is reciprocated by a cam on a shaft 25 driven by worm-gearing from the main shaft. Two suction devices 32 are employed and in addition to the rising and falling motion described, these are given horizontal reciprocations by means of rods 35 operated by link 37 and lever 38 on a shaft 21 which is oscillated by a sector operated by a lever and cam on shaft 25. The suction devices can be set on shaft 24 so as to be near together, or so as to be far apart, the suckers 32 being arranged near together when acting on the following edge of a sheet, and further apart when acting on the leading edge of a sheet. The suckers 32 may also be given a tilting action so as to ruck up the edge of the sheet, and they are vertically adjustable by nuts 83, and are connected by flexible pipes to a shaft 44, and valve mechanism is provided to control the suction. The separation of the sheets is assisted by blasts of air from a pivoted blower 46 on a rod 49 operated by a cam actuated lever 52. This cam raises the blower periodically, and as it rises a pin 60 tilts the blower backwards. A blade spring 68 acts as a pressing device to prevent feed of more than one sheet. The blower 46 and presser 68 can be held out of action when the adjacent sucker is engaging the leading edge of a sheet, and when the suckers engage the following edge of the sheet they are out of range of the pin 60 and so receive no tilting motion. In a modification only one set of suckers 32 is employed, and each of these may be mounted to act on either edge of the sheet and to be given a movement to suck the sheets away from the edge it is acting on, while a fixed blower assists to effect the separation of the sheet by acting on the rucked-up edge.

A Rotary Offset Machine.



An invention has been patented by Mr. C. E. Bell and Connelly, Ltd., which relates to a rotary machine for printing in colours by the lithographic offset method and also by direct or offset intaglio printing and is con-



structed so as to produce superimposed offset impressions on one impression cylinder from two or more lithographic printing cylinders, and one or more direct or offset impressions from intaglio cylinders. An impression cylinder *i* receives impressions from two or more offset cylinders *g*, *h* coacting with lithographic cylinders *a*, *b*, and a direct impression from an intaglio printing cylinder *c*. The printing cylinders may be arranged in any order.

Cutting Paper on Machines.

As patented by Mr. W. E. Molins, mechanism for cutting a plain or printed paper, etc., web into lengths for labels or tickets comprises a rotating transverse knife and a fixed co-acting knife set at an angle so as to give a shearing cut, means being provided for bending or bowing the fixed knife to enable it to co-operate with the rotating knife throughout the cut. As shown, applied to a machine for printing the web, an engraved printing roller 3 is mounted with its lower portion dipping in an ink trough 4, surplus ink being

removed by a scraper 14 mounted on a shaft 15 which is reciprocated by means of a connecting rod and crank disk on the shaft 12 driven by worm gearing 10, 11 from the shaft 9 so that the scraper has a reciprocating movement. The bearing blocks 15a of the shaft 15 are adjustable by means of screws 18 for varying the angle of the scraper. Cutting of the printed web is effected by a transverse blade 22 clamped in a holder 24 on a rotating shaft 25 and co-acting with a fixed blade 23 set slightly at an angle to give a shearing action in cutting. The holder 28 of the fixed blade 23 is provided with screws 31 for bowing said blade to keep it in contact with the revolving blade during the cut. By adjusting the rotating blade 22 in its holder 24 and also the holder 28 of the fixed blade the length of the labels cut off may be varied. To prevent the leading edge of the severed web from catching against the fixed blade 23 a guide 33 is provided together with a spring 32, which engages the web where it flexes at *a* during the cutting and causes the end of the web to spring forward when the cut has been completed. Before entering between the printing roller and the rubber-covered impression roller 20b the web may be passed between rotary cleaning brushes to prevent dust getting into the ink and also between creasing, embossing, etc., rollers. The cut labels are received in a box, one end of which does not reach the bottom leaving an aperture normally closed by a spring plate adapted to be depressed so as to enable the bottom labels to be removed while the machine is running.

THE

THOMPSON TYPE, LEAD & RULE CASTER

Is a simple, complete and compact machine for casting finished type, spaces and quads in all sizes from 5 to 48 point inclusive and of all faces within the range of Linotype, Intertype and its own matrices.

Leads, Slugs and Rule from 2 to 12 point inclusive.

Embodies features not found in any other machine, while having at the same time the essential merits of simplicity and strength.

Produces type in all languages as perfect, durable and well finished as that supplied by any type foundry.

British Paper in the World Markets.

Unchallenged Reputation for Quality.

Paper is the handmaid of all industries. Without paper the merchant could not correspond with his customer abroad, keep his records of transactions, draw bills for payment or wrap his goods. If you take the London Directory you will find that dealers in paper are a very numerous body.

The making and merchandising of paper in its various qualities and forms is an industry greater than would appear at the first glance, and the export side of the trade is one of which Great Britain has always had a full share. Apart from the home-manufactured article, a considerable business is done in the products of other countries, the British dealer, with his wide sources of supply and his reputable financial position, being able to give purchasers abroad a better selection of goods than other countries which only offer their own manufactures. The home firms dealing with the Dominion and foreign markets are generally long-established houses with a reputation for fair dealing—a matter of paramount importance to a buyer thousands of miles away, who knows that his claims will always be treated fairly and squarely.

The better class papers of British manufacture have a ready sale abroad, the cheaper grades exported being in many cases of foreign origin. Australia, New Zealand and South Africa are good markets for the home product. Canada, with its own mills making excellent kraft, writings and news, is a market for specialities only. The Far East presents a good opening for supplies generally, though the question of credit has retarded business lately. South America respects British traders, but the exchange, particularly in Brazil, has made the question of the amount of credit to be given a serious one, and thus reduced the volume of business. The United States buys specialities such as Whatmans and Arnold unbleached drawing papers, which are without equal in their respective spheres. The continent of Europe takes high-class papers and the Near East general supplies.

Many British mills have had to run for the last two years at a loss, the volume of trade being low and stock, both manufactured and unmanufactured, having had to be written down. Had they not been prudent in the past in building up reserves, they could not have weathered the storm. The tide has turned, however, export orders particularly are growing, and as prosperity comes to the Dominions—and gradually, also, to those countries whose exchanges are on the wrong side—the prospects of home manufacturers and dealers are certainly hopeful.

During the war it was natural that our paper exports should go down. Paper was in such demand for national purposes, the supplies so restricted and the opportunities of shipping so reduced, that a decline was inevitable. The quality, too, deteriorated, as no mill could obtain its usual raw material. That time has now passed, and the papers being manufactured by British mills are fully up to the pre-war standard, and in some cases better. Engine-sized writings, tub-sized writings, wood-free printing, art papers, hand and mould-made papers, drawing papers, tinted printings and writings, to name a few qualities only, are the best the world produces, and buyers abroad may rely on the supplies being up to sample. In manufactured stationery, too, the home maker is keenly alive to the importance of get-up, so that quality and appearance go hand in hand.

The British papermaker and dealer can therefore look forward with confidence to a return to prosperity, the unfailing result of value given, good service and fair dealing with customers.—*British Industry*, 1923, published by the F.B.I.

LATEX PAPERS.—Describing the exhibition of modern rubber products at Winchester House, a writer in the *Financier* says:—As regards the new latex paper over a score of samples were exhibited. This paper has already made great strides in public favour and as the latex increases the strength, durability and pliability of paper, while giving it a superior finish without adding to the cost, the possibilities here appear to be boundless.

THE I&M CUTTER AND CREASER

Specially designed for the accurate cutting and creasing of carton work at high speed.

SPECIAL FEATURES

Built on similar lines to the Miehle Press, and all the desirable features of the latter, ensuring dead register, smoothness of working, etc., are incorporated in it.

The tympan or cutting plate on the cylinder is held at the front and rear edges by special locating and clamping devices.

The cards are fed to the front lays in the usual manner, and are then taken by the cylinder grippers at the front edge of the tympan plate with a small amount of over-lapping gripper edge.

The cylinder with the card around the tympan plates comes into contact with the forme in the same way as on the two-revolution printing machine.

The card is taken directly off the cylinder by a special gripper delivery mechanism.

Delivery grippers and pads are adjustable.

An endless band travelling at the same surface speed as the cylinder extends from the point of take-off to beyond the point of release of the delivery grippers.

Another endless band on the delivery carriage receives the card from the first endless band.

The card is transferred from the first to the second endless band at the commencement of the outward stroke of the delivery carriage; the second band rolls away from under the card, leaving it to fall directly on to the pile delivery.

The delivered cards are jogged up so that they can be easily stripped.

There are no tapes or sticks in the pile delivery. From the point of take off from the cylinder until the card is deposited on the pile it is supported by endless bands.

It is easily handled, and requires no special knowledge on the part of the operator.

This Cutter and Creaser can, if desired, be supplied with a specially designed pile hoist for raising the cards to the feed board.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 92. NUMBER 22. [REGISTERED AS A NEWSPAPER.] LONDON: MAY 31, 1923. EVERY THURSDAY. PRICE TWOPENCE.

London Welcomes the Country's Printers.

Record Attendances and Great Enthusiasm Mark the Annual Gatherings of the Federation of Master Printers in London.

As befits the dignity of the Federation of Master Printers, and of their hosts the London Master Printers' Association, the London gatherings of 1923 commenced (on Saturday evening) with a reception in the Guildhall by the Lord Mayor of London—or rather, as it happened, by the senior alderman, Sir George Wyatt Truscott, Bart, the Lord Mayor himself being unfortunately prevented, by his recent accident, from performing this service as intended.

It was a pleasure to receive, immediately on entering the precincts of the Guildhall, a hearty handshake from Mr. C. T. Jacobi, who acted as a sort of advance guard of the Reception Committee, and one could not go far without being personally welcomed by Mr. W. Whyte (secretary for the Conference) and his band of assiduous L.M.P.A. helpers, who were busy all the evening attending to the comfort of the visitors.

A Brilliant Reception.

The attendance at the reception was in the neighbourhood of 1,000 ladies and gentleman, amongst whom one noted a large number of the country's most prominent master printers, London and provincial, and the personal reception of all these was no light task. The procession of guests continued uninterrupted for well over half an hour. Sir George Truscott (who was accompanied by Mrs. Waller) was supported by Sir William Waterlow, both in their brilliant robes of office, whilst Mr. W. Howard Hazell (president of the London Master Printers' Association) and Mrs. Hazell also gave each guest a personal welcome. The proceedings were enlivened with music by the band of the Royal Regiment of Artillery.

After the reception, which took place in the Great Hall, guests had the alternative of enjoying a dance in the Art Gallery, accompanied by the band of the Royal Regiment of Artillery, or a concert in the Council Chamber, both of which items were greatly enjoyed.

The concert programme included much appreciated songs by Miss Annie Bartle and Mr. P. G. Crannis, humorous songs by Mr. T. C. Sterndale Bennett and a piano solo by Miss Bessie Hawes (who also acted as accompanist), whilst a specially cordial reception marked the appearance of Mr. J. J. Keliher (a past president of the L.M.P.A.), who contributed flute solos.

Buffet refreshments were served in the Old Crypt.

A handy booklet listing the 450 or so "Visitors to London" was distributed to the guests, and this must have served a useful purpose in facilitating the making and renewing of friendships.

A change from the festive scenes of the historic Guildhall came with a visit on Sunday morning to the venerable Westminster

Mr. W. Howard Hazell,

President of the London Master Printers' Association—Hosts of the Federation.

Abbey. A large number of Federation representatives attended the morning service, when seats were reserved for the visitors and the preacher was the Rev. A. E. N. Simms, B.D., Vicar of Grayshott.

On Sunday afternoon there were kindly helpers available at the Congress Bureau at the Great Central Hotel assisting visitors to take advantage of the opportunity for visiting art galleries and other places of interest.

Pleasurable Excursions.

The Association of Master Printers of West and North-West London distinguished itself by arranging on its own account a pleasant addition to the programme of events in the form of a motor drive on Sunday afternoon, providing country visitors with an excellent opportunity of seeing some of the near-London beauty spots. Mr. J. Emlyn Jones and his fellow-workers of the North-West made this a great success. Starting from the Hotel Great Central, the attractive itinerary served to show a large stretch of interesting country, places touched upon including amongst others: Hampstead Heath, Hendon, Rickmansworth, Chesham Bois, Amersham, the Chalfonts, Uxbridge, Pinner, Harrow and Wembley. Motor cars for this occasion were kindly lent by the following: Mr. A. H. Archibald, Mr. A. H. K. Burt, Mr. C. Johnston Burt, Mr. Chatterton, Messrs. J. Dickinson and Co., Ltd. (3), Messrs. Johnson, Riddle and Co., Mr. J. Emlyn Jones, Mr. J. S. King, Messrs. Linotype and Machinery Limited (3), Messrs. George Mann and Co., Ltd., Messrs. Miehle Printing Press and Manufacturing Co., Ltd., Mr. F. Scott-Mitchell, Mr. F. Perry, Messrs. Stephenson and Blake, Ltd., Messrs. B. Winstone and Sons, Ltd. and Mr. W. H. Wormald.

Excellent arrangements were made to enable country printers—and especially their ladies, who had more time on their hands—to see something of the sights of London. Thus Monday's programme included motor charabanc tours for the ladies, there being alternative routes (*a*) St. Paul's Cathedral and the Tower of London (*b*) *via* Buckingham Palace and The Mall to Houses of Parliament, Westminster Abbey and the Tate Gallery.

Then on Tuesday there was planned for the ladies another most interesting excursion, motor charabancs leaving the hotel for Hampton Court, *via* Hammersmith, Sheen, Richmond, York House and Chestnut Avenue to the Palace, return being made *via* Kingston and Putney, tea being had at the Court Restaurant, Hampton Court.

Of course both the printers and their ladies participated in Monday's luncheon at the Great Central Hotel, and in *the* big social event of the week, the annual banquet of the Federation, held on Tuesday evening.

Yesterday (Wednesday) was to be a gala day for all, that being the occasion of a whole-day excursion (in two parties A and B)

Digitized by Google

by rail and river to Marlow and Windsor. It was arranged both parties would leave Paddington by special train at 8.48 a.m. Party A would detrain at Windsor, visit the Castle, have lunch at the Castle Hotel, make the trip to Marlow in the afternoon (tea being served on board) and leave Marlow for London by special train at 6·10 p.m. Party B would go on by train to Marlow, leave by steamer for Windsor, lunch at the White Hart Hotel, visit Windsor Castle, return to the Hotel for tea, and leave Windsor for London at 6.45 p.m. Both parties arriving back at Paddington about 7.30 p.m.

For to-day there are to be provided facilities (weather permitting) for outdoor recreations, golf, cricket, etc., including a golf match between London and the Provinces at Totteridge, when it is hoped that Harry Vardon will be in attendance. Another item is a visit to the London School of Printing.

Such were the excellent social and recreational amenities arranged by London for its visitors.

Cost Congress and Annual Meeting.

To turn now to the business side of the proceedings, this was crowded into two important and strenuous days, Monday and Tuesday. Both days' doings will be found reported elsewhere in this issue.

Monday's Cost Congress provided a rich feast of facts and figures for those interested in the vital subject of proper profits for printers. Then on Tuesday came the annual general meeting of the Federation of Master Printers. An important feature of this was the annual report of the year's work. This gave a good general insight into the multifarious useful activities of the employers' organisation, and may fittingly be summarised here.

Another Difficult Year.

The report opened with a review of the year's labour negotiations, and stated that 1922-23 had surpassed even its immediate predecessor in the number and seriousness of the obstacles that have had to be surmounted. The Federation had emerged with the greatest credit from the trials through which it had passed, and the outlook for the coming year was more favourable than at their last annual gathering.

Putting on record that the brunt of the work in connection with the wage conferences fell upon the Labour Committee and the National Wage Basis Committee, the report proceeded to outline the various wages movements which had occurred, and recalled the strike of the Typographical Association workers which, lasting for four weeks (although in the meantime many men returned to work at the reduced figure), was eventually settled on terms that, with the exception of a slight variation in dates, were the same as were awarded by the Industrial Court. The comment followed that the strike proved in no uncertain fashion that the Federation was a more powerful body than even its greatest enthusiasts had dared to assume, and that its members were prepared to make heavy sacrifices in order to conform to its rulings and thus assist their fellow printers. The statement was made that adequate tribute can never be paid to the office-bearers of the Federation and of the Joint Industrial Council, all of whom gave unsparingly of their services during this critical period. Meetings lasting all day and the greater part of the night became a quite common occurrence. Above all, the Federation is indebted to Mr. James MacLehose, LL.D., president of the Federation, 1921-22, for his patient and eminently successful leadership throughout the whole of the negotiations. Despite the fact that the strain was telling severely on his health, he consented to retain the chairmanship of the Labour Committee after his normal year of office had expired in June, until peace was again established some two months later. The dinner given in his honour early this year testified to the esteem in which he is held by all members and their desire to show some appreciation of all that he had done in their behalf.

Tribute was paid to the valuable co operation rendered by the Newspaper Society during the difficult period to which reference had been made, the ultimate success achieved being in considerable measure due to the firm stand taken by the majority of its members during the strike.

Costing Propaganda.

The report stated that the past year had not given a fair field for the development of costing matters, owing to the grave crisis which eventuated in many provincial printing offices being closed for four weeks in succession during August. The events leading up to this had caused attention to be drawn away from the importance of correct methods of costing. Notwithstanding this drawback, however, the work had been fairly well maintained, and the returns compared not unfavourably with the preceding years.

It was reported that the Costing Committee had met four times, the agenda on each occasion being of such a character that a full day's sitting had been necessary to dispose of it. The interest of the members had been evident by their keen participation in the discussions. The chairman (Mr. W. Howard Hazell) had been present at each meeting (except the last, when he was prevented by illness). It is a matter of interest that the chairman is this year the president of the London Alliance.

Nearly 900 personal calls have been made by the costing staff on members of the Federation; over 100 meetings have been attended, about 40 of which were for propaganda purposes; 75 installations and 45 revisions have been carried through, or are practically completed; 113 towns have been visited at least once, some of them time and time again—as there are about 170 associations it is evident that the country generally has not been neglected.

In recording valuable assistance given to the costing movement the report mentioned particularly Messrs. J. D. Wise (London) and H. V. Chappell (South Western), who have travelled extensively outside the borders of their own Alliances to carry the good news to other centres; Capt. Wm. L. Bemrose, O.B.E., and Major Dudley P. Forman (Midland), Messrs. Robt. Wilson (Scottish), and W. H. Thomas (North-Eastern); and the indefatigable president of the Lancashire and Cheshire Alliance (Mr. H. A. Bethell).

It was recalled that a notable event of the year was the decision of the Binders' Union in Manchester to make a trial of the daily docket. This followed drastic action by two prominent Manchester members of the Federation, and the discussion at the last annual meeting, but the decision was undoubtedly accelerated by the influence of the men's executive officers. This action was followed shortly afterwards by a similar movement in Letchworth.

Record was made that further work on revision of printing schedules for public bodies had been undertaken, and in each case modification of some of the conditions had been agreed upon.

Reference was made to the influence of the Federation Costing movement upon other sections of the allied trades. The Master Bookbinders' Association has formulated a costing scheme, largely the work of Major R. Leighton, of London. The Paper Box Manufacturers requisitioned the services of the costing secretary (Mr. A. Williamson), and a costing scheme was compiled and issued in pamphlet form. The Paper Bag Manufacturers' Federation has requisitioned the services of the Federation staff for the compilation of a costing system. Lieut.-Colonel H. Rivers Fletcher was mainly responsible for a scheme of costing for Horticulturists. At an all-day conference on "Standardisation of Costing by Industries" in connection with the Institute of Cost and Works Accountants, both Mr. Hazell and Mr. Williamson were able to assure the doubting ones that the difficulties were not insurmountable.

Postal Rates.

Referring to the important subject of the postal services, the report stated that it could not be expected that there would be an early return to the postal rates in force before the war, but it was gratifying that the past year had seen a welcome decrease in postal charges, and that there was a possibility of further concessions being made. It urged that to the Federation and to the Joint Industrial Council belongs the credit of having prevailed upon the Postmaster-General to reduce rates, it being plain that the deputations which waited upon the Postmaster-General, the constant appeals through the Press and united action with other powerful trade organisations had their effect, and that the printing industry is beginning to reap the benefit of those efforts. Members were advised to bring to the notice of their customers the lower rates now effective in order that full advantage might be obtained from the concessions.

Legislation Affecting the Trade.

Referring to several items of legislation affecting the printing industry, the report remarked that the strenuous opposition of the Federation, combined with other interests concerned, to the Advertisements Regulation Bill in the form in which it was introduced on two occasions was so successful that a third Bill of a much less drastic character has now been drafted, and to this little exception can be taken. Whilst the two earlier Bills would, if passed, have spelt ruin to the poster and other advertising industries, the new Bill, in so far as it affects our trade, is aimed at protecting only beauty spots, historic monuments and the like. Seeing that local authorities can already obtain powers of protection for such places, the need for further opposition does not arise.

In regard to certain British firms printing and posting circulars, etc., abroad, it was stated that the action of the Federation, in conjunction with the Joint Industrial Council, had salutary effect upon at least one large organisation which was a notorious offender, and it was also able to invoke the interest of the House of Commons. The Federation is pressing for the Merchandise Marks Act to be amended so that the country of origin shall be marked on every single sheet of imported printed matter. Further, the moral effect of the Federation campaign has not been lost on firms which were contemplating ordering their printing abroad, and this has been an appreciable factor in combating the danger.

State and Municipal Printing.

Although the report made on the agitation against State and municipal printing was perhaps not so encouraging as could be wished, it was stated that had it not been for the Federation's persistent efforts there would assuredly have been developments to the disadvantage of private printers. Every opportunity had been taken in the House of Commons and through the Press to point out the waste of public money incurred by State printing establishments in general, and by the Harrow works in particular, as well as the unfair competition to which the private printer is subjected. One tangible outcome of these efforts was the promise made that a Select Committee is to investigate the Harrow works, and that the Federation will have the opportunity of presenting evidence to the Committee.

The activites of the Navy, Army and Air Force Institute were mentioned as a source of anxiety. This body, which sprang from the Canteen Board established during the war, is carrying on a large trading concern backed by public money, and includes a fairly extensive printing plant in its organisation. As the result of pressure brought to bear by the Federation, in conjunction with other trade organisations, the Government has re-appointed the Select Committee (which was first appointed in 1922, but lapsed with the dissolution of the Government last autumn) to inquire into the affairs of the Institute.

Map printers are perturbed by the erection at Cricklewood of a State factory which it is understood is to be used for printing Admiralty charts, etc. Careful investigation is being made into this matter, which again involves the principle of the State competing with the private producer.

In regard to various announcements of the intended establishment of municipal printing plants, the report stated that the Contracts and Legislation Committee under its tireless chairman, Mr. E. G. Arnold, has done splendid work in nullifying such schemes and in preventing the extension of existing municipal printing plants.

The Joint Industrial Council.

It was recorded that the services of the Joint Industrial Council have been much in demand both during the labour difficulties of last year and in dealing with other smaller disputes that have since arisen. The Council is more than ever a powerful instrument in promoting harmony in the trade, and the lessons learned through the year which has now ended will be of great assistance in preventing discord in future.

The report concluded with the encouraging remark that, despite the dark days through which they have passed, the year had undoubtedly been one of progress, and they might claim with confidence that the Federation had gained in prestige and in solidarity as the result of the trials it had endured.

WHO ever is satisfied with what he does will progress no more.—*Marden.*

New President of the Federation.

Lt.-Col. H. Rivers Fletcher.

Henry Rivers Fletcher was born December 19th, 1875, and is the eldest son of the late B. E. Fletcher, J.P. and Deputy Lieutenant for the County of Norfolk.

He was educated at Rugby. On leaving school, he joined his father in the business of Fletcher and Son, Ltd., and on this business being converted into a limited company in 1898, he became one of the managing directors. On the death of his father in 1912, he became the chairman of that company, and also chairman of Messrs. Daniels Bros., Ltd., seedsmen and nurserymen, of Norwich. During the last three years he has acted as managing director of this latter company, and has interested himself in extending their business in the directions of farming fruit and seed growing.

Lt.-Col. H. Rivers Fletcher.

Whilst at school he was a keen cadet, and on leaving was appointed to a commission in the 4th Volunteer Battalion of the Norfolk Regiment, subsequently the 4th Territorial Battalion, with which he served up to and through the war. Decorations: T.D. and O.B.E.

He has always taken great interest in many kinds of sport. He has played Rugby football for Norfolk and the Eastern Counties Teams, and also golf for the Royal Norfolk Golf Club and the Royal West Norfolk G.C., has been keenly interested in yachting—having owned numerous small boats of various types, and having been to Canada, the Baltic, France, and other countries yacht racing—and is also interested in shooting and other outdoor sports.

He married in 1904 Muriel Heslop, daughter of the late Mr. T. H. B. Heslop, and has one son now at Rugby, and two daughters.

Col. Fletcher has rendered outstanding services to the employers' organisation. He has been president of the East Anglian Master Printers' Alliance, assistant treasurer of the Federation, chairman of the Federation Labour Committee, and a member of the Costing Committee, Federation Council and other committees. He now succeeds Mr. R. A. Austen-Leigh in the honourable and responsible position of president of the Federation of Master Printers. We think the industry is with us in wishing him success in the discharge of the duties of this high office.

A Memorable Cost Congress.

Large Gathering and Interesting Speeches at the Hotel Great Central.

The Cost Congress of the Federation of Master Printers, held on Monday in the large and convenient winter garden of the Hotel Great Central, marks another milestone of the big campaign for correct costing in the printing industry of this country. There was a large and keenly interested audience—despite unpropitious weather—and the various papers contributed, together with the discussions which followed them, served to make a very educative exposition of the subjects considered.

The chair was taken at 10.30 by Mr. R. A. Austen-Leigh who was accompanied on the platform by Lieut.-Col. H. Rivers Fletcher, Mr W. Howard Hazell, Mr. A. E. Goodwin and Mr. A. Williamson.

Mr. R. A. Austen-Leigh.

Mr. Austen-Leigh, in opening the Congress, said he should have wished to start with words of welcome, but that would be poaching on the preserves of the president of the London Alliance who was the next speaker. In proceeding to consider the purpose and value of cost congresses, he pointed out that there are continually arising new questions as to the allocation of particular expenses and so on. Then again, cost congresses are held because those preaching the gospel of costing must go on preaching it, because there are still a lot of people to convert and a lot of those already converted to be prevented from backsliding.

Mentioning that this was the eleventh cost congress, Mr. Austen-Leigh recalled the expectation of the first congress that every master printer would at once agree that it was perfectly necessary to discover the costs of his business. It was thought the only difficulty was to produce a standard costing system. They had been somewhat disappointed. There were printers who, because of possessing successful businesses, asked why they should go to the trouble of putting in the Costing System. Their reply to these gentlemen was that they were extremely lucky, probably because they had a line which was not a competitive line—they might lose that some day; moreover, they would be much more successful if they had the system in. There was another class of master printers who said they were too poor to put in the system as they could not afford the expense. Their reply to this was that the initial cost would be recovered almost within a month of putting in the system.

The Federation was looking to the Alliances to further the work of costing. He was glad to say some were active in the matter, and they all had the example of men like Mr. Chappell and Mr. Wise, who were good enough to go about the country preaching the costing gospel.

In concluding, Mr. Austen-Leigh said there was one word of welcome that he must say—to some of their guests from afar. They were lucky in having amongst them visitors from Australia, from New Zealand, from the United States and, he understood, from India. (Applause.) He proceeded to express a specially hearty welcome to Mr. George H. Carter, Public Printer of the United States of America. After referring to the great equipment and large amount of work done by the Government Printing office at Washington, Mr. Austen-Leigh welcomed Mr. Carter in the name of the assembly, his remarks being received with loud applause.

Public Printer of the U.S.A.

Mr. Carter, in the course of a short speech making suitable acknowledgment of the welcome given him, mentioned that he had come to Europe by commission of the President of the United States, as representative of the American Government at the International Conference of Master Printers to be held at Gothenburg. He said that in an interview which he had with the President before he left Washington he had told Mr. Harding of the invitation to attend the conference with the Federation of Master Printers. The President had expressed his very great pleasure at the fact, and His Excellency had asked him particularly to convey to the conference his most cordial greetings, and his very best wishes as a fellow printer. (Applause.) As an indication of the cordial relationship that existed in the United States between the Government, the employers and the employees in the printing trades, he said that he had had the honour conferred upon him to represent also at the Gothenburg conference the United Typothetæ of America and the International Printing Pressmens' and Assistants' Union, an organisation of the pressmen of the United States. Mr. Carter went on to speak of the veneration he felt as he walked the streets of London with its memories of Caxton and of Benjamin Franklin, and he concluded by recalling some facts and figures showing the great extent of the printing industry of the United States, also referring to the work of the Government Printing Office.

A Cable to America.

At the conclusion of Mr. Carter's speech, Col. Fletcher rose to move that the conference should send a cable to the President of the United States expressing appreciation of the cordial message he had sent them by the mouth of Mr. Carter.

The proposition was agreed to unanimously and with acclamation, and the secretary of the Federation was instructed to draft a message in suitable terms.

Mr. W. Howard Hazell.

On behalf of the London Master Printers' Association Mr. W. Howard Hazell (president of the London Alliance and chairman of the Federation and L.M.P.A. Costing Committee) bid them all a most hearty welcome to the Metropolis. This was the twenty-third annual meeting and the eleventh cost congress, and he thought it would be one of the most successful they had ever held in the history of the Federation. Nothing, perhaps, could rival the first great meeting when 1,200 printers sat down for two days to the subject of costing. It was difficult to draw 1,200 printers to London. They had, however, made all the arrangements they could—with the exception of arranging with the clerk of the weather—and he hoped these meetings would be a red-letter series of gatherings and

Digitized by Google

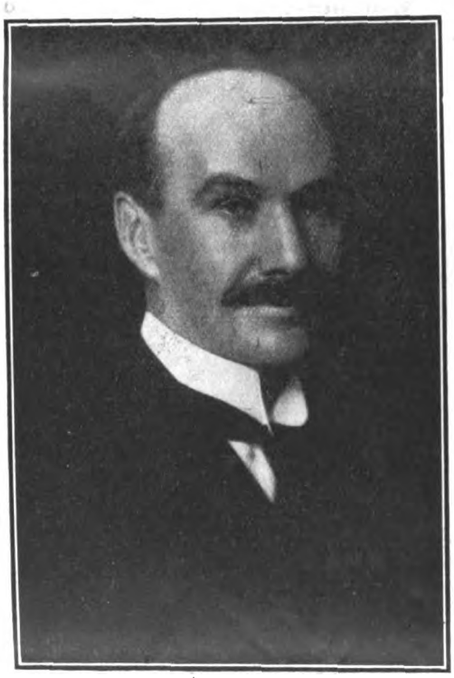
mark a new starting point from which to go forward to better and greater things. The president had mentioned that it took a long time to convert master printers. His own experience was that it was easier to convert a Conservative into a Liberal than to turn a non-costing printer into a costing printer. (Laughter.)

Proceeding to ask a few questions and suggest answers, Mr. Hazell inquired why they were in the printing trade. They were in business to make a living, and the amount of profit made depended upon the efficiency with which their business was conducted, and cost of production was an absolutely essential point in the successful carrying on of a business. How were they to find costs of production? This would be a perfectly simple matter if a customer asked them to produce a job which would occupy their whole factory for the whole of the year, but unfortunately the customer most probably wished only to hire a part of two or three departments for a few hours. It was impossible to find the cost of this except for a system such as theirs. He had sometimes been asked whether the Costing System increased costs. The Costing System reduced costs almost immediately it was installed because it showed them the costs of each department and of each job. Another question was "If I put the System in shall I have to raise my prices?" "Certainly not," said Mr. Hazell sarcastically. "Go on selling below cost; lose on some customers, making profit on others with a paltry profit for yourself—if you think that is the right way." He added, however, that the Costing System enabled printers to discriminate between the work they accepted. If they could not get reasonable prices for a job it was better to lose it and to produce work that paid better. Further points Mr. Hazell made were that the Costing System had been designed to suit the work of all classes of printers, from the smallest to the largest, in London or in the country. In no case had the System been found unsuitable for any printing office, and they had been asked to elaborate costing systems on similar lines for other trades. The costing system was extremely simple to work. If printers who had the largest turnover and printers with the smallest businesses all spoke so highly of the System, was it not time for every printer in this country to follow in their train and gain the benefit for his own works and so benefit the entire industry? (Applause.)

Mr. A. Williamson on Essentials.

The first address to the congress was delivered by Mr. A. Williamson, costing secretary to the Federation of Master Printers. In his address Mr. Williamson dealt ably and succinctly with "The Essential Features of the Federation Costing System," and we print the address on another page.

Mr. John Murdoch.



The discussion on Mr. Williamson's paper was opened by Mr. John Murdoch (Glasgow). Mr. Murdoch based his points upon the letters of the word SYSTEM. S stood for "Scientific." The Costing System was based upon a knowledge of facts, which knowledge was not possible to the great bulk of the printers who had not installed the System. The System was "Yours," because it was especially adapted for the printer, but unless they adopted it they could not claim it as theirs. The system was "Simple." He had proved this for himself. After asking help from the Federation the System was running in his office within a few days. As a matter of fact he did not know much about it because it was being worked by a girl. (Laughter.) A system to be practicable must be "True and Trustworthy." They could absolutely rely upon the facts disclosed by the forms used in the Federation System. The System was certainly also most "Efficient," and it was "Money-Making." As one who installed the system about 5 years ago he thought what a fool he was not to have installed it earlier. He was a member of the particular Alliance that was putting in the System free. They might say he was not a very shrewd Scotsman to have failed to wait until he got it for nothing. (Laughter.) However, only one who did not know the System would say that, because it had saved him thousands of pounds. His turnover had doubled, and profits had increased in greater proportion. A criticism which Mr. Murdoch made towards the end of his speech referred to the 20 per cent. charged on handling of jobs. This, he thought, was too much in a case where materials were expensive and printing formed but a small proportion of total costs. Mr. Murdoch was enthusiastically applauded on resuming his seat.

Mr. Murrell (Cardiff).

Mr. Murrell remarked that it was not reasonable to have a fixed percentage for handling. The 20 per cent. cited was simply an average. He found that materials formed roughly one-third of the selling price of a job, wages formed another third and overhead charges another. It was only when materials formed an average proportion of the job that the handling charge of 20 per cent. would be accurate.

Costing in the Bindery.

Mr. Murrell spoke of great difficulty experienced in applying the Costing System to binding departments. They found that the men, instead of putting on the daily docket the actual time on the job, had arranged standard times for different jobs. He could sympathise with the men in the matter, as the binder did not finish a job outright, but had to take up another job and come back to the first, or did a batch of jobs at once.

Mr. R. A. Austen-Leigh.

Who Presided over the Cost Congress.

Mr. Howard Hazell took up the question of the percentage to be added to the cost of materials. He said that the 20 per cent. that had been cited was an average figure obtained on data from a large number of houses. To be sure of his percentage every printer ought to put the System in and find out. He went on to explain that the percentage ought to be varied in accordance with individual cases.

On the subject of the application of the Costing System to bookbinding departments, Mr. Howard Hazell suggested that if it took master printers ten years to become converted to the Costing System they could hardly expect bookbinders to welcome time dockets within ten days. He urged members not to find fault if dockets were badly filled in. Let them help the men rather than blame them, and so remove some of the opposition to the System. He cited his own firm's binding departments as evidence that, with tactful handling, it was possible to apply the Costing System to the bindery so as to get the full benefits of it in that department.

Major Forman (Nottingham) reverted to the question of handling and selling charges. He thought half the trouble arose from the fact that they had costs of actual handling of paper and selling costs on the one chart. The American Typothetæ had found it advisable to separate these, and he suggested that their own costing committee should carefully consider the advisability of separating out the selling costs.

Mr. Andrews suggested that to separate out selling costs would involve extra detail that was not worth while.

Mr. A. E. Goodwin, who said he regarded the subject as one of the most important they were ventilating, pointed out that the main aim of the Costing System was to make plain to master printers their complete costs, including handling and selling costs. They had to regard the matter from the point of view of the average commercial jobbing printer rather than of a few specialised businesses dealing with peculiar commodities. Many printers if asked to deal with selling costs separately would forget to deal with them at all. General principles had to be established first. It was a great advantage to have a flat percentage covering average expenses on ordinary printing jobs; exceptions could then be dealt with as they came along.

Mr. Walker (Bolton) spoke of printers in his district having adopted the Costing System and consequently being "cut out." He asked for a message to take to them.

Mr. Goodwin replied that the position in this respect was improving. He pointed out that it was impossible for a man who adopted the System and was surrounded by competitors working on different methods to adjust his prices immediately to suit the current of trade. Those already working the Federation Costing System would benefit still more as the number of users increased. Eventually the trade would have a standard which was generally recognised.

Mr. Sessions on "Estimate Variation"

The next address was on "Causes of Estimate Variation: Some Suggested Remedies," the speaker being Mr. W. H. Sessions, of the Yorkshire Alliance. In the course of a striking paper—which we hope to print in an early issue—Mr. Sessions threw spot lights on some of the dark places in the subject of printers' estimating. Difference of opinion on operating times was stated to be the foundation of all printers' troubles. The wide variations due to this factor were made plain by a chart which was distributed showing actual cases in which variations occurred of 313 per cent. and 220 per cent. respectively between the lowest and highest tenders. The speaker said that the more he looked into charges of price-cutting in the printing trade, the more certain he was that the trouble was not so much wilful cutting as a lack of standards. Using a striking comparison, he said the variations of charges in the instances cited when 39 printers measured up the time for the work were as if 39 tailors measured up cloth, each using a yard stick of different length, their yard sticks varying from 19 ins. to 59 ins. (Laughter.) Mr. Sessions went on to plead for a fair market price for printing. It was possible to reconcile the very divergent views on operation times, and the actual difference of times of various workers into a standard. America had done it and so could we.

Mr. N. Hills Patterson.

Discussion on Mr. Sessions's paper was opened by Mr. N. Hills Patterson (North-Eastern Alliance) who submitted that in dealing with variations in estimates two classes of printers were the most difficult to deal with: those who had a "system of their own," and those who did not know their own costs and did not want to know. Loud laughter greeted the citing of an actual case where the Federation cost accountant was told "I have decided not to instal the Federation Costing System. If I knew my costs I would never get a job at all." Printers of this class usually relied upon some book or published list of prices, but rarely worked out the operation times correctly. Indeed, they misused the lists by deliberately estimating 15–20 per cent. below list price—doing this, in the bulk of cases, honestly, because they believed the official costs and prices were suitable for the larger houses and that their own costs were lower. A striking instance was given of a printer who, undercutting prices by about 33 per cent., was interviewed on the subject and admitted that rent and rates of his little place worked out at about £25 per annum against himself and his one man. The light dawned when he was asked if he imagined the large firm with many employees had to debit each employee with £25 for his share of rent and rates. The speaker pointed out that the hourly costs of a man in a back street employing three hands were actually higher than those of an employer with a first-class building in a main street and employing thirty hands. But the small printer did not know it and could seldom be made to realise it. For converting such, the only method he could think of was "peaceful penetration"—making acquaintance, and "working it in gently."

Direct Paper Supplies.

Wholesale Stationers and Master Printers Reach Agreement.

Negotiations between the National Association of Wholesale Stationers and the Federation of Master Printers on the question of direct supplying of paper have been so far successful that Mr. A. Dykes Spicer, the president, has given an assurance on behalf of his Association that they will accept the general principles underlying the questionnaire sent out by the Federation.

The questionnaire, it may be recalled, was as follows:—

1. Do you confine your business to the trade only?
2. Do you in any circumstances supply direct to consumers?
3. If so, will you say if you supply consumers at the same prices as charged to the trade, or always quote consumers at a price that would allow a profit to the printer if the goods had been supplied through him?

Following the assurance given by Mr. Spicer, the Trade Relations Committee of the Federation decided to publish, for the information of their members, a list of the firms comprising the Wholesale Stationers' Association, together with the firms outside that organisation who have given satisfactory replies.

There are several points of detail to be settled, and to deal with these a joint committee comprising representatives of the Federation and of the Wholesale Stationers' Association is to be set up.

Some of the questions to be discussed are: Printers' customers whose businesses are so large that they can pass both printer and wholesale paper merchant, and buy direct from the mill; the position of the wholesale paper merchant when he is in competition with a firm of printers who are also manufacturing stationers; a definition as to what constitutes a "a printer," including that of manufacturing firms who own a printing plant merely to supply their own printing requirements; wrappings and other special classes of paper; and the very difficult questions of advertising agencies, of printing firms who have subsidiary wholesale paper merchant companies, and of wholesale paper merchant firms who have subsidiary printing companies.

THE BRITISH & COLONIAL PRINTER

FOUNDED 1878 AND STATIONER PUBLISHED WEEKLY

FORTY-FIFTH YEAR.

Printed and Published EVERY THURSDAY by STONHILL & GILLIS, at 58, Shoe Lane, London, E.C.4.

Tel.: Stonhill, Fleet, London." Phone: 8407 City.

SUBSCRIPTION: Per Annum, 18s. (including Postage).

Charges for Trade Advertisements:
(Full Page 12 by 8 ins.)

Across Whole or Half-Width of Page:				In Single Column Form:			
Whole Page	£8	0	0	One Column	£3	3	0
Half Page	4	10	0	Half Column	1	17	6
Quarter Page	2	10	0	Quarter Column	1	0	0
One Eighth-Page	1	10	0	One-inch Column		7	6

An Extra Charge for Cover and Special Positions.

Discounts according to Number of Insertions.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C.4.

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., newsagents, 11, St. Bride-street, London, E.C.4.

Representatives:

London—Mr. STANLEY J. GILLIS, 58, Shoe Lane, E.C.4
Lancashire and Yorkshire—Mr. W. C. FOSTER, 1, Duncan-street, Higher Broughton, Manchester.
Scandinavia and Finland—Mr. DAVID AAMO, 2, Hollænderdybet, Copenhagen, C.
France and Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, Bruxelles.
United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MAY 31, 1923.

Master Printers' Convention.

THIS is an historic week in the annals of the British printing industry. Record gatherings have marked the various social and business functions held under the auspices of the Federation, and London had a big task imposed upon it in providing for the necessities and the entertainment of some 900 master printers and their ladies, who came from all parts of the United Kingdom. Glasgow last year set a high standard in organisation; but London attained an equal level of efficiency, even if it did not establish something better. There was only one unfortunate aspect—that was the weather—and it was beyond human power of organisation to control the variable English climate. The indoor festivities were brilliant in the extreme. The opening reception at the Guildhall and the banquet at the Hotel Great Central were the gayest and happiest of functions. The lasting impression made upon the ladies is sufficient testimony to the success attained.

* * *

Business Meetings.

AS FOR the more serious business of the Cost Congress and the Federation annual meeting, it is safe to say that the scope and tone of the gatherings have never been exceeded. They have become permanent foci of the intellectual and practical acumen of the craft. For years past sound constructional work has been done in building up the organisations which give power and unity to the master printers of the country. The Federation and the Alliance are now a great force, and some idea of the activities which have engaged attention during the past 12 months is afforded by the annual report which appears in another column. Without the Federation and the London Association the printing industry would be in chaos to-day. Without the Costing System it would still be the pitiable Cinderella of the craft family. By virtue of organisation and splendid spade work it now stands "four square to all the world." All who attended the meetings on Monday and Tuesday were impressed by the latent and the active strength contained within the Federation and represented by the influential men behind it.

* * *

The Annual Banquet.

THE moving scene presented by the annual banquet on Tuesday evening at the Hotel Great Central was a tribute to the power of the Federation. Mr. R. A. Austen-Leigh, the retiring president, must have felt proud to have led an organisation which could bring together such an influential assembly. It was an inspiring gathering—gorgeous from the social standpoint, memorable for its oratory. London thus establishes another milestone in the history of the Federation of Master Printers and Allied Trades. For the manner in which the London Alliance carried out its duties as host every credit is due. Time was not allowed to hang heavy on the hands of anyone, and except so far as the weather is concerned, visitors to the Metropolis will go away with many happy memories.

Personal.

THE RT. HON. LORD RIDDELL who is vice-chairman of the Newspaper Proprietors' Association and chairman of the Weekly Newspaper and Periodical Proprietors' Association, is one of the score or so of gentlemen whom the Parliamentary Secretary to the Department of Overseas Trade has added to his Advisory Committee.

SIR ROBERT H. BAIRD and Mr. C. A. Bates are attending the Advertising Convention at Atlantic City in June as representatives of the Federation of Master Printers.

MR. GEORGE W. JONES, the noted printer-craftsman of Gough-square, Fleet street, was on Tuesday elected a Common Councillor of the City of London. Mr. Jones's votes totalled over 100 per cent. more than the combined votes of the other candidates. A striking anomaly is thus removed, in that the Ward of Farringdon Without, which includes Fleet-street and the surrounding district, at last has a printer as its representative on the Council of the City of London.

MR. MONTGOMERY HENNEGIN, who has completed four years of service as assistant costing secretary to the Federation of Master Printers, leaves at the end of this month to take up the important position of organising secretary to the South African Master Printers' Federation.

AT the annual meeting of the Federation on Tuesday, the annual report made mention of Mr. Hennegin's approaching departure, and put it on record that Mr. Hennegin had discharged his duties to the satisfaction of the Costing Committee and with credit to himself, and will carry with him the best wishes of those he has served.

THE address which Mr. F. Heckford (chief chemist to John Dickinson and Co.), will give to the members of the South-West London Master Printers' Association at Battersea next Tuesday evening will be accompanied by practical demonstrations of papermaking and illustrations on the blackboard.

MR. LINTON ANDREWS, a member of the sub-editorial staff of the *Daily Mail*, has been appointed editor of the *Leeds Mercury*, in succession to Mr. James Lumsden, who resigned on the sale of the concern by Lord Rothermere to the *Yorkshire Post*.

MR. E. K. PEARSON, hitherto chief reporter of the *Gloucester Citizen*, has been appointed editor of that paper.

MR. WILLIAM LONGSTER, for 30 years deputy overseer and overseer of the *Nottingham Guardian*, has just celebrated his golden wedding.

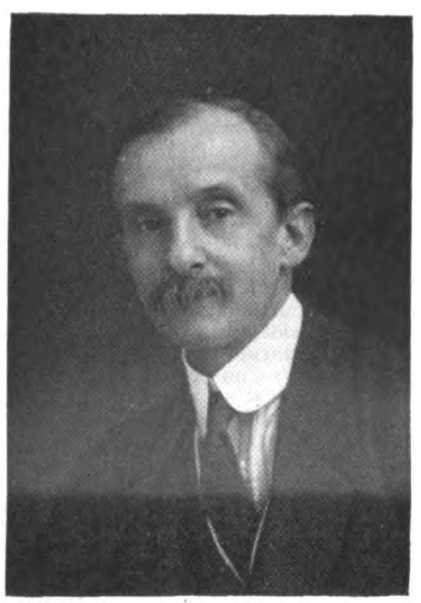
The Federation Annual Meeting.

Important Business Transacted.



The twenty-third annual meeting, which took place at the Hotel Great Central on Tuesday was largely attended. Mr. R. A. Austen-Leigh, late president of the Federation presided.

Mr. W. B. Wykes (Leicester),
Vice-President of the Federation of Master Printers.

Telegrams of greeting were sent to the United Typothetæ of America, and to the Master Printers' organisations of France, Belgium and Holland.

The chairman, in moving the adoption of the annual report said that notwithstanding the dispute of last year the relationship with the Executive of the T. A. was not in any way embittered, and the union was looking to some form of arbitration to settle points on which they could not agree. The question of organisation was receiving much attention, and a model and permissive form of indenture for apprentices had been prepared. The Trades Relation Committee had come to an understanding with the National Association of Wholesale Stationers and Paper Merchants, and the Federation had succeeded in securing a further rebate from the insurance companies to printers who had fire sprinklers installed. Owing to the firm stand taken last year the Federation had improved its strength, reputation and prestige.

Mr. A. E. Goodwin,
Secretary of the Federation of Master Printers.

The adoption of the report was seconded by Col. J. R. Truscott (London), and in supporting this, Col. H. R. Fletcher urged printers to press home the advantages of the lowered postal rates to their advertising customers.

Mr. Edward Unwin (treasurer) proposed, and Col. H. R. Fletcher (late assistant treasurer) seconded, the adoption of the accounts and balance sheet, which showed the finances to be in a healthy condition.

Mr. W. B. Wykes (assistant treasurer) moved that the subscription be the same as last year, and he outlined the budget for the coming year, which estimated for a reduced income on account of the fall in wages paid, and an increased expenditure by reason of the payment of hotel and travelling expenses to members of committees.

The meeting then listened to a rejoinder by Mr. D. A. Whitehead (London) to an article in a trade journal by a "small printer" attacking the Federation in regard to its alleged attitude to small firms. The meeting unanimously endorsed Mr. Whitehead's remarks.

Election of Officers.

On the proposition of Mr. R. A. Austen-Leigh, seconded by Mr. W. A. Clowes, Lt.-Col. H. Rivers Fletcher was elected president of the Federation for the ensuing year.

The following officers were also appointed: Vice-president, Mr. W. B. Wykes (Leicester); treasurer, Mr. Edward Unwin; assistant treasurer, Mr. W. B. Wykes; auditors, Messrs. A. C. Roberts, Wright and Co.

Mr. H. Hanson, supported by Mr. W. T. F. Jarrold, on behalf of the East Anglian Alliance invited the Federation to that area for the annual meeting in 1924.

The following resolution proposed by Mr. G. F. Storey, seconded by Mr. E. H. Lee, was adopted:—"That the Federation of Master Printers at the annual meeting in London, representing 5,000 employers, wishes to congratulate Sir Laming Worthington Evans on his appointment as Postmaster-General and trusts that during his term of office he will find it possible to make further reductions in the postal rates which will assuredly be beneficial to the trade and commerce of the country, and that he will press forward with the legislation to prevent British advertisers posting circulars abroad."

The following resolution was also adopted: "That the Federation of Master Printers assembled in conference wish to draw the attention of the Prime Minister to the promise given that an enquiry should be set up into the working of the State printing establishment, and in view of the fact that this was started for an experimental period of three years which expires next month, this enquiry should be set up without delay."

Mr. H. A. Bethell, chairman of the Organisation Committee of the Joint Industrial Council, urged the formation of District Committees throughout the country, and initiated a discussion which was well sustained.

Co-operative Advertising.

Mr. A. le Pine Strange (Eastbourne) introduced the subject of the Federation undertaking the advertising of printing in the same way that gas, apples, tomatoes, milk, paint and other commodities had been advertised by the respective organisations. He suggested a sub-committee should be formed to consider the proposal, and he offered the slogan: "Use more Print, and make more Profit." The idea met with a considerable measure of support from Mr. W. H. Sessions, Colonel Fletcher, Mr. H. V. Chappell, Mr. G. F. Storey, Mr. Keen (Leicester), and others, and it was agreed to remit the question to the Council for consideration.

Mr. Percival Jones (Birmingham) proposed a vote of thanks to the retiring president, vice-presidents, treasurer, council and committees for the work of the year, to which Mr. R. A. Austen-Leigh replied.

A vote of thanks to the London Alliance Committees, stewards, etc., for their hospitality, was voiced by Mr. W. Johnson (Manchester) John Wylie (Glasgow), and repre-

Mr. W. Whyte,
Secretary of the London Master Printers' Association and Secretary for the Conference.

sentatives from Wales and Ireland. Mr. W. H. Hazell responded.

The Annual Banquet.

Mr. R. A. Austen-Leigh, the retiring president, was in the chair at the annual banquet held on Tuesday evening at the Hotel Great Central, and the gathering numbered between 500 and 600. An excellent musical programme was provided.

Lieut.-Col. H. Rivers Fletcher, the new president, proposed the toast of "The City of London" and Sir Ernest Wild, K.C., the Recorder of London, responded.

Mr. J. R. Scott, president of the Newspaper Society, submitted the toast of "The Printing Craft" and Mr. James MacLehose, LL.D., in reply, said he often wondered, in thinking of the craft, whether one should be more impressed with the amount of work that the Federation had been able to accomplish or rather by the amount which was still left to do.

The visitors were toasted at the instance of the chairman, and Mr. A. Dykes Spicer (president of the National Association of Wholesale Stationers and Paper Merchants), returned thanks.

A full report of the proceedings will be given in our next issue.

MR. THOMAS ILLINGWORTH, of Roundwood-park, Willesden, and of Aldbourne (Wilts), inventor of a new process in the manufacture of photographic dry plates and paper, has died suddenly after an operation.

The Bookbinder

Notes and News.

The Trade Outlook.

There has been no marked development in the bookbinding industry in recent weeks. Trade is neither worse nor better than it has been, and Board of Trade figures show scarcely any diminution in the percentage of unemployment in the bookbinding trades. It is to be feared that there can be no real improvement in our own section until business generally improves throughout the country. It was held in some quarters at the close of the war that five years would suffice to bring trade back to its normal bulk and usual channels. At the time, this was regarded more generally as an unduly extended period for such an ordinary process as trade recovery. Practically four and a half years have gone by, and it is patent enough that the end is not yet in sight. Summer months are not usually productive of fruitful business, and those before us are not in any way likely to turn out contrary to rule. Hope deferred may have its regrettable side, but so long as there is hope there is something to look forward to. The feeling in trade circles is that there will be a decided improvement throughout the country by the end of the year.

Labour-Saving Machinery.

Many bookbinding firms are sufficiently optimistic over future prospects to invest in new machinery. Mainly, it is the larger houses that are intent on developing their plant. It still remains for a multitude of smaller binderies to realise the value of labour-saving machinery in the bookbinding department. To many of them the simplest machines, such as the leather **parer**, the glueing machine and the back-rounder are an untried quantity. Even in some of the larger establishments cloth and buckram are still cut by hand labour and finished off on the guillotine, with its resultant waste. Mainly as a result of foreign enterprise, the bookbinder of to-day is presented with a series of machines which cut hand labour down to its minimum. Despite tinges of regret at the passing of handcraft and the quality commonly associated with handsewn and handbound books, it is absolutely essential in the interests of bookbinding development that maximum output at minimum cost should be achieved. The only prospect of successful competition against well equipped binderies is that afforded by equally good equipment.

An Improved Disc Ruler.

Several orders have been placed recently for an improved form of disc ruling machine fitted with a new type of suction feeder. For scholastic work the ordinary friction feeder can perform all that is required, but it falls short on higher-class account-book work, and there is an uncertainty in its handling of thin papers. Printers have abundantly proved the reliability and versatility of pneumatic suction feeding on all classes of paper, and quite a number of different types of auto-feeders are in use in offices throughout the country. Rulers have been a bit slow in applying a similar solution, but it is satisfactory to have a British manufacture first in the field.

Suction Feed Advantages.

We have seen the feeder in action, and it accomplished all that was claimed for it. The *modus operandi* is extremely simple, and there is an entire absence of intricate mechanism. Adjustable air nozzles loosen the sheets on three sides, while the back edge is gently held under light tension. A shaft carrying a perforated suction cylinder revolves over the near edge of the pile of sheets, and pneumatically picks up a single sheet for transference to the travelling tapes, which convey the sheets to the ruling cylinder.

The Materials Market.

The market for bookbinding materials is firm and steady. Leathers remain at the same prices that have been recorded in recent issues. There is but a poor demand from bookbinders, and it is fortunate for the leather manufacturers that they do not rely solely upon the orders they receive from our quarter. Probably there is many times the amount of leather put into upholstery than upon books. As regards prices, it is not so much the demand from users that influences the leather market as the competition for the raw material. In this sphere American and Continental participation is a controlling factor.

Leather Substitutes.

Some new patterns in leather surfaced **fabrics for** upholstery have just been introduced. The effect aimed at is that known as two-colour antique hide and the embossed designs are reproductions from actual skins. Needless to say, the imitation is so perfect that detection would be impossible to any except the expert once the material was in position as a covering. Nowadays, of course, there is no such thing as passing these fabrics off as imitations. They compete against leather as an alternative material, and are claimed to be superior in certain respects.

Some Price Movements.

Goldleaf, fabrics, tapes, threads, &c., remain unaltered in price. There has been a slight reduction in the figures for certain leather cloths, baizes, &c. Strawboards have eased a little, and as there are big stocks in the country with a low demand there is no immediate likelihood of any advance in price.

Union Restrictions in the Bindery.

The growth of organisation in the printing and allied trades has been followed by a big movement towards uniformity in conditions of work and trade customs of all kinds. It is probable that in the main this levelling up tendency, brought about chiefly by the increased power of the trade unions, has made for the good of the industry as a whole, though some regulations that have been agreed to are open to question, and certainly press with great severity in certain individual cases.

The bookbinding section of the trade is not exempt from restrictions that are sometimes found irksome, and it is probable that it would be possible for the bookbinding trade in this country to increase its prosperity if more freedom of action were made possible in some directions. One reads with interest, in the *South African Printer*, that our bookbinder colleagues in South Africa are at grips with this problem of trade union restrictions in the bindery, and a joint meeting between the master printers and the binding section of the Transvaal trade took place recently in Johannesburg. At this meeting it was stated that the matter had been before the last National Industrial Council, when a report by the Sub-Binding Committee of the Union on the matter of restrictions was discussed, but no decision could be reached. This joint meeting therefore was to discuss the matter further, with a view to finding a way out.

A spokesman of the employers said the matter of Transvaal binding restrictions had been in question since the first Council meeting in 1919, when promise of relief had been given, but though the matter had since come before every successive Council nothing of benefit to the position had taken place. The crux of the masters' case was that if it were possible to cheapen the production of certain classes of work by the removal of certain binding restrictions which confined certain processes in the hands of journeymen binders, when such could be handled by female labour, the article would thereby be cheapened, and a larger demand ensured for the local production. At present turned-in work was held to be journeymen's work. This meant that a large range of manufactured stationery could not be economically handled, and went either to the coast towns, where such rigid restrictions did not exist, or to oversea. He was convinced that if Grade II. labour were allowed to handle turned-in work of the ordinary cheap commercial kind, binding would get a big stimulus, which, besides absorbing more journeymen, would give needed employment to a large number of girls. Mr. Esson showed by shipping records how imported books, stationery and printing had gone up from £490,000 in 1915 to £1,258,000 in 1920. Half of this amount, he claimed, could be manufactured in South Africa, and the necessary labour to do this could be put down as 3,000 additional hands. These restrictions as existing, therefore, affected adversely all the other departments of the trade. In cap ½-rough books and ordinary flush books there was a large consumption and if it were possible, as he contended, to turn out these books locally, it would extend the binding trade considerably, and the men would share in this extension.

Another speaker gave instances of how his firm had before them, from time to time, requests for prices of large quantities of manufactured stationery, but, owing to these binding restrictions, the local price was over 100 per cent. higher than the landed cost from oversea. He appealed to the men to take a broad view of the situation.

On behalf of the binders, it was suggested that the production by girls would not be near expectation. He had the greatest sympathy with the aims of the employers. Their girls and boys could not be rated with those in competitive centres oversea. The quality of binding work had greatly deteriorated in South Africa, and not much was now left to the binder, and if the line of demarcation was withdrawn, he was not yet convinced that the binders position would be bettered. A protective tariff should first be secured, as, under present small production, they could not possibly successfully compete with the large and highly organised houses oversea.

In summing up the discussion, the em-

Digitized by Google

ployers' chief spokesman deplored the rather narrow view disclosed by the speakers on behalf of the men, and especially the poor estimate of the capacity of the local girls. But even logically they stood on soft ground, for if the capacity of local girl labour was at such a poor level as stated, why fear them by the removal of a few restrictions? Several of the men had advised higher protection but he could assure them that until they lowered the economic cost of production in these things, the Government would turn down any request for more protection.

Ultimately, as there appeared to be disagreement in regard to facts and figures alleged throughout the discussion, it was agreed that a small Committee of both sides should be appointed to test the various statements of fact and figure and estimate contained in the arguments of both sides.

Care of Paper Cutter Knives.

Recently the Seybold Machine Co. prepared a set of suggestions on the care of paper cutter knives. As published in the *American Printer*, they are as follows:—

Grinding.

The utmost care and judgment should be used in grinding paper knives, whether ground with a sandstone or an emery wheel.

If an emery or any abrasive wheel is used it should be made by silicate process about 66/36 grain, medium grade, or soft enough so that a light feed can be taken without burning or glazing the bevel of the knife.

The operator of the grinding machine should be in constant attendance while the knife is ground, and should have a liberal supply of water feeding on the wheel where it comes in contact with the bevel of the knife—*not* at the top of the wheel. If this supply of water is cut off from any cause, and the wheel continues to grind without water, it will create a friction, heat up and draw the temper in the knife or crack it.

Extra precaution should be taken to grind the cutting edge of the knife parallel with the top of the knife, not either end or the centre of the knife wider than another part, for when this occurs the cutting edge of the knife does not strike the cutting stick squarely. It has a tendency to snip out at the wide section, and also destroys the cutting stick quickly.

The bevel should be ground flat or a shade concave, and must not exceed in length twice the thickness of the knife plus one-quarter inch, or twenty-four degrees. If this rule is not adhered to, and a longer bevel than this is ground on the knife, the flat side or face of the knife will become rounded about one-half inch back from the cutting edge, thereby taking the slight concave out of the knife, and causing the machine to cut tapering, *i.e.*, the top of a cut, say, four or five inches high, will be narrower than the bottom of the cut.

If any colour shows on either the face or back of knife when ground, it indicates that the temper has been drawn by over-heating, caused from lack of water, too heavy feed or an improper or glazed wheel.

Honing.

Every knife, when coming direct from grinding machine, has a wire edge, which should be honed off before the knife is placed in the knife bar.

Good results in honing may be obtained by use of No. 1 India Oil Stone (Pike Mfg. Co., N.H., U.S.A.), or No. 108 Carborundum Combination Stones from one of Carborundum Agencies.

The knife should be laid on a bench or table, flat side down, with edge of the knife protruding about one-eighth of an inch beyond the edge of the table. The hone should be held flat on the bevel, and the motion should be circular or rotary movement as well as up and down. The honing should be done from one end to the other without lifting the hone from the knife.

Never hone the flat side of the knife to sharpen it.

When a fine wire edge appears on the flat side, lay the hone on lightly with no pressure and absolutely flat, and draw from one end to the other. After honing the knife for a short time (four or five minutes), the wire edge will disappear or get so thin that a small piece of white pine or other soft wood drawn along the cutting edge will eliminate this thin wire edge.

Never hone a knife while in the machine.

New Book-Covering Material?

That it is suitable for use as a book-covering material is one of the claims made for a new material which, it is stated, will shortly make its appearance on the market in multitudinous form and colour.

Mr. S. J. Peachey, by birth and education a Londoner, by profession a lecturer in chemistry, made a discovery in his laboratory at the Manchester School of Technology three years ago. He found that by exposing rubber alternately to the action of two gases for about a quarter of an hour, he produced a vulcanised rubber without heat.

This discovery is the basis of the new material, in the making of which waste materials, such as leather buffings and shavings ground up, sawdust, cork dust, and shoddy, are mixed with rubber. A plastic solution is formed, which can be worked with aniline dyes into any colour and any form. The result is said to be a beautiful material, more durable than leather, capable of much more diversified treatment, and much cheaper.

A laboratory and miniature factory have been started at Willesden, London, N.W.

An important step in the development of the Peachey process, is the appearance of the prospectus of Peachey Leather Products, Ltd., offering 125,000 ordinary shares of £1 each at par. The directors have underwritten the whole of the issue, and they and their friends will take allotment of 46,050 shares out of the 125,000 shares issued.

German Bookbinders' Employment.

Unemployment in the German printing and allied trades greatly increased during March, when the proportion of bookbinding workers unemployed more than doubled. Though the latest figures—up to the end of March—compare very unfavourably with our own unemploy nent returns, it is interesting to note that in Germany the bookbinding trade has a much smaller proportion of unemployed than has the printing trade.

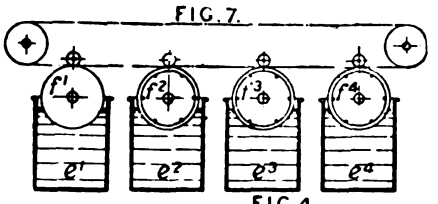
Of a trade union membership reported at the end of March as 96,975 in the bookbinding trade, 9·8 per cent. were totally unemployed at the end of March, as against 4·4 at the end of February. These figures compare with a percentage of only 0·9 at the end of March a year ago.

On the other hand, a total reporting membership of 63,993 printing trade workers included at the end of March a proportion of 11·3 per cent. unemployed, as against 8·4 per cent. at the end of February, and 1·7 per cent. at the end of March, 1923.

Inlaid Paper.

A British patent has been granted to Mr. F. Kaye relating to inlaid paper, millboard, etc. In the production of inlaid designs in paper, millboard, leather substitute, and linoleum substitute, coloured pulps as portions of a design are superposed on a foundation or backing of white or coloured pulp. Where a hand mould *a* is used, the different

FIG. 7.



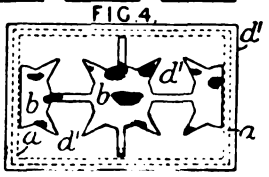


FIG. 4.

portions of the design are formed by using corresponding deckles of wood or like material d^1 on the wire gauze *b* of the mould. For machine-made paper, a number of cylinders f^1—f^4, Fig. 7, in vats e^1—e^4 of different coloured pulps are used. The first cylinder gauze, forming the foundation or backing, is plain. The gauze of the other cylinders corresponds to the different patterns required to produce the complemental sections of the design. Strong and flexible waterproof products, suitable as a substitute for leather and linoleum, may be produced by adding rubber containing latex, balata containing latex, or gutta containing latex, to the pulp of vegetable, animal and mineral fibres.

How to Select the Right Paper.

By FREDERICK JOHNSON.

Of much importance to the printer is the question of the physical quality of papers, as it is knowledge of this that should be used when deciding the limit of lines he intends handling. Two basic factors must be considered: 1. The use to which the printed piece is to be put; 2. The method of impress which is to be employed.

Under the heading of "Use" must be considered A. Longevity—the length of time for which the paper must resist deterioration, requiring consideration of the life or permanency of the paper; B. Treatment—the amount and character of handling, folding or exposure to which the paper will be subjected, requiring consideration of whether paper for ordinary usage or of extra strength is necessary, and C. Appearance—the character or sense appeal in the paper itself requiring consideration of special quality or a range of colours.

In general, printed pieces fall into two clearly defined groups, *i.e.*, vehicles for messages, including advertising and formal announcements of widely different types, and records of transactions, embracing office and factory forms, records and documents of all kinds.

Printed pieces conveying messages require paper selected on a basis of ordinary usage, special strength, special bulk to weight, and special appearance. Printed pieces recording transactions require papers selected on a basis of permanency and treatment or amount of handling, folding and exposure.

Irrespective of whether the printed piece is the vehicle for a message or the means of recording a transaction, the choice of paper must also be considered from the point of view of the method of impress to be applied. The adaptability of the various methods of impress is governed largely by the class and finish of the paper. Fine-screen half-tones, for example, can be applied successfully to papers of the book class in super-calendered finishes, but cannot be used on papers in the cover and printed class in antique finish.

Use good papers where you possibly can. Better paper, better printing. You may send out a cheap job because of necessity, but it is a curious fact that some time after the job has been forgotten some busybody in the customer's establishment will pick up a piece of the cheap looking printing and ask "Who printed this"? and the reply will come Pickwick's Art Press, Ltd., and the busybody will smile and not be impressed.

The following is a classification of papers indicating what is essential to success for commercial usage:—

Bonds: Strength combined with adaptability to pencil, ink and typewriting.

Linens: Strength combined with adaptability to pencil, ink and typewriting.

Ledgers: Special adaptability to large amount of pen writing—ability to withstand frequent erasure—heavy sheet must lie flat.

Writings: Suitable where appearance and pen writing are important factors or as a substitute for a lightweight ledger, where strength is not a governing condition.

Book Papers: Strength and uniformity of texture—good colour—freedom from dust or fuzz, and adaptable principally to various types of letterpress.

Offsets: Surface that will not lift or pick, minimum shrinkage or stretch.

Covers: High resistance to handling, combined with good folding qualities and appearance.

Index Bristols: Good for pen and pencil writing—must have stiffness—should possess good bending qualities and be able to resist erasure.

Weddings and Papeteries: Pen writing qualities, smooth finish, brightness of colour.

NO MAN is a success who is not happy.

DIVIDENDS AND REPORTS.

HAZELL, WATSON AND VINEY.—Net profit of Hazell, Watson and Viney for year ended March 31st, after providing for all expenses and taxes, but before paying interest on debentures and dividend on preference shares, was £30,823, plus £22,380 brought in, making £53,203. Deducting debenture interest, preference dividend, and interim dividends on ordinary and employees' ordinary shares, balance was £42,686. Directors propose final dividends, free of tax, of 14s. per share on ordinary shares, 1s. 4½d. per share on employees' ordinary shares fully paid April 1st, and 10½d. per share on shares fully paid on October 1st. Directors also propose to transfer £5,000 to reserve, making it £50,000, and to carry forward £17,951.

A. B. FLEMING.—Amount at credit of profit and loss of A. B. Fleming and Co. for year ended April 30th, including £9,847 brought in, is £36,498. Dividend of 15 per cent., less tax, £8,000 carried to new buildings and plant account, and £10,498 forward.

WILLIAM COLLINS, SONS AND CO.—Report of this Glasgow company of printers, publishers, etc., states that, after allowing for depreciation, there is credit balance £32,186, and after paying interim dividends and debenture interest there is available £16,836. Directors recommend final dividend of 1¼ per cent. on ordinary shares, making 6¼ per cent. for year, against 5 per cent. for 1921, carrying forward £7,936.

THOMAS OWEN AND CO., LTD.—Profit for year ended March 31st, 1923, after providing for taxation and reserves and subject to repayment of excess profits duty, amounted to £29,449, plus £4,669 brought forward, making £34,118. Directors recommend dividend of 7½ per cent. less tax, on ordinary shares (making 10 per cent.), carrying £7,118 forward.

BECKER AND CO., LTD.—The directors, in presenting the fifteenth year's accounts, mention that they are the first after amalgamation and extension of capital. In August and September, the £180,000 new ordinary capital, and by January 15th the moneys resulting from the note and debenture issues were received. The sum carried forward from last year, after payment of dividends, etc., was £23,211 2s. 6d., and the profits for the year after providing debenture and note interest amounts to £82,695 19s. 1d., a total of £105,907 1s. 7d. Shareholders were asked at the annual general meeting to confirm that the cost of the issues, £40,244 3s. 9d., be written off and 7½ per cent. dividend be paid, amounting to £37,500, and that the sum of £28,162 17s. 10d. be carried forward.

NEW COMPANIES.

E. W. BOUCKLEY AND CO, LTD.—Capital £1,500 in £1 shares; to carry on the business of general and commercial printers, lithographers and bookbinders, etc. Private company. Subscribers: E. W. Bouckley and A. O. Goldsmith. E. A. Bouckley and C. M. Harrison are permanent directors. Registered office: 70, Bradford-street, Birmingham.

J. W. ARROWSMITH (LONDON), LTD.—Capital £20,000 in £1 shares; to acquire the publishing part only of the printing and publishing business, now carried on by J. W. Arrowsmith, Ltd., at Bristol. Private company. First directors: J. A. Arrowsmith-Brown, F. N. Tribe, G. B. Cobb and W. D. R. Bravington.

JOHN B. MACNAUGHTON AND CO., LTD.—Capital £100 in £1 shares; to carry on the business of newsagents, stationers, lithographers, typefounders, engravers, bookbinders, paper and ink manufacturers, etc. Private company. First directors: J. B. MacNaughton, Mrs. L. H. MacNaughton and K. B. MacNaughton. Registered office: Brier Bank, North Erskine Park, Bearsden.

RICHARDSON AND BROWN, LTD.—Capital £2,000 in £1 shares; to take over the business of printers and stationers carried on by J. H. Richardson and A. E. Brown at 128, Great Jackson-street, Manchester, as Richardson and Brown, and to carry on the same and the business of paper bag, account book and box makers, etc. Private company. First directors: J. H. Richardson, A. E. Brown, S. M. Parkes and J. E. Brown. Registered office: 128, Great Jackson-street, Manchester.

"MORO," LTD.—Capital £5,000 in £1 shares; to carry on the business of manufacturers, printers, bookbinders, diesinkers, papermakers and dealers in paper, papier mache, etc. Private company. First directors: A. J. Robbins, W. D. Baxter and P. W. Rosher. Registered office: 35-7, Broad-street-house, New Broad-street, E.C.

UNITED KINGDOM PRINTING CO., LTD.—Capital £500 in £1 shares; to acquire the printing business carried on at 195, Strand, W.C., as Charles Brady and Co., Ltd., and to carry on the same and that of stationers, bookbinders, agents, etc. Private company. First directors: A. J. Moore and F. W. Hopkins. Registered office: 195, Strand, W.C.2.

CENTURY PRESS, LTD.—Capital £100, in £1 shares; to carry on the business of paper manufacturers and dealers, wholesale, retail and export stationers, printers, envelope manufacturers, etc. Private company. First directors: E. Goldston and E. L. Brynildsen.

ARMOUR BLADE CO, LTD.—Capital £10,000, in £1 shares (8,500 10 per cent. cumulative preference and 1,500 ordinary); to adopt an agreement with S. Cheetham, J. W. Schofield, W. H. Armour, M. E. Schofield, and two subsidiary agreements referred to therein, and to carry on the business of makers of machinery for the production of cartons, wrappings, printings, etc. Private company. Permanent directors: S. Cheetham, J. W. Schofield, W. H. Armour and M. E. Schofield. Registered office: Parliament Mansions, Orchard-street, Westminster, S.W.

RAILWAY ISSUES, LTD.—Capital £1,000 in £1 shares; to carry on the business of proprietors and publishers of newspapers, journals, books and other literary works, etc. Private company. Subscribers (each with one share): H. E. Warner and A. Mills.

N. SMITH AND CO., LTD.—Capital £1,500, in £1 shares; to acquire the business now or formerly carried on by J. S. Horrex as "Smith's Cardboard Box Co" or otherwise at 28-29, Leopold-street, Birmingham, and to carry on the business of cardboard boxmakers and dealers, etc. Private company. First directors: J. S. Horrex and Mrs. Minnie A. Horrex.

ACTON BOROUGH POST PUBLISHING CO., LTD.—Capital £500, in 1s. shares; to carry on the business of newspaper proprietors, newsagents, advertising contractors, etc. Private company. First directors: A. C. Musselwhite, H. G. Prichard and J. Kent. Registered office: 9, High street, Acton, W.

PRACTICAL BAKER, LTD.—Capital £200, in £1 shares; to carry on the business of newspaper proprietors and general publishers, etc. Private company. Subscribers: W. H. Edwards and C. J. Fright. Registered office: 613 and 614, Bank-chambers, 329, High Holborn, W.C.

CASOID, LTD.—Capital of £35,000 in £1 shares (20,000 6 per cent. non-cumulative preference and 15,000 ordinary); to acquire the trade mark "Casoid" and to carry on the business of manufacturers of and dealers in glues, and casein, casein and vegetable casein and milk products; and bye products of milk and rubber, glue and casein rubber and vulcanite manufacturers, etc. Private company. First directors: Rt. Hon. Lord Colwyn, P. A. Birley and L. Brown.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

LANE, GENTRY AND CO., LTD. (printers, etc., Margate and Hastings).—Particulars filed of £200 debentures, authorised May 1st, 1923, charged on the company's property, present and future, including uncalled capital; the whole amount being now issued.

B. GOODMAN AND SONS, LTD. (art publishers, etc.).—Particulars filed of £10,000 debentures authorised April 26th, 1923, charged on the company's undertaking and property, present and future, inuding uncalled capital, and interest in underlease dated November 1st, 1920, relating to 24, Worship-street, E.C., the whole amount being now issued.

PAWSON AND BRAILSFORD, LTD. (printers, stationers, etc., Sheffield).—Particulars filed of £14,000 debentures authorised April 30th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

BENNETT BROS., LTD. (stationers, box and paper bag manufacturers, etc., Bristol).—Satisfaction in full on March 15th, 1923, of mortgage dated April 12th, 1918, securing £5,250.

CLOISTER PRESS, LTD.—Issue on May 4th, 1923, of £300 debentures, part of a series already registered.

BANKRUPTCIES, etc.

Re ALEXANDER COHEN.—An application for an order of discharge was made recently to Mr. Registrar Hope at the London Bankruptcy Court on behalf of Alexander Cohen, who traded at 10, Paul-street, Finsbury, E.C., under the style of the "Finsbury Rag and Metal Stores." Mr. E. Parke, official receiver, reported that the failure occurred in October, 1920; the provable debts amounted to £1,411, and the assets had realised £53, sufficient to pay a dividend of 5¼d. in the £. The bankrupt commenced business in 1904 as a waste paper merchant, but was unsuccessful and closed down in 1908. He was subsequently employed in the paper trade until March, 1914, when, with £400 capital, he commenced as a waste paper and general merchant. The trading was very successful until November, 1918, when he had a stock which had cost him £1,000; after the Armistice, waste paper, which had been used during the war for making munitions, became practically unsaleable, and the bankrupt had since lost money on the trading. He attributed his failure to the slump in the paper trade during 1919, and to ill health. After hearing Mr. W. H. James, in support of the application, his honour granted a discharge subject to a judgment for £50 to be satisfied by an immediate cash payment.

Anglo-Newfoundland Development COMPANY.

Redemption of Debentures.

The Anglo-Newfoundland Development Co., which redeemed £300,000 of its 8 per cent. guaranteed 15-year second mortgage debentures in January last, has notified the debenture holder trustees of its intention to redeem on January 31st next at 103, plus accrued interest, the terms provided in the trust deed, the remaining £500,000 of these debentures outstanding.

The debentures to be redeemed by the Anglo-Newfoundland Development Co. are guaranteed by the Associated Newspapers, Ltd., and by the *Daily Mirror* Newspapers, whose liability under this guarantee will, of course, come to an end with the redemption of the debentures.

German Paper Trade.

Prices Fail to Revive Business.

The Commercial Secretary at Berlin (Mr. H. N. Sturrock) has forwarded to the Department of Overseas Trade a resume of the reports issued by the Prussian Chambers of Commerce on German trade and industry during April.

With regard to the paper trade, it is stated: Prices were reduced by the conventions by about 15 per cent. compared with the preceding month. In spite of this, business did not revive. Some demand was shown in the last days of the month under review; but business was concluded practically without exception, below purchase price. Factories had only few orders on hand; as export prices were below inland prices, factories held back also with exports.

FULHAM Council are urging legislation making the wrapping of bread compulsory.

"Daily Telegraph" Equipment.

Over 200 delegates to the Philatelic Congress of Great Britain availed themselves of an invitation by the proprietors of the *Daily Telegraph* to visit their offices last week and to witness the various stages of the production and printing of a newspaper. In the unavoidable absence of Viscount Burnham, the guests were received by Lieut.-Colonel and Mrs. E. F. Lawson in the Pillar Hall.

In small parties the visitors made a tour of the buildings, particular interest being taken in the time-saving mechanical devices which form so important a part in the speedy presentation of the latest news for the morning reader. In the composing room the company saw the largest single newspaper battery of linotypes in the world, there being 46 machines, capable of composing single or double-columns in six different sets of types. The setting up of pages of type was witnessed, the pages being followed to the foundry, where cylindrical metal plates were taken from papier-maché moulds of the type, to be fitted on to the plate-cylinders of the rotary presses. In a few moments a Hoe high-speed machine of the latest design was pouring out copies of the *Daily Telegraph*, folded to half-page size, at the rate of 30,000 per hour. In the machine room, which is without its match in London, six Hoe printing presses, each capable of printing 16, 18, 20, and 24 pages, were on view.

Openings for British Trade, etc.

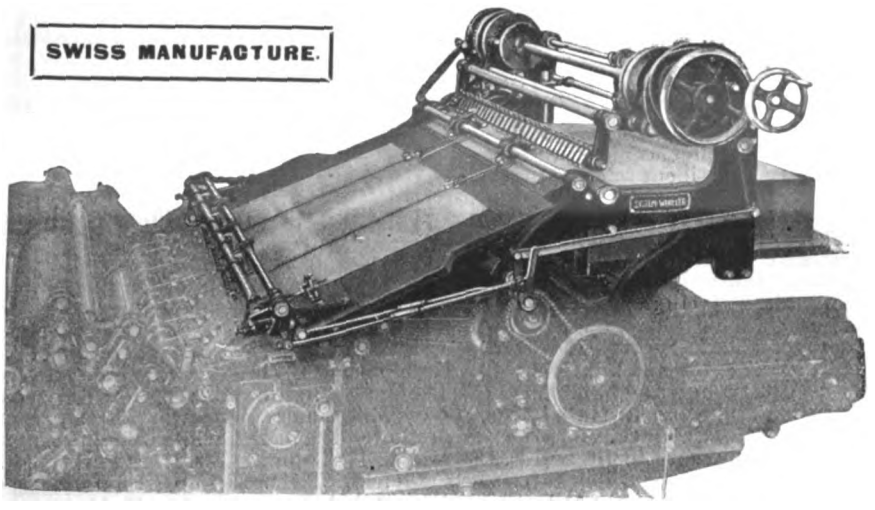
Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A local firm of manufacturers of French and English calendar pads, sales books, etc., desires to be placed in touch with United Kingdom manufacturers of shipping tags and labels. (Reference 11220/E.D./M.C. (2).

Directory of Papermakers.

With its 47th annual publication, the Directory of Papermakers of the United Kingdom for 1923 (Marchant Singer and Co., St. Mary Axe, E.C., 5s. nett) serves a purpose of ever-growing usefulness. Authentically revised and brought right up to date, it provides a complete reference to the various sections of the industry. It is not only useful to have an alphabetical list of mills in England and Wales, Scotland and Ireland, but the numerical and geograhical arrangement is frequently necessary. The classification of makes with makers' names and the trade designations (actual watermarks and trade names), together with the addresses of the firms referred to under these headings, making altogether over 70 pages, form a valuable section. Paper Trade Customs and sizes of papers are other features which render this directory so helpful for reference purposes. Altogether the work maintains the invaluable position it has earned for itself. Its size (7¼ by 10¼) permits a handy format. To the large circle of people in the allied industries who are interested in paper the Directory is indispensable.



HAND-MADE SPECIALITIES. — Specialities are quite a feature of the hand-made paper mills, and evidently the enterprise displayed largely accounts for the steady trade conditions ruling. A new and excellent line of the Tuckenhay Mills, Totnes, Devonshire, is the Millbourn Vellum Parchment. It is pleasing to learn that Messrs. Arthur Millbourn and Co., Ltd., are making large quantities of this product, which is a first-class substitute for parchment skins and Japanese vellum. Made by hand from specially prepared extra strong rags, it has surprising strength, and is sized to stand heavy writing and erasure. The hand-made writings, acccunt book papers, drawings, etc., emanating from Tuckenhay Mills also continue to enjoy a good home and export demand. The London agent is Mr. John Rowley, 30, Ludgate-hill, E.C.4.

The "WINKLER" Automatic Sheet Feeder

is adaptable for short runs and supplied at a price within the reach of every printer. The principal reasons for not universally adopting automatic feed are therefore removed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

12 Feeders sold recently.

COME AND SEE IT RUNNING IN LONDON.

SOLE AGENTS—

WILLIAM J. LIGHT & CO., Ltd.,

Trade Notes.

IN view of the recent death of Mr. Edgar P. Woodman, chairman and managing director of the Fisher Bookbinding Co. (1912), Ltd., the business will be carried on as hitherto, and Mr. James Frankham, who has been actively connected with the company for a number of years, has been appointed temporarily as managing director jointly with Mrs. Woodman as assistant managing director. The extension to the works is now nearing completion, and the additional facilities thus provided will enable the firm to handle efficiently a much larger volume of business.

MR. C. A. MCCURDY, M.P., chairman of the directors, presided at a meeting of the employees of the *Edinburgh Evening News*, on Saturday, on the occasion of the Jubilee of the paper. He announced that the directors had arranged an insurance scheme for the staff, under which, on the death of any employee, his representatives would receive one year's salary.

AT the annual meeting of the London District Committee of the Joint Industrial Council, Mr. B. Embleton (Printing Machine Managers' Association) was elected chairman and Mr. Edward Unwin, retiring chairman, was elected vice-chairman. Messrs. W. Whyte and E. Buckton were reappointed joint secretaries, and Mr. W. Boyd (Litho Artists) was re-elected treasurer.

For the third consecutive year, the horse-vans of Fry's Metal Foundry, so often seen delivering "Fryotype" printing metals in the Fleet-street area, have competed successfully in the Annual London Cart-Horse Parade held in Regents Park. The prizes secured by Fry's vans last Whit Monday included one 1st prize and one 3rd prize.

A CONFIDENTIAL report on the market for stationery in Egypt has been issued by the Department of Overseas Trade, 35, Old Queen street, London, S.W.1, to firms enrolled on the Department's "Special Register." The particulars given include information as to the demand for boxed and other stationery, account books, memo books, etc. (Reference: 870/1/FG/MC).

THE Italian Customs Commission has proposed to abolish the duty of 15 gold lire per metric quintal on books printed in foreign languages.

IN the House of Commons on Tuesday the new Postmaster-General stated that the proposal for using the backs of postage stamps for advertisement purposes had been abandoned for the time being.

THERE were two cases of lead poisoning during April in the printing industry.

THE death took place on Thursday at Aberdeen, of Mr. George Duthie, a well-known member of the local printing trade.

THE late Mr. James Lewis Kitcat, of Falmouth, formerly of Hatton garden, E.C., wholesale bookbinder, who died February 23rd, aged 78, left £21,038.

MR. EDWIN BALE, R.I., of St. John's-wood, for many years art director of Messrs. Cassell and Co., Ltd., who died April 9th, aged 84, left £5,627.

THE Paper Box Trade Board (Northern Ireland) has given notice of proposal to fix general minimum piece-rates for certain classes of female workers.

DUBLIN DEMANDS IRISH PAPER.—The Dublin Port and Docks Board in soliciting tenders for the printing of the Register of Electors of the Board stipulate that the paper used must be of Irish manufacture. A similar condition is laid down for the tenders for the general printing of the Board.

"CANADA TO-DAY," 1923. — The seventh issue of "Canada To-day," the popular annual published from the offices of *Canada*, the London illustrated weekly, at 2s. 6d., is of special interest and importance at the present time, in view of the widespread interest that is being shown in the opportunities of various kinds which Canada offers. It comprises 204 pages, which are packed with carefully-compiled information in regard to the Dominion, its progress, the development of its industries, and the numberless and widely-varied opportunities which the continued development of the country offers to all classes. In addition there is a specially-prepared gazetteer, arranged alphabetically, giving a short description of the cities and all principal towns, and the book is carefully indexed.

LORD RIDDELL, the chairman of the Newspaper Proprietors' Association, gave evidence before the Broadcasting Committee on Tuesday, on the broadcasting of news and its effect on newspapers. Further evidence on this aspect of the question is to be given by representatives of the Newspaper Society and the principal news agencies.

A PROPOSAL to abolish street pavement chalkings will come before Parliament soon in the form of a Glasgow Provisional Order. The Labour members are opposed to the proposal, as the prohibition of chalking notices would add to the cost of advertising Labour meetings.

APPROXIMATELY £1,000 was saved in Government departments by using the economy label for envelopes during the year ended March 31st last.

Trade Union Matters.

NATSOPA CLERICAL SECTION.—Whatever may be the case elsewhere in the printing world, the Clerical Section of the National Society of Operative Printers and Assistants reports steady progress during the present year, the number of recruits in the first five months being approximately 400. The total strength of the Section is now upwards of 1,700, and while the greatest following is in newspaper houses, the clerks in the larger magazine houses are also in membership. Hitherto the clerks employed in the general trade have not shown much interest in this organisation, but we understand that inquiries are now being made from clerical workers in some of the larger houses, and Natsopa officials are optimistic enough to think they can establish themselves as firmly in the general trade as they have done in the newspaper section of the industry.

CONSTITUION OF THE T.A.—Mr. W. Wesson, a member of the Executive Council of the Typographical Association, writing in the circular of the Association, suggests a re-arrangement of the Executive Council. Seventy-five per cent. of the usual business of the Council is, he says, of purely detail and routine character, and this he proposes should be dealt with by rota committees, consisting of two members of the Council in turn, presided over by the president or vice-president, with the secretary or assistant secretary. This would result in a big saving of administrative expenditure. The remaining 25 per cent. of the business consists of highly important matters, such as high finance, subscriptions and levies, questions of general policy, and national negotiations on wages and working conditions. This business would be dealt with by the whole of the Executive Council.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

There was a good attendance of members at the May meeting, when President F. E. Robinson occupied the chair.

Previous to the commencement of the general business the president referred to the great loss the Centre had sustained by the death of Mr. Thomas Shaw, who was a foundation member and first president of the Manchester Centre, he, along with Mr. Chas. N. Knowles, being transferred from the Parent Centre in 1904. Mr. F. J. Hughes also added a few words, and the members, upstanding, silently and reverently supported a vote of condolence with Mrs. Shaw and family.

It was agreed that a bowling handicap be played on Saturday, June 2nd, at Hale Barns, near Altrincham, at three o'clock.

Messrs. F. E. Robinson, president, and F. J. Hughes, secretary, were elected delegates to the National conference to be held at Leicester on Saturday, June 16th.

The members then discussed the agenda for the conference. Rule 24 was thought to be too wordy and ambiguous, several members putting different constructions on various sentences.

"Technical Training for Young Craftsmen" had to be postponed owing to the enforced absence of Mr. J. H. Nuttall.

The annual "Ladies' Day" will be at St. Annes-on-Sea on July 21st.

WEE MAC.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

R. E. Garnell and E. L. Mills, process engravers, 4-8, Haunch of Venison-yard, Brook-street, W.1, under the style of the Regent Engraving Co.

R. T. Bore and H. Goldstein, printers and stationers, 9, Harp lane, and 19, St. Dunstan's-hill, London, under the style of Geo. Young.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Cusden, Junior (a firm), 21, John-street, W.C., also carrying on business at 55, Castle-street, Reading, advertising agents.

C. C. Gall, 3, Draper's-gardens, London, journalist.

P. F. Booth, 2, Holly-road, Handsworth, and carrying on business at 46, Graham-street, Birmingham, paper merchant.

Taylor and Son, 60, Grange-road West, Middlesbrough, wallpaper merchants.

E. St. M. B. Chauncy, Stroxton, near Grantham, Lincolnshire, trading at Exchange Hall-buildings, Grantham, lately residing at 132, Harrowby-road, Grantham, and trading at 27, The Balcony, Castle-arcade, Cardiff, Glamorgan, stationer.

North London Master Printers.

The North London Master Printers' Association held their annual general meeting at Finsbury Park on May 17th, when the presence of Mr. A. Langley as a special speaker was appreciated.

The annual report was read by the hon. secretary, Mr. W. J. Mizen. In the course of its adoption unanimous praise was given Mr. Mizen on his thorough and enthusiastic work for the M.P.A., and the North London branch in particular.

The president (Mr. L. F. Hunt) and the vice-president (Mr. Wilson) were again elected to the same positions, as were Mr. Mizen as secretary and Mr. W. R. Cummins as hon. treasurer and publicity secretary.

The representatives on the London Council appointed were Mr. W. J. Mizen and Mr. L. F. Hunt, with Mr. D. A. Whitehead to act as deputy. Open house representatives: Messrs. Hammond and W. R. Cummins. The committee for the ensuing year: Messrs. Curtis, Hammond, Gold, Collins, Dooley, Brockman, Soule, Woolridge, Sellens, Whitehead, Malcolm and Williams.

Refreshments were provided at the interval, after which Mr. A. Langley spoke on the coming Federation gatherings in London. He had much to say to stimulate members' interest in these gatherings, particularly in the Cost Congress. He said that the Costing Committee needed no apology for its inception, as it had justified its existence by the adherents it now had and the use it had been to the trade during the war and since.

At the conclusion of a very interesting talk Mr. Hunt proposed a vote of thanks to Mr Langley.

One new member was elected.

Mr. T. Sellens was chosen to look after the Printers' Pension Fund for 1923.

Printing Trades Sports Association

Mr. J. Gomer Berry presided at the annual concert and distribution of cups of the Printing and Allied Trades Charity Sports Association (reorganised football section), held in Cannon-street Hotel on Saturday evening. The gathering numbered between 400 and 500. Mrs. Gomer Berry was also a guest and presented the prizes, while other present were Mr. A. H. Mundey, Mr. H. F. Parker, Mr. A. Oddy, Mr. T. H. Kirkup (secretary, London Football Association), Mr. T. H. Middleton and Mr. G. H. Marks (secretary).

Mrs. Gomer Berry presented the prizes to the following:—

Division 1.—Cup and medals: Harmsworth A.F.C., Gravesend. Runners-up (medals): Sun Engraving F.C., Watford.

Division 2.—Cup and medals: Britannia F.C. Runners-up (medals): Baynards' Press F.C.

Division 1 League.—Undecided.

Division 2 League.—Medals: Britannia F.C. Runners-up (medals): Cornwall Press II.

Memorable Cost Congress.

(*Continued from page 384*).

Mr. G. F. Storey (Leeds) laid emphasis on the question of quality. He read a question from an American journal emphasising that every printer quoted on his own quality, and the important thing in printing was style. The speaker thought the quality of their work was the thing that was going to make them in the future. Better work could command a better price, and by doing better work they could get both pleasure and profit out of business.

The discussion adjourned at 12.45 for lunch.

THE LUNCHEON.

The luncheon given by the L.M.P.A. to the Federation and the visitors, was held in the well-appointed and commodious Wharncliffe Rooms of the Hotel, and was presided over by Mr. W. Howard Hazell. The assembly, numbering close upon five hundred ladies and gentlemen, constituted one of the largest gatherings of its kind held under the same auspices. Not only was the occasion made noteworthy by the presence of a large number of distinguished representatives of the printing trade at home, but its importance was greatly added to by the presence of many well-known visitors from other parts of the world. Among those present, most of them accompanied by their ladies, were: Brig. Gen. W. W. Bemrose, Mr. A. F. Blades, Dr. W. W. Blackie, Mr. George H. Carter (Government Printer, United States), Mr. W. A. Clowes, Mr. Harry Cooke, Col. H. R. Fletcher, Sir Cecil Harrison, Mr. J. J. Keliher, Mr. A. Langley, Mr. R. A. Austen-Leigh, Dr. Jas. Maclehose, Mr. Edwin Unwin, Sir William Waterlow, Mr. W. B. Wykes, and Mr. David Greenhill.

"The Visitors."

The toast of "The King" having been loyally honoured, Mr. W. Howard Hazell, in proposing "The Visitors," referred to the fact that they had with them distinguished visitors from all parts of Great Britain as well as from overseas. Londoners, proceeded Mr. Hazell, were modest folk (hear, hear), and they realised that they had with them representatives from many parts of the country who had distinguished themselves in many ways. The provinces in the past had provided twelve presidents to the Federation, and they knew quite well that what Manchester said to-day England would think to-morrow. In addition, they sometimes thought that Scotsmen took too many of the good positions in this country in the south. He then related the story of a young man who came from Scotland to London for his firm, who, when he returned was asked by his mother what he thought of Englishmen. The young man replied that he did not see many Englishmen, but only Scotsmen. "You see, mother," the young man further replied, "I was only dealing with men who occupy positions as heads of businesses and the chiefs of departments." (Laughter). Whether that were the true statement of the case Mr. Hazell did not know. However, Londoners always welcomed men with brains and energy wherever they came from. There were various ways of gauging the intelligence and ability of people, and one way was to consult the customer. Mr. Hazell then praised what he termed the obliging country printers, who were possessed of intelligence and ability and every other quality that printers can ever need, and he said he hoped that when things did not go well with them and goods were not delivered up to time they would seek assistance from London printers, who were the finest printers on the face of the earth. (Laughter).

Proceeding, Mr. Hazell said it had been customary in the past for the hosts of the Federation to show their visitors their unique sights. As Londoners they could not offer to their visitors the bracing breezes of Scarborough, or Glasgow, with its mysteries of haggis, with the stirring strains of the bagpipes as aids to digestion. Still, they had shown to them some of the unique features of London. They were pleased to meet them at the Guild Hall on Saturday evening, and they had endeavoured to show the ladies something of the picture galleries and buildings of which they as Londoners were proud. He remembered the gatherings of the Federation years ago, when the paucity of the members dealing with the subjects at the various meetings, and the absence of the ladies made those occasions a great contrast to the gathering being held this year.

In concluding, he asked them to consider this toast, not as a single one, but as a treble one which included the mental, physical and financial health of the visitors. He hoped their mental health would be stimulated and improved by the sights they would see, and by the renewal of old friendships and the making of new ones; their physical health by visits to be paid to some of London's beautiful surroundings; and hoped they would be financially strengthened by the deliberations and decisions come to at the meetings during the two days of the Congress. He asked the company to drink very heartily the toast of "The Visitors," to which he coupled the name of their future president, Lt.-Col. H. R. Fletcher.

The toast was heartily honoured.

Col. Fletcher Responded.

Col. Fletcher, in responding on behalf of the visitors, said he rose to reply with great pleasure and felt it a great honour to be asked to respond to the toast so eloquently proposed and received with such cordiality. He also considered it an especial honour to be the respondent to a toast which was representative of so many interests. He was not only speaking for the country men present and for the people who shaped the thoughts of England—No. 2 Alliance (laughter)—but also for those visitors who had come to the meeting from the United States and the distant colonies. He was sure he was expressing the feelings of all when he thanked them most heartily for the able and generous hospitality extended to them, which had included the magnificent reception on Saturday at the Mansion House.

COST CONGRESS RESUMED.

Greetings to President Harding.

At the opening of the afternoon session, the President read the following telegram which was to be sent to the President of the United States: "The Federation of Master Printers of Great Britain and Ireland in annual meeting assembled offer their respectful greetings to the President of the U.S.A., and desire to express their sincere appreciation of his message of goodwill coming from a fellow craftsman and personally conveyed by by the Hon. Mr. Carter, public printer, Washington." (Applause)

Mr. Carter, before leaving the Conference, extended a cordial invitation to the Federation to send a representative delegation to the meeting of the United Typothetæ at Washington in October.

Resuming the discussion on Mr. Sessions's adds, Colonel Fletcher said if more master printers would adopt the estimating form recently issued by the Federation they would be less likely to be guilty of "errors and omissions."

Costing in Bad Times.

Mr. W. H. Andrew (Lancashire and Cheshire Alliance) introduced the subject of "How the Federation Costing System operated during a period of Trade Depression," and he thought the fact that it had operated during the period when there were tremendous differences in the prices of raw materials had proved that it had stood the test. A good many master printers did not take sufficient interest in the figures given to them by the costing clerks.

Mentioning the question of paper stocks, the speaker said that was a matter which was inclined to be forgotten. It should be gone into carefully. They must be very careful in buying paper in the future. They should not buy paper that was a little cheap, such as would cockle or was not trimmed, and so on. If trade depression made them more careful in buying paper, after the sumptuous times of the boom years it would have done some good.

Mr. Andrew went on to urge the need of creating more business, not by taking it from competitors, but by making greater use of present customers. They must advertise and suggest new lines of work.

Mr. W. H. Thomas (North Eastern Alliance), who has been connected with the printing trade for 50 years, very much doubted whether printers could increase the volume of business by making printing very cheap. The fact was many firms had reduced the quantity of their printing. There must be cultivated a better spirit among employers, and in that direction and by eliminating unfair competition the Alliances were doing good work.

Price Cutting.

Major W. H. Barrell (Home Counties Alliance) addressed himself to the subject of "Price Cutting: Its Effect on Our Craft," or as he put it, "Printers' Diseases and Their Cure." He thought there were three reasons for the existence of price cutting, namely, ignorance of true cost and operation times, panic during a slack period, and hatred (in degrees) of one's brother craftsmen. If the cause was ignorance, then the sooner master printers got down to understanding their costs and checking of operation times, the better for the craft in general and themselves in particular. Fortunately they had a remedy for all the evils to which he had referred, namely, the Costing System, which he declared was simplicity itself, since with a turnover of about £2,000 it took about a quarter of an hour a day, or with a turnover of £20,000 the time of a lady clerk was only taken up for 2½ hours per day. The Costing System was invaluable in checking leakages, determining the necessary staff and equipment, in utilising floor space to the full advantage and so on. The speaker also emphasised the advantage of increasing confidence among buyers of print, because if they could feel assured of fair treatment, the growing habit of price getting and price cutting and lowering of quality would be to a large extent eliminated. It was the extraordinary difference in printers' quotations that encouraged doubt among buyers, and this attitude was a nuisance to the buyer and led to the unremunerative position of the printing business to day. Master printers would become "degraded slaves of commerce" if they allowed themselves to be beaten down to the last penny. If price cutting got a strangle-hold they would eventually have the trade back in the ghastly pre-war conditions, under which a dustman received more than an artist of the printing craft.

Backbone Needed.

Mr. George Eaton Hart (London Alliance) thought drastic measures were needed to stop price cutting. Pointing to the evils of reducing prices unnecessarily, he urged that once this course was taken it would take a generation to get them back. Moreover, if a contract was lost to a price cutter, when the offer came again to the previous contractor it was at the lower figure. In this matter they had to replace the "wish bone" by the "back bone." (Hear, hear.) What they had to do was to so organise and equip their works that they could compete on a fair basis, and then the customer was entitled to the best price that brains, machinery and organisation could give. Mr. Hart thought the Federation might follow the example of the ancient guild, which not only arranged prices, but prevented undesirable men from entering a trade. He was glad to see some such proposition was to be considered by the United Typothetæ of America. Why should they not treat the price cutter as a black leg?—(hear, hear)—or as a mentally deficient individual? (Laughter.) What was the good of a standard price list if they did not use it?

Mr. Rankin said if all printers who had been price cutters were locked up 90 per cent. of the trade would be so treated. Printers who had installed the Cost System had been price cutting just the same as those who had not the system, the only difference being that the one knew he was cutting below cost. They had to make up their minds to the fact that it would take four or five years before trade would improve. It might be all right to keep employees at work when there was a bad patch of trade; but in a long period of depression they had to consider the question of the proportion of their staff to the amount of work.

Mr. Keen (Leicester) suggested two causes of price cutting—first, panic during bad trade, and secondly lack of proper conditions for staff and workpeople. With regard to remedies, master printers should take the example set by the employees in the matter of combination. Again, they might build up a fund so that in times of depression they could advertise the trade.

Mr. Howard Hazell believed a good deal of the price cutting was due to ignorance tempered by fear of what the customer would say and what the other printer was going to do. The answer to that was education and co-operation. Printers were too ready to believe what their customers said. When the demand for printing dropped, say, 28 per cent., some printers thought they were clever in trying to get 100 per cent. output by cutting prices. It was better to be 80 per cent. full at reasonable prices than 90 per cent. full at bad prices. (Hear, hear.)

Mr. James Forman (Nottingham) argued that some committee should consider in what

Digitized by Google

way some uniformity could be introduced throughout the country into the question of estimating the proper times for producing work in each section and in each department. (Hear, hear.)

Major Barrell suggested that by making a profit on output, employers would be in a better position to look after their workpeople.

Burden of Over Equipment.

Major Dudley P. Forman (Midland Alliance) dealt with the subject of "The Burden of Over Equipment." This matter, he said, was purely one of arithmetic. He had not got any official figures of turnover or capital from this country, but figures furnished by the American Typothetæ for 1921, which were the last published, gave a very accurate proportion for costs of material, costs of wages and costs of overhead. The American figures showed that if 100 represented the cost production of the product of the trade, then 35·71 per cent. represented the cost of materials, 33·41 per cent. the cost of wages, and 30·88 per cent. overhead. That was as good as saying that one-third of the cost was fixed, while two-thirds only varied. In putting down increased plant, it had to be remembered that it was necessary to organise the department accordingly, providing additional floor space and so on. If they increased their plant unduly and they could not keep it running a reasonable number of hours, the whole of that permanent expense had to be carried on a smaller number of working hours; so that if they were running only 25 per cent. of normal, these expenses were going to cost them four times per hour for overhead expenses than if they were running normally. New machinery should not be put down unless there was a reasonable prospect of keeping it going a fair proportion of its time.

The speaker read a letter which had been sent to him by Mr. Williamson, in which a country printer, who had bought a machine which was only working two days a week, solicited orders, which he offered to carry out during the remainder of the week at cost only. The effect of such offers as these was going to be extraordinarily bad. That printer was short of work and wanted to get his overhead back. He would try by selling at cost; and if he could not do that he would sell under cost. For the moment he might be better off than by keeping the machine idle, but the effect was that the general value of printing was reduced, because they must never forget, in all these costing methods, that the value of their product was determined by the price of any given quantity or quality which could be produced in the open market.

Mr. Goodwin referred to the case of a firm with specialised machinery for producing periodicals which could also turn out catalogue and similar work. It was unfair from an economic and trading point of view that this firm should be willing to put the whole of the burden of their overhead charges on to the periodical section of the business and to do work of a commercial description at a cost which simply covered their wages cost, with perhaps a little addition to relieve the overhead charges. All that could be done in expressing an opinion on this matter was to warn those who attempted to put in special equipment to take into consideration the reasonable view of what those machines were likely to do, and not to exaggerate the volume of work that might be attracted to them.

Mr. George Eaton Hart, who had suffered in this matter, although he was in a position to take up the same attitude, said he had always endeavoured to play the game. What should they do with a firm such as Mr. Goodwin had referred to? If they belonged to the Master Printers' Association should they not be brought to book? If there was some means by which they could stop that sort of thing, so much the better.

Mr. Johnson referred to a firm supplying printing machinery and plant offering their products on the hire system, and suggested that the Federation should set its face against a firm doing business on these lines.

Votes of Thanks.

Mr. Humphries (Yorkshire Alliance), in proposing a vote of thanks to the speakers, paid a tribute to the enthusiastic "costers" who were found in every section of the Federation. He was surprised that printers in England had not expressed their thanks to these enthusiasts by installing the costing system. He understood there were about three times as many printers in the British Isles to day using the hourly costing rate than had installed the system. It was not fair that they should accept the hard work of the costing experts in telling them what their hourly rates were without adopting the whole system and paying for it. The costing system would enable them to be fair to themselves, fair to their customers, and fair to their workers. Mr. Humphries concluded with the following: "Let those who never cost before cost now, and those who cost before now cost the more." (Laughter and cheers).

The resolution was cordially carried, and acknowledgment by the president closed the Cost Congress.

Australian State Contracts.

His Majesty's Trade Commissioner at Sydney (Mr. A. Simpson) has forwarded to the Department of Overseas Trade an extract from the Sydney *Sun* of March 14th, which states that a new board has been formed to control Government contracts and the buying of stores amounting to over £2,000,000 a year, the object being to avoid duplication and unnecessary expenditure and to get better prices by accepting materials in larger quantities. The report goes on to say that the proposal was approved by the Executive Council, and a body of responsible officials has been formed to put the scheme in working order. This body will control all State enterprises and the buying of stores and supplies for Government departments.

Under the new scheme, which involves a yearly outlay of £2,000,000, the new board hopes to effect a substantial saving in the buying of supplies and the control of the States enterprises. The £2,000,000 may not necessarily be spent in the scheme, but that sum will be set aside for the use of the board to the advantage of the State.

The treasurer (Mr. Cocks) states that the new board is an improvement on the old system, and adds that there has been no drastic changes except that the old stores committee has been reconstituted and given additional powers.

Gold Inks
(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you,

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines,
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

LORILLEUX & BOLTON LTD.

The Essential Features of the Federation Costing System.

Address at the Cost Congress by Mr. A. Williamson, F.C.W.A., Costing Secretary to the Federation of Master Printers.

It is assumed at the outset that every man who enters the arena of business has one important object in view—to make a profit. The ideal is to make a profit on every job. It is not conceivable that the time will ever arrive when all customers will be ready to pay on a cost-plus-profit basis, because the market would soon be crowded with sellers and competition be more rife than ever.

As most work, therefore, has to be estimated for, it is necessary that machinery should be perfected to show as accurately as possible the costs of every operation and the time taken for work similar in character. Without these two factors there can be no security against loss, to say nothing about the possibility of realising a profit. Without an accurate cost-finding system business is a hazardous gamble from the beginning to the end of the year. It is not enough to be a thoroughly experienced practical printer, to possess a commercial mind, or even to be imbued with a good supply of horse sense, the factors of time and value must be comprehended and used with precision.

The installation of the Federation Costing System in any printing works is like acquiring the proverbial "eyes at the back of the head." It acts like the view-finder on a camera—turn it in whichever way you will, it presents in miniature a picture that will later be developed in your balance sheet.

Here are some of the essential features of the Federation Costing System :—

The Budget.

This is the essence of the System. All known expenses which are regular and persistent, like rent and rates, light and heat, insurance and power, can be analysed and compared, and extraordinary expenses not of the nature of capital expenditure may be spread over a number of years. Items known to be liable to increase would have a percentage added, and conversely a decrease would be made where such was to be expected. All reasonable care would be taken to provide for contingencies so as not to be taken unawares during the period for which provision was being made. Times of great fluctuation in expenses would naturally call for shorter budgeting periods. This budget may be termed the estimate for the job of running a printing works.

Interest on Capital.

The Federation Costing System works on the principle of no profit being earned until money has been rewarded for the services it renders to business, but the inclusion of interest is important for other reasons. The comparative costs of any operation by hand or machine, or as between one class of machine or another, cannot be secured unless by the inclusion of this item as an expense. To omit interest on capital would be like playing cricket and not keeping the score.

Depreciation.

The amount of depreciation written off the solid assets of a business, particularly that of a public limited liability company, is sometimes varied by the amount available for profit at the end of the year; the Federation Costing System, however, lays it down as essential that wear, tear, and obsolescence are important items of expense. When the amount of plant necessary to the running of even the smallest printing business is examined it will readily be agreed that the depreciation allowance should be adequate. It is known, however, that the allowance provided even when taken on the "working" value of the plant is not more than 5 per cent. of the turnover. Making no provision for renewal of wasting assets has brought ruin to many businesses.

Departmentalisation.

Just as in every factory it is the practice to separate into groups workers on different processes, so it is essential that the expenses incurred should be allotted to these processes in right proportions. If an operation performed by hand demands a large proportion of the floor space, it would naturally be debited with a good share of the rent and rates, but the proportion of interest and depreciation would be correspondingly small. On the other hand, machines like the Linotype and the Monotype, occupying little floor space, would not have a great amount of expense for rates and taxes, but a much larger bill for interest, depreciation, insurance and repairs. This feature of the Federation Costing System is highly important because the hourly rates for the various operations cannot be properly gauged if this principle is incorrectly applied. The effect of departmentalisation is to decrease the amount of expense to be recovered by a percentage figure and thus reduce to smaller proportions the possibilities of leakage. Departmentalisation makes certain of much and leaves but little to chance.

Recovery of General Expenses.

These expenses cannot be departmentalised with any degree of accuracy, and any attempt to do so would lead to an arbitrary allocation. Most of them are affected by the value of the work done, and the method employed is to divide them according to value as between labour and materials by a percentage on each. The total expenses other than departmental wages and cost of materials are allocated first to departments according to floor space and value of plant, and secondly to materials. The remaining portion is taken as a percentage on the departmental wages and departmental expenses combined. The application of this percentage to the cost (*i.e.*, wages and expenses) of any department results in the full costs being accurately ascertained for each department separately and for the works as a whole. This feature is worked on the principle of not allowing the tail to wag the dog.

How the Percentage for General Expense Operates.

This percentage figure remains a fixture until another budget is made, but the total cost of production will be affected by every change in the amount of wages paid. If work falls off in one department and increases in another the amount added by the percentage figure will adjust the costs as between these departments. If wages should be reduced to any extent a readjustment would be necessary. During a "slump" period the percentage figure approximates much more closely to what would be the costs of production if the expenses it represents could be reduced *pro rata* to the demands of the moment. It is a simple matter to find out whether the full amount of the general expense is being recovered. All that need be done is to find out from the budget what is the weekly proportion of the annual amount and compare this with the amount recovered on the weekly statement of cost and value.

Handling Charges on Materials and Outwork.

This is probably the least understood feature of the Federation Costing System. The misconception is no doubt largely due to the term used—it is not comprehensive enough to be self-explanatory. By "handling" it should be understood that all expense is covered that is incidental to buying, storing, issuing on requisition or otherwise, keeping records of stock, interest on the value of the stock in hand, and a share of the expense of estimating, pricing and selling in addition. As the price of material falls, the percentage figure to recover cost must rise, hence to-day 20 per cent. on the value is in many cases insufficient to meet the bill. It will be seen, therefore, that much more than the mere "humping" of paper is implied by the term. Quite recently one of the members was reckoning up his handling charges and considered that 6¼ per cent. was enough to add to the value, but on our investigating the matter it was found that he had taken into account only such items of expense as rent and rates with the wages of the storekeeper.

Hourly Rates.

After the correct hourly rate has been ascertained for any operation the possibility of leakage is reduced to a minimum. The System provides checks against leakages of time, and the combination of time expended with operational hourly rate ensures correct costing of the job. An all-in rate is easy to work, less liable to error, and thus more satisfactory in its results. In the Standard Hourly Rates the members of this organisation are possessed of information of immense value for comparative purposes information the like of which is not in the possession of any other trade organisation in this country, or even in the world at large, apart from that of a similar character circulated by the American Typothetæ. Using correctly ascertained hourly rates, your own costs, is like taking out a policy of insurance against fire—it gives a feeling of security.

Simplicity.

Once properly installed the Federation Costing System is easy to run and is almost automatic in its actions, at any rate so far as its machinery is concerned. Here let me emphasise the importance of engaging the services of the Federation Cost accountants for installation and revision purposes. They will bring a wide experience to bear on your individual problems, besides ensuring the application of the System on standard lines—a most important consideration. The collection of data is more or less routine work usually very satisfactorily performed by girls of average scholastic ability. In more than one case the Federation Costing System is controlled entirely by experienced women, some of whom are present this morning. The working out of cost data must not be confused with the highly important work of price-fixing, but under the Federation Costing System methods price fixing is decidedly easier and less liable to error.

Elasticity.

This feature enables the Federation Costing System to grapple successfully with and overcome the peculiarities which attach themselves to many printing businesses. Let us examine some of them : 1. A small printing business to which is attached a stationer's shop. There may be a further complication inasmuch as the premises may be the residence of the printer as well as his place of business. 2. A printer in a country market town owning, printing, and publishing a weekly newspaper, and conducting a commercial printing business with the same employees. With this composite establishment might be combined a stationery and daily newspaper retail business. 3. A letterpress and litho business combined with a flat paper trade. In each of these cases by analysis and segregation the expenses peculiar to each section would be apportioned and the cost of running each would be ascertained with a reasonable amount of accuracy. This division soon proves the value of the different sections from the profit-earning standpoint.

Installation of the F.C.S.

The Federation cost accountant will extract all the data he requires from the balance-sheet and trading account, will departmentalise the expenses and find your percentages for handling and general expense, suggest hourly rates for the different processes, instruct your staff in the working of the System, and will generally help and advise until the System is in proper working order. The cost accountant will respect your confidences and will not carry away and pass on to your competitors any details of your business. The work of installation is by no means disturbing to the usual conduct of your business, the change-over is made with a minimum of fuss or friction, and the cost of the services rendered is much too low when the value of the experience is considered.

Cost of Working the System.

The cost of running the System when properly installed is almost infinitesimal. In a small business with a turnover of £5,000 it would probably cost about 2 per cent. of the turnover for wages and all the extra forms required. Quite recently I found these services were costing a turnover of £100,000 not more than a quarter per cent. Taking the higher figure, the cost of working the Federation Costing System is less than sixpence in the £, and at the lower figure less than 1d. in the £. The increased efficiency of an establishment working a proper costing system more than compensates for the little extra expense. It has been proved time and time again that a cost system is one of the best investments that can be made by any manufacturer.

An Erroneous Impression.

There is an idea abroad that costing increases the cost of the product. Such an idea as this has no evidence to support it. A costing system which does not lead to economy and efficiency is not functioning and needs

Digitized by Google

attention. There is evidence on every hand that the opportunities for analysis and comparison which a costing system provides have done much to cheapen the price of commodities and thus increase the demand. It should be widely made known that without proper costing methods fair and equitable charges cannot be found.

Machinery of the F.C.S. in the Factory.

The first essential is the daily docket. Unfortunately this form is looked upon with suspicion by the individual whose interests it best serves. It is so designed that most contingencies are provided against, and, properly used, it safeguards an employee against charges of waste of time through any causes over which he has no control. All time should be correctly entered immediately an operation is performed, and the atmosphere of every printing works should be conducive to this being a natural state of affairs. The daily docket is not an estimate form, it is an historical document, and the events it records should be in correct chronological order. The employee should as honourably discharge his responsibilities in connection with it as he expects his employer to act honourably on pay day. The man who manipulates his time on a daily docket would be the first to squeal if a few bad coins appeared in his wage envelope at the week end.

Another essential is the weekly comparative statement of cost and earnings—known as the Cost and Value Statement. This document is vital to the successful conduct of any business to day. It is a searching analysis of the doings of every department. To be without it would be like playing golf without a putter.

Bread Wrapping.

Propaganda for the Use of Paper.

Steady work is proceeding in the direction of educating the public in the desirability of having foodstuffs, and particularly bread, encased in wrappings. A good deal of propaganda work has been undertaken by the Anglo-Canadian Wax Paper Co. A number of pamphlets have been written and published by them, including "Clean Enticing Bread," which we commended in a recent issue when referring to the work of another firm. We have now received from them a copy of an excellently designed and printed pamphlet of 40 pages, entitled "Bread Wrapping," which covers the subject much more thoroughly.

So far as Great Britain is concerned, the practice of bread wrapping is comparatively new. It was in 1920 that the first serious effort to interest the trade in this matter was made by the Anglo-Canadian Wax Paper Co., Ltd., and in 1921 that the first waxed paper bread wrapper was printed by them.

Evidence is accumulating that the demand for food wrapping and compliance with this demand are developing satisfactorily. In stressing the advantages of food wrapping, the brochure mentions that bread encased in ventilated wax paper as soon as it is baked is perfectly protected and comes clean and fresh direct from the oven to the home. In this connection the Anglo-Canadian Wax Paper Co. possess patent rights in a wax wrapper with ventilating seam, which allows the necessary amount of air to pass in order to retain the full flavour of the load and to permit of its keeping for a considerable time.

The wrapping of bread from the baker's point of view is quite a good asset. It is not only a recommendation in itself, but the advertising possibilities are important. Apart from this advantage, of course, the baker is able to recover his cost with a very small addition to the price of his bread, and it has been shown, in fact, that quite a substantial additional profit can be derived from this source. Bread wrapping can be undertaken either by hand or by machinery, and we understand that a fully automatic machine of British make, which has been placed upon the market, is proving very popular.

THE situation of the paper industry in Sweden is so far not satisfactory, says *Affarsvarlden*, as the paper prices are ruling at a very low level, and although the costs of production have had a rising tendency for some time, there are still no signs of any increase in the sales prices for paper.

THE PRODUCTION AND UTILISATION OF PRINTING PAPER: A Manual for Papermakers and Printers. By Willy Grünwald. Berlin: Carl Hofmann. Price 8s 6d.

We have received a copy of a book entitled "Herstellung und Verarbeitung von Druckpapieren," whose author is the technical editor of the *Papier Zeitung*. It is, of course, issued by the well-known house of Hofmann, Berlin, and is printed on a super calendered white wood cellulose printing of excellent quality; the matter and illustrations are both good examples of the art. It is bound in a greenish blue paper board, with a cloth back, and runs to 158 pages, including a full index, and a fairly comprehensive bibliography of the German literature of the subjects is added.

The author states that this work is the outcome of a lecture which he gave to the Berlin Typographical Society, on "The Making and Using of Paper," particularly with reference to offset printing. Many of his hearers wished a fuller treatment of the subjects and the book before us is the result.

The author expresses a hope that he has succeeded in telling the papermaker what the printer must demand and the printer what the papermaker can accomplish. A perusal of these chapters will convince the reader that he has fulfilled his desire with much success.

The book is systematically arranged, commencing with a short historical introduction to the manufacture of paper and to the invention of printing and the press. Modern papermaking is then dealt with in a crisp style, avoiding superfluities, but ever and anon directing the reader's attention to the bearing of the process of manufacture on the printing quality of the product. This chapter is closed with the following remark:—"In the printing paper group the papermaker offers the printer a material in sheet form, of a particular goodness, length, breadth and absorbency, made from single fibres of diverse origin. The individual fibres are felted to a more or less tight and strong body, the interstices of which may be filled up with mineral additions. The absorbency of the whole is regulated by the method of preparing the half-stuff and also by sizing. Apart from specialities, the desirable rule is a sheet with the most even and closed surface, and of the most equal elasticity and thickness in the smallest direction of the sheet. By the highest calendering or by the glazing of a mineral coating, a surface is obtained which comes nearest to the desired mathematical plane."

The preparation of the printing ink is suitably treated; then the machines used by printers are described, along with the various classes of printing, as from type, engraved plates, stone, gelatine, etc., followed by a careful description of the actual working of these different processes, with all the time a steady eye on the peculiarities of the paper and ink to be used.

The book closes with a chapter on the testing of paper and ink. Here Mr. King-Smith's clever lines on "A Papermaker's Plaint" are freely translated from the *British and Colonial Printer and Stationer* (originally appearing in the *World's Paper Trade Review*) and approvingly quoted. They may, indeed, prove almost as useful to the paper buyer as the more abstruse directions given for testing.

This is a handy little volume which should prove useful to those engaged in both industries. It is well illustrated throughout. The diagrammatic illustrations of paper and pulp-making are particularly useful to the uninitiated. One fine example of three-colour work is given, and there are further coloured pages to illustrate the use of various coloured inks.

TREATMENT OF PAPER FOR SPECIAL PURPOSES. By Louis Edgar Andés. London: Scott, Greenwood and Son. Demy 8vo, pp. 104 + XII. Price 8s 6d. net.

Translated from the German, the present volume represents the second English edition, revised and enlarged. In these days when paper is treated in such divers ways and for so many different purposes, a simple description of the methods of manufacture, minute characteristics, and the purposes served by the made up paper, is particularly useful. Instructions for working paper up into a great variety of articles are to be found in a large number of books and periodicals; and the author has undertaken the task of collecting and sifting them, in the hope that the result will prove beneficial to all trades in which paper is used as a raw material. This purpose is well served. In addition to the clearly written letterpress, there are a plate and 48 illustrations, which help to a better understanding of the text. Nineteen chapters are devoted to the classes of paper subjected to special treatment, the 20th being concerned with the characteristics of paper—paper testing. Then there is a very full index, giving quick reference to any part of the volume. A striking impression made by the work is the variety of the paper manufactures in use to-day. Chapter XVIII. alone mentions thirty special papers. Other sections deal with paper which may be indicated by the terms: parchment, transfer, packing, preservative, gummed, hectograph, insecticide, leather, blotting, metal and medicated, marbled, tracing and copying, photographic, paper articles, etc. Each section deals with subdivisions of class, so that the total number of references is enormous. Altogether, the book is a valuable guide to special papers.

Paper at the Imperial Institute.

An enquiry into the functions of the Imperial Institute has been undertaken by a writer to *The Times* (Trade Supplement), who says:—

In the showcases of the reference sample room are to be seen the results of many interesting and valuable investigations. Among these the writer was particularly impressed with the section relating to paper made from various materials not yet commercially used for this purpose. The bamboos which cover vast areas of British East Africa have been proved to be capable of being utilised for the manufacture of wood pulp for papermaking, and as there are local supplies—at Lake Magadi—of the soda required in the digesting process, there are good prospects of a pulp industry being established. Tenders for leases of bamboo lands are now being invited by the local Government. Papers of good quality have been made by manufacturers in this country from bamboo. Other African papermaking materials which have been shown to be quite satisfactory are tambookie grass and the spent wattle bark from which the tanning ingredient has been extracted.

As the result of investigations by the Institute during the war, the extraction of wattle bark extract, formerly a German monopoly, is now being undertaken in South Africa, and the manufacture of paper and cardboard from the spent bark will follow. In view of the fact that before many years are past there is every probability of a severe famine in papermaking materials of the types now utilised, this work on possible substitutes will eventually prove to be of the greatest value.

COLOMBIA and Venezuela are important markets for paper, Colombia being the busier, with demands for news-print, book paper, wrapping, boards, and writing paper. In Venezuela writing paper is the principal item, followed by news print and book paper.

WE are all writers, in that we each day write a little chapter to our life-story.

Employment in Allied Industries.

Slow Improvement.

Reports concerning employment disclose an improving tendency, but the movement is slow. This applies alike to the allied trades and to industry generally.

Employment in the paper trade continues fair on the whole, but there is a certain amount of irregularity, a few mills working only periodically.

In the printing trade employment remains generally fair with letterpress printers, but shows a decline on the previous month at several provincial towns, including Leeds, Sheffield and Birmingham. It is reported as very good with electrotypers and stereotypers in London and at Edinburgh. In the lithographic printing trade employment continues slack, but lithographic artists are fairly well employed.

In the bookbinding trade employment is slack on the whole; a slight improvement is reported in some districts, but there is a decline in London, and much short time is reported.

Statistics concerning unemployment in the allied trades are on the whole perhaps not quite so good as a month ago, although the position is better than in most industries. In papermaking and staining, out of 61,000 insured workpeople (estimated), 4,501 were unemployed at April 23rd, the majority (3,192) being males. The total percentage unemployed was 7·4 both for males and females. There was a total increase in the month of 0·3 per cent.—an increase of 1·3 per cent. in the case of females, but a decrease of 0·2 in males.

Out of 70,200 insured workpeople engaged in manufacturing stationery, 4,472 were unemployed at April 23rd, or 6·4 per cent. The total decrease compared with March 26th was 0·2, an increase of 0·3 in males and a decrease of 0·4 in females.

Larger figures are dealt with in printing, publishing and bookbinding. Here there are 213,150 insured workpeople (estimated), of whom 12,851 were on the unemployed books at April 23rd—8,892 males and 4,049 females. The total percentage of unemployed was 6·0 (6·7 males and 4·9 females), showing a total increase of 0·1 per cent. the same for both sexes.

According to returns furnished by trade unions in printing, bookbinding and paper, out of a membership of 95,352, there were unemployed at the end of April 4,564, a percentage of 4·8, declines of 0·1 during the month and of 2·4 compared with a year before.

Paper Testers.

Investigation as to Efficiency.

The oft-debated subject of the efficiency or usefulness of the Mullen and other similar testing apparatus has recently been the subject of an investigation by Prof. Herzberg, and the *Wochenblatt* publishes his report extracted from the Bulletin of the Materials Testing Office at Berlin. That office does not possess an instrument of its own, but the firm of J. W. Zanders, of Berg-Gladbach, kindly placed one at its disposal.

Herzberg finds that apparatus of this class may be of some use in valuing such things as packing, bag and sack papers, but is of no use in determining the strength peculiarities of papers generally, as can be done by measuring the breaking strain, stretch and folding properties. He recounts the experiments of E. Douty, of the Bureau of Standards at Washington, who found that tests made with the four machines in use in America gave quite divergent results, varying as much as from 40 to 65 per cent.

At Berlin tests were made on 24 samples of paper supplied by the various newspaper publishers in the city. The aggregate results are set out in the following table. The papers were arranged according to substance, beginning with 46 grm. per sq. m. and ending with 67 grm., because the Mullen value is dependent upon the substance:—

Properties.	Lowest.	Highest.	Aver. value.
Square metre weight, grm.	46	67	52
Ash contents, per cent. ...	4.4	18.7	11.0
Moisture content in per cent. (air moisture being 65 per cent.)	8.3	10.9	9.4
Breaking length, metres ...	2,300	3,625	2,900
Stretch in per cent. ...	1.2	1.8	1.5
Folding number	1.8	10.0	5.0
Breaking weight in kg. ...	1.57	2.71	2.05
Bursting pressure by Mullen in kg. per sq. cm. ...	0.36	0.84	0.56
Sulphite pulp, per cent. ...	15	50	28
Mech. wood per cent. ...	50	85	85

The mean bursting pressure 0.56 kg. per sq. cm. is equal to about 8 lbs. per sq. inch.

As already stated, it is not possible to calculate the Mullen value from the breaking strain, stretch and folding, or *vice versa*. All that can be looked for from the results in this table is the possibility of a certain probable Mullen value agreeing with the characteristics as determined by the European method when the substance is taken into consideration.

To Standardise Paper Micrometers.

Technologic Paper No. 226 of the Bureau of Standards, entitled "A Study of Commercial Dial Micrometers for Measuring the Thickness of Paper" will shortly be issued.

The instruments generally used for measuring the thickness of paper are of the type known as dial micrometers. A study of dial micrometers in commercial use showed a wide range in design, in the size and weights of the moving parts, and in the pressures impressed on the paper by the plunger contact, these pressures varying from two to forty-three pounds per square inch. To determine the effect of such variations in contact pressure upon the thickness readings, several grades of paper were measured with each instrument. It was found that with certain grades and thickness of paper the difference in readings with commercial instruments could be as great as 0.001-inch, owing to the difference in contact pressure alone.

A test was also made of the compressibility of paper, using three areas of contact and a wide range of contact pressures. The results show that to obtain consistent values in measuring the thickness of paper, a uniform shape and area of contact pressure must be used.

This publication includes specifications for a standard instrument, drawn up in such a way that dial micrometers which comply with them will check each other when used with any grade of paper.

A MATERIAL which is a compromise between tissue paper and glass—being as thin and flexible as the former and as transparent as the latter—is to be manufactured in America under the name of cellulin.

Ingenious Watermarks.

British papermakers are well abreast of the times. As an example of this may be mentioned the aerial postage design which has been introduced as a watermark by the Roughway Paper Mills, Ltd. This has been produced both in the all-over multiple watermark and the cut to register, of which we have seen excellent specimens.

The design is quite a new one, and has been introduced for the purpose of supplying the Stamp Exhibition at the Horticultural Hall to be printed up with the new Aerial Exhibition stamp.

The Roughway Paper Mills have been manufacturing postage stamp papers for over 50 years, and to-day the major portion of the out-turn of the mill is on this quality. The paper is made of a pure rag stock, and animal tub-sized, and it is claimed that after many years of experience the mills are now producing a paper suitable in every way for adhesive postage stamps, and one which gives the very best results and satisfaction to the printer, perforator and gummer. A special point is also made with regard to the clearness of the watermark.

The dandy rolls used for the watermarks were the work of Messrs. Edwin Amies and Son, Maidstone.

While making the two watermarks referred to, opportunity was taken to run off at the same time designs representing countersunk bank note watermarks. The specimens before us are very effective, and are remarkable for the fact that they have been obtained in such a thin paper as L'post 14 lbs.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*

The following is a letter we have received from The Fisher Bookbinding Co. (1912) Ltd.—one of many unsolicited testimonials.

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

Causes of Estimate Variation:

SOME SUGGESTED REMEDIES.

A Striking Address by Mr. W. H. Sessions (The Ebor Press, York), at last week's Cost Congress.

An outstanding feature of the Cost Congress of the Federation of Master Printers was the address by Mr. W. H. Sessions on the vital subject of the causes of those variations in estimates which cause so much heart-burning amongst printers and so much unholy satisfaction amongst unscrupulous buyers of print.

The particular cause of variation to which Mr. Sessions chiefly addressed himself was the difference of opinion on operating times He had prepared, however, a list of 16 different causes, adding comments as to their nature or possible elimination.

The Causes Scheduled.

Under the heading of "Real Variations" he listed the following:—

"(1) Difference in efficiency of plant.—A good variation because it tends to automatically select the work most suitable for one's own plant.

"(2) Cheaper purchase of material.—Felt only on long runs and even there rarely exceeds 5 per cent.

"(3) Greater efficiency of business organisation.—Not serious, as the highly efficient business is generally able to secure remunerative prices and good in so far as it helps us to follow the same excellent example.

"(4) Difference in Hour Rates, even under the Costing System.—The highly efficient plant will have a higher hour rate than the 'worked-to-death plant,' but it gives value, in both quality and service to the customer in return.

"(5) Better planning for working a job.—This will only occur on some estimates and a printer is entitled to reap the reward of his ingenuity (if it succeeds, or to bear the loss if his theory turns out defective in practice)."

Under "Real Variations to be used with Care" came:—

"(6) Variation of profit.—Worked as regards profit only, the law of supply and demand operates through this, tempting customers to purchase when trade is slack, and tending to turn trade from the printer whose order book is overflowing to the one who is wanting work."

Next came six "Variations we are at present Seeking to Remedy":—

"(7) Faulty hour rates.—As the Federation Costing System spreads and the Federation hour rates become more firmly established this variation will disappear.

"(8) Ignorance of real costs.—Much less serious than it was before the Costing Committee started but there is still much missionary work to be done.

"(9) Taking orders at a loss rather than be on short time.—A very human variation, but one we all want stiffening up to avoid, and short time is better met by putting men on to advertising, especially that which seeks to increase the use of printing.

"(10) Cutting in on first inquiry.—The net result of which is that profitable orders become unprofitable.

Block by courtesy of "Business Organisation and Management."

Mr. W. H. Sessions.

"(11) Cutting to spite the other fellow.—The best cure is to attend the happy annual gatherings of the Federation, although, North of the Border, haggis is said to have the same effect.

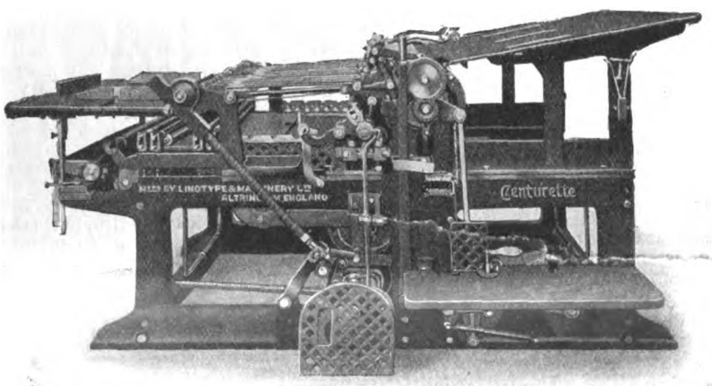
"(12) Pure errors.—Death is the only cure—but as our successors will be equally frail, a double check is better and less drastic."

Last came "Variations Needing Fresh Campaigns":—"(13) Absence of full details on estimates and (14) Difference of opinion on the paper required.—Fruitful sources of after trouble between customer and printer and equally fruitful sources of bitterness between printer and printer. Could the Costing Committee start a campaign against quoting on insufficient details, including publicity to show customers what the printer really wants to know and how variations slight to them often mean serious variations to the printer?

"(15) Times varying with the human element and (16) Difference of opinion on operating times.—The greatest difficulty of all and only to be met by the institution of standard times in place of the present wide variation in ideas of the time taken on any piece of work."

Estimating Operating Times.

Intimating that he had ascertained that these causes of variation were general and were common to all parts of the country, Mr. Sessions turned particularly to the last, No. 16, "Difference of Opinion on Operating Times." This cause, he said, stood by itself, and was clearly the foundation of all their troubles. Such difference of opinion was present in almost every batch of estimates which printers' customers received. To illustrate the effect of this factor the speaker took two actual instances of jobs for which estimates were asked. Using graphs produced by the Costing Committee showing times estimated by different printers, he had calculated the value represented by the time put down by each estimator, and produced a chart for each of the two jobs—time only being taken for composing (hand) department, cutting and machining, worked out at the same hour rate, with no paper or profit added. This, therefore, was a test almost entirely free from the first 14 variations in the list.



One estimate was for 20,000 forms, demy 4to., printed both sides, black ink, two up (one stereo), work and turn on demy wharfe. For this job there were 39 estimates charted, and the variation between the lowest of £3 0s. 11d. and the highest of £9 11s. 2d. was 313 per cent.

The second estimate was for 5,000 forms, demy 8vo., red and black ink, printed both sides, work and turn on foolscap folio platen. Of 37 estimates charted, variation between the lowest of £1 18s. 11d. and the highest of £4 5s. 2d. was 220 per cent.

The speaker pointed out how widespread was the variation in both cases. It was not

a case of general agreement with a few wide of the mark at each end, but a remarkably steady rise; at no point could it be said that here at least there was general agreement.

Lack of Standards

"Think of it a moment," Mr. Sessions continued, "to clear off the slate all the first fourteen causes of variation, leaves us with a variation on quite simple jobs of over 200 per cent. on one case and over 300 per cent. in the other. It reveals the fact that opinion of the time taken, even on quite simple work, varies in a most alarming manner and this absence of standardisation in the trade is the very root of our difficulties. This is no reflection at all on the unknown printers who estimated; rather we ought to thank them for pointing the lesson so clearly of what is taking place daily in our estimates—and I have been told that similar tests have revealed the same conditions. One of my correspondents relates giving a test to a meeting of managers and overseers, and the result showed that the estimated time for composition varied from 30 to 80 hours, and the time for make-ready varied from one to eight hours.

"These facts shed a new light on the charge of cutting which is always being made in our trade. The more I have looked into the question the more I am certain that the trouble is not so much wilful cutting, as a lack of standards. Perhaps we shall all understand a little better from these examples how it is that one week we are accusing our competitor of cutting and the next week he is returning the compliment.

"A lack of standards brings an even bigger trouble in its train. Where there is no fixed measuring rule, the unconscious human element makes a still greater variation. The more the order is wanted the more rosy unconsciously becomes the outlook on the question of speed. We have grown up so used to varying prices that we hardly grasp what our variations mean. In the first of the two cases cited, 39 printers measured up the time for this work and that is the result. It is as if 39 tailors, measuring up cloth, each used a yard stick of different length and their yard sticks varied from 19 ins. to 59 ins. (that is the same proportion). You would at once suggest to them a standard yard measure of 36 ins."

Deplorable Effects of Variation.

"Look at it from our customers' point of view—put the boot on the other leg. Supposing you wanted 10 reams of 24 lb. double crown printing and you sent round for samples and quotations. When these came in you found any one of the samples would suit your purpose, yet the price varied from 3d. per lb. to 9½d. That is a cost to you from £3 to £9 10s., practically the same figures as in the first example. How you would curse the paper trade and talk seriously to the paper travellers about getting back to a market price! What confidence would you have in sending an urgent order 'at current prices' to any paper house under such conditions? What suspicions you would have about the charges of even the most fair and honest paper man! What a worry and trouble would be added to your buying of paper! All this is happening to our customers because of our present lack of a market price

"The effect of this variation on the trade is indeed deplorable, leading to suspicion between printer and printer and to lack of confidence between printer and customer. Even the Costing System suffers quite undeservedly through this. For costing out finished work the System is splendid. In itself it gives the means of producing accurate data for estimating. But when built on the shifting foundation of varying estimates of time, no costing system and no standard hour rates will put the matter right; and so quite unfair suspicion is cast on the Costing System."

The Cure for the Disease.

"Is there a cure for this? There is. I said before that the Federation Costing System gives us valuable data on operation times. The difficulty is that in each firm there seems too little time to collect this data. Further, efficiency varies and an exceptionally quick, or indeed a slow man, affects averages far too much in an individual firm. In America this was recognised and the master printers' organisation collected and averaged the data. This was first published in a priced book—the best method, in that it saved a calculation—then more recently, possibly to meet Trust Law difficulties, it has been published in time only. So impressed was I of the utility of this work, that finding the time was not yet ripe for an official publication, Mr. Jackson and I published the *Estimator* on similar lines, in such a way that every member of the Federation received a free copy. Perhaps I might add that, in response to requests, a new edition, revised and enlarged is on the way and will be distributed free to members in a month or two's time. By means of this method America has been able to find a standard or fair market price for printing. Mark you, that is not the same thing as an attempt to keep up prices of printing. To talk about fixing a market price, too, is better from the point of view of our customers. All of these will resent an attempt to keep up prices, none can grumble at a market price, for almost all they buy or sell, except printing, is ruled by the market price.

"There is a disease, there is a cure, but the crux of the matter is, how far will such a method receive the practical support of the industry and be brought into daily use? I am aware, indeed, that there is a considerable body of opinion in the trade against any price list. How, in face of that, can we put into operation an exceedingly full and complete one, covering not only jobs, but also operating times, such as is doing splendid service in America? Let us be under no delusions about it—the way of progress is never a bed of roses and we have to face many difficulties. Right from the start there will be difficulties about standard times. Some trade at first might be lost by those using it, for all changes cause some unrest. Yet in the end the result would be a great benefit to the trade."

Martyrs of Standardisation.

"The notes in some future programme may be written thus:—

1923. The great blessing of stardardisation was started.
1924. Most of the Costing Committee massacred by printers who did not agree with the rates of the new price list.
1925. The remainder of the Costing Committee massacred by printers who had lost trade.
1930. Unveiling of the magnificent memorial to the splendid martyrs of 1924 and 1925 who laid so well the sound properity of the printing trade.

"There is an underlying bit of truth in this jest. Let us, therefore, look carefully into the objections. There is the difficulty of reconciling the very divergent views on operation times and the actual difference of times of various workers, into a standard. The short answer to that is that America has done it.

"There is always this initial difficulty in fixing standards. What is a foot? Long ago 50 feet varied according to the size of the foot of the man who measured them, but although our feet still vary, the twelve inch foot we measure by is fixed. Take a closer case. What is the power of a horse? Every one varies, even the power of the same horse varies between the start and the end of the day—but the standard horse power of the engineer does not vary.

"Then there is a strong feeling about the danger of a price list as a weapon in the hands of the unscrupulous printer. Take a lesson from the retail trade. How does the argument apply there? Every one who knows anything of the retail trade will tell you that the very best possible way of securing permanent trade and the confidence of your customers is to mark all goods in plain figures and to put price tickets on the goods in the window and to put prices in your advertisements. In short to give your prices the greatest possible publicity. Some of us print catalogues for our customers—most of these bear fixed prices, prices which can be used by unscrupulous competitors in just the way we fear, yet these customers of ours know that it pays them to print their prices. All experience shows that listed prices bring confidence and confidence brings the more desirable firms as permanent customers. Once he has become used to it the customer is pleased with the simplicity of a price list, and most important the traveller can bring the order away at his first call—a thing a printer's traveller can rarely do now. We fear our prices, because we do not know where we are—with a sound standard we can nail them to the counter.

"Fix fair minimum rates, and the very fairness of our prices will carry us through with all but the worst type of customer. For, after all, most of our customers only want to be sure they are having a square deal. They are out to transfer all the profit they can from our pocket to theirs, but they do not want us to work at a loss. I am satisfied of this, perfectly satisfied, that the troubles we fear are temporary, the good results will be great and permanent.

"I wish I could let you see the letters I received upon publication of the kite I flew—'The Estimator.' There ran through the letters the note that in such standardisation lay the hope of improvement for many a printer struggling along in difficulty, that in it too lay the hope of many a printer for the greater stability and dignity of the trade. It is the urge of those scores of letters of appeal to go forward which make me wish to-day I had the eloquence to convince you of the need of this next step in the printing trade.

"Thirty-nine printers measuring up printing each with yard sticks of different length—39 yard sticks varying from 19 to 59 inches—how soon are we going to make a standard yard stick? This year, next year, sometime—well, we shall undoubtedly decide to start sometime! Why not this year? Why not now?"

British Empire Exhibition.

Paper and Stationery Committee.

Representatives of leading firms in the trade attended the last meeting of the Paper and Stationery Committee of the British Empire Exhibition, over which Mr. John Walker presided.

The chairman was able to report that the Papermakers' Association was lending its support to the proposal that a working paper-making machine, to be designed by Messrs. Charles Walmsley and Co., should form a central feature of the papermakers' and manufacturing stationers' exhibit at the Exhibition.

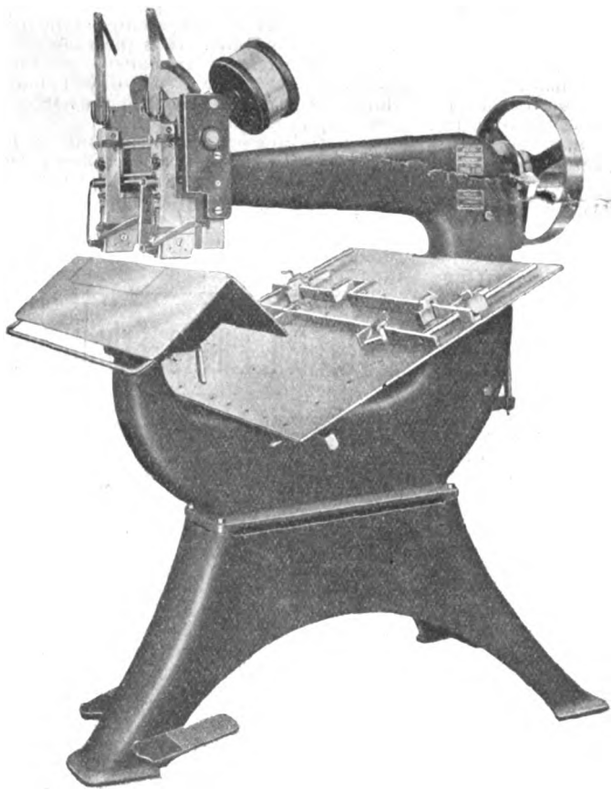
Machinery in motion is recognised as being an impressive and attractive adjunct of any exhibit, and it is believed that a number of firms will follow the lead given by the Papermakers' Association, and include working machinery in their exhibit, to show the process, or part of the process, by which their manufactures are produced. No objection is taken by the Exhibition Management to working machinery being shown in the Palace of Industry, so long as it is not on too large a scale and is not likely to be noisy or offensive to the public.

It is confidently expected that through the medium of the Paper and Stationery Exhibiting Section an opportunity, such as is rarely offered to the public, will be given to visitors to the Exhibition of realising the importance and the various activities of the trade. The Committee were glad to learn that, already, the arrangements projected by the Exhibition Management are likely to be attended with great success.

Polish Paper Duties.

A Series of Surtaxes.

H.M. Commercial Secretary at Warsaw has forwarded translation of three lists of goods, the Customs duties on which, if paid in paper currency, are subject to surtaxes.



Goods on which the surtax is fixed at 9,900 per cent. include cellulose, dry and wet; printing paper and paper for illustrations, without ornaments and watermarks; also paper dyed white on one or both sides for social or Government institutions, under permit from the Ministry of Finance.

Among the articles on which the surtax is fixed at 49,900 per cent. are papermaking machines, not manufactured in Poland, under permit of the Ministry of Finance; printing paper, white, unsatined and unsized, containing not less than 60 per cent. of wood pulp and weighing not less than 48 grs. per square metre; (1) in rolls not less than 70 cms. in diameter; (2) in sheets.

List No. 4, goods on which the surtax is fixed at 119,900 per cent., embrace printing paper, not sized or slightly sized, white, without ornaments or watermarks, containing wood pulp and weighing not less than 48 grs. per square metre. Paper for copybooks, sized, white, without ornaments or watermarks with or without blue or grey lines, containing wood pulp, weighing not less than 65 grs. per square metre; blotting paper, white or coloured, containing wood pulp.

Trade Notes.

THE printing, bookbinding and stationery business carried on for many years at Cupar, Fifeshire, by Messrs. A. Westwood and Son, has been purchased by Messrs. J. and G. Innes, the proprietors of the *Fifeshire Herald and Journal*, the *Fife News* and the *St. Andrew's Citizen*.

CITY firemen were called to a six-floored warehouse in Little Sutton street, Goswell-road, E.C., occupied by Messrs. R. H. Filmer and Co., folding box manufacturers. The fire was restricted to the basement and ground-floor, where considerable damage was caused.

THE business premises of the Dorland Agency, Ltd., international advertising contractors, are amongst the buildings now being demolished in Regent-street. The house is the one that Nash—the designer of Regent-street—built for himself.

THE Printing Trades Alliance has removed from its old address of 39, Shoe-lane, E.C.4, and is now located at 8, Farringdon-avenue, E.C.4.

DAMAGES of £500 for libel in posters were awarded in the Lord Chief Justice's Court last week, to Mr. Charles L. Nordon, solicitor, independent Conservative candidate, West Bermondsey, against Mr. C. R. Scriven, National Liberal nominee, and his agent. The libel lay in statements made in the posters.

NEXT Thursday, the 14th inst., is the date of the annual general meeting of the London Master Printers' Association, to be held at Stationers' Hall at 12·0 noon.

P.M. AND O.A. UNITED GATHERING.—It is anticipated that the United Gathering of the Printers' Managers and Overseers' Association—to be held at Leicester on June 16th-17th—will be exceptionally interesting and successful. Members of the Association will travel to Leicester from all parts of the country, and a very large party will go from London, the Parent Centre. Besides the important business meeting, the programme includes attractive social events and motor tours, while another interesting item is a visit to Messrs. N. Corah and Son's, St. Margaret's Works, Leicester—the largest hosiery factory in Great Britain, covering five acres of ground and employing over 2,600 people.

STATE PRINTING WORKS.—The final session of the National Chamber of Trade conference at Plymouth approved a resolution for a Government inquiry into the working of the State printing works at Harrow.

KENT COUNTY COUNCIL TRADING.—At a recent meeting of the Kent County Council the Economy Committee's report was considered, and the trading in stationery, etc., carried on by the stores department of the Education Committee was again the subject of debate. Due emphasis was laid on the vital fact that the stores department had issued no balance sheet, so that ratepayers did not know where they stood in regard to the stores. Discussion on the Economy Committee's report was deferred to a later date. In connection with this same subject of the stores department there has been published in the *Kent Gazette and Canterbury Press* some correspondence that has passed between Mr. Herbert Marsh, secretary of the Stationers' Association and Mr. E. Salter Davies (Director of Education). Mr. Marsh intimates that he has received communications from some 250 or more stationers who are anxious about their diminished sales due to the stores department's trading.

PROTEST AGAINST GOVERNMENT TRADING.—Lord Askwith, chairman of a committee representing 270,000 British traders, who protest against state-aided trading as practised by the navy, army and air force canteens, has addressed a letter to Sir Frederick Banbury, Bart., M.P., chairman of the Select Committee which is now inquiring into the administration of the home canteens and alleged losses while liquidating the business of the Expeditionary Force Canteens. Sir Frederick Banbury had stated at the opening of the inquiry that "state trading is outside the terms of reference," and Lord Askwith, on behalf of the Protest Committee, points out that this ruling eliminates important evidence on a matter of vital importance to the private trader.

"THE NEWS MAN" is the title of a new organ issued by the National News and Operators' Guild. The first number contains a full statement of the aims of the Guild.

FOR possessing four plates which couid have been used in the making of ten-shilling Treasury notes, Henry Walton, an engraver, was at the Old Bailev on Tuesday sentenced to 12 months in the second division.

IN the King's Bench Division last week William Edward Clery, Denbigh-street, S.W., described as an author, dramatic critic and journalist, sued the *Daily News*, Ltd., and Mr. Wilson Pope, editor of the *Star*, for damages for an alleged libel published in the *Star* on May 27th, 1922. Defendants pleaded that save an allegation that plaintiff was dead the words were true in substance and in fact. At the resumed hearing on Tueseay the jury stopped the case and returned a verdict for the defendants, for whom judgment was accordingly entered, with costs.

MR. GEORGE SMITH, a member of the staff of the Press Association, met with a serious accident on Sunday evening while driving his motor cycle and side car. For many years Mr. Smith has reported Royal functions for the Press Association, and, on being informed of his accident, the King and Queen sent a message to the hospital inquiring about his condition, and expressing the hope that he might soon be able to resume his duties.

THE death is announced at Brooksbar of Mr. James D. Nicholson, who was previously a member of the composing staff of the *Manchester Guardian*. He was in his 81st year.

MR. HARRY T. PRAILL, 52, proprietor of the *Cannock Chase Courier* series of newspapers, has died suddenly.

THE late Mr. Reginald John Lake, of Watford, managing director of Messrs. Gilbert and Rivington, printers, formerly director of the Federation of Master Printers of Great Britain, left £13,017 (net personalty £9,936).

THE late Mr. William Willis, aged 82, of Brasted Chart, Kent, who discovered and perfected the platinum printing process for photographic prints, left £106,833.

THE *Agricultural Gazette* announces that *Modern Farming*, which has hitherto appeared as a monthly, will from June 29th next be amalgamated with it, the combined publications to be known as the *Agricultural Gazette and Modern Farming*, published by Iliffe and Sons, Ltd., each Friday morning.

MR. G. F. HUSSEY, M.P. in the South Australian Legislature, in his address to the West and North-West London Master Printers recently, said that Queensland was not favourable to immigration. This statement requires qualification as that State is now settling a class of people on the land.

BOOK EXHIBITION.—An international exhibition of modern printed books, showing volumes produced in the ordinary way of commerce that yet attain a high standard in applied art, has been gathered by the Medici Society, and can now be seen at the Society's galleries, 7, Grafton-street, Bond-street, W. To continue until June 30th, the exhibition is open daily from 10 a.m. to 6 p.m., Saturdays 10 to 1.

LLOYD MEMORIAL (CAXTON) HOME.—On Saturday, June 16th, Mrs. F. C. Brown, the executrix of the will of the late Mr. W. E. Abrahams of the *Morning Advertiser*, will go down to deal with a party to unveil a tablet in memory of the late Mr. Abrahams who bequeathed £250 to the Home for the endowment of a bed. Anyone wishing to take part in the ceremony can obtain excursion tickets for the day from Messrs. Cook and Sons. The unveiling ceremony will take place at 3.30 at the Home in Deal High-street, to which all visitors are invited. It may not be known that the late Mr. Abrahams was one of the founders of the fund, and was trustee of the Home from 1895 to 1910.

BRITISH INDUSTRIES FAIR.—Having consulted affiliated associations, the Federation of British Industries has suggested to the Overseas Trade Department that the British Industries Fair should not be held next year in view of the British Empire Exhibition being held at Wembley. At the same time the Federation have emphasised the desirability of not dispersing the staff responsible for the British Industries Fair, even if no fair is held next year, as they regard the fair as of great importance to British industry, and the continued success of the fair is very largely dependent on the experience and enthusiasm of the staff who have been responsible for organising it in the past.

EDINBURGH MAPMAKING.—Mr. W. Simpson Henderson, managing director of Messrs. W. and A. K. Johnston, Ltd., map makers, addressed the members of the Edinburgh Rotary Club at their weekly luncheon last Thursday on the subject of "The Making of a Map." Mr. Henderson said Edinburgh was the home of the map-making industry in this country. Touching on methods of production, he said the bulk of the maps now were engraved on copper plates, the process in which woodcuts were used having been abandoned. Engraving took a long time to do. In cutting the letter "A," for example, seven cuts of the engraver's tool were required. Maps were formerly printed direct from the plates, now the lithographing process was used. The map industry, Mr. Henderson said, in concluding, in this country was seriously menaced by the Ordnance Survey Department issuing maps for motorists and tourists at prices which no private firm could compete with. It was high time that this was stopped.

THE *Daily Herald's* big whip-up of subscribers, following upon the paper's enlargement, includes the circulation in hundreds of thousands of pledge cards for use by trade unionists. Each card bears a number and letter. One portion is retained by the member, and on it he gives the following pledge: "This card testifies that in response to the appeal of the above bodies (Trades Union Congress and the Labour Party) ..... is pledged to take the Labour daily first; that is to say, not to buy a non-Labour daily unless he (or she) has that day bought the Labour paper, the *Daily Herald*." The member is enjoined to keep the card, to sign the counterfoil, and to return the latter to his union branch secretary. The counterfoil contains the pledge, the number of the card, and a space for signature.

CENTRAL SCHOOL OF ARTS AND CRAFTS.—The annual exhibition of the work of this school for the session will be open from June 11th to June 23rd, 10 a.m. to 8 p.m. daily, Saturdays 10 to 12 noon. Admission is free on signing the visitors' book. The exhibits include work in writing and illumination, printing, bookbinding, wood engraving, book illustration, etching, lithography, drawing and design.

"MONOTYPE" DEMONSTRATION IN LEEDS.—From June 11th to 23rd inclusive Yorkshire printers will have an opportunity of inspecting a "Monotype" demonstration plant at the College of Technology, 86, Woodhouse-lane, Leeds, where the Lanston Monotype Corporation, Ltd., are showing their standard composing machine, as well as the DD pattern keyboard, and their famous typecaster, fitted with lead and rule casting and cutting attachment. All printers in the district are being cordially invited to see these machines, and newspaper proprietors will have an opportunity of investigating the merits of the "Monotype" typecaster for the purpose of casting heading types, leads and rules.

CONCERNING AN INVESTMENT!

You are a Master Printer. Without delay you should invest in the purchase of a Minimum Jobbing Price List issued by the Bristol Association. Seventy-two jobs are described, the paper decided upon, the operations times shown, the cost totalled, and 323 selling prices given. Saves time and labour. Tells you what profit you get. Compiled by practical men for practical men. Suitable for practically all grades. A buyer in a Grade II. town writes: "I beg to enclose Postal Order for 7/6 in payment for the List, and beg to thank you most sincerely for giving us the opportunity of seeing it. I have checked over several of the prices and find them to be very accurate." Another buyer writes: "The writer has been through this book and would like to congratulate you on this excellent piece of work. Although this area is in Grade IV. the prices are practically the same as we have been in the habit of charging, the difference in wages being scarcely apparent on these small items." Price 7/6, cash with order, from G. F. Jones, Master Printers' Offices, 54, Baldwin Street, Bristol.

The Federation Banquet.

Brilliant Gathering at the Hotel Great Central.

The various threads of the Master Printers' conference held last week under the auspices of the Federation were suitably drawn together on the Tuesday evening, when the annual banquet was held in the Wharncliffe Rooms of the Hotel Great Central. Large as these ornate rooms are, the accommodation was fully occupied by the 500 or 600 members, guests and their ladies, who came together under the presidency of Mr. R. A. Austen Leigh (the retiring president). It was a gay, influential and representative gathering of the printing industry of the country, to which was added a delegate here and there from our colonies. A fine tone distinguished the assembly and was maintained throughout, even to the concert programme, to which there contributed Miss Dorothy Greene, Miss Dorothy George and Mr. Harry Dearth, with Mr. William Parkyn at the piano. Mr. Chas. Winter ably directed the programme.

"The City of London."

Lieut.-Col. H. Rivers Fletcher, the new president, was responsible for the toast of "The City of London." There was no place where the printing industry had a greater hold or was more practised than in London. Those who had attended the reception on the Saturday night at the Guildhall had been impressed by the historic and artistic surroundings. All these things spoke of the fact that they were not only in the centre of the country but of the empire and of the world. (Hear, hear.) Incorporated in the Colonel's remarks were some interesting and amusing recollections of Sir Ernest Wild in Norwich.

Sir Ernest Wild, K.C, Recorder of London, in reply, endorsed the eulogium which Col. Fletcher had passed upon the Right Hon. G. H. Roberts, who, as a typographical representative, had beaten Sir Ernest in a Parliamentary contest at Norwich. Sir Ernest went on to say that he was reminded of that almost invincible triple alliance—the tongue, the pen and the printing press. It could revolutionise public opinion, it could upheave or consolidate the world, and it could mould morals, determine policies, and even destroy dynasties. The City was a great home of the printing trade, from Richard Pynson, in 1500, the first official printer to the Corporation, to Sir George Wyatt Truscott and Sir William Waterlow, past presidents of the Federation.

The speaker went on to say that that was the fourth occasion on which the Federation had held its annual meeting in the Metropolis since the year of its birth, 1901. He observed that the history of the City was worth printing, and he spoke impressively of some of the old customs which still survived. Symbolism went hand in hand with efficiency, and that was something to be able to say in these materialistic times. After referring to Sir Christopher Wren as the great printer in stone, and to the desire of some people that some of the churches might be destroyed and their sites used for secular purposes, the Recorder observed that the City had still room for its God. He looked upon the City of London, her churches, her institutions, her customs as a great and sacred trust, handed down, not to the comparatively few men who governed her destinies, but to the empire and to the world.

The Age of Print.

Mr. J. R. Scott proposed the toast of "The Printing Craft." Describing this as the age of print, he observed that print was to the body politic what blood circulation is to the body corporal. It was the vehicle of ideas and information to every section of the community. In peace and in war, in commerce and the arts, every day and every hour print was quietly and efficiently at work transfusing information, maintaining those intellectual contacts without which the peoples would be a mob and civilisation would degenerate into chaos. Print came with the dawn of civilisation, and apparently no nation could attain such utter insolvency as to be beyond its beneficent ministration. As printers they could never be a primary industry or art, but they were the indispensable minister to all. Mr. Scott complained that the poor newspaper printers had little scope. They were caged by the mechanism of vast but inflexible plants and were driven by inexorable time sheets. In their editorial columns the range of their emotions must be expressed within the limitations of ruby, minion and bourgeois, —just occasionally long primer, when very deeply stirred—or perhaps it would be more accurate to say when they thought that the public thought that they ought to be deeply stirred. (Laughter.) Letterpress and lithograph printers were much happier in this respect, and the advances they had made in recent years had been astonishing. Not only had processes improved beyong recognition in some branches, but never before did trained imagination and artistic feeling so permeate the rank and file of the industry. They doubtless had worlds yet to conquer, but their faces were set in the right direction, and one might almost say that the education of their clients was now as important as the perfection of their art. Coupling the name of Mr. MacLehose with the toast, Mr. Scott recalled that as president of the Federation, not only had he been untiring in a long period of great strain and anxiety, but he brought to the discharge of those duties, a natural courtesy, great patience and a keen intellect. (Applause.)

Improving the Craft.

Mr. James MacLehose, M.A., LL.D., had a specially cordial welcome on rising to acknowledge the toast. Recalling that they were told on Sunday, in Westminster Abbey, that improvement, if it was to be lasting, must be slow, he said he sometimes wondered, when he thought of their craft, as to whether one should be more impressed with what it had accomplished or rather by the amount which was still left to do. So far as beauty of workmanship was concerned, the work of the printers of 400 years ago and more left them a hard task to equal it. Of course they did things differently in those days, because they had an infinite amount of time, and possibly some of the less perfect of their work had not been preserved, but many of the examples which were still open to them to see must make our compositors, our pressmen and our ink makers full of ambition if they were to equal or surpass them. Perhaps the days of competition and rush might make some of them think too much of the quantity of their output rather than of the quality. But there were forces tending in the other direction, and in this connection Mr. MacLehose referred to the printing schools which had been established. Glancing at the conditions under which the early scribes laboured Mr. MacLehose pointed out that these conditions were somewhat less comfortable than they would find in a modern factory, where they had tried to bring at least light and air. At all events, the early work, beautiful as it was, was produced in cells, many of which were very dark. Of course, it was all hand work, but if they looked at the types and the presses as they were to be seen at the library at San Lorenzo or the Plantin Museum at Antwerp, they would notice that these were not very different from the types and presses of to-day. The great difference had been in the growth of variety and size of machinery, and the introduction of motive power. All these had brought them new problems which might mean new gain or new losses. It struck him that whether they were to be gains or not depended upon whether they kept before them the importance of raising the standard of their work. There were many printers who were members of the Federation who had devoted the greatest possible care to that point and among them was their friend Dr. Blaikie. To those men they owed a deep debt of gratitude for continually pointing out to them the way they ought to proceed.

The speaker went on to refer to the change in relationship of master printers one to another. Thanks to the work of the Federation they found printers in these days not only knowing each other, but going out of their way to help their fellow craftsmen. The same spirit was gradually entering into their relations with the work people, and there was a greatly increasing sense of good-will and co-operation spreading throughout the country, which would have a great effect upon their future relations. There was a vast amount of good in the world, and they could take a wider view and remember that in all spheres of activity, as well as in their own industry, it was true that men did not live for themselves alone. In considering their craft they ought to be filled with the spirit of hope. They ought to try, as Browning said, to "greet the unseen with a cheer." Of course, they did not know what was in front of the printing trade, but they did know that they had great hopes of it. If each one of them, in their relations with those with whom they worked, would step upward and not downward, he felt sure they could look forward to the printing craft occupying a still higher position. (Applause.)

"The Visitors."

The Chairman, in proposing the toast of "The Visitors," referred to the presence of the Master of the Worshipful Company of Stationers (Mr. Fitch), who was the 367th holder of that office. In the face of such venerable antiquity, he (Mr. Austen-Leigh), as the mere 23rd president of the Federation, could only humbly and metaphorically take off his hat to their distinguished visitor. If they went back 300 years, to the days when the Star Chamber decided that there should be only 20 master printers in London and none outside, except at the universities of Oxford and Cambridge, Mr. Fitch would have made short shrift of the president of the Federation. (Laughter.) As there were some 7,000 master printers scattered throughout the United Kingdom, the Master of the Stationers' Company was to be congratulated on having nothing to do with the troubles of industrial warfare, and he was therefore able to devote his time, as he did with such success, to maintaining the dignity of his historic Company. (Applause.)

Relations with Paper Merchants.

Coupling with the toast the name of Mr. A. Dykes Spicer (president of the National Association of Wholesale Stationers and Paper Merchants), the chairman mentioned that this was an Association with which the Federation had had certain differences during the last few years. There had been complaints on both sides, but lately they had been trying to get together, and, knowing the goodwill on the side of the master printers and being convinced of the goodwill of Mr. Spicer and his executive, he (Mr. Austen-Leigh) felt that these differences would be shortly composed.

Mr. A. Dykes Spicer, in acknowledging the toast, and speaking on behalf of the Association which he represented, wished to thank the Federation of Master Printers for the very courteous and pleasant attempt they had made to straighten out matters between themselves and the paper merchants. He had no doubt that through the good offices of Mr. R A. Austen-Leigh, Mr. Goodwin, and members of the committee, an, atmosphere was being created which augured well for the future. The wholesale stationers appreciated these efforts, and on their side they would do their best to assist in trying to bring about a state of affairs which he was sure, in the long run, would be the best for both parties. He not only hoped, but he believed, that a recognition of inter-dependence was a not unhealthy sign, and free and frank discussion of the facts before them would get rid of many difficulties and would pave the way for better business. He hoped that the post-prandial aspirations, so cordially expressed by the chairman, would, in the clear bright light of day, be worked out in a logical, clear, and thoroughly-considered scheme. Mr. Spicer went on to emphasise the debt which everyone owed to the printing trade. It was, he thought, Carlyle who said the three great elements of civilisation were gunpowder, printing and the Protestant religion. (Laughter.) At the present moment, when the very basis of society was being questioned and at times trampled upon, it was well to recognise the obligation and to be grateful to those who, not merely for profit, but for pride and love of their craft, were doing much to develop and improve that particular pivot of our lives.

"R.A." as M.P.

Sir William Waterlow, in proposing the health of "The Chairman," spoke of the excellent manner in which Mr. Austen-Leigh had carried out his duties in spite of the anxiety occasioned by the health of his wife. Mr. Austen Leigh had not spared himself in any way, and he had held high office in the Federation during a longer period than anybody before him, which was saying a great deal, having regard to the splendid work which had been done by many members in recent years. Sir William looked forward to the time when they would have Mr. Austen-Leigh in the House of Commons, where he would be a powerful advocate on behalf of the printing industry.

In response, the Chairman observed that if he had been of any service to the printing trade he counted it as one of the greatest privileges of his life. He was very proud to think that his name would be recorded in the list of presidents of that Federation, a list in which Sir William Waterlow was so distinguished an ornament himself.

The proceedings shortly afterwards terminated with the singing of Auld Lang Syne.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Visit to Jackson's Millboard and Paper Co., Ltd.

With the idea of combining the social with the educational side of its activities, the annual outing of the Printing, Bookbinding and Kindred Trades Overseers' Association on Saturday took the form of a visit to Jackson's Millboard and Paper Co., Ltd., Bourne End, Bucks. The party, numbering 80 ladies and gentlemen, left Paddington about 2.30 p.m., after experiencing no little purturbation owing to a temporary breakdown of the arrangements, caused by the missing of a train. On detraining at Maidenhead the company was surprised to learn that the next train for Bourne End would not be due for 75 minutes. The consternation caused by this unwelcome news, however, was soon dispersed when it was learnt that Mr. Geo. A. Eden, who had charge of the proceedings, had chartered two charabancs that would convey the trippers the remainder of the journey. Thus what appeared to be an inauspicious start was turned into a very pleasant experience.

On arriving at the mill gates the company was met by Mr. Frederick Jackson, his two sons and other officials. After the somewhat belated arrival no time was lost in arranging the party into convenient groups, which were then conducted round the different parts of the mill, where, happily for the visitors, normal work was in progress and the machinery running as usual.

One of the first departments to be visited was the beating room, where a number of beaters manufactured by the West End Engine Works were seen in operation beating flax and other raw materials, to be eventually turned into red fibre boards for the trunk and other trades.

The next feature of interest was the inspection of several Watford Pulpers. With regard to this class of machinery, it was explained that the raw material, which at one time had to be sorted by about two hundred girls before it was made into pulp, now required only half-a-dozen, and that now the sorting was done after the raw material had been reduced to pulp.

Many other of the mill's operations, including the production of friction boards, were examined and explained, and then the boardmaking machine house was reached. Here were installed a number of machines engaged on making fibre board and millboard. Close inspection was made of the intricate character of the machinery, and the interesting mechanical methods employed in causing the pulp to be taken along the wire up on to a cylinder, from which the wet board after it had attained its desired thickness, was skilfully cut and snatched off by three operatives while the machine was in rapid motion. The visitors then saw the wet boards, all of uniform dimensions, being piled ready to be placed in the pressing machine. Interest was aroused at this point with regard to the work being performed on a Hollings and Guest pressing machine, which contained a great number of wet boards being squeezed at a pressure of 300 tons, in order to remove all water.

In the drying-room, the next department to be inspected, the visitors were interested in a clever contrivance adopted for hanging the boards in the drying racks. The drying-room itself, which contains a number of tunnels, each measuring 100 feet from the wet end to the dry end, is heated by condensers.

The party was next escorted to the well-equipped and commodious finishing and cutting-room, where the surfaces of the boards were undergoing various methods of treatment, and while in this department opportunity was taken of seeing a rotary cutting machine, which was cutting thick boards at a rapid rate.

After an inspection of the engine house, in which is installed a 500 horse-power motor, a pleasant walk of about a quarter of a mile brought the party to the famous old Hedsor hand-made mill, taken over by Jackson's Millboard and Paper Co. several years ago from the late T. and W. Lunnon. Here keen interest was shown in the production of many qualities of hand-made boards. The machinery at this branch of the firm's operations is driven by a gigantic water wheel, many of the methods employed in 1757 being still in use. Here also was seen quaint machinery driven by means of wooden shafting and pegs. The operatives in this section of the mill, three or four of whom are between 70 and 80 years of age, were engaged in the manufacture of the very highest quality hand made boards, such as are required by the Bank of England, and by customers who require better class ledgers for special purposes, and bank books.

Standing outside the mill buildings were stacked many tons of different classes of boards, it being pointed out that they were in readiness to be shipped to various Colonial and foreign markets.

At the conclusion of the itinerary of the mill the company assembled to an excellent tea served in the spacious canteen, a building recently erected for the comfort and convenience of the workers. Among those present at the gathering were Mr. Frederick Jackson and Mr. Harold and John Jackson (sons), Mr. E. J. W. Zaehnsdorf, Mr. H. Milton, Mr. J. Fleming (president and vice-president of the Association), Mr. A. Cox (secretary), and Mr. T. Goodall (the Mill's London representative).

After the repast Mr. Geo. A. Eden, said that such a pleasant afternoon as they had spent together would not be complete without the passing of a hearty vote of thanks to Mr. Jackson and his sons, the various officials and the lady supervisor who had contributed to make their visit to the mills such an enjoyable and instructive experience.

Mr. F. Jackson, in replying, said on behalf of himself, his sons and all those who represented Jackson's Millboard and Paper Co., Ltd, that it gave him great pleasure to welcome the visitors. He was pleased to be able to tell them that things were gradually righting themselves, and so far as he could see he anticipated a better state of trade in the coming twelve months than had been the case last year. He was also glad to say that the output at the mill was slowly and steadily increasing.

Mr. A. Boreham, senior foreman of the mill, proposed the "Association," and wished it still further success.

To this toast Mr. H. Milton briefly replied on behalf of the Association.

The proceedings were enlivened by contributions from Mr. T. Hunt (songs), J. A. Esler (card tricks), Mr. H. Gawthorn (recitation), Mrs. Gawthorn (piano).

A memorable day was then brought to a close, Paddington being reached soon after 10 o'clock.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

LINOTYPE OPERATORS required for Australasia; good permanent employment offered for first-class men.—Apply, Box 14155.

SUBSCRIPTION CANVASSER wanted for old-established Printing Trade Journal.—Reply, in first place, to Box 14162.

Situations Wanted.

A SUPERIOR Young Man, with a thoroughly practical experience in Print (Letterpress and Lithography), desires an OUTDOOR SITUATION with a good firm; will do everything to please and give satisfaction for the right offer.—Kindly write, stating terms, Box 14141.

BOOKBINDER and FINISHER, WAREHOUSEMAN, used to taking charge, desires situation.—31, Westbury street, Swansea. 14151

CUTTER (Binders and Printers), good all-round man, requires permanency; T.U. rates.—Box 14168.

CUTTER, WAREHOUSEMAN, BINDER; able to take charge; 22 years experience; used to all Binding Machines; abstainer; moderate wages; seaside or country preferred.—Box 14167.

GOLD BLOCKER seeks sit., 14 years experience in Account and Letterpress Work; Blocks or Type; ex. ref.—Write, Box 14156.

LADY COST CLERK (Printer's), 8 years exp., knowledge Bookkeeping, Shorthand, Typewriting; mod. salary; London.—Box 14158.

LOOSE-LEAF BINDER desires Re-appointment; practical expert, comprehensive knowledge numerous systems, able organise and manage dept.—Write, Box 14142.

MANAGER-OVERSEER seeks position (Jobbing and News); good organiser, estimator and buyer.—Box 14159.

MINDER seeks perm., Wharfes and Platens, H.T. and Commercial.—W., 134, Chesterroad, Watford, Herts. 14163

PACKER (29) seeks sit. (N.S.); 8 years experience; good reference.—F. W. Burton, 166, Kirby-street, Snowfields, Bermondsey, S.E.1. 14164

PLATEN HAND, good class Com. and 2-Col., etc., could take charge Gen. Machines, wants sit.; town or country.—C. J., 16, Adam-street, S.E.1. 14152

PRINTER'S CUTTER and WAREHOUSEMAN seeks permanency in good Commercial or Publishing house, could take charge.—C. B., 73, Northborough-road, Norbury. 14149

YOUTH desires Apprenticeship either in Litho or Letterpress Machining, or in Stereo Foundry; intelligent; C.C.S. scholar.—G. A. Rutherford, 39, Moselle-avenue, N.22. 14126

Managers, etc.

PRINTERS' MANAGER wanted for Buenos Aires; must be a practical printer, have had experience in the control of men and production of Monthly and Weekly Newspapers; Rotary knowledge an advantage; good position for capable man, but only experienced men need apply, giving full particulars, to Mr. Crowlesmith, 52, Long-acre, W.C.2. 14166

Agencies.

CONTINENTAL firm of Paper and Printing Machinery Manufacturers desires to GET INTO TOUCH with British firm who could handle their production in England, either as Sole Agents or Merchants buying for own account.—Reply, giving full particulars, to Box 14160.

Machinery for Sale.

NEW PLATEN (Treadle Power), inside chase 9½ by 6½-in., self-inking, automatic delivery.—Charles and Co., 12, Old Jewry-chambers, E.C.2. 14157

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Miscellaneous.

MACHINING.—Supplementary formes of Trade Journal, quad crown, can be placed. Firms (preferably E.C.4 district) open for occasional work are invited to communicate with advertisers.—Box 14169.

NO PREMIUM.—HARROW.—IMPORTANT BUSINESS PREMISES adjoining large Drapery Store; fine position opposite station and bus stage; large shop with show-room or rooms over; reat £250 or freehold for sale; unique opportunity for High-class Stationery and Fancy Goods.—Clarke and Co., The Harrow Estate Offices. Tel. 219. 14165

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, JUNE 7, 1923.

Collective Advertising of Printing.

THE time would seem to ripe for some definite action in the direction of collective advertising by printers with a view to increasing the demand for print. As we indicated last week, the subject came up at the annual meeting of the Federation of Master Printers, and the general proposal met with much support. There are obvious difficulties, of course, and the question of finance is a matter that has been stressed. However, it has now been strikingly proved by other industries that such advertising is well worth while. We understand that the advertising campaign of the fruit growers has had such beneficial results that a greatly increased advertising expenditure is contemplated for the coming fruit season. Truly it is time that printers took some of their own medicine and tried the application of print for the cure of ailing trade. Now that this matter has been so definitely brought to the fore, we have no doubt the executive of the Federation will go into the question thoroughly and, we hope, evolve some scheme that will be of benefit to the whole industry.

* * *

Good-Fellowship.

THERE can be no question to-day that recent years have seen a big growth of good-fellowship in the world of print. The matter is not one that can be statistically scheduled in annual reports of trade organisations, but now and then an occasion crops up which brings home very vividly the difference between to-day and ten years ago in the attitude of printers to their brethren in the craft. The recent annual gatherings of the Federation of Master Printers furnished striking evidence of this, for the way in which large printers, small printers and medium printers got together in friendly social intercourse was a thing which a decade ago would have made us all marvel. Personal testimony was also given at the Federation annual meeting as to the assistance which printers give one to another in the course of the day's work, the larger printer often lending his aid to the smaller man and so further strengthening that spirit of good-fellowship which is now one of the most hopeful features of the printing trade.

* * *

Paper Prices Stiffening.

THERE is every indication that prices of paper are stiffening, although the movement is not as yet very general. Wood free papers appear to have led the way with a rise of ½d., and esparto followed suit. Kraft and grease-proof papers are also firmer. As we have already indicated, there is a demand on the part of foreign manufacturers for a better return on their products, and this side of the market also shows signs of greater firmness. The hindrance to the upward move in prices is furnished by competition from Germany, which is assisted by its debased rate of exchange. So far as tonnage is concerned, the amount of paper coming to hand from the Central European power is not so very great, although it is an expanding figure; but the mere fact that German paper is on the market at quotations considerably below those which can possibly be offered by English mills causes a disturbance in the market, and provides a handle for consumers to hold down the prices of competing articles. German purveyors of paper have an advantage, not only in regard to the exchange, but also in the matter of freights, and in this connection Scandinavian producers feel the competition severely. For instance, the freight from Hamburg is only a matter of 10s., whereas from Scandinavia it runs to 20s. or 25s. These factors enable the Germans to put in prices which are anything up to £2 a ton cheaper than their rivals can quote.

* * *

Rising Market Expected.

IF the paper buyer presumes that the present condition is one of temporary inflation, he requires to contemplate the fact that wood pulp supplies are being contracted for into 1924 at to-day's figures. Further, he must solve for himself the problem constituted by the French occupation of industrial areas and mining districts in Germany. That in itself has lifted the price of coal in this country. If this is insufficient evidence for conviction, there is a wider field for reflection in the shortage of both wood pulp and esparto and the insatiable demands of U.S.A. Expert advice indicates a rising market and the paper mills are acting upon that advice by safeguarding their supplies and running up ample stocks of standard papers.

WORLD'S LARGEST CAMERA.—The Department of the interior (Washington) contains the largest camera in the world—an instrument which weighs 7,000 pounds, occupies two complete rooms, takes a picture one yard square, and is operated either by electricity or by hand as easily as the smallest camera. Lens, bellows and copyholder are in one room, and plate holder and dark room in the other. Maps and charts are being reproduced daily by this photographic monster, which was designed by the photographer of the Geological Survey.

SERVICEABLE MONO METAL.—We have been interested to read a letter received recently by Fry's Metal Foundry containing unsolicited testimony as to the quality of the metal supplied by that well-known house. The customer stated: "We have recently completed a run of 250,000 32-page crown 8vo. booklets, from one and the same Mono setting, in Gloster old style, cast from your metal. We enclose sheets showing one of the first and one of the last impressions of the booklet in question, the difference between the two being almost imperceptible, showing how extremely well the metal has withstood the wear and tear of what we consider an exceptionally long run."

Personal.

AMONGST those presented at their Majesties' Court last Thursday was Mrs. E. G. Arnold, who was presented by the Duchess of Devonshire. Mrs. Arnold is the wife of Mr. E. G. Arnold, Pro-Chancellor of Leeds University and a past president of the Federation of Master Printers.

MR. G. F. HUSSEY, the retired Australian printer, who is at present on a visit to Europe, this week attended the Printers' Congress at Gothenburg, and will return to England and remain here until August 3rd, when he leaves for the United States and Canada, departing from Vancouver at the end of August for Honolulu and Sydney.

ALDERMAN T. WINDLEY, father of the Leicester City Council, and a former local newspaper editor, was presented on Thursday last with a testimonial, which included a subscribed sum of £8co for the establishment of scholarships, in recognition of 50 years' service in the Council. Alderman Windley is celebrating his 88th birthday.

A PRESENTATION on behalf of the *Sunday Times* staffs was made on Thursday to Mr. Leonard Rees, the editor, on the occasion of his marriage to Miss Mary MacLeod Moore.

MR. REES and Miss Moore were married at St. Mary Abbott's, Kensington, on Tuesday, among those present in the church being Lord Riddell, Mr. Gomer Berry and Mr. T. P. O'Connor, M.P.

ON the occasion of his leaving the editorial staff of the *North Mail and Newcastle Chronicle* to take up an appointment at Darlington, Mr. E. Stanley Nash was presented with a handsome silver cigarette case by his colleagues.

MR. FREDERICK PEAKER, the president of the Institute of Journalists, will address the members of the Kent District of the Institute at the summer meeting at Folkestone on June 30th.

MR. JAMES THOMSON, of the literary staff of the *Shewsbury Chronirle*, and previously on the *Derbyshire Times*, has been appointed editor of the *Aldershot Gazette*.

MR. A. V. HYDE, for some time editor of the *Fish Trades Gazette*, has been appointed editor of the *Furniture Journal*.

Master Printers' River Trip.

The principal outing which the London Master Printers' Association arranged for their Federation guests last week was a great success, the Wednesday fortunately bringing a welcome change from the wet weather which marred the preceding days' activities. River trips between Marlow and Windsor were made in glorious sunshine and the visitors enjoyed the outing immensely. At Windsor special facilities were given for inspecting the treasures of Windsor Castle, and Mr. Stanley F. Oxley—president of the Home Counties Alliance and printer to the King at Windsor—was untiring in his efforts to make the visit a memorable one. One of the parties also enjoyed the privilege of being conducted over Eton College and grounds by Mr. R. A. Austen-Leigh, the recognised historian of the College.

At the luncheon at the Castle Hotel, Windsor, Mr. W. Howard Hazell presided, and the feelings of all present were heartily expressed when Mr. MacLehose took the opportunity to propose the health of Mr. and Mrs. Howard Hazell. The stewards did everything possible to make the outing a success, Mr. Edwin Keliher and Mr. Graham Williams rendering conspicuous service. Mention must be made, too, of the energetic secretary of the London Master Printers' Association who, at one point of the proceedings was the recipient of a spontaneous expression of appreciation from the Association's guests, Mr. and Mrs. Whyte being greeted with a round of cheers when their boat reached Marlow.

Printers' International Congress.

British Visitors to Gothenburg.

The official delegation appointed by the Federation of Master Printers to attend the International Congress of Printers at Gothenburg, Sweden, left London on Saturday. The members of the delegation are: Lieut.-Col. H. Rivers Fletcher, the new president; Mr. R. A. Austen-Leigh, who retired from the presidency last week; Councillor W. B. Wykes, the new vice-president; and Mr. A. E. Goodwin, secretary. They are accompanied by Mr. G. F. Hussey, M.P., a prominent member of the Australian Master Printers' Organisation; Mr. J. J. Keliher, ex-president of the London Master Printers' Association; Mr. David Irvine, president of the Irish Master Printers' Association; and Mr. D. A. C. Cruden. The Hon. Geo. H. Carter, delegate of the United States Government and representing the United Typothetæ of America, sailed by an earlier boat.

The Congress was to commence on Monday and last for three days, and an interesting programme had been arranged. Mr. R. A. Austen-Leigh was to open a discussion on "An International Bureau of Information for the Printing Industry." Mr. Austen-Leigh is well qualified to speak on this subject, having attended conferences of printing employers' organisations in America, France, Holland, and Belgium. Lieut.-Colonel H. Rivers-Fletcher, president of the Federation, was to read a paper on "The Printers' Standard Cost System," and Mr. A. E. Goodwin, secretary, to speak on the same topic and contribute an address on "The Training of Apprentices." Councillor W. B. Wykes, vice-president of the Federation, took for his subject "Standardisation" (of paper sizes and watermarks, colours, etc.).

Mr. Austen-Leigh was chosen one of the two presidents of the congress.

Swedish Bookbinding and Printing.

Wholesome Modern Tendencies.

Published last week appropriately in view of the opening of the Gothenburg Exhibition, *The Times* Supplement on Sweden contains much information relating to Sweden's industries. Referring to book production, Mr. Erik Wettergren remarks that there is much good tradition in this branch of Swedish art. The bookbinders for the last 40 years, he says, have been following upon lines revived from the practices of the 17th and 18th centuries. The result is an extraordinarily firm treatment of the leather and of the gold lettering, together with a fixed level of good taste. The outstanding representatives of this tradition are Gustaf Hedberg and N. Bernh. Andersson, while the great publishing firm of P. A. Norstedt and Soner show, in their bookbinding department, what can be done by newer methods. Of particular importance has been the impulse given by this firm to a refinement in the binding of cheaper volumes, which they keep unspoilt by advertising matter and which, instead of owing anything to illustrations, depend for their charm upon the excellence of the material used, harmonious colour schemes, and arrangement of the text.

In the field of printing also this firm takes a prominent place. In respect both to printing and to binding it is their artistic adviser, Akke Kumlien, who has played the reformer's *rôle*. It may be said, above all, for Swedish book-printing that it is the outcome of that endless experimenting which was characteristic of all industrial arts in Europe at the end of the 19th century. It is being sought to attain gradually a more modern character but of a more rational description, and the way to this goal has certainly been through a serious study of the good old examples. Norstedt and Söner found their inspiration in the 18th century and the beginning of the 19th, while the firms of Almqvist and Wiksell and of Lagerström seek theirs in medieval times, and above all in the Renaissance. It was the brothers Lagerström and the firm of W. Zachrisson, of Gothenburg, who led the way in thus treating the production of books as a fine art.

Trade Union Matters.

T.A. SECRETARY AND WAGES.—At the annual gathering of the Yorkshire branches of the Typographical Association held at Harrogate, delegates were present from the various branches, the attendance including Mr. F. O. Roberts, M.P., Mr. J. W. Lowe (Manchester), Mr. H. J. Harvey (from the Lancashire groups), and Mr. H. Skinner (general secretary, Typographical Association). Mr. Skinner, in the course of a speech, said they deeply regretted they had to accept the wage reduction last year, but they never submitted to it because they thought the employers were entitled to it. He hoped the employers recognised that position, and hoped they would never attempt to reduce the standard of life of their people. They (the Typographical Association) wanted to keep the standard as high as possible because he thought it could be done without injury to the trade. They did not want to get back to the old days. Printers ought, by their skill, to be in the first flight of wage-earners, so far as wages were concerned.

MONOTYPE CASTERS AND LAYING TYPE.—The Executive Council of the Typographical Association have had under consideration a question as to whether Monotype caster attendants who are members of the Association, but who have not been trained as compositors, can be allowed to assist in the laying of type, and their decision is that such members must not participate in such work.

N.A.T.S.O.P. AND A. CLERICAL SECTION.—Our note of last week on the Clerical Section of the National Society of Operative Printers has brought us inquiries from various quarters, and we have elicited replies from officials of the Society. To "Typist" who writes from Highgate, asking if she is eligible for membership, the answer is "Yes."—We are informed that all the shorthand typists in newspaper offices in London to-day are members of the Society. "Double Entry" (Battersea) asks if membership is confined to costing and estimating clerks. The answer is "No."—Membership is open to all clerks and administrative workers in the industry without regard to sex, and at the present time there are are associated with the Section all classes of clerical workers, from the junior at 16, who is on the minimum wage of 30s. per week up to the deputy manager at £750 a year. Further information can be obtained from the secretary of the Clerical Section, Room 42, Memorial Hall, Farringdon-street, E.C.4.

Printers' Received by Stationers' COMPANY.

In connection with the annual gatherings in London of the Federation of Master Printers, a goodly number of master printers and their ladies were on Tuesday afternoon of last week received at Stationers' Hall by the Master, Wardens and Court of Assistants of the Worshipful Company of Stationers. The Master, Mr. Herbert Fitch (who was accompanied by Mrs. Fitch) found opportunity to make a speech of welcome, and the visitors were given an interesting and enjoyable time.

The provincial visitors particularly were glad of the opportunity to make acquaintance with the historic Company and its Hall, and in gaining information they were aided by receiving each a handsome illustrated booklet "The Worshipful Company of Stationers: A Short Account of its Charter, Hall, Plate, Registers and other matters connected with its History," written by Mr. Reginald T. Rivington, M.A., LL.B., Clerk to the Company and specially printed for the occasion by Mr. Geo. W. Jones.

The many visitors, who included leading members of the Federation Council, the president and secretary of the London Master Printers' Association, and many of the most prominent printers of London and the provinces, were entertained to an excellent concert, and light refreshments were served. The concert artistes were Mr. Turle Lee, Miss Mary Winter and Mr. Reginald Johnson, with orchestra conducted by Mr. C. E. Daggett.

NEARLY 150,000 tons of newspapers are carried by air yearly between London and Paris.

DIVIDENDS AND REPORTS.

ASSOCIATED NEWSPAPERS.—The report of Associated Newspapers for the year to March 31st, 1923, shows net profit, after meeting all charges and providing for depreciation and corporation tax, and including £420 from transfer fees, of £680,209, compared with £224,133 for the previous year. With the addition of £80,863 brought in there was available £761,492. A final dividend on the deferred shares has been paid, making 35 per cent. for the year (5 per cent. being paid tax free), compared with 15 per cent. for the previous year, and two bonus issues, each totalling 250,000 deferred shares, were made, leaving to be carried forward £94,492.

STAR PAPER MILL (1920)—Interim dividend at rate of 5 per cent. per annum, less tax, on ordinary for half-year, paid May 18th. Last year, dividend same.

NEW COMPANIES.

BRANDON, TURNER AND CO., LTD.—Capital £65,000 in £1 shares; to acquire the business carried on at 47 and 48, Hatton-garden, E.C., as Brandon, Turner and Co., to adopt an agreement with H. Brandon, and to carry on the business of stationers, printers, lithographers, photographic printers, engravers, envelope manufacturers, paper, paper bag, cardboard and paper box makers, photographers, manufacturers of and dealers in fancy and other cards, and cases, etc. Private company. Warrillows, Limited.

In the companies winding up court Tuesday Mr. Justice P. O. Lawrence again had before him the petition by J. S. Davey and Sons, Ltd., for the compulsory winding up of Warrillows, Ltd.

Mr. Van Ek for the petitioning creditor said this petition stood over in April with a view to a scheme being prepared.

Mr. Whinney for the company said a scheme was being prepared and it was hoped this would be ready by the last petition day these sittings. The scheme was well forward and there was a suggestion of an alternative arrangement by which a large sum of money would be found.

The petition stood over until the last petition day.

THE St Neots Paper Mill Co. has just paid off the whole of its Debentures (£8,000).

FOR the Guildhall reception in connection with the annual gatherings of the Federation of Master Printers, the lounge furniture was very kindly lent by Messrs. Oetzmann and Co., Ltd., of Hampstead-road, N.W.1.

From the London Gazette.

PARTNERSHIP DISSOLVED.

J. Bentley and A. Wild, printers, stationers and bookbinders, 11, Halifax-road, Todmorden, York, under the style of John Bentley and Sons.

THE BANKRUPTCY ACT, 1914.
RECEIVING ORDERS.

H. A. Weltner, trading as the Britannia Publishing Co., 87, Great Eastern street, London, publisher.

P. S. Wall, carrying on business at 104, Great Hampton-row, residing at 111, Great Hampton-row, Birmingham, wholesale paper merchant and stationer.

Margaret E. Ryder (the wife of F. C. Ryder), residing and carrying on business separate and apart from her husband at 9, Bath-street, Barrow-in-Furness, Lancaster, stationer.

CO-OPERATIVE PRINTING SOCIETY.—A good deal of information about the Co-operative Printing Society, Ltd., of New Mount-street, Manchester (also of Newcastle and London) is to be found in a recently issued booklet recording a visit paid to the Manchester premises in February when representatives of trade unions and societies interested in the concern were entertained by the directors. The booklet has a frontispiece, a half-tone view of the large New Mount-street premises, which now include the registered office and stationery department, formerly at 118, Corporation-street. Indication of the growth of the Co-operative Printing Society is found in the fact that the sales for the five years ending June, 1874, amounted to £48,230 whereas sales for only three years to September, 1922, totalled £98,424.

THE little house organ of the Marshall Engraving Co., Ltd., "Marshall's Message," contains in its latest issue many good examples of the photo-engraver's art, a particularly interesting one being a series of variant line-block reproductions, by means of tints, etc., all produced from the same artist-drawn lettering.

Hazell, Watson and Viney.

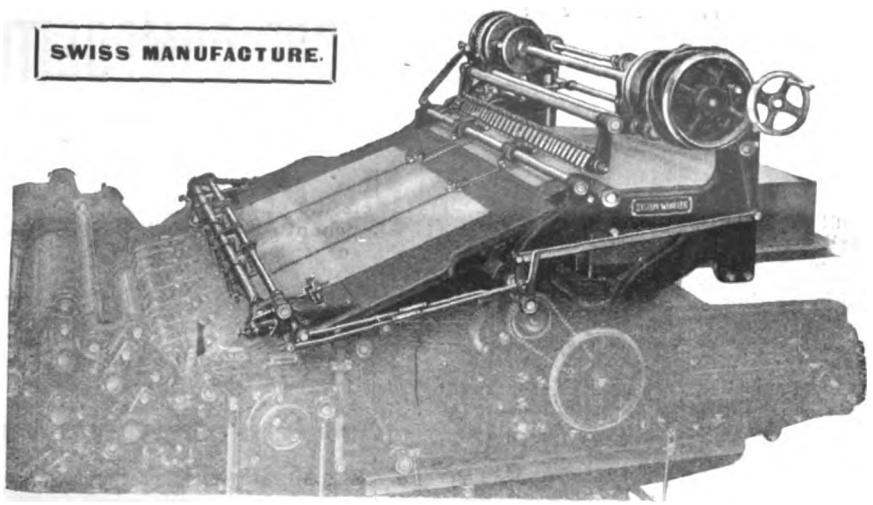
Improved Trade Outlook.

At the thirty-ninth annual general meeting of the shareholders of Hazell, Watson and Viney, Ltd., held at Stationers' Hall, on Monday, Mr. W. Howard Hazell, J.P. (the chairman), presided.

In the course of a review of the year's working he referred to the increased costs of printing and stressed the need that printers should have the newest machinery and the best methods of production, and thus increase the efficiency of our factories and lower the costs. Major Viney, he said, had visited the United States at the end of last year, in order to investigate new machines and processes in that country, and visits had been made to the Continent, so that no process or machine the use of which would be advantageous to the company might be overlooked. The company's purchases of plant during the past year had been the greatest, with the exception of one year, in the company's history.

The meeting adopted the recommendation that £5,000 should be transferred to the reserve fund, making it £50,000, and that a final dividend be paid of 7 per cent., making 9 per cent. for the year, free of income tax, on the ordinary share capital, leaving £17,951 9s 2d. to be carried forward.

MESSRS. SAMPSON LOW will have a revised edition of "George Baxter the Picture Printer," by C. T. Courtney Lewis, ready for publication in the early autumn.



COOPER & BUDD LTD

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

Visit to the Central London Printing School.

This association paid an official visit to the Central London Printing School last Thursday, when a party numbering about 20 were received at the School building by Mr. W. Howard Hazell and Mr. J. R. Riddell. The company was split up into various groups, and conducted through the bookbinding, photo-litho, letterpress and machine rooms, electrotyping and stereotyping departments, and the chemical laboratory. Great interest was taken in all the work that was in progress in the various departments, more particularly in the one with which the members' own craft is identified.

In this department it was remarked that the plant in use was the very best possible for the better training of students in shop and general experience. The visitors were unanimously of the opinion that the pupils have at the school opportunities of learning the intricacies of the craft that are not possible in many of the smaller shops in London. The work being undertaken in this department, which is under the charge of Mr. J. S. Sunderland, ranges from stereotyping, stereo-nickelling and electrotyping.

After a thorough inspection had been made of the different branches of the School's activities, the visitors were conducted back to the reception room, where criticisms and questions were invited regarding the School's operations. Several questions were asked, which were ably answered by Mr. Riddell, who extended a further invitation to the members to visit the School either collectively or individually, Mr. Riddell remarking that they at the School had no special "show day."

Mr. J. Black, vice-president of the Association, on behalf of the visitors, thanked Mr. Riddell and the School authorities for the hearty invitation. He said the members of the Association had been highly impressed with the general efficiency noticed at the School, more particularly in the work being carried on in the electrotyping and stereotyping departments.

During the visit the company were invited to attend a brief chat in the laboratory on the chemical side of the analysis of metals by Mr. A. H. Mundey (Fry's), and several of the members availed themselves of this opportunity.

In response to an invitation from Mr. J. R. Riddell, the members of the Electrotyping and Stereotyping Employers' Federation visited the London School of Printing in Stamford-street, on May 29th, among the party being Mr. G. E. Holloway (chairman of the Federation), Messrs. J. A. Corey, W. Eldridge, A. Dargavel, W. Luckett, L. Posener, Roberts and J. B. Titchener (secretary). The party were welcomed by the Principal and conducted round the school where interesting work by the students was in progress. The visitors showed much interest in the demonstration by Mr. Mundey, and they made a special inspection of the stereo and electro foundry equipment which they found very satisfactory, especially as the Federation members send their apprentices to the day classes during working hours for instruction. The visitors expressed their hearty thanks to the Principal for the able manner in which the various processes were demonstrated, and wished the school every success.

An official visit was paid to the School on Tuesday afternoon by the executive of the Printing, Bookbinding and Kindred Trades Overseers' Association. At the monthly meeting of the Association in the evening at St. Bride Institute reports were presented from those who had attended the visit, and an interesting discussion took place.

Both those interested in Erasmus and those concerned with printer's type will take pleasure in an admirably produced pamphlet "Erasmus en zijn Drukkers-Uitgevers" (Erasmus and his Printer-Publishers) issued by the Littergieterij "Amsterdam," Vorhen N. Tetterode. A feature is the printing of the booklet in the publishers' attractive new type-face known as Erasmus-Mediæval.

Luncheon to Veteran Employees.

Members of the staff who have done more than 40 years' service with Messrs. Jas. Truscott and Son, Ltd., were entertained by Sir George Truscott at luncheon at Cannon-street Hotel on the 18th ult. Sir George, who presided, was supported by the other directors —Mr. H. D. Truscott, Lieut.-Colonel J. R. Truscott, Lieut.-Colonel R. F. Truscott, Mr. Albert Bennett (late general manager) and Mr. W. S. Tredgold.

The veterans present were Messrs. A. C. DeJersey, 64 years' service, C. Perman, 56 years, W. Smith, 53 years, F. G. Perman, 48 years, M. Rushbrook, 47 years, and P. Steel, 44 years (all of the composing department); Messrs. H. Gillman, 55 years, H. Joselin, 54 years, T. Deverell, 50 years, C. Deverell, 47 years, W. Evans, 43 years, R. Burrows, 42 years, and J. Cartwright, 40 years (binding department); Messrs. J. Cannon, 60 years, R. Rutt, 48 years, and H. J. White, 40 years (machine department); Messrs. T. Walters, 54 years, and H. Page, 45 years (numbering department); Mr. J. Newton, 55 years (ruling department), and Mr. E. C. Clark, 41 years (office).

Sir George proposed the toast of "The Veterans," and gave many interesting reminiscences of the past. He drew attention to the remarkable fact that in addition to the long service of so many members of the staff, a considerable number of the veterans present had succeeded their fathers in service with the House of Truscott, whilst in some cases a third generation was already represented in the House.

He cited as an example of this the case of the Perman family, of which Mr. F. G. Perman has just retired after 48 years of service, while his elder brother, Mr. C. Perman, is still working for the firm after 56 years. Their father had worked for 42 years before them. Messrs. C. and F. G. Perman each have a son working in the House at the present time. These have been in Suffolk-lane for 16 and 17 years respectively, thus making a total of 179 years' service of the Perman family with the firm, while the family has worked continuously with the House for 91 years, *i.e.*, 1832 to 1923.

Mr. DeJersey and Mr. J. Cannon responded on behalf of "The Veterans," and drew attention to the vast changes that had come over the printing trade since they first entered the House.

Mr. F. G. Perman then proposed the toast of "The Firm," and coupled it with the name of the chairman, Sir George Truscott. The chairman briefly replied, and Mr. Ernest Clark proposed the health of the one other director who qualified by length of service with the firm to be considered a veteran, viz., Mr. Henry Truscott. The toast was very cordially received and Mr. Henry Truscott responded.

Booksellers & Collective Advertising

The subject of collective advertising, again brought forcibly to the notice of printers at the Federation annual meeting, has also been engaging the notice of the annual conference of the Associated Booksellers. A proposal which will be given further consideration was made Mr. Gilbert Foyle (London), who suggested a scheme to run a collective advertising campaign to increase the sale of books as Christmas gifts during the six weeks prior to Christmas this year. It was to include seven 9-in. treble column and 35 6-in. double column advertisements in seven of the best London dailies, and there would also be window bills and show cards, etc. The estimated cost of this would be about £2,500, and Mr. Foyle suggested that 50 booksellers guaranteed £25 each, which would be half the cost, and they then approach the publishers with a view to securing £25 each from 50 of them, the cost of the scheme being thus covered.

The Homeland Association, Ltd. (37 and 38, Maiden-lane, Covent-garden, London, W.C.2) have published a quarto brochure entitled "Dear Old London," which is a remarkably fine collection of half-tone views of the Metropolis. Containing 106 illustrations of the scenery and architecture of London, all from new photographs, we think it remarkable value for its price of 1s. net.

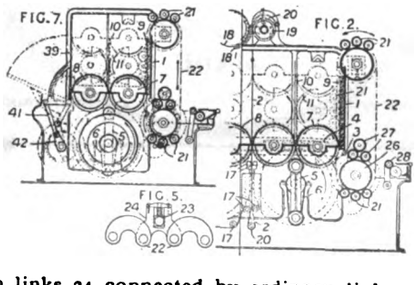
New Inventions

Two-Revolution Machines.



In a two-revolution cylinder printing machine, patented by Mr. W. G. Mudd, the cylinder and the bed are driven from a sleeve or bush *m* fitted with driving pulleys *n* of a fly-wheel *p*, the bush being fitted with a gear-wheel *q* in direct gear with the impression cylinder, and being geared to a wheel 18 which drives a crank motion for controlling the motions of the bed during the reversal periods. The bush *m* is also splined to a shaft *c* by means of keys *k*, and the shaft *c* is reciprocated axially together with a similar shaft *t*, which is geared to it and rotates in an opposite direction, so as to move gear-wheels *f* on the shaft *c* into and out of gear with two outer divided racks on the printing bed. In the position shown in Fig. 2, the wheels *f* are in a position to gear with these racks, and the wheels *f* move the bed until the end of the rack is reached and a

central rack on the bed comes, into gear with one of a pair of pinions 30, 32, which are oscillated by crank mechanism driven by gears *o*, 18, and comprising a sliding frame 24 operated by a crank 21, a reciprocating rack 27 on the frame 24, a pinion 28 in gear therewith, and on the same shaft as the pinion 30, which is geared to the pinion 32 by a rack 31. After the pinions *f* have finished driving the bed in one direction, the shafts *c*, *d* are moved axially to bring a similar gear-wheel *u* into position to engage the outer racks by a lever 4 with rollers 2, 3, which engage flanges *y* on the shafts, the lever being oscillated by a cam 9 splined to the shaft 10 geared to shaft *c*. The cam 9 moves axially against the action of springs 13 fixed to collars 14 on the cam shaft 10, and the movement of lever 4 is limited by fixed stops 17.

Offset Machines.

According to an invention patented by Mr. E. Grosse, an offset machine is constructed with a vertical fixed type bed 1, a semi-cylindrical rubber roller 7 mounted in a sliding frame 4, which is reciprocated by a crank 6 and connecting rod 5, the roller 7 being fitted with a gear section 11 which engages racks 9, 10 alternately so as to rotate the roller 7 in the same direction as the frame 4 moves upwardly or downwardly. While the roller 7 is away from the bed 1, inking rollers 21 mounted on chains 22 move across the bed in a direction opposite to that of the roller 7. The roller 7 can print an offset impression on a sheet fed to a vertical platen arranged parallel to the bed 1, or as shown in Fig. 7 printing takes place by a double offset from the roller 7 to a similar semi-cylindrical roller 8, which prints on a sheet fed to a vertical platen 39. This platen 39 is opened to receive the sheet by a crank 42, and link 41, the crank 42 being geared to the main crankshaft. Two gearings are provided between the shafts and by means of a clutch the crank 42 may be arranged to cause a sheet to be printed for each reciprocation of the roller 8, or for alternate reciprocations only so that double inking may occur. As shown in Fig. 2, a pair of offset rollers 8 coact with one another to print simultaneously on opposite sides of a web 2 which is fed continuously from a roll by friction rollers, passed over guide rollers 17, a gravity looping roller 20, and is fed intermittingly through the rollers 8, and is wound up on a roller 19 by a roller 18 fitted with a friction sector 18¹, which grips the paper, and also relieves the paper from the action of pivoted spring-pressed rubber faced clamps 20. The inking rollers 21 are mounted in bearings 23, Fig. 5,

in links 24 connected by ordinary links 22 which pass over sprockets driven by gearing from the main crankshaft. The rollers 21 receive their ink from rollers 26 fitted with distributing rollers 27, and inked by a messenger roller 28 coacting with a fountain roller. The roller 26 is driven in the opposite direction to the chain 22, to ensure a uniform inking of the rollers 21, and the roller 26 may be reciprocated longitudinally by a cam groove and a fixed pin. The bed 1 is pivoted at 3 so that it can be let down into a horizontal position for adjusting the forme.

Reply Envelopes.

A reply envelope, of the kind having a window aperture for exposing the address on the enclosure, the invention of Mr. W. Brazier, is provided with an address flap disposed inside the envelope in such a manner that it can be positioned when desired to expose an inscription thereon through the aperture. In the example shown in Fig. 2, the address flap 6, bearing the name and address of the sender, is secured at its upper edge to the inside of the envelope body along

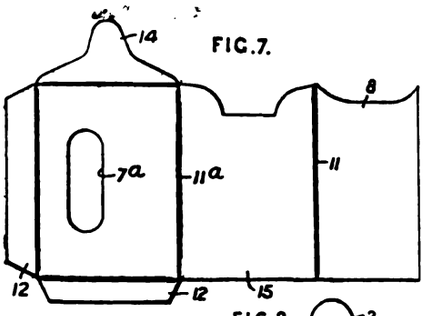


FIG.7.

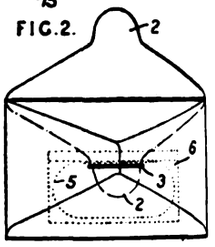

FIG.2.

the corresponding edge of the aperture 5, and can be turned inwards to allow the address of the receiver, written upon the enclosure, to be revealed through the aperture. To return the envelope to the original sender, the address flap is turned down to expose the address thereon. The envelope is secured by the engagement of a tongue 2 on the closing flap with a slit 3 in the envelope body. In another construction shown in Fig. 7, the address flap 8 is preferably integral with the envelope which is formed by folding along the lines 11, 11ª and securing at the gummed flaps 12. Thus formed the envelope has two compartments, and an address upon an enclosure in the front compartment could be revealed through the aperture 7ª, while the sender's address upon the flap 8 would be covered. The envelope is secured by inserting the flap 14 between the address flap 8 and the back 15 of the envelope.

Wm. Ritchie and Sons, Ltd.

Wholesale Stationery Jubilee.

The directors of Wm. Ritchie and Sons, Ltd., wholesale stationers, Elder-street, Edinburgh, entertained to dinner at the Caledonian Station Hotel, on Friday evening, 18th ult., a company of friends, customers, and staff to do honour to Mr. Wm. McCrie Boyd, one of the directors, on the occasion of his business jubilee, Mr. A. Spottiswoode Ritchie taking the chair.

Mr. Boyd has just completed 50 years' service with the firm, 40 years of which have been spent on the road throughout Scotland, where he is perhaps one of the best known figures. Letters of congratulation were read from many of Mr. Boyd's customers who were unable to be present.

Mr. Boyd commenced his apprenticeship with the late Mr. Wm. Ritchie on May 5th, 1873, and, with the exception of four days recently, when he had to rest under doctor's orders, he has not missed a day's work—a remarkable record, testifying to a splendid constitution and indomitable perseverance. After five years' apprenticeship and other five years' work inside, Mr. Boyd, still a very young man, was appointed town traveller. So well did he succeed in that work that in October, 1886, he was appointed by Mr. Ritchie country traveller, a position he has ever since filled with marked ability and with great acceptance both to his many customers and to the firm; and so congenial does he find the work that, in his own words, he would "gladly give another 40 years to it were that humanly possible."

On the business being converted into a limited company, Mr. Boyd, along with his life-long friend, the late Mr. Thos. Scott, became a director, and was one of the original subscribers of the company.

It is interesting to note, as evidence of the progress of Wm. Ritchie and Sons, that in these early days Mr. Boyd was the only country traveller, and the entire staff of the firm was 22 all told. At the present time the firm have as many travellers on the road throughout the length and breadth of Britain as the total staff in their employment about 50 years ago.

A handsome gold watch was presented to Mr. Boyd by the directors, while Mrs. Boyd was given a pearl and cairngorm pendant. From the inside and travelling staff Mr. Boyd also received a gold albert and cigarette case.

A presentation was also made to the Yorks and North of England representative—Mr.

MR. WM. MCCRIE BOYD.

Walter Thompson, of Leeds—who has recently retired on account of ill health, after a period of 33 years travelling for the company. Few men are better known in Yorkshire than Mr. Thompson, and letters were read from many of his customers and friends throughout the North of England, containing expressions of regret on Mr. Thompson having to retire and wishing him well.

Mr. Thompson received, as a token of esteem, from the directors a handsome drawing-room clock, and from the staff a tortoiseshell and ebony walking stick.

Danish Paper Duties.

An amended Danish temporary "Luxury Tax" Law which came into force on June 1st and remains effective until December 31st next includes the following items:—

Wall-paper, wall-paper decorations and friezes, not exceeding in weight 80 gr. per sq. metre, 15 ore per kg., plus 5 per cent. *ad val.*

Sensitised photographic paper and cardboard, 1 kr. per kilog; and wall-paper, decorations and friezes, other than that included above, 25 ore per kg., plus 25 per cent. *ad val.*

Other manufactures of paper and paper pulp, not specially tariffed:—Combined with silk, artificial flowers, ornamental feathers, pearls, precious stones, semi-precious stones or imitations thereof, or with ivory, mother-of-pearl, amber, tortoiseshell, gold, silver or platinum, or with other metal coated with gold, silver or platinum—dutiable as "fancy goods"; other kinds, 70 ore per kg.

THE cigarette and tobacco industry of Japan is the largest individual consumer of paper in that country. Purchases of paper are made through the medium of certain local firms designated by the Tobacco Monopoly Bureau.

Striking testimony as to the value of the "British and Colonial Printer and Stationer":

"Please put us on your Subscription List for an additional 2 copies of the *British and Colonial Printer and Stationer*. We find the contents of such help and guidance that we feel that our representatives should each have a copy regularly each week."

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

AN APPRECIATION OF

"SLOGGER"

Automatic Sheet Feeder

(*From letter received by H. T. B., Ltd.*)

"*I wish to compliment your Company on the new model 'Slogger' recently fitted to a Quad Demy Two-Revolution Machine.*

"*During the past week on a 40,000 run the press with the 'Slogger' ran thoroughout at a steady and uniform speed of 1,850 copies per hour in perfect register, and on a test for some hours ran at 2,100 copies per hour, and the only labour required was half an hour's loading up each morning for the day's run.*

"*The job was an ordinary Magazine, Demy 8vo., 32 pp, machine set type, and the paper Quad Demy, mill finish, 76lb.*

"*It is only since the 'Slogger' was fitted that I have been enabled to obtain the full productive capacity of a Two-Revolution Machine, and I do not exaggerate when I state that on longish runs of Quad Demy size sheets the output is fully 50 per cent. above that of hand feeding with better register. On very thin paper, and also on larger size sheets the output percentage would be much higher.*

"*I am convinced that for speed, reliability, accuracy, and labour saving there is no Automatic Feeder on the Market at present to equal the 'Slogger' for Magazine and Book work, both for long and short runs.*"

YOU WILL HAVE SIMILAR RESULTS WHEN YOU INSTALL "SLOGGER" PILE FEEDER.

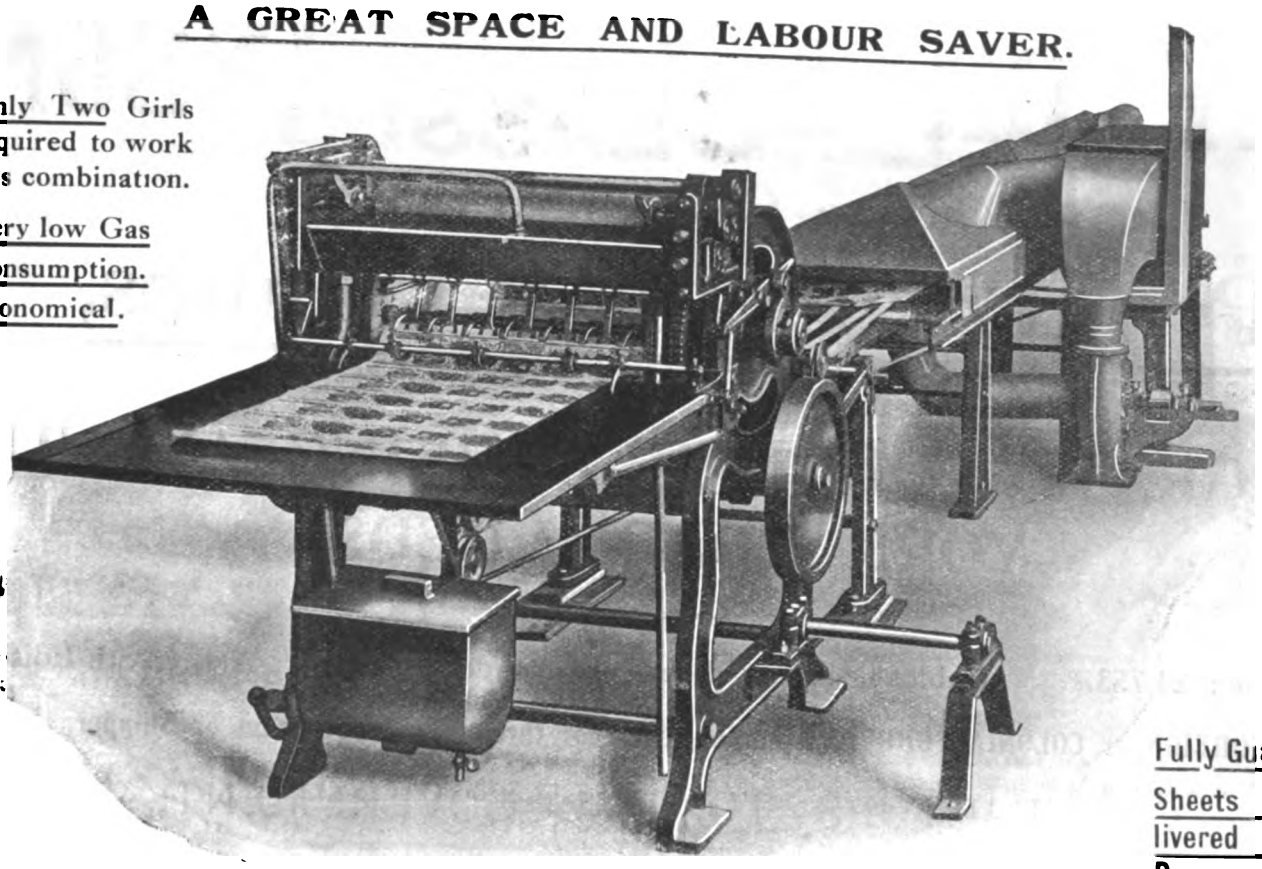
BUSH'S PATENT COMBINED

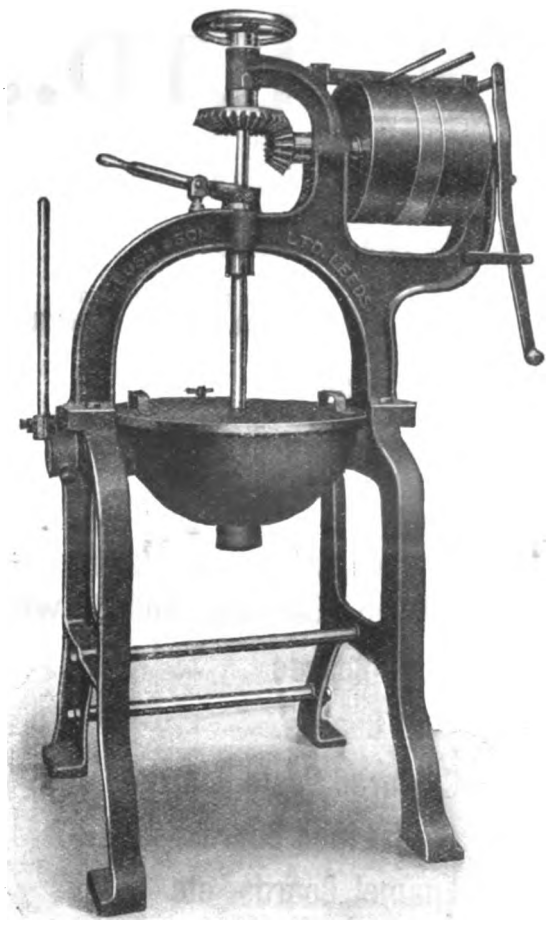
(Patented in Great Britain and Abroad)



Varnishing and Gumming Machine and Hot-Air Drying Apparatus. (Patent No. 141,997).

A GREAT SPACE AND LABOUR SAVER.

Only Two Girls required to work this combination.



Very low Gas Consumption.

Economical.

Fully Guaranteed.

Sheets are Delivered Perfectly Dry.

The above illustration shews both our machines combined, but we can supply either machine separately.

Made in 4 sizes, D. Crown to Quad Demy.

Supplied to many of the leading Printing Offices at Home and Abroad.

*

Bush's Patent Ink Mixing Machine

(Patent No. 8,623).

The only Machine fitted with Tilting Bowl, Removable Blade, etc. Blade can be reversed by moving belt handles either to left or right.

Illustration shewing Machine in operation.

Made in 2 sizes. For 75 lbs. Colour or 150 lbs.

Its Good Points.

1. Economical.—Old Ink can be speedily restored to working consistency.
2. Strongest Inks and Varnishes are thoroughly amalgamated with the greatest of ease.
3. Dispenses with old slow process of Hand Mullering and Blending.
4. A Machine which requires no special attention.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 92. NUMBER 24. [REGISTERED AS A NEWSPAPER.] LONDON: JUNE 14, 1923. Special Export Issue 4d.

Export Notes and Comments

A Cheerful Trade Outlook.

WHEN the last special issue of the *British and Colonial Printer and Stationer* appeared, in March, the outlook for export trade was taking on a markedly rosier aspect, and it is a fortunate fact that the state of affairs has since then continued to improve. The printing trade in this country is undoubtedly on the up-grade, and we now have leaders of our industry prophesying, if not a boom, at any rate a big expansion of business. Whilst the Continent is still for the most part an unhappy spectacle to the trader and economist, the bettered conditions which are establishing themselves here are paralleled in other countries, and there are signs that the world's business generally will soon be in a healthier state than for many years. In respect of the recovery in Canada and the United States, some people do not hesitate to use the word "boom," and we find so good a judge as the general manager of the Mergenthaler Linotype Co. returning from a very comprehensive tour with the report that "American business is cheerful all the way through the country. Values are high, and there is no indication that they are inflated. Optimism is the note most noticeable, without discord, both in the United States and Canada." A notable feature of the position across the Atlantic is the fact that business in print and in printers' machinery and supplies is sharing the increased prosperity of industry generally. The outlook for British printers and suppliers in respect of both home and export trade can be taken as justifying an optimistic attitude, and due use of all available means for pushing business should now yield substantial returns.

Printing Opportunities.

IN the steady growth of the Colonies, printing naturally plays a great part. As populations increase, so does demand for printed matter extend. Therefore, British printers and supply houses have to expect constantly expanding markets in South Africa, Australia, New Zealand and other outposts of the Empire. Local representation is a great aid in developing business. On the paper and stationery side much has been done in this direction, but there is room for the display of similar activity on the part of more printing supply houses. In the absence of such local representation, of course, the orders go to more persistent propagandists like the Germans and the Americans. Evidence is not wanting, however, that British printing engineers and manufacturers are waking up to the opportunities which present themselves for cultivating closer connections with Colonial consumers, and now is the very psychological moment to press home the advantage.

South Africa Organising.

SOME excellent printing is produced in South Africa, and the craft in the Union is steadily being raised to a higher standard. Internally, however, there is room for reorganisation, and it is with the object of placing the industry on a sounder footing that the services of Mr. Hennegin, lately on the headquarters staff of the British Master Printers' Federation, have been obtained. Apparently his task will not be an easy one by reason of diverse interests in the various provinces. Nevertheless, the valuable experience he has gained in the Home Country will stand him in good stead in his new task. From the British exporter's point of view, it is so much to the good that one of our own countrymen should be directing the reorganisation of South African printers. At all events, the fact brings the colony in closer touch with British methods and ideas, which should in turn give a leaning to our printing products. There is rather more inclination among South African printers than in other parts of the Empire to favour British printing plant and equipment, and the hope is that this affinity will be accentuated as time goes on.

Overseas Printing.

A LITTLE stir has been created among South African printers by the placing overseas of a contract for printing Durban tram tickets. The lowest Durban price apparently was 4s. 4d. per 1,000 as against 1s. 6d. per 1,000 landed cost from abroad. A strong protest is made by the *South African Printer and Stationer* against the action of the tramway authority in entering into a foreign contract when there were printers in the Union who could handle the work, one Transvaal firm already producing tram coupons at 1s. 6d. to 2s. 3d. per 1,000 under contract. The competition from overseas which is indicated by the Durban contract seems to point to high charges by the local printers. While these may be at a disadvantage as regards wages, other costs could doubtless be lowered by the adoption of the latest machinery. There appears to be here a good opportunity for British ticket printing machines, which aid so substantially in cheap production.

The Canadian Market.

IMPROVED trading conditions in Canada makes this market one that should not be neglected by British manufacturers, yet one still hears complaints as to faulty methods adopted by would-be exporters. Insufficient care in respect of convenient and attractive packing of certain classes of goods is one of the faults alleged. There still seems room also for British makers of machinery and similar goods to remember that Canadians, like Americans, scrap their apparatus more frequently than we are accustomed to do in this country, and the less durable, though efficient classes of goods are more acceptable than the kind which are priced higher because they will last a lifetime.

The Australian Market.

THE proportions to which our export trade with Australia has grown is indicated by the fact that to-day Australia is the best customer Great Britain has. With increasing population, Australia's purchases from Great Britain will increase in volume. Export trade with Australia in supplies for the printing and allied trades is attended in some directions—printing machinery in particular—with very severe competition from the United States as well as from Australia's own developing manufacturer. To make progress in this market at the present day, it is necessary to aim high. As our Senior Trade Commissioner in the Commonwealth declared recently: "The best goods, the best sales methods, the best type of visiting representative are not too good for the existing valuable Australian market with its vast future possibilities."

Australia Wants British Catalogues.

RECENT complaints as to the scarcity and poor quality of the catalogues sent to Australia by British exporting houses as compared with those from American exporters, have resulted in a big change in favour of this country. British firms are waking to the values of supplying well-produced lists to the public libraries, etc., of Australian cities. Australian buyers want them, and the providing of them must mean increased business for British manufacturers.

Tasmanian Government Printing Plant.

THERE should be some orders coming from Tasmania for printing plant. A report of the Government Printing Department for the year ended June 30th, 1922, mentions that

Digitized by Google

THE LM CUTTER AND CREASER

Specially designed for the accurate cutting and creasing of carton work at high speed.

SPECIAL FEATURES

Built on similar lines to the Miehle Press, and all the desirable features of the latter, ensuring dead register, smoothness of working, etc., are incorporated in it.

The tympan or cutting plate on the cylinder is held at the front and rear edges by special locating and clamping devices.

The cards are fed to the front lays in the usual manner, and are then taken by the cylinder grippers at the front edge of the tympan plate with a small amount of over-lapping gripper edge.

The cylinder with the card around the tympan plates comes into contact with the forme in the same way as on the two-revolution printing machine.

The card is taken directly off the cylinder by a special gripper delivery mechanism.

Delivery grippers and pads are adjustable.

An endless band travelling at the same surface speed as the cylinder extends from the point of take-off to beyond the point of release of the delivery grippers.

Another endless band on the delivery carriage receives the card from the first endless band.

The card is transferred from the first to the second endless band at the commencement of the outward stroke of the delivery carriage; the second band rolls away from under the card, leaving it to fall directly on to the pile delivery.

The delivered cards are jogged up so that they can be easily stripped.

There are no tapes or sticks in the pile delivery. From the point of take off from the cylinder until the card is deposited on the pile it is supported by endless bands.

It is easily handled, and requires no special knowledge on the part of the operator.

This Cutter and Creaser can, if desired, be supplied with a specially designed pile hoist for raising the cards to the feed board.

there is need of new linotypes to replace the two machines installed in 1901, while the type for Bills and Acts has not been renewed for 30 years. Furthermore the lithographic machine was purchased nearly 40 years ago. Naturally, as the report points out, the old machines which have seen their day only make for higher costs of production and lower efficiency. It was suggested as long ago as 1914 that the old plant should be replaced by modern machines; but there is nothing in the report to indicate that this was acted upon. Some of the present machinery, it is interesting to note, is of British manufacture. It is reasonable to suppose, therefore, that new models of the same origin might well replace it. Mr. John Vail, the Government Printer at Hobart, is obviously impressed with the need for more up-to-date plant; and British suppliers, accordingly, should get busy with their offers.

Government Printing in India.

ON behalf of the private printing establishments in India, a severe indictment of State printing comes from Calcutta. It is in the form of a large-sized brochure printed by Lala Shadiram Monga at Lal Chand and Sons. In addition to the arguments advanced in favour of private enterprise, illustrations are given of the various establishments where printing is carried on. The brochure takes a cue from a similar agitation in the United Kingdom, and there are copious quotations from the *British and Colonial Printer and Stationer* on the subject. Of course, the great charge against State-owned printing presses is that they are more costly than private establishments, and that, with the State funds behind them, they offer unfair competition against the individual printer. Since the publication of the brochure, there has been issued a detailed criticism of the Inchcape Committee which investigated the question of Government Printing Presses in India. After hearing evidence, the committee recommended the retention of the State establishments. Private printers, however, are not satisfied with the matter as it stands, and they appeal to the Council of State and the Legislative Assembly to insist upon a proper, impartial and unofficial investigation, and "not to countenance the expenditure of further large sums from the public purse in maintaining or improving "State printing establishments. The disadvantages under which private enterprise labours in opposing State concerns are much greater in India than they are in England, but there are signs that headway is being made in both countries.

Catalogues in Foreign Languages.

PRINTERS have more than one interest in the production of catalogues printed in foreign languages. In the first place, the more publicity of this description undertaken, the more orders come to the printers, many of whom specialise in this particular class of work. There is no question that in order to make the best impression in overseas markets, the native people must be approached in a way they understand, and catalogues in the style and language of the particular country offer the most effective appeal. A second interest which the printer has is in using such catalogues on his own behalf or on behalf of confreres in the engineering and other branches of the industry. This is a direction in which, it seems to us, printers might well do some of the collective advertising which is advocated.

British Industries Federation.

THE Royal recognition of the British Industries Federation indicates the importance which is attached to trade propaganda at home and abroad. Quite a wonderful organisation has been built up by the Federation since it was founded in 1916 for the encouragement, promotion, and protection of British industries of all kinds and the development thereof, and the establishment of closer communications between manufacturers, producers, workmen, and customers, and the improvement, standardisation, and simplification of commercial law in all parts of the Dominions. It is because the Federation is doing important national work that the King has granted to it a Royal Charter of Incorporation, which is rarely given to other than learned societies and educational and technical institutions. This young yet flourishing organisation is an important link in the Imperial chain. An essentially British institution, it inspires confidence by the directness and honesty of its methods.

Catering for Colonial Requirements.

Some Notes on Export Trade Conditions, with Special Reference to the Firm of Hunters Ltd.

The overseas printing trade buyer, when he visits this country, is out to see the latest developments in apparatus and materials for the printing craft; he needs also to know the prices of the goods he fancies, and what those goods will have cost him by the time he gets them into his own premises. On the other hand, the British manufacturer, if he is aiming at developing his export business, is spending money (or should be) in advertising his business and his products in order to gain the good will of colonial visitors and to show them what this country can offer in the way of supplies of all kinds, suitable for overseas requirements. The interests of both buyer and seller being thus so much in unison, it would seem natural that attempts of colonial inquirers to satisfy their requirements would result very happily to both parties. Unfortunately this is by no means universally the case, and the blame for unsatisfactory relationships does not always lie with the overseas visitor.

Trading Within the Empire.

If the inquirer does not readily place his orders in this country the chances are that his failure is at any rate not due to lack of the wish to do so. In recent years much good propaganda has been done with a view to encouraging buying within the Empire. This has doubtless strengthened the natural bonds of imperial sympathy, and now, undoubtedly, much special favour is shown to British manufactures by a large section of the colonial and other overseas markets. An illustration which recently came to our notice brought this home rather vividly. A leading Australian printer visited this country after having previously travelled through the United States. Though he had been much impressed with what he had seen in the States by way of machinery and supplies for the printing and allied trades, he stated that some thousands of pounds which he was going to spend on such goods would all be spent in this country.

British Backwardness.

That buyer's experience, despite his good will, was an illustration of what we have found to be a far too general state of affairs in this country. He discovered that over here, in strong contrast with his experience in the States, he had often very great difficulty in seeing new machinery under working conditions in printing works, and he found, moreover, a lack of what he had anticipated and hoped for in the way of keen salesmanship coupled with the willingness of the dealer to go out of his way to meet his client's requirements. He was met too often with an offhand manner—as though, unless he was prepared to give an order on the spot, it was too much trouble to go into the matter with him and provide the requisite information.

He found too—a point which is not sufficiently realised here—that British firms' standard quotations, f.o.b. London or English port, were inadequate to indicate the actual cost he was incurring. The price in London warehouse or on a vessel in the Thames is often very different from the price c.i.f. delivered at port of importation. The buyer has enough to do to reckon the extra cost of carriage at the other end, together with customs duties, etc., without having costs of transhipment to calculate as well. British exporters could doubtless facilitate overseas business by attention to this important detail.

The matter of providing access to apparatus under working conditions is another thing that could be greatly improved upon with advantage to British export trade. Cases in which the printer, because of the use of secret processes or improved methods, has real occasion to be afraid of visitors, must be rare, especially if the visitor's interests are centred in a plant across the seas. It should surely be possible to develop a little more co-operation in this respect between users and makers of apparatus. The printer who admits visitors is not only doing something that is for the good of the industry, but he is also writing his name in the memories of people whose acquaintance and good will may, at a later date, be of actual monetary value to him.

A Good Contrary Example.

A London firm which provides a good example of the outgrowing of British conservatism in the matter of catering for colonial inquiries is the house of Hunters, Ltd., of St. Bride-street. Many a colonial buyer of printing supplies has reason to remember that name, and we should judge that the good will earned is well worth the large amount of time and trouble that Messrs. Hunters, Ltd. have often taken in providing overseas inquirers with information, not only of the firm's own manufactures, but of other people's productions as well. The fact of being known as a "service" house is making itself felt, and overseas visitors who have called at the St. Bride-street offices and received friendly assistance, in the way of the supplying of introductions to other British houses and so on, make a note of the fact for the future guidance of themselves and their friends. On calling at Messrs. Hunters, London offices the other day we were told that the last three or four years have seen their colonial business increase tenfold, trade with New Zealand, Australia and South Africa particularly having shown great improvement.

The Business of Hunters, Ltd.

Before the war Messrs. Hunters were importing from Germany all their process engraving, stereotyping and electrotyping machinery. During the war, however, they bought a large factory at Wellingborough, and after the wartime manufacture of machine tools had come to an end, the factory was specially adapted to the making of apparatus for the printing trade. Here a start was made *de novo* in the designing of apparatus for process engravers, stereotypers, electrotypers, etc., and Messrs. Hunters claim that their twenty years' experience of the trade has enabled them to make a number of improvements upon previously existing designs. They are now building cameras, stands and lamps, routers, bevellers, saws, etching machines, casting boxes and many similar lines of manufacture, a number of which will be seen illustrated on one of our advertisement pages. The firm has also been closely associated with the development of photo-litho, and have developed many improvements in photo-lithographic apparatus, particularly in respect of printing frames with greatly simplyfied methods of obtaining register. Lithographic supplies of all kinds form another important branch of their manufactures, and the firm produces transfer papers, blankets, zinc plates and the hundred-and-one other requirements of the litho printer. It will be remembered also that we were recently able to describe and illustrate the remarkable new Hunter photo-typesetting machine, a machine which, though not yet quite ready for demonstration and practical use, is a centre of interest to those who are in touch with the latest developments in the printing world.

Messrs. Hunters, Ltd. are an encouraging example of the long looked-for improvement of export trade, which is at last becoming a tangible fact. There are big possibilities of export development in many directions, but the British manufacturer must, as we have endeavoured to indicate, be prepared to lay himself out to meet the requirements of colonial buyers, if he is to take his full share of trade in overseas markets.

Copy of Letter received from One of the Latest Installers of the "LITHOTEX" Plant.

To PICTORIAL MACHINERY LTD.,
7, FARRINGDON ROAD, E.C.1.

DEAR SIRS,

As we have now got well going with our "Lithotex" plant, that is the Step-and-Repeat Machine, Printing-Down Frame, etc., you supplied us with, we should like to say beyond your demonstration we have ourselves demonstrated the plant in our own factory, and are exceptionally pleased with the results obtained.

As you know, we are interested in good class work, and aim at producing the best that can be done in the printing trade, and we must say we have already found your plant of great service to us, and anticipate great help from it in our business.

We think this expression of feeling is only fair to yourselves because we found that although the lithographic machine has been perfected, and far better results were possible than formerly, transferring has not altered for the last 30 years, the same machinery being used, and the same process in every possible way, so that unless you had introduced us to the "Lithotex" we could not possibly have taken advantage of the Rotary Offset Machines which have been installed by us. We can only say that three-fourths of our trouble was due to imperfect transferring, and now that we have introduced your process we have practically no trouble whatever.

We have no objection to you showing this letter to any person it may interest, but if you should publish same we would be obliged if you would withhold our name.

Yours faithfully,

.....

(Managing Director).

OFFSET WORK on "LITHOTEX" or "PRINTEX" PLATES.

500 REAMS FROM ONE SET OF LITHOGRAPHIC PLATES

"In reply to your letter dated 12th May, I see no reason why I should withhold from you the outputs from our 'Lithotex' or 'Printex' Plates *(that is the usual Metal Litho Grained Aluminium Plates coated however with the 'Lithotex' Formulae and exposed by 'Lithotex' Lamps in the Patent 'Lithotex' Printing-down Frame.*

"Our record is over 500 reams. Our average, with conditions absolutely satisfactory, is about 200 reams.

"On a single-colour machine (when properly tuned up) there is no reason why 300 reams should not be obtained.

"In above remarks I am of course referring to offset work."

This extract is from a letter from one of the largest Lithographic Offset Printers in the world, and is in reply to our enquiry (Original Letter can be seen). The fine quality and long printing life of "Lithotex" surfaces is proverbial and admitted all round the world.

PICTORIAL MACHINERY LIMITED

(SPECIALISTS IN MACHINERY AND PLANT FOR THE GRAPHIC ARTS),

Proprietors of "PRINTEX" and "LITHOTEX" Processes and Plants,

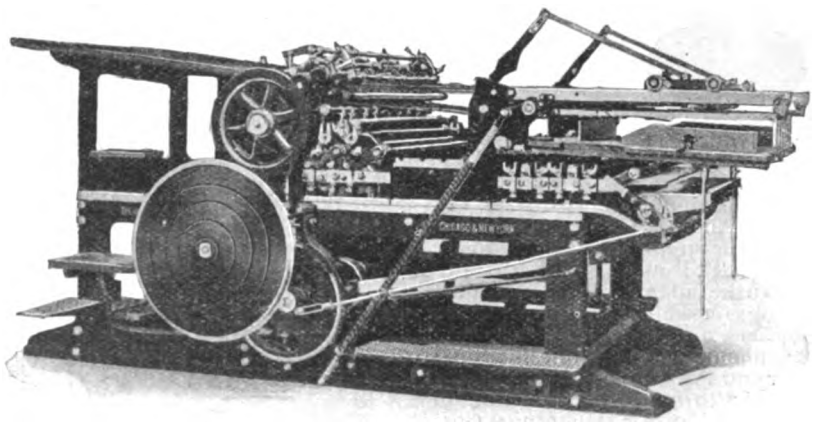
What our Manufacturers are Doing

British Machinery and Other Products that Merit the Attention of Overseas Buyers.

Photogravure Plant: Francis J. Connolly, Limited.

The Bell Photogravure Machinery Co. have just voluntarily wound up on account of illness of a serious character amongst the directors, and we are informed that Messrs. Francis J. Connolly, Ltd., have arrived at an arrangement with Mr. Charles Bell, who was the managing director, to carry this business on. This means that Messrs. Connolly are in a position now not only to supply the necessary machine for photogravure printing, both by means of sheet feeding methods and reel feeding, but to guarantee to install the plant with a complete and satisfactory process of production, this being assured by the fact that Mr. Bell is the controller of the photogravure department of the largest printing house in the country, that he is running twelve large rotary photogravure machines continuously on their productions, fifty men being occupied in the preparation of the cylinders—which demonstrates that the process is essentially a commercial one apart from being one of beauty. Messrs. Connolly are in a position to demonstrate all this to any who are interested. Messrs. Marinoni manufacture all the machinery for printing in this process in addition to other machinery which they advertise from time to time in our columns.

Ruling Machines: John Shaw and Sons.



John Shaw and Sons, Honley, near Huddersfield, manufacturers of "Shaw" Striker Ruling Machines, including the improved disc ruling machine and suction feeder. This has accomplished all that has been claimed, and the method of operation is extremely simple. Intricate mechanism is entirely eliminated. Adjustable air nozzles loosen the sheets on three sides, while the back edge is gently held under light tension. A shaft carrying a perforated suction cylinder revolves over the near edge of the pile of sheets, and pneumatically picks up a single sheet for transferrence to the travelling tapes, which convey the sheets to the ruling cylinder. Messrs. John Shaw and Sons are also sole agents for American Striker Pens and the new "Gold Alloy" durable striker pens.

Machinery: Oscar Friedheim, Ltd.

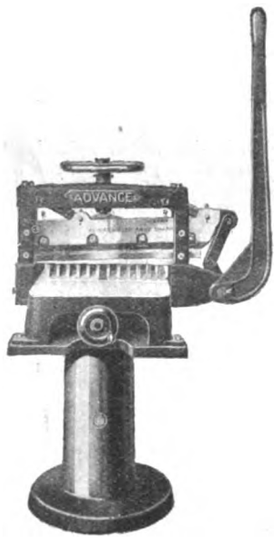
The productions of this old-established concern have occupied a prominent place for many years. Messrs. Oscar, Friedheim, of 7, Water-lane, Ludgate, London, E.C., are capable of turning out almost every variety of appliance connected with the work of the bookbinder and kindred trader. One of the firm's newest appliances is the model Flat Bronzing Machine, an apparatus which has met with warm commendation from several of the largest printers. It is constructed to execute work in five different sizes, and is claimed to be economical in working, simple in construction and rapid in running. As far as its capabilities are concerned, the machine is suited for the bronzing of all kinds of papers, cardboards, finished book covers, and metal sheets up to 3/16-in. thick, etc. Another important apparatus handled by the firm is Friedheim's simplified No. 3 Book Sewing Machine. One of the outstanding features introduced here is that no stitching heads are required, a fact which conduces greatly to simplifying the machine. The output of the book-sewer is 50 sections per minute, and the floor space required is about four square feet. Books can be sewn from 1 15-16th in. high by 1 15-16th in. wide, up to 22 7-16th in. high by 15¾ in. wide. The Friedheim fully automatic Folding Machine, fitted with the Camco continuous rotary feeder—"Spiess Patents"—is constructed with the view of embracing all the requirements of the trade in every possible respect. Other appliances the firm place before the trade are a rotary continuous sheet feeder, which has the reputation of being simple in construction, positive and speedy in operation. Moreover, Messrs. Friedheim are sole agents for a combine of envelope machine manufacturers who are in a position to supply all the latest and most up-to-date appliances for every style of envelope and bag.

Printing Presses: American Miehle Co.

The American Miehle Co.'s perfecting, two-colour and single-cylinder two-revolution presses are world-renowed and need nothing in the way of introduction from us. From the largest double-cylinders to the smallest singles, namely, the fast-running "Pony" machine, the firm provides a range of the highest grade machines whereby every class of printer is catered for. One machine that may be more particularly noticed is rapidly coming into prominence: the three-roller press (approximately double-royal size) seen in the illustration. It frequently happens in both large and small establishments that quite a considerable proportion of the everyday work does not necessitate the heavy inking provided for on the American Miehle Co.'s four-roller presses, whereas an access of speed is a distinct advantage. For work of this description this three-roller has been specially designed and is well meeting the demand. It is suitable for printing every class of work, certainly all that comes into the hands of the general jobbing printer, at the guaranteed practical speed of 2,400 per hour. As a matter of fact, high class illustrated book and catalogue work is regularly being produced with the same hair-line register that characterises the company's four roller presses. From the point of view of perfection of manufacture, registering qualities, accessibility, simplicity in design, strength and completeness in labour-saving devices, the American Miehle Co.'s three-roller press is in no way inferior to that company's regular four-roller, and it bears the same high reputation. The Miehle Co., we understand, are always out to arrange to show this machine by appointment to anyone likely to be interested.

American Miehle Co.'s Three-Roller Press.

Machinery: W. J. Light and Co., Ltd.



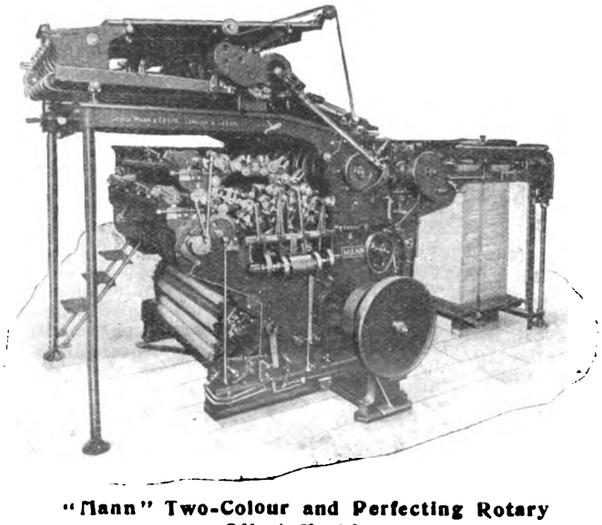
Those who are on the look out for machinery of various kinds will do well to bear in mind the many lines handled by Messrs. W. J. Light and Co., Ltd., of 36-8, Whitefriars-street, London, E.C.4. A machine which is at present attracting much attention is the hand-fed offset machine known as the "Augsburg." Offset printing is now of ever-increasing importance, and this particular machine has a number of very attractive features to recommend it. It is fitted not with three cylinders, but with two, viz., one rubber cylinder and one large cylinder arranged underneath the rubber cylinder, and carrying both the forme and the impression surface. In every revolution one sheet is printed. During the first half-revolution the forme prints on the rubber cylinder, and in the second half the rubber cylinder transfers the print to the sheet placed in the meantime on the impression surface. By this arrangement, fastening of the zinc plates and rubber blanket is much facilitated, and it is rendered possible more easily to obtain and control the exact evolution of the cylinders. Feeding, damping and inking arrangements are among the features for which special advantages are claimed. A wide variety of other attractive machinery—of Swiss manufacture—are handled by Messrs. W. J. Light and Co., Ltd. These include the well-known "Winkler" automatic sheet feeder, which is now being increasingly adopted by British printers, and also a large range of stereotyping apparatus of all kinds.

Printing and Cutting Machinery: Lanston Monotype Corporation.

One of the most interesting letterpress printing machines yet placed on the market is now being shown by the Lanston Monotype Corporation of 43-44, Fetter-lane, in the form of the new "Miller" high-speed cylinder press. It is entirely automatic, and claims to be the fastest flat-bed press built. It attains its guaranteed speed of 4,000 impressions per hour with a quiet, easy movement, without sacrifice of any impressional strength, register, distribution, or other function necessary to the production of the highest class of multi-colour and half-tone printing. It prints the heaviest formes with ease, and responds to the most delicate overlays and underlays. Four-colour process work registers perfectly at speeds ranging from 3,600 to 4,000 per hour. Both forme rollers clear the largest-sized forme it is possible to get on the machine, and with the rollers and three composition distributors, each one of which is also supplied with a steel rider, the inking arrangements are found to be adequate to the requirements of the heaviest formes. The feeder operates unfailingly at the highest rate of speed on all weights and grades of stock ranging from manifold to heavy-coated papers and cardboard. The stock table holds 26-in. of stock, the height of the pile being automatically maintained in correct position as the sheets are fed into the press. The delivery board will accomodate a pile of stock 30-in. high. A valuable feature of the machine is the variable speed drive by which the movement of the machine can be instantly regulated to any desired speed ranging from 500 copies up to 4,000 copies per hour. The accessibility of the machine is splendid, as unobstructed access can be obtained to forme, cylinder and rollers, and, as every machine minder knows, this contributes to speedy make-ready and a quick "wash-up." Another series of machinery of interest to every stationer and printer are the cutting machines which the Lanston Monotype Corporation, Ltd., are now handling—a range of cutters that will satisfy

Digitized by Google

and be suitable to both the man in a small way of business and the large firm with an extensive plant, needing nothing but power machines. A most useful tool is the "Advance Pony Cutter" (which we illustrate) which can be supplied with or without the pedestal and if necessary put on a bench in any convenient



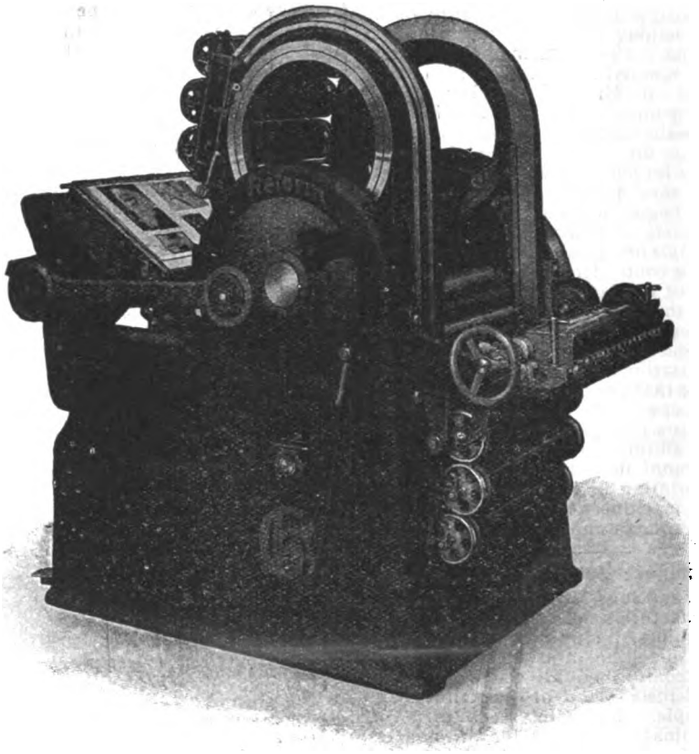
The "Advance" Pony Cutter.

position. It is obtainable in two sizes, *i.e.*, 16 in. and 19 in. Another Lever Cutting Machine, which can be supplied either in 30 in., 32 in. or 34 in. model, is made so that at any later date it can be adapted for power purposes, the fittings for which could be obtained from the suppliers, and fitted by the buyer; this would then make the machine identical with the Diamond Power Cutters which are equal in efficiency to any other machine on the market. The Lanston Monotype Corporation, Ltd., will readily send full particulars of any of the above-mentioned machinery, or arrange a demonstration for anyone interested.

Lithographic Machinery: George Mann and Co., Ltd.

Messrs. George Mann and Co., Ltd., lithographic machinery specialists, announce that orders are still coming in very satisfactorily. Their large works at Hunslet, Leeds, which are equipped with the finest and most accurate machine tools procurable, are well able

"Mann" Two-Colour and Perfecting Rotary Offset Machine.



to cope with this welcome flow of business and yet ask for more. The firm report that their two-colour and perfecting rotary offset litho machine has been an outstanding success. One well-known firm put in four machines for carton printing during the last year. The machines are eminently suitable for this type of work and are fitted with front and automatically lowering pile delivery, the sheet being delivered, printed side up, in full view of the operator. Only one grip is needed for the two impressions received by the sheet while it is passing through the machine, and, therefore, perfect register is ensured. The demy folio "Baby" rotary offset litho machine (20 in. by 12 in.) continues to sell rapidly and is giving universal satisfaction. This is extremely suitable for short runs, both the finest colour and commercial work being equally well done on this little machine. Messrs. Mann are introducing a new single-colour perfecting rotary offset litho machine, quad demy size, to lithograph all classes of newspapers, magazines, catalogues, bonds and all other work requiring perfecting, *i.e.*, two sides of the sheet printed with once feeding through the machine. The latest production in machinery for tinplate printing is Messrs. Mann's "Rapid" rotary tinplate decorating machine, which was introduced to meet the demand for a machine to give greater output than is obtained from their "Standard" Model, and yet give the same high quality of work. This, we learn, is selling rapidly. All rollers and blankets are interchangeable between the two machines. The firm hope very shortly to place a new and extremely simple automatic feeder on the market. It is at present being tested in their Leeds works and gives every promise of being another of the many benefits this old-established company have been giving to the lithographic printing trade for more than fifty years.

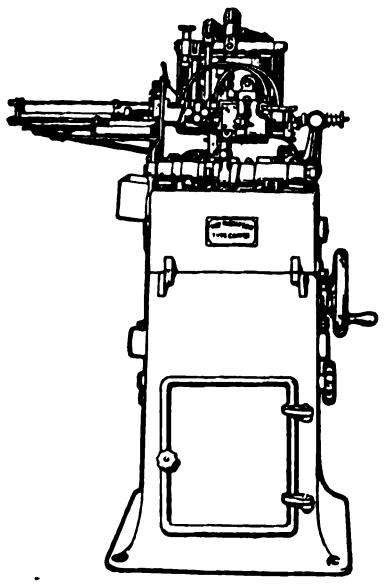
Automatic Sheet Feeders: H. T. Backhouse, Ltd.

A speciality offered by Messrs. H. T. Backhouse, Ltd., Blackhorse-lane, Walthamstow, E.17, is the "Slogger" Feeder, which is suitable for any job from letterpress to any colour work, and for speeds to suit any purpose. It can deal with runs from 500 to anything upwards and feeds from tissues to boards. The separation of sheets is accomplished by a blast of air directed through the top sheets of the pile, and this blast of air at the same time frees the paper from dust and fluff, very prevalent to certain types of paper. This dust and fluff would eventually find their way to the ink rollers and duct, detracting from the colour of the ink and spoiling the quality of the work. By cleaning each sheet before feeding it, the high quality of the work is maintained, and washing up and brushing out of the forme are therefore minimised.

Miscellaneous Machinery: A. Edler.

A number of interesting new items in the way of machinery are to be seen in the showrooms of Mr. A. Edler, at 78, Southwark-street, London, S.E.1. The "Reform" platen press is a model which has many points that make it of special interest, one being the use of double sets of inking rollers which travel round a continuous circuit and are not subject to reciprocating motion. We understand that very shortly Mr. Edler will have on view also a remarkably interesting modification of this press in the form of an offset

The "Reform" Platen Machine.

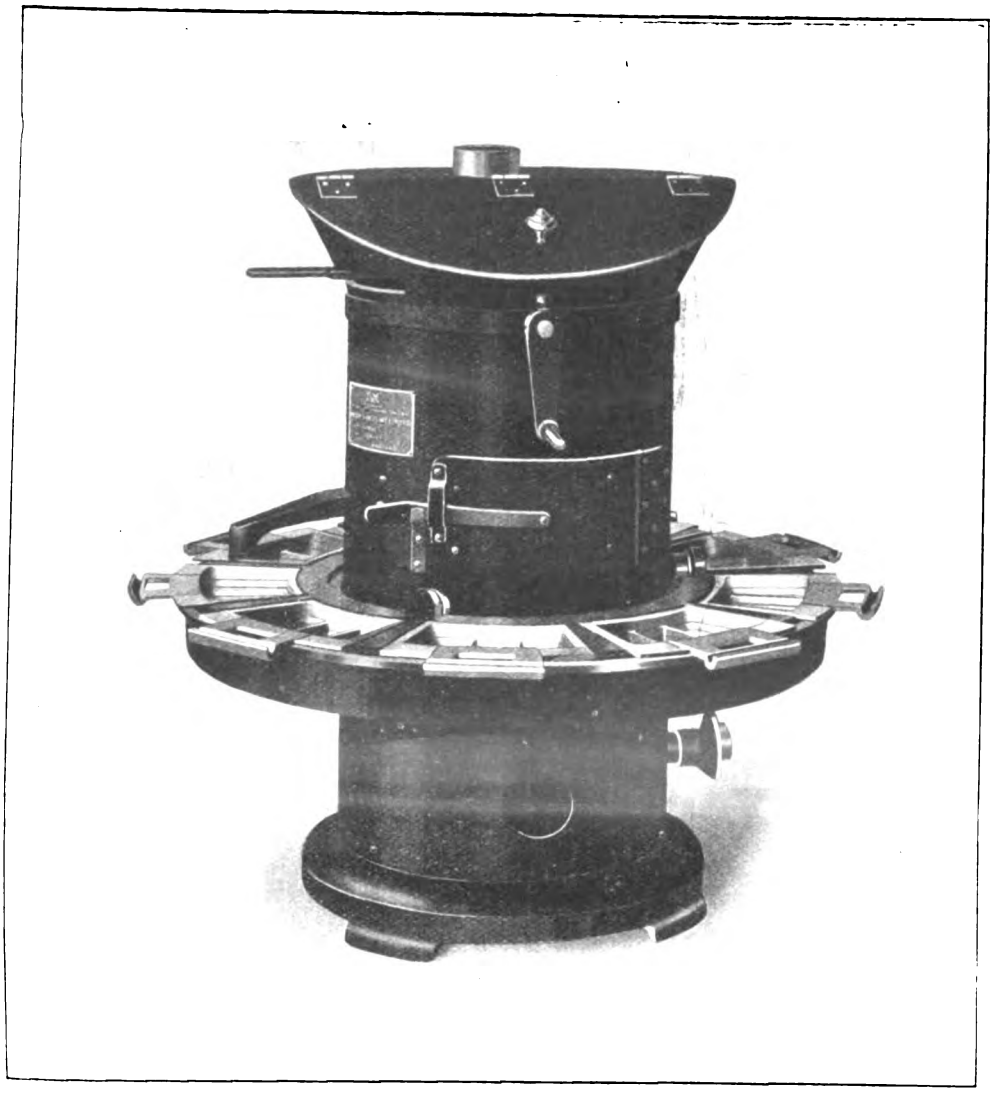


platen. The application of the offset principle to platen machines is a development of very great importance, and marks a new link between letterpress and offset printing. Whilst runs less than 20,000 or so can hardly be profitably done by rotary offset, the platen offset makes practicable the offset printing of quite small jobs, no transfer being necessary and no make-ready. The "Reform" offset platen created a sensation at the spring fair at Leipzic. Another Edler line appealing strongly to guillotine users is the "Perfecta" guillotine. We know this machine to have given working averages of 30 cuts a minute, whilst it is tested in manufacture up to 40 cuts. It is an enormously powerful machine and a finely graduated device giving automatic feed is one of its attractions. Other items handled by Mr. Edler are the "Typograph" composing machine, a new zinc plate grinding and grading machine which greatly simplifies the removal of the marbles, the new "Windmill" paging machine of specially simple and effective design, and the well-known "Lightning" proofing press which has recently been fitted with important improvements.

Typecasting Machine: Thompson Type Machine Co.

The Thompson type, lead and rule caster is so designed that the purchaser need buy only that equipment which best suits his requirements. The full range of the machine is the casting of types, borders, ornaments, special characters, logotypes, etc., as well as high and low quads and spaces in all sizes from 4½ to 48-point inclusive. The average hourly output varies from five pounds in 6-point to twenty pounds in 48 point. In addition, the machine casts leads, slugs and rules in continuous strips and automatically cuts them to any desired length from 6 to 138 picas and in any thickness from 2 to 12-point inclusive. It is not necessary that a purchaser install the entire equipment. He need buy only what he requires at the time he purchases the machine

Digitized by Google



and add the additional equipment from time to time as the need arises. In addition to its own assortment of over 800 founts of matrices, the users of the Thompson have an exclusive advantage in being able to cast from all sizes from either the English or American Linotype, as well as Intertype matrices. One reason for the great success of the Thompson Typecaster in the foreign field is its unique ability to reproduce faithfully the type characters required for all foreign languages. The machine is in use in Europe, India, China, Japan, South Africa, Australia and New Zealand, as well as the United States and Canada. The operator can change from one size body to another in about two minutes and from one style face to another in less than one minute. The manufacturers are always glad to answer inquiries and give detailed information to anyone at all interested in improving the quality of printing they do.

Thompson Typecasting Machine.

Automatic Metal Furnace: Linotype and Machinery Limited.

In their constant efforts to provide improved methods and machinery for the modern printer, Linotype and Machinery Limited, Kingsway, London, W.C.2, have developed the L. and M. Automatic Metal Furnace No. 2. This new model is a modification of the No. 1 model and has been specially designed for printers who have no immediate use for the larger furnace. It is singularly effective and simple in operation, for, like the larger furnace, it melts scrap metal from composing and typecasting machines, and, after cleaning and mixing it, casts the metal into new ingots of suitable size for the machines. The rapidity and economy with which the furnaces deal with large quantities of metal, the manner in which they conserve the metal as regards both bulk and quality, and their low fuel consumption render these furnaces of great utility. The No. 2 model, of which we give an illustration, measures 3 ft. 6½ ins. height overall; its weight is approximately 5 cwt.; capacity of pot, 3 cwt.; number of moulds 9. The furnace can also be supplied with extended spout for small stereotyping purposes. Recent tests for gas consumption have shown that in the No. 2 furnace, one ton of slugs was melted down and cast into ingots in 4 hours 10 minutes on a gas consumption of 3½ therms, the cost working out, with gas at 10d. per therm, less 15 per cent., at approximately 2s. 6d. for the one ton. In the case of the No. 1 furnace the time was 3 hours and the cost 2s. 4d. per ton. It is interesting to learn that over 800 L. and M. automatic metal furnaces are in use throughout the United Kingdom, the Continent of Europe and British Colonies.

The "L. & M." Automatic Metal Furnace No. 2.

Printing Machinery: S.A.P. Limited.

We have from time to time referred to the printing machinery of various kinds which this company makes and imports. A point of special interest to colonial readers is the fact that Messrs. S.A.P. Limited have been appointed sole representatives and agents in Australia and New Zealand for the whole of the productions of Koenig and Bauer, Wurzburg, Bavaria.

Printing Metals: Fry's Metal Foundry.

Overseas printers who are not securing maximum efficiency from their printing metals would be well advised to communicate with Messrs. Fry's Metal Foundry of 25-42, Holland-street, Blackfriars, London, S.E.1, manufacturers of the well-known "Fryotype" brands. This firm have undertaken, as a part of their service to the printing trade, to assay, free of all charge, samples of their customers' printing metals in order to determine the extent of deterioration which inevitably occurs in remelting printing metals. So that the metals may be brought up to their original strength, they manufacture special reviving metals—"Frilo" for Linotype and Intertype Metals, "Fromo" for Monotype, and renewal metals for the different grades of stereotype metals. When a printing metal has been assayed, it is a simple matter for a printer to add the correct proportion of one of these grades of revivers to his working stock and so obtain improved results. At their London foundry they have a well-equipped laboratory where many chemists are constantly employed assaying not only samples of metal in use by customers, but also the metals which are being manufactured for home and overseas consumption. The services of two of the leading metallurgists in the United Kingdom have been secured by Fry's Metal Foundry, and all printing metals are made under the personal supervision of these two gentlemen. Fry's will be only too glad to place the services of their technical experts at the disposal of printers overseas.

Printing Inks: Coates Bros. and Co., Ltd.

Those not yet satisfied in the matter of ink supplies will note with special interest the series of specimens entitled "Coats of Many Colours" now being issued by this firm to show the "quality inks" they are manufacturing. Before putting these inks on the market, very careful tests were made to find out the most economical ink for the printer to use, and this series represents the result of those tests. We are informed that, in these tests, the number of runs obtained with a given quantity of a cheap quality ink in one instance worked out to be 11,900 and the number of runs obtained with one of these "quality" inks, which was less than 50 per cent. more expensive, worked out to be 19,207. Thus it does not pay to buy the cheapest priced inks, whilst the use of superior inks gives the added advantage of a brighter and more effective impression.

Printing Inks: Slater and Palmer.

The old-established firm of Slater and Palmer are keeping well to the fore in the production of good reliable inks, and, as will be seen from the page announcement in this issue, they are out to cater for the special requirements of all climates. Their half-tone satin black ink No. 134, in wide demand at home, is made up in other consistencies for hot climates, and in several countries has already established itself as a reliable ink capable of really fine work. This firm has also recently introduced a number of fine half-tone coloured inks, well up to pre-war strength and brilliancy—fine rose red, geranium lakes, orange lake, photo brown, brown lake, bronze blue, emerald lake, etc.—and indentors of this class of inks would do well to give a practical trial of these when next in the market. The long experience of Slater and Palmer in dealing with the peculiar climatic conditions of Eastern countries has led them to place on the market at moderate prices their "Super Solid Solvent" for promoting the even distribution of printing ink, also their special reducant "Palmink," which causes stiff inks to work clean and free and strong inks to avoid "picking," besides S. and P.'s "Wash-up Preventative," to enable the machine to be left over-night without "washing up," which is a boon to printers in warm climates.

Cleaning Outfit for Numbering Machines: Victory-Kidder Co.

The American Numbering Machine Co., Brooklyn, New York, has placed on the market a complete outfit for the cleaning and care of numbering machines, included in

which is a mixture known as "Numerex" which, it is claimed, will add years to the life of typographical numbering machines. Numbering machines are more or less delicate devices, and have to be absolutely accurate in their operation or they are useless. While in use they receive a constant hammering by either the tympan or impression cylinder, and between these blows printer's ink is spread over the machines. If, however, they are properly taken care of, they should stand up for many millions of impressions, even under the extreme conditions to which they are subjected. The matter to consider is the cleaning of the machines by freeing the working parts from the printer's ink, dirt and other foreign particles which hinder proper functioning. Soaking the machines in "Numerex" cleaning mixture for a few hours will loosen and dissolve all the hard ink, dirt and other foreign particles, and leave the machines absolutely clean. The fluid is already prepared, and requires no mixing or heating. The cleaning outfit is supplied in Europe by the sole agents, Victory-Kidder Printing Machine Co., Ltd., 66, Houndsditch, London, and Birkenhead.

Litho Accessories: Algraphy, Ltd.

A wide selection of litho accessories are produced by Algraphy, Ltd., Philip-road, Peckham Rye, London, manufacturers of aluminium and zinc printing plates, etc. Their object is to keep well ahead of developments, and they are constantly introducing new methods which combine simplicity with efficiency. A wide range is covered by their litho plates for flat bed and direct rotaries as well as offset machines. Thin zinc offset plates and bed plates have also gained an enviable reputation. Indicative of the enterprise of the firm is the new chemical for etching zinc and aluminium plates which is claimed to be superior to anything yet introduced or used. As the operations employed are so simple, it brings every printer within the reach of lithography, however inexperienced he may be. Another line which has been recently developed is offset rubber blankets, large numbers of which are in use on the leading offset presses in this country. The special feature is that the blankets are so vulcanised that the best results are obtained, whilst durability is maintained at its highest point.

The Canadian Official Press Bureau.

The establishment of a Canadian Official Press Bureau at 9, John-street, Adelphi, under the direction of Mr. W. T. Cranfield, is a sign of the closer commercial relations which are growing up between the different parts of the Empire. Canada, of course, is becoming a great industrial nation and she requires new and extended markets for her produce. It is in order that the British people might have authentic news about the Dominion that the Bureau has been established under the authority of the Federal Government. Mr. Cranfield is therefore established at 9, John-street, with the necessary office staff and facilities for handling the official information of which he will be the medium.

Mr. Cranfield is well known in journalistic circles and has published several volumes of permanent value on Canadian subjects under the pen-name of Denis Crane. He has an intimate knowledge of the Dominion, where he has travelled extensively. The information which he will from time to time submit to his colleagues of the Press will be of topical interest and as far as possible adapted to their requirements, and will aim to promote between this country and the Dominion that mutual knowledge which is one of the strongest ties of unity.

THE "TIMES OF CEYLON" GREEN BOOK.—We have received the *Times of Ceylon* Green Book for 1923, which, consisting of some 1,400 closely-printed pages, contains a mass of information relating to the activities, commercial and otherwise, of Ceylon. The volume is divided into thirteen different sections, the information required being easily obtained by the aid of system of tab-indexing. The contents include a list of colour printers as well as the names of Ceylon's importers of printing and writing paper. A useful map of Ceylon is also given, and a number of new features have been added to the comprehensive mass of information contained in last year's edition.

Trade Notes.

A RECEIVING ORDER has been issued in respect of E. E. Barker, stationer, of 82, Drake-street, Rochdale.

THE Government last week appointed a Departmental Committee to inquire into the whole question of Government printing contracts. Amongst other things, the investigation will include the running of the printing works at Harrow, which have been carried on for three years upon experimental lines.

THERE was a large attendance at the annual dinner of the Scottish Newspaper Proprietors' Association on Saturday evening in the Station Hotel, Inverness. Mr. Johnston, *Falkirk Herald*, presided. Mr. Delamore M'Cay, manager and editor of the Australian Newspaper Cable Service, was one of the speakers.

FOLKESTONE'S Chief Constable summoned three post card dealers, Gaetoni Faraoni, Stuart Hogben, and Burwood Mallows, on Tuesday, for exhibiting indecent post cards. The case was dismissed against all three defendants, who gave an undertaking not to sell any more.

NOMINATIONS for the position of secretary to the Trades Union Congress, in succession to Mr. C. W. Bowerman, M.P., who is retiring under the age limit of 70 fixed by the Congress last year, closed on Monday.

THE annual visit to the Caxton Convalescent Home, Limpsfield, takes place on Saturday, the 16th inst., when the new entrance gates and gateway will be presented and the Robinson Memorial Bed Tablet unveiled.

SIR WILLIAM JOYNSON-HICKS states that the annual amount of revenue which it is estimated will be received by allowing income-tax receipts and certain other Inland Revenue forms to be used for advertisement purposes is £8,000.

WHILE motor cycling a month ago William Barrett, a printer's engineer, collided with a motor car, and his thighs were fractured. He was taken to Wellingborough Cottage Hospital, and an operation was performed. On Wednesday last week he was carried to the altar of All Saints' Church, Wellingborough, on a stretcher, and after his wedding to Miss Joy Hobbs, a clerk at Wellingborough, he was taken back to hospital for an operation.

THE British delegation to the Advertising Convention have received more than a thousand cables of congratulation from all parts of the world on their success in obtaining the 1924 Advertising Convention for London.

NEWSPAPER SOCIETY COUNCIL.—The retirement from the Council is announced of Mr. A. Hickling, the representative of the Cumberland and Westmorland weekly newspapers. Mr. H. C. Derwent, of the *Bradford Daily Telegraph*, has been elected to represent the Yorkshire evening newspapers on the Council. Mr. J. R. Scott (president of the Society), Sir James Owen (ex-president), Mr. Valentine Knapp and Mr. G. E. Stembidge will represent the Society on the Joint Industrial Council of the Printing and Allied Trades.

NEWSAGENTS AND THE PRINTING TRADE.—At the annual conference of the National Federation of Retail Newsagents, Booksellers, and Stationers, which opened at Leamington on Monday, security of tenure for the business premises of small shopkeepers and closer relationship with the printing trades unions were advocated, and it was pointed out that negotiations were in progress, as the result of which it was hoped closer relationship would be established with the Printing and Kindred Trades Federation at a joint conference which is to take place shortly.

COUNTERFEIT NOTE PRINTING.—Printing presses, a photographic camera and the most up-to-date scientific printing apparatus as well as hundreds of counterfeit £1 notes in various stages of preparation were found by the police in a week-end raid on a house in Danygraig-street, St. Thomas, Swansea. The completed notes are stated to be such extraordinary imitations of the real notes as only to be distinguishable in their differences by experts. The raid was the sequel to a case at the Cardiff Police Court on Saturday, when Rose Heal (37) and Edward Williams, who were stated to be brother and sister, were charged with uttering a forged Treasury note knowing it to be forged.

AT Sotheby's, Thomas Pennant's "Some Account of London" was sold for £1,450.

MR. HERBERT JENKINS, the author and publisher, died on Friday, aged 47, after an illness which had been brought on by overwork. He founded in 1912 the publishing house of Herbert Jenkins, Ltd., after he had been with Mr. John Lane as manager for ten years.

MR. FREDERICK DOLMAN, F.J.I., a well-known journalist and author, who died on Monday, aged 55, was the editor of the *Art Trade Journal*, which he acquired some fifteen years ago.

THE late Mr. James Booth Milburn, 63, of Covent-garden, W.C. and Brentford, editor of the *Tablet*, left £1,397 (net personalty £1,197).

MR. DUDLEY H. IAGO has been appointed representative for Great Britain for the Howard Smith Paper Mills, Ltd., of Montreal, a Canadian undertaking whose ledger, bond and banknote papers, etc., have achieved a high reputation on the market. Mr. Iago, whose offices are at Blackfriars-house, New Bridge-street, London, E.C.4, was for many years with Messrs. Edward Lloyd, Ltd., and subsequently with Messrs. Charles Marsden and Son, Ltd., and has a long and intimate knowledge of the trade.

DEMANDS for better accommodation having been refused, the pressmen at Dail Eireann on Tuesday night refused to continue reporting the proceedings and left the building.

THE plans and designs for the new paper mills of Messrs. Edward Lloyd, Ltd., at Sittingbourne, prepared by Mr. T. F. W. Grant, F.R.I B.A., of Sittingbourne, are on exhibition at the Royal Academy.

A NEW YORK newspaper announces, says Reuter, that it will issue a miniature newspaper for the busy man, to be read in ten minutes, in addition to the regular edition.

THE formal announcement of the postponement of the Customs duty on writing paper, etc., imported into Australia is contained in Deferment Notice No. 6, issued by the Minister for Trade and Customs, which postpones the operation of the deferred duty on "writing and typewriting paper (plain), not including duplicating, in sheets not less than 16 by 13 inches" (item 334 F.) until January 1st, 1924.

FROM a Berlin printing firm which claims to have "1,500 employees and workers" and "100 printing machines" we have received advertising matter which is presumably being widely circulated in this country. Special emphasis is laid on big economies made possible in reprint matter by the displacement of the compositor and the employing of photo-mechanical methods.

TRADE WITH URUGUAY.—A direction in which British trade might be fostered is indicated in a report on the "Economic and Financial Conditions in Uruguay," issued by the Department of Overseas Trade. "Uruguayan importers," states the report, "have always shown themselves anxious for trade with the United Kingdom, but they became discouraged by adverse exchange and frequent inability of British manufacturers to meet demands."

FOR the ten months ended October, 1922 the value of paper imports into Japan from the United Kingdom stood at 3,925,182 yen, those from Germany being 3,361,824 yen. Printing paper is among the chief classes of goods now being supplied by Germany to Japan.

THE Japanese paper *Mainichi* reports a continued improvement in the demand for Japanese-made foreign-style paper, due to the supply from Sweden having greatly diminished.

CONSTRUCTION has been commenced on additions and extensions to the paper and pulp plant of the Powell River Co., Ltd., at Powell River, B.C., that will involve the expenditure of approximately $4,000,000. An important part of the work is the installation of a new $500,000 steam generation power plant, the first unit of which is now under construction.

A REPORT on the foreign trade of Austria last year notes an important increase in the export of paper and paper goods.

PAPETERIES GAILLARD, Paris, has been founded for the manufacture and sale of paper, millboard, wood pulp, rags; the establishment and exploitation of commercial and manufacturing establishments and especially the leasing and working of the paper mills at La Brugère (now the property of M. Emile Girard), etc. Capital 500,000 francs.

THURSDAY, JUNE 14, 1923.

Imperial Trading.

THE idea of trading within the Empire is rapidly gaining ground, and an impetus will be given to it by several important events which are in prospect, such as the Empire Economic Conference and the British Empire Exhibition. While not neglecting foreign markets which offer good prospects of business, British manufacturers and supply houses will do well to devote more attention to the Colonies. The soil is ripe there for intensive cultivation. Not only is there a very ready disposition to look favourably upon the products of the Mother Country, but there is the additional incentive provided by the prospects of improving their own export trade with the United Kingdom. Of course, as the Prime Minister of Australia (Mr. Walter Bruce) observes, if Australia, for instance, cannot secure the advantage of the Empire policy, she will accept the offers of countries outside the Empire.

* * *

Colonial Printer Visitors.

VISITS to the Mother Country by Colonial printers of eminence is indicative of the interest which the whole craft overseas takes in the industrial possibilities of the United Kingdom. But while the visitors may be chiefly interested in that part of the trip which embraces the British Isles, they never fail to include America in the round. This fact emphasises the point made in another column that there is some difficulty in obtaining access to English works. That does not prevail in regard to American printeries. Therefore a Colonial visitor who has seen machinery and plant in operation is likely to be impressed with what he has seen; and if it should happen to be American, then it is easy to prophesy in which direction the decision to purchase will lie.

Press Censorship.

THE question of Press censorship is being brought into prominence again by a resolution which the Platen Printing Machine Minders' Society propose to move to-day (Thursday) at the delegate meeting of the London Trades Council. The resolution is as follows: "That this meeting of the London Trades Council is of opinion that the time has now arrived when the trade unions should exercise a censorship of the Press, owing to the fact of gross misrepresentation from time to time of the position of the workers in trade disputes, and with this object in view the Trades Union Congress will be approached to consider ways and means of enforcing same." Attempts have previously been made to dispute the discretion of newspaper editors, as in the case of the *Daily Mail*, when Lord Northcliffe stood out against the unions so stoutly. There have been numerous other instances of course, which have caused inconvenience and annoyance to printers and publishers alike. Even if the course suggested were right in principle, it is difficult to see how it is to operate. Trade unionists must take a broad view of the question, as no doubt the leaders will do. British newspapers as a rule have been very fairly conducted, and their columns have generally been quite open to all parties. In recent years, perhaps, there has developed a only tendency to ventilate the views and opinions of a particular section. This, no doubt, has given rise to the very reasonable resolution of the Council of the Institute of Journalists, which on Saturday expressed the opinion "that when a newspaper prints anything reflecting on any person, or body of persons, it is in accord with the canons of good journalism, fair dealing, and common justice that the newspaper concerned should grant a reasonable right of reply in its columns." So if the aim of the platen minders is impracticable, the publication of the resolution and the views of the journalists should help to keep procedure on the right lines.

* * *

Paper Prices Advancing.

JUDGING from a perusal of recent mill and merchant samples, the price movement is already well under way. Printing and kindred papers are in many cases advanced by ½d. per lb.; but the most general increase appears to be that of ¼d. per lb. Reductions to-day are a rarity, but we have one in view affecting a tub-sized account book paper. Maybe this is an overdue concession in this particular instance; but if anything can be deduced from it, it is the fact that account book papers of the better class can be made to yield profit on their present level.

* * *

Strawboards Easier.

FOREIGN strawboards have become noticeably easier as a result of the continued low demand. Dutch mills claimed to be well booked up a short time ago and prospects of an advancing market led many dealers to purchase fairly heavily. At the moment stocks in this country are heavy and consumption is very low. There is no likelihood of improvement before the fall season sets in. To-day's quotations are based on (approximately) £9 7s. 6d. per ton for light weight unlined boards, with the usual 25s. per ton extra for 1½ lb. and upwards. For two-ton lots a concession of about 5s. per ton might be secured. Quotations at port are in the region of £9 per ton, cartage and carriage forward.

* * *

Other Board Prices.

LEATHERBOARDS and white wood pulp boards remain practically unchanged, and the market is firm. First grade leatherboards are listed at £19 per ton, second grade at £18 per ton, and white wood pulp boards at £18, £19 and £20 per ton for 60's to 350's, 450's and 600's respectively.

Printers' International Congress.

Successful Gatherings at Gothenburg.

The representatives of the Federation of Master Printers of the United Kingdom who attended the International Congress at Gothenburg last week returned to this country on Monday, and they are unanimous in the expession of opinion that the gatherings at Gothenburg were a distinct success. At first sight it might appear that the difficulties of the language would be insuperable, but the Conference was fortunate in having as one of its chairmen, Mr. W. Zachrisson, president of the Swedish Master Printers' Association, who is quite fluent in four or five different languages and apparently had no difficulty in understanding several of the other tongues which were spoken at the Conference. Mr. R. A. Austen-Leigh, who was joint chairman, is also a gifted linguist and proved to be an excellent colleague.

A very favourable impression was created at the outset by the British delegation asking leave to present an ivory gavel for the use of the chairman and as a token of their appreciation of the efforts of the Swedish master printers in organising the Conference. Although the British representation was not numerous, it embraced England, Scotland, Ireland and Wales.

The proceedings at the Conference, which was held in the Exhibition Buildings, comprised papers on costing, artistic printing, labour problems, and international organisation. We hope to reproduce some of the papers from time to time.

Every member of the British delegation took part in the proceedings. Lieut.-Col. H. Rivers Fletcher, the new president of the Federation of Master Printers, gave an address on costing; Mr. W. B. Wykes, the vice-president, addressed himself to paper standardisation, and by way of preface referred to the valuable pioneer work of Mr. Howard Hazell and his efforts to standardise paper sizes in Great Britain; Mr. A. E. Goodwin, the secretary, spoke on the training of apprentices, whilst Mr. J. J. Keliher, a former president of the London Master Printers' Association, also made a contribution on this subject.

International Organisation.

Mr. R. A. Austen-Leigh submitted the final paper on "International Organisation," which aroused a great deal of interest. It was ultimately decided to establish such an organisation for the discussion of printing problems, and an invitation was extended to hold the next conference in Spain, the representative from Switzerland also expressing the hope that the Congress might be held there. It was decided to leave this question in the hands of a committee, which is to be set up, and which will be representative of all the organisations present at the Congress.

The Conference was notable for the interest which was taken in subjects apart from those of a purely economic character, the training of young printers and the development of the artistic side of printing occupying considerable time. Again, valuable information was exchanged as to the condition of the printing industry in various countries, and it was manifest that similar problems are being faced in most countries. There were, by the way, only two representatives from Germany, and one each from Austria and Hungary. Incidentally it might be mentioned that it cost the Austrian delegate over 1,000,000 kronen to attend the Conference.

The Swedish master printers were untiring in their efforts to entertain the various delegates, and the attention given to the British representatives was most marked. Lieut.-Col. Rivers Fletcher, in voicing the thanks of the British printers, remarked upon the good fellowship which had been evidenced throughout the proceedings, and undertook to recommend that his Federation should assist in every way possible to the formation of an international organisation.

Papermaking Exhibits.

Several of the British delegates paid a visit to one of the large paper mills in the neighbourhood of Gothenburg, and were greatly impressed by the up-to-date machinery. The Exhibition itself also demonstrated the history and scope of papermaking. One of the features was an old Swedish house in which hand-made paper had been produced, and which had been brought from a remote part of Sweden and erected in the grounds. Furthermore, in the industrial section of the Exhibition there had been set up a large-size model of a papermaking machine, whilst an extensive range of photographs and statistics clearly showed the importance of papermaking among the industries of Sweden.

Manchester and Salford Master PRINTERS.

Mr. W. Clare-Lees, president of the Manchester Chamber of Commerce, was the guest at luncheon of the Manchester and Salford Association of Master Printers on Thursday at the Victoria Hotel. There was a representative attendance of members. Mr. H. A. Bethell, president of the Association, was in the chair, and others present were—Mr. W. Johnson, ex-president of the Association; Mr. J. R. Scott, president of the Newspaper Society; Mr. F. Waterhouse, president of the Monotype Users' Association; and Mr. J. S. Brunton, vice-president of the Lancashire and Cheshire Master Printers' Alliance.

Mackie and Co.'s Wayzegoose.

The annual outing of the firm of Mackie and Co., Ltd., the well-known printers of Warrington, took place on Saturday, the 2nd inst. The party left Springfield-street shortly after 12.30 p.m. by charabancs, the route selected being through Great Sankey, Prescot and Knowsley to the Weld-Blundell Arms Hotel.

Among those present were Mr. J. C. Coppock (the managing director of Messrs. Mackie and Co., Ltd.) and Mrs. Coppock, Mr. Herbert Gibson (secretary of the company), Mr. H. J. Holloway (works manager), Mr. Alfred Downing (works foreman), Mr. James Lawton (sub-editor, who represented Mr. Fennelly, the editor, who is away on a holiday), and Mr. James Woodward, the trip secretary, who was responsible for the admirable arrangements made for the pleasure of the trippers.

At the conclusion of some excellent exhibitions of bowling Mrs. Coppock presented the prizes.

After a cordial expression of thanks on behalf of the employees, Mr. Coppock responded on behalf of Mrs. Coppock, his co-directors and himself. He said that the more the management and the workers got together, not only in the works, but outside, the more they would be able to work hand in hand together for their mutual support and advantage. He had been mixed up with the printing trade not only locally, but nationally. He had been a member of the National Joint Industrial Council of the Printing Trade ever since it commenced, and, judging from his experience in connection with that Council, the more employers and employees met the better would they be able to rub off those rough edges which sometimes exist, and thus avoid friction and a great deal of unnecessary trouble. Sometimes they misunderstood each other and these meetings serve to wipe away the differences, and do a great deal of good.

The return journey was made *via* Crosby, West Derby and Knotty Ash, Warrington being reached about eleven o'clock. The outing was in very way a great success.

Printing Trades' Chess League.

The final match of the Printing and Allied Trades' Chess League was played on May 31st at Kingsway Hall, when Messrs. S. H. Benson, by defeating Messrs. Straker Smith and Co., retain their position as League champions, and also hold the silver trophy presented by the League for the second year in succession.

Applications for entrance to the League are cordially invited from the Press, printing, advertising and publishing houses, and should be made to the hon. secretary, Printing and Allied Trades' Chess League, care of Oxford Press, Warwick-lane, E.C.

Personal.

PRESIDENT HARDING gave a cordial reception to the British Advertising Delegation at the White House, Washington, on Monday. He said that, as one of the Fourth Estate, of which he was proud, he was delighted to greet so interesting a delegation of advertising and newspaper men.

IN referring last week to the King's first levee we omitted to record the interesting fact that Mr. E. George Arnold, Pro-Chancellor of the University of Leeds, ex-president of the Federation of Master Printers, was presented by the President of the Board of Trade.

SIR WILLIAM and Lady Berry left on Saturday for a short visit to Spain.

A COMPLIMENTARY luncheon was given in Leeds on Friday to Mr. H. Cooke, managing director of Alf. Cooke, Ltd., in recognition of his ten years' presidency of the Leeds and District Master Printers' Association. Mr. J. A. Stembridge, president of the Association, Mr. E. G. Arnold and Mr. Henry Jenkinson paid tribute to the valuable work of Mr. Cooke on behalf of the organisation, and an illuminated address signed by all the members of the Executive Council of the Association was presented.

MR. C. W. BOWERMAN, M.P., and Mr. H. Skinner are among the trade union leaders acting as mediators in the dispute affecting the Co-operative Wholesale Society.

MR. CONDE NAST, the publisher, of New York, Paris, and London, who is now staying at the Ritz Hotel, London, has recently been made a Chevalier of the Legion of Honour by the French Government in recognition of his interest in and encouragement of French literature.

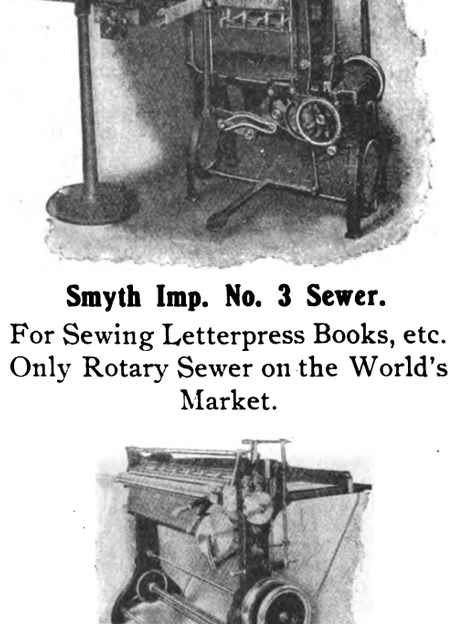
MR. FRANK BRUFF (manager of the Birmingham Printers' Ltd.) spoke in a discussion on "The Place of the Worker in Industry" at the two-days' conference on Labour Co-partnership, arranged by the Labour Co-Partnership Association, at the Royal Society of Arts, Adelphi.

Interesting Wedding at Peckham.

An exceptionally pretty wedding took place on Saturday last at St. Saviour's Church, Copleston-road, Denmark Park, between Miss Constance Blake-Hales and Mr. Frederick Charles Scorgie, both of whom are well known to the printing trade. A large company had gathered at the church and were entertained with selections by the organist. At the altar the black suits of the bridegroom and his two sponsors, heightening the effect of the saxe-blue dresses of the two bridesmaids, the white wedding attire of the bride and the pretty nut-brown suits of the two little page boys, together formed a pleasing colour scheme.

The Rev. J. B. Morton officiated, and the brother, Mr. R. Blake-Hales, gave the bride away, the best man being Mr. John Talbot.

The wedding gifts were numerous, many being of a valuable kind, and a large party assembled at the wedding breakfast at 23, Copleston-road, amongst whom were Mr. and Mrs. R. Blake-Hales, Mr. and Mrs. J. L. Scorgie, Mr. and Mrs. J. Scorgie, Mr. and Mrs. H. Abercromby, Mr. J. Oliver, Miss A. Barr, the well-known contralto, Mr. and Mrs. Harrison, Mr. and Mrs. Allen, Mr. and Mrs. Lancefield, Mr. and Mrs. Johns, Mrs. Lean, Miss L. Keyse, Mr. T. Murray, Miss Gladys Nicola, Miss Winifred Wilson, Mrs. W. B. Cairns, from India, Mr. J. Cairns, Junr., Mrs. H. F. Parker and Mr. H. F. Parker, hon. secretary of Charity Sports.



The bride and bridegroom left for Folkestone on their way to the Hotel de Londres, Place de la Station, Bruges, a popular resort for members of the craft.

RUSSIA'S imports of paper, etc., in January reached 600 tons, of a value of 161,000 gold roubles.

Printers' Managers and Overseers
(PARENT) ASSOCIATION.

Brief Business and a Smoking Concert.

At the June general meeting of this association, held at the Old Bell, Holborn, on Tuesday of last week, the business of the evening was quickly dispatched, and members then enjoyed a smoking concert, which had been arranged by Messrs. Camplin, Condliff and Reed. The president, Mr. S. M. Bateman, was in the chair, and the attendance, though sparse to begin with, soon increased to satisfactory numbers.

After the confirmation of the minutes, the president made kindly reference to Mr. Arthur Paul's recovery from his recent illness, and Mr. Paul, on entering the room, received a cordial ovation, to which he briefly responded, expressing particularly his appreciation of the kindness of those members who had communicated with him during his stay in hospital.

New Members Elected.

There were, as usual, nominations for election to membership, and the following gentlemen were elected, the president giving each a personal welcome: Mr. F. R. Allsop (Botolph Printing Works, 8, Gate-street, Kingsway), overseer, letterpress machine room; Mr. H. R. Taylor (Kingsway Press, Ltd., Wharf-road, Latimer-road, W.10), works manager.

The next item of business was the consideration of a recommendation by the Council with regard to the forthcoming United Gathering at Leicester. This read: "That the Parent Association pay half railway fare of any London member desirous of attending." The recommendation was proposed, seconded, and carried unanimously without discussion, and Mr. Bateman pointed out the desirability of a large number of members attending the United Gathering, which is being held next Saturday.

Concert a Great Success.

The concert programme had been skilfully compiled, and the artistes were in excellent trim, the result being an enjoyable variety of music, song and humour. Miss Dorothy Wise's soprano voice was much appreciated in a number of songs, including the old favourite, "Beautiful Isle of the Sea." Miss Elsie Sterry, a rich contralto, sang with fine feeling in several beautiful numbers, gaining a very cordial reception. Miss Rosa Costa proved herself a vivacious comedienne and soprano vocalist. Of the gentlemen, Mr. Godfrey Cons was well received in baritone songs, and Mr. F. Casey in songs in a deeper key. Mr. Jimmy Watts was a very lively humorist, whilst Mr. Robert Howe, though his name was not on the programme, was certainly one of the greatest successes of the evening in songs displaying great vocal range and power. At the piano was Mr. H. Bull.

The hearty applause given to every artiste and the frequent encores demanded proved that the whole programme was thoroughly acceptable to those present. Further witness was borne to this fact by the passing of a vote of thanks to the concert stewards and artistes. This was proposed by Mr. Berryman, seconded by Mr. Dawson, and carried with enthusiasm.

Brief response was made by Mr. Reed, after which the meeting concluded with the utmost cordiality, members joining hands in the singing of Auld Lang Syne.

N.-W. GROUP OF T.A. COMMITTEE.—The committee for the ensuing year of the North-Western Group of the Typographical Association are: President, Mr. F. C. Richens, Stockport; vice-president, Mr. H. V. Marsh, Manchester; committee, Messrs. F. Knights, Bolton; T. Hargreaves, Chester; J. A. Pilling, Bury; G. Nelson, Liverpool; J. E. Howarth, Rochdale; G. H. Walker, Kendal; auditors: Messrs. S. Fox, Ashton, and T. Haines, Preston; secretary-treasurer, Mr. H. J. Harvey, J.P., Blackburn.

Trade Union Matters.

PRINTERS AND HOLIDAY PAY.—The Lancs and Cheshire Master Printers' Alliance have intimated to the Typographical Association E.C. that in view of the month's strike last August the Alliance propose deducting one day's (8 hours) pay from the holiday money allowance. The Executive Council of the Union have lodged a protest and a meeting is convened to discuss the matter.

LONDON SOCIETY OF COMPOSITOR members signing the out-of-work book during the week ending May 26th, according to the *L.T.J.*, stood at 837. This figure compares with 788 in the previous week, 769 for the week ending May 12th, and 750 for April 28th. The members signing on May 26th, 1922, numbered 1,005 and 1,226 in the corresponding week of 1921. The total number of hours of overtime worked during April in the general trade was 63,945, which was divided amongst 5,703 men. Overtime worked during April in the news section represented 10,873 hours, for which 1,667 men were responsible.

By the way, arrangements for the L.S.C. Jubilee celebrations to be held at the Crystal Palace on July 7th are well forward. Apart from the many interesting attractions devoted more closely to L.S.C. interests the day's programme includes a wide variety of other diverting events.

N.-W.T.A. GROUP CONFERENCE.—On Saturday, June 9th, the North-Western Groups of the Typographical Association held their annual meeting at the "Lion" Hotel, Bridge-street, Warrington. The delegates were welcomed by the Mayor (Alderman J. Evans, J.P.). Mr. Chas. Duke (president of the Trades and Labour Council), and Mr. Wm. Robinson (president of the local branch of the T.A.) also welcomed the delegates. There were 23 resolutions from various branches, chief among them being discussion upon the advisability of settling wage questions in regional areas instead of by the National Agreement.

THE highest form of salesmanship is nothing but service.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NICARAGUA.

His Majesty's Consul at Managua, Nicaragua (Mr. T. Ifor Rees) reports that a firm of stationers and bookbinders in that town desires to receive quotations for and samples of cloth and leather for bookbinding and of paper for writing and printing purposes, for account books and envelope making. The enquirer states he is obliged to use American products, which he finds are of inferior quality. He was not aware that supplies were obtainable from the United Kingdom and would be glad to enter into relations with United Kingdom manufacturers. (Reference No. 8,157/F.L./M.C./2.)

NEW ZEALAND.

The Officer-in-charge for His Majesty's Trade Commissioner at Wellington reports that the Post and Telegraph Department of the Dominion of New Zealand invite tenders for the supply of 1,000 reams azure wove bond typewriting paper, size 13 in. by 8½ in., 3¾ lb. per ream. Quotations should be c.i.f. and e. Wellington, New Zealand, and must reach the Stores Manager by 3 p.m. on June 28th, 1923. (Reference, 11404/E.D./M.P.).

EGYPT.

The British Commercial Agent for Egypt reports that the Superintendent of the Government Press, Cairo, invites tenders for the supply of paper for the year 1923-24 as follows: 800 reams, cream wove, strong smooth-surfaced writing paper, engine-sized, size 56 by 76 cm. weight 17·024 kilos. 500 reams ditto, but light buff colour. Sealed tenders on the proper form, addressed to the Superintendent, Government Press, Bulaq, Cairo, will be received up to noon on June 25th, 1923. Reference, 10833/F.E./M.P.).

STATIONERY for gentlemen, put up in cabinets of flat sheets and envelopes, is being developed in America.

Striking testimony as to the value of the "British and Colonial Printer and Stationer":

"Please put us on your Subscription List for an additional 2 copies of the *British and Colonial Printer and Stationer*. We find the contents of such help and guidance that we feel that our representatives should each have a copy regularly each week."

M. Co.

The Subscription rate to this journal is only 13/- per annum, post free, for 52 issues.

Paper and Print Export Figures.

Colonial Requirements show Satisfactory Increases Compared with Previous Periods.

Statistics relating to the shipments of the different classes of goods handled by the overseas printer during the first quarter of the year indicate a definite tendency in the direction of improved business. A pleasing feature of the returns is that, while Colonial business with foreign markets shows signs of declining, that with the mother country evidences a marked increase.

Boards.

Exports of millboard, strawboard and cardboard for the first quarter of 1923, amounted to 23,129 cwts. as compared with 16,132 cwts. in the corresponding period of last year. This increase in the demand for the British article is all the more satisfactory in view of the large consignments that have been forthcoming from Scandinavian and Central European sources. The value of the shipments of boards during January-March have risen from £40,927 last year to £40,927 last year to £50,235 for the corresponding three months of the present year.

Boxes and Cartons.

The exports of boxes and cartons of paper and cardboard—including folding boxes—show no diminution during recent months, and a gratifying position is also revealed when the shipments for the first three months of the year are contrasted with those for the corresponding period of the two preceding years. Consignments of boxes and cartons during January to March reached 6,423 cwts. (of the value of £30,086), as against 4,707 cwts. (£28,508) in the corresponding period last year, and 4,858 cwts. (£39,573) during January to March of the preceding year.

Coated Papers.

Coated papers—which comprise printed and embossed paper hangings—met with a much better demand during the quarter than was the case in the corresponding periods of the two previous years. Considerably increased enterprise is now being displayed by many leading British houses engaged in this class of manufacture, with the result that oversea buyers can now obtain their requirements from this country, where formerly they had to go to Continental sources. During January to March these exports represented 38,892 cwts. (£177,938), as against 23,134 cwts. (£145,273) in the former period, and 21,023 cwts. (£174,646) during the first three months of 1921.

All other sorts of coated papers were exported to the extent of 9,576 cwts. (£65,624) during the quarter ended March, compared with 6,198 cwts. (£61,241) in the corresponding period last year, and 7,965 cwts. (£101,248) during January to March, 1921.

Packings and Wrappings.

Packings and wrappings continue to occupy an important position among paper and kindred articles sent overseas. For the first quarter of the year exports of this class of merchandise represented a proportion of 11·5 per cent. of the total paper and cardboard shipments, and recent consignments to oversea markets have been well maintained. During January to March the exports of packings and wrappings reached 118,427 cwts. (£91,040), a figure which favourably compares with 64,448 cwts. (£69,822) in the three months of the previous year, and 29,762 cwts. (£126,942) during January to March, 1921.

Paper Bags.

Many devices have been invented recently for producing paper bags and similar goods as food containers in large quantities. With the enterprise now being exerted in this direction by manufacturers of this class of machinery at home, it is surprising to find the exports of paper bags during the quarter ended March showing a slight decrease compared with the two former periods. The quantity sent overseas during January to March of the present year amounted to 4,227 cwts., as against 4,981 cwts. last year (three months), and 5,914 cwts. during the first quarter of 1921. The value in the respective three-monthly periods was as follows: 1923, £16,778; 1922, £18,060; 1921, £32,588.

Playing Cards.

Playing cards of British make were dispatched to colonial and foreign markets more numerously during the quarter ended March than they were in either of the corresponding quarters of 1922 or 1921. The present year's consignments of this commodity represented 542 cwts. (£10,474), contrasted with 490 cwts. (£9,916) during January to March, 1922, and 302 cwts. (£7,579) in the corresponding period of 1921.

Printed Books.

Exports under this heading form an important item in the list of goods that come within the purview of the oversea operations of many leading printing houses at home. As an instance of the popularity of this class of export on colonial markets it is interesting to notice that the latest available figures referring to the trade and commerce of Australia indicate that that market is the largest one for printed books so far as the United Kingdom exporter is concerned. Of the total value of printed books imported into Australia during the year 1920-21, amounting in value to £1,032,935, New South Wales was responsible for taking these goods to the extent of £447,462, whilst the share of Victoria stood at £357,255. For the quarter ending March of the present year exports of printed books amounted to 66,008 cwts. (£683,264) as contrasted with 52,966 cwts. (£636,305) last year (three months), and 80,794 cwts. (£969,173) in the corresponding period of the preceding year.

Printing Paper.

The returns relating to the exports of printing paper were very satisfactory, the quantity and value for the three months of the respective years being as follows:—

Jan.-March, 1923 ...	686,522 cwts.	£979,113
,, 1922 ...	198,877 ,,	419,217
,, 1921 ...	248,064 ,,	1,133,885

Regarding the markets to which printing papers were sent during the first quarter of the year, it is pleasing to notice that by far the larger share went to British Possessions, viz., 583,088 cwts. to colonial and 103,437 cwts. to foreign markets.

Australia continues to occupy the leading place as a consumer of British printings, the quantity consigned to that colony during the first three months of the year amounting to no less than 411,315 cwts., as against 76,789 cwts. in the corresponding period of last year, and 89,317 cwts. in 1921 (three months).

British India takes the second place with 63,625 cwts., against 21,103 cwts. in the former year, and 34,716 cwts. during January to March, 1921.

New Zealand comes next with 57,420 cwts., a figure which shows a substantial improvement over the 18,126 cwts. for January to March, 1922, and over the 19,441 cwts. sent during January to March, 1921.

British South Africa has proved a good market, that colony taking 32,226 cwts., against 13,512 cwts. last year and 31,145 cwts. during January to March, 1921.

Canada, Ceylon, and the Straits Settlements and Federated Malay States each increased their requirements during January to March compared with the similar period of last year.

Printing Type.

A slightly better demand has been experienced for British printing type during the quarter as compared with last year, although contrasted with January to March, 1921, a considerably lessened demand was made. The present year's exports stood at 59 tons (£17,626), against 57 tons (£17,819) in January to March last year, and 104 tons (£31,620) in the 1921 period.

Stationery Exports.

Exports of envelopes, which do not include boxed stationery, were in an improved demand during the quarter, when they amounted to 10,214 cwts. This figure compares favourably with 17,642 cwts. last year (three months) and 7,306 cwts. in January to March, 1921. The value of these exports in the respective three-monthly periods stood at £43,784, 1923; £43,043, 1922; £86,198, 1921.

Other sorts of stationery were despatched abroad to the extent of 33,412 cwts. (£311,760) during the quarter ending March, as contrasted with 29,442 cwts. (£371,491) in the corresponding period of last year, and 39,535 cwts. (£586,346) in the three months of 1921.

Tissues.

The volume of the shipments of British tissues have been well maintained. The quantity exported during the first quarter of the year represented 3,224 cwts., as against 3,213 cwts. last year, and 3,570 cwts. in the corresponding period of 1921. The value of these exports stood at £32,367 during January to March, £36,074 in the similar period last year, and £56,468 in the corresponding three months of 1921.

Writing Paper.

The returns show a very much better demand for overseas British writings, and it is interesting to notice that every one of the Colonial markets—with the single exception of Ceylon—have considerably increased their takings of this important branch of manufacture. The quantity and value of the shipments of British writing paper for the first quarter of the year, and for the two corresponding previous quarters were as follows:

Jan. to March, 1923 ...	59,624 cwts. ...	£161,332
,, ,, 1922 ...	31,291 ,, ...	126,718
,, ,, 1921 ...	45,036 ,, ...	313,676

Australian demands were by far the largest, amounting to 25,480 cwts, against 11,814 last year; British India came next with 15,224 cwts., against 5,439 cwts. The figures for the other Colonies were: New Zealand, 6,761 cwts.; British South Africa, 2,372 cwts.; Straits Settlements, 703 cwts.; Ceylon, 557 cwts.; and Canada, 518 cwts.

Australian Paper Trade.

Import and Export Figures.

The values of paper and paper goods imported into and exported from the Commonwealth during the periods mentioned were as follows:—

Imports.

February	1922	1923
Cardboard and other paper boards	£11,312	£24,012
Printings	168,172	166,238
Wrappings of all colours	25,214	31,758
Writing & typewriting paper	37,679	62,938
All other paper	66,208	43,231
Directories, etc.	59,657	69,607
All other stationery ...	33,019	90,037
Totals ...	£421,261	£487,821
July to February	1921-22	1922-23
Cardboard and other paper boards	£90,535	£175,844
Printings	1,403,357	1,421,413
Wrappings of all colours	175,263	282,067
Writing & typewriting paper	225,386	442,285
All other paper	405,208	309,351
Directories, etc.	644,624	803,455
All other stationery ...	370,306	770,565
Totals	£3,314 679	£4,204,980

Exports.

February	1922	1923
Paper	£2,950	£3,952
Stationery	11,218	11,112
Totals ...	14,168	15,064
July to February	1921-22	1922-23
Paper	£34,990	£35,263
Stationery	134,192	122,195
Totals ...	£169,182	£157,458

PAPER and paper pulp imported into Japan last year reached a value of 30,720,457 yen. The value of the exports of papers was 16,127,576 yen.

British Paper Trade.

Problem of Demand and Higher Prices.

There is still much to be desired in the condition of the British paper trade. One of the great difficulties is to obtain prices which are adequate in view of the costs of production. British and Scandinavian producers are endeavouring to obtain better figures, but they are faced with serious competition from Central Europe.

A "Patchy" Market.

Although far from satisfactory the paper market is not without its more hopeful side. As a correspondent of *The Times* (Trade Supplement) points out, recently issued balance sheets and company reports demonstrate clearly the "patchy" condition of trade. Certain mills are fortunate enough to show satisfactory profits, others have managed to pay a dividend slightly below what might be termed normal, while others again have incurred heavy losses. The most gratifying feature is undoubtedly the fact that there is a definite improvement in almost all the figures as compared with 1921 trading. Paper merchants, who are in a very much worse position than the millowners in 1921, are obviously emerging from a difficult time, and in many cases are able to show profitable trading figures for the last accounting period. It is perhaps too soon to claim that the paper-making industry and the paper trade are at the end of their difficulties, but there is clear enough evidence that they have surmounted the worst of them.

The position now is that the majority of paper mills show favourable results while the minority have yet to turn the corner. The same remark applies to the paper merchants, who are, however, dependent almost entirely upon home demands for their turnover. Home demand has passed its low water mark and is slowly but steadily improving. It has a long way still to go before it even approximates to normal. If therefore the distributing side of the paper trade is able to register fairly good returns (not necessarily satisfactory profits) during the worst phase of the depression there is every reason to believe that the prospects of sound business returns for the next period are distinctly favourable.

Colonial Demand.

Reports from the mills indicate a condition similar to that which has prevailed for a considerable time. The news-print mills are really busy. They have a good supply of orders in hand, both home and colonial. Australian demands are actually increasing, and a very steady trade is being conducted with New Zealand. In this section of the industry the only cause for complaint is the high price of pulp.

In the white printing section business is somewhat quietier. Some mills are in want of orders, and there is much idle machinery in the country.

The Scottish esparto mills are working at almost full capacity at present. In this section it is mainly the home demand that is being satisfied, but a fair amount of export business is passing through.

The fine paper mills report greatly improved trade, orders coming from home, foreign and Colonial sources. They are by no means approaching maximum output, but there is a feeling that the situation is becoming safe.

Unfortunately that important section of the paper industry which is concerned with wrapping papers is in a poor way, and doleful accounts come to hand. Here competition from Central Europe is felt very seriously, the price factor being prominent.

PAPER MOUNTS. — Good and serviceable mounts for photographs, pictures, and similar purposes are made by the Art Mount Manufacturing Co. in England, the sole selling agents for whom are Brown Bros., 216, Upper Thames-street, London. The mounts cover all the ranges that are required, being produced in two substances, six colours, and in five finishes—linen, hessian, hop sack, hand-made and plain. An important feature of the sheets is their composition. They are made from rag stock and contain no aniline or other fugitive dyes, and they are guaranteed free from hypo. These qualities are important for the mounting of photographs and pictures, which would be readily acted upon by inferior mounts.

Paper Prices.

Sellers the "Slaves of Uncontrollable Forces."

Paper merchants find themselves in something of a difficulty in the matter of paper prices, and explanations are offered in an article under the heading of "Our Computation" in *Paper and Progress*.

"We did think at the commencement of the year," says the writer, "that we were masters of the situation with regard to prices, which were then fairly stable, but now realise that we are merely the slaves of uncontrollable circumstances which clearly point to an immediate increase in the cost of all grades of paper.

"During the last few weeks we, in common with all other houses, have had orders for various writings and printings returned by the mills, with an indication that they could not be executed except at an advance of ⅛d. to ¼d. per lb. Wrapping papers generally are advanced £2 per ton. Various explanations are given and these are backed with facts that cannot be controverted.

"Taking the esparto mills first, they have been working on old stocks of grass, and have been faced with a shortage of new stocks owing to labour trouble in Africa, where the natives refused to collect until their demands were satisfied. This may possibly explain why there is such a big difference in the amount of grass used. We recently had occasion to have analysed various samples of esparto papers from a number of mills, and the results were surprising, the difference of material used in manufacture varying between 30 per cent. to 75 per cent. This test was made for our own satisfaction, and in the interest of our customers, in order that when we sold them an esparto paper its principal content justified its name.

"The serious situation resulting from labour troubles in Sweden is responsible for the upward tendency of printings, the result of the recent lock-out being a shortage approximately of 200,000 tons of wood pulp. Another factor not realised except by those in direct contact with the situation is the effect of the United States of America on this market, in the fact that they can, and do, outbuy us; also Scandinavian mills in some instances are refusing orders not only on the question of price, but on account of their output being booked for many months ahead. We should ourselves think it a short-sighted policy to refuse whatever stocks we hold (other than in circumstances amounting to a moratorium) to our customers, but abroad the almighty dollar rules the situation, and foreign mills will disappoint the English regular trade for a very small margin.

"Experiments are now being made with bamboo, which, if successful, might eventually help the pulp situation. Meanwhile, easy bleaching pulp has advanced about £5 per ton over that quoted six months ago, whilst coal is about 12s. per ton more, which really represents an increase of ½d. per pound, and it is due to certain stocks of pulp at the mills that makers are, at the moment, only asking for about half this extra on new makings. Therefore merchants are in no way responsible for whatever increases occur and which inevitably must come."

Irish Free State Paper Industry.

It is interesting to note that the statistics relating to imports and exports of paper of the Irish Free State are no longer included under the classification of the United Kingdom, but are incorporated with those of "other countries." Accordingly the figures furnished by the Director of Statistics of the Free State Ministry, although they relate to the year 1921, have a particular significance.

From this statement it is seen that imports of paper goods were valued as follows, the exports being given in parenthesis:—Paper, £535,616 (£102,597); stationery, £245,565 (£33,053); books, approximately £120,000 (£25,491); newspapers, £62,004 (£12,579); show cards, £33,558 (£31,416).

In the cardboard industry the number of works is given as 17, employing 606 hands, while the manufacture of wall-paper accounts for 228 employees.

Cardboard in Spain.

Opportunity for British Product.

The following report on the cardboard industry in Spain has been forwarded to the Department of Overseas Trade by the Commercial Secretary at Madrid (Capt. U. do B. Charles):—

La Papelera Espanola, the only large firm of paper manufacturers in Spain, have just completed a new factory in Prat y Llobrogat for the manufacture of cardboard. This is the first factory producing it on a large scale, *i.e.*, some 12 tons a day. The machinery installed is Swiss (by Escher, Wyss and Co.) and bi-colour. As is the case with all cardboard of Spanish manufacture, the quality is poor, the inner of the three layers being made from extremely bad paper waste, gathered from the streets, such as torn-off theatre bills, etc. The finished article is consequently coarse and brittle.

A factory of some importance exists at Tolosa, which turns out some 2 tons per day of corrugated cardboard (chiefly used for packing electric bulbs).

There is another factory of some importance at Palazuolos (Segovia), where wood pulp, made on the premises from Norwegian and Finnish wood, is used.

Some 20 to 30 small factories, none of which have an output exceeding 200 kilograms per day, exist in various parts of the country. Their primary object appears to be the production of the same kind of article on the most economic lines.

The principal sources of demand spring from the boxmaking trade, the confectionery tray makers, theatre and other ticket manufacturers, and there is even a large demand for cardboard for the making soles for cheap shoes, chiefly at Blohe, Alicante. The arms factory at Toledo uses many tons of cardboard every year, but the inferior quality supplied gives rise to many complaints.

As to the better quality cardboard, Austria and Italy were the principal importers before the war, but since then Germany, favoured by her exchange, has flooded the market with her makes. Lately there has been a considerable decrease in imports from that source, and, given competitive prices, there should be a good market in Spain now for a medium quality cardboard. The cardboard used for visiting cards is inferior, and it should not be difficult to educate the taste of the better class Spaniard in this connection, with a view to placing the English article on the market.

In view of the policy of completely sacrificing quality to price, and the better buying capacity of the working classes, it would seem that there is scope for a factory making cardboard of superior quality to that at present obtainable from national sources, as the high duty payable is always an obstacle in the way of imported cardboard.

This commodity is dutiable on its entrance into Spain under Tariff items 1084–1097.

The Commercial Secretary has forwarded to the Overseas Trade Department a few samples of cardboard and paperboard of Spanish manufacture, which it is thought United Kingdom manufacturers may care to see.

With the object of assisting manufacturers of English card and pasteboard desirous of calculating c.i.f. prices, the Commercial Secretary has obtained from a firm of Customs House agents at Bilbao, the following *pro forma* account of charges in connection with the discharge of 100 kilograms of cardboard in sheets or bales, and pasteboard in boxes:—

	Ptas.
Discharge, port and traffic charges	30.20
Cartage, charges railways and customs	17.00
Porters at Customs	10.00
Documents, each consignment ...	3.50
Customs House agents' commission, approx.	10.00
Duties according to Tariff:	
Pasteboard, minimum	50.00
Cardboard, covered with paper, minimum	50.00
Approximately 25 per cent. to be added to duties for gold agio.	

The samples referred to, together with a list of prices quoted by the manufacturer, may be seen at the offices of the Department (Room 42), and a duplicate set of samples is available for loan, in order of application, to provincial manufacturers who may be unable to inspect them in London.

The American Numerex Cleaning Outfit.

has been specially placed on the market to reduce to a minimum the trouble of the proper care of numbering machines.

Care of Machines: If numbering machines are properly taken care of, they should stand up, even under the extreme conditions they are subject to, for many millions of impressions. The first matter to consider, therefore, is the cleaning away from the frame and working parts the printer's ink, dirt and other foreign particles that hinder the proper functioning of these devices.

Full Particulars from the Sole European Agents:

Price of Complete Outfit £1.8.6

The Outfit Includes:

2 1-Piece Steel Trays
1 Wire Drip Tray
1 1-Gallon Can of Numerex Cleaning Mixture
1 Wooden Handle Cleaning Brush
1 Bottle of Numerex Numbering Machine Oil
1 Oil Can

VICTORY-KIDDER PRINTING MACHINE Co. LTD.

Rotary Letterpress Machines for Modern Printers

Newspaper Rotaries
All-size Magazine Rotaries
Fixed-size ,, ,,
Multi-colour Rotaries
Combined Letterpress and Photogravure Rotaries

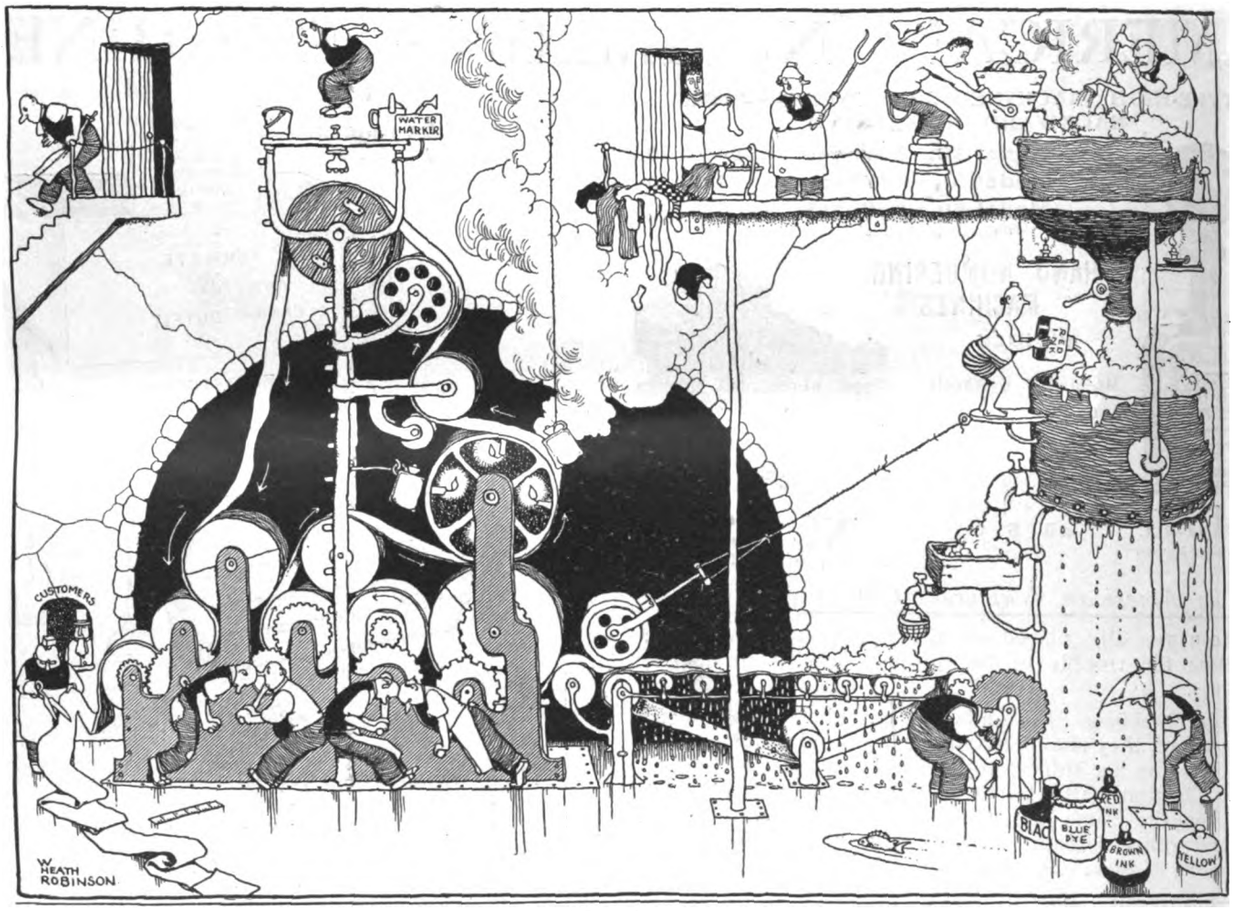
MESSRS. MARINONI'S reputation is world-wide in connection with the construction of Rotary Letterpress Machines, and their products have consistently improved during their career, which extends to nearly 80 years.

More than 2,000 Letterpress Rotary Machines Built.

Eight Designs of Rotary Offset Machines!

Single Colour
Two Colour (Superimposed)
Two Colour (Successive or Perfecting)
Two Colour and Photogravure (Combination)
Three Colour (Successive)
Perfector—Reel or Sheet Fed
Perfector—Reel Fed, with Folder
ALSO
Single Colour—(Tin Plate)

THESE constructions are the result of the experience and initiative of a famous firm possessing vast resources, whose sole aim is to produce the best. Thoughtful printers will realise that MARINONI VOIRIN'S conception of the best merits investigation and respect.



More than 600 Rotary Offset Machines now Running.

The Latest Thing in Papermaking Machines submitted for the consideration of

THOMAS & GREEN, Ltd.

Thomas and Green, Limited, recently invited Mr. W. Heath Robinson to submit suggestions for improvements on the existing types of papermaking machines. The resulting ideas as shown in the sketch are extremely interesting and in many ways simplify present practice; but owing to the necessity for exact colour-matching which has been for so many years a speciality of 288 Mill, the directors have decided very reluctantly that they must continue to rely upon the more orthodox methods of the leading papermaking authorities.

News-Print & Surface Coated Paper

U.S. Exports for March.

In the month of March exports of news-print paper from the United States represented 3,978,361 lbs., of the value of $189,927. The chief market was Cuba, which took 2,931,623 lbs. (£128,396). Considerably behind is the second most important market, that of the Philippine Islands, with 384,401 lbs. ($18,851). Then we have Columbia 95,302 lbs. ($5,670). England occupies the fourth place, her receipts of American news print representing 79,929 lbs. ($7,303), followed by Canada with 73,537 lbs. ($7,100). Substantial quantities were dispatched to South American States while Australia's share amounted to 7,588 lbs. ($1,189).

Book Paper.

Total exports for March of book paper (not coated) were 2,383,962 lbs., of the value of $266,443. Again Cuba is the principal market, with 704,917 lbs. ($76,521). Canada occupies the second place, 338,910 lbs. ($41,042). Mexico's consumption reached 228,792 lbs. ($23,675), the Philippine Islands coming fourth with 254,059 lbs. ($22,649). Argentina and Brazil each took more than 100,000 lbs. of this class of paper. Outside of the American continent, the principal markets were China 90,667 lbs. ($11,021), Japan 85,267 lbs. ($6,885), Australia 85,089 lbs. ($12,802), British India 63,702 lbs. ($6,357), and England 47,568 lbs. ($10,879).

The quantity of surface-coated paper dispatched abroad by the United States in the same month represented 334,249 lbs., of the value of $56,810. The principal consumer was Canada, with £148,285 lbs. ($31,547), and she was closely followed by Cuba, which took 132,239 lbs. ($13,823). In the third place we find Australia, whose consumption was 22,836 lbs. ($6,173). After Mexico, which consumed 11,907 lbs. ($1,938), the principal markets were England 6,780 lbs. ($1,198), Scotland 3,579 lbs. ($747) and British South Africa 2,329 lbs. ($388).

Writing Paper, Envelopes, etc.

Statistics of U.S. Exports.

Statistics furnished by the Department of Commerce, Washington, give the following figures concerning the export of writing paper, envelopes, papeteries and cover paper from the United States during the month of March:—Cover paper, 110,802 lbs. ($18,061), writing paper (except papeteries), 492,584 lbs. ($81,224), envelopes, 218,375 lbs. ($41,179), papeteries, 22,525 lbs. ($7,958).

Of the comparatively few markets for cover paper Canada is the principal consumer, her share of the total during March being 45,632 lbs. ($9,119). England comes next with 35,322 lbs. ($4,557), then Cuba 23,824 lbs. ($3,431), Colombia and Mexico practically accounting for the remainder, with a small consignment for Australia of 321 lbs. ($64).

Of writing paper (except papeteries), the largest individual share went to the Philippine Islands, 107,785 lbs. ($15,368). Other principal markets were Mexico 90,344 lbs. ($13,718), China 33,611 lbs. ($5,670), Canada 25,956 lbs. ($8,224), Australia 23,702 lbs. ($2,776), Straits Settlements 17,930 lbs. ($2,619), England's consumption amounting to 10,135 lbs. ($1,318), while British India took 9,422 lbs. ($1,618).

Cuba was the principal consumer of United States envelopes, the quantity dispatched in March being 44,750 lbs. ($8,603). Canada was a close rival with 41,520 lbs. ($8,245), followed by Philippine Islands 32,657 lbs. ($4,716) and British South Africa 23,277 lbs. ($3,830).

Mexico was the chief destination for papeteries, to the extent of 4,469 lbs. ($1,313), followed by Canada 3,494 lbs. ($953), Cuba 3,168 lbs. ($1,922), Dominican Republic 2,279 lbs. ($704), and New Zealand 1,025 lbs. ($241).

AN Advertisement is always working.

U.S. Board Exports.

Exports from the United States during March of paper board and strawboard reached a total of 4,253,288 lbs. ($225,486), and of Bristols and Bristol board 222,360 lbs. ($16,906).

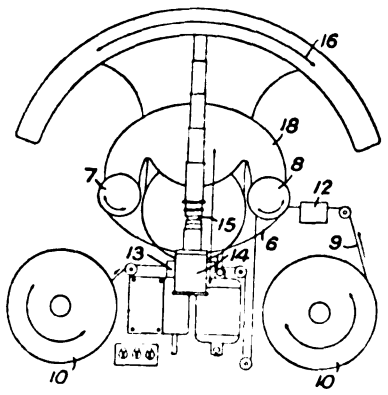
Nearly half of the paper and strawboard went to Canda, namely 2,025,432 lbs. ($91,117). The second place was occupied by Japan, 719,568 lbs. ($37,702), followed by Cuba, 488,829 lbs. ($30,937), and China 487,296 lbs. ($25,894). England occupied the fifth place with 112,172 lbs. ($5,205), succeeded by Mexico 77,338 lb. ($6,620), Philippine Islands, 75,088 lbs. ($7,230), Colombia 66,621 lbs. ($4,103), Australia 46,593 lbs. ($4,904) and New Zealand 37,937 lbs. ($1,989).

Bristols and Bristol board are less extensively distributed. The largest quantity went to Cuba, namely 136,455 lbs. ($8,851), then follow Chile 32,263 lbs. ($1,582), Canada 13,307 lbs. ($2,025), Mexico 11,577 lbs. ($1,372), Colombia 8,755 lbs. ($650), and Australia 7,714 lbs. ($758).

Blotting from Wood Pulp.

An entirely new departure in the manufacture of blotting paper is forecast by the Forest Products Laboratories of Canada as the result of an investigation recently carried out in their experimental paper mill.

The best grades of blotting paper have hitherto been made from rag pulp, but the laboratories have succeeded in producing a paper with excellent absorptive powers entirely from wood pulp.



The interesting feature of the new paper is that it contains a large proportion of pulp made from a wood, which, although plentiful, has found little employment in the pulp industry of Canada.

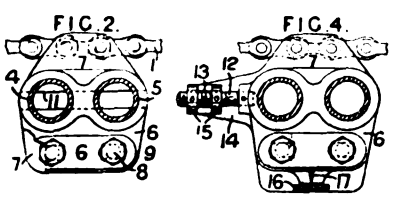
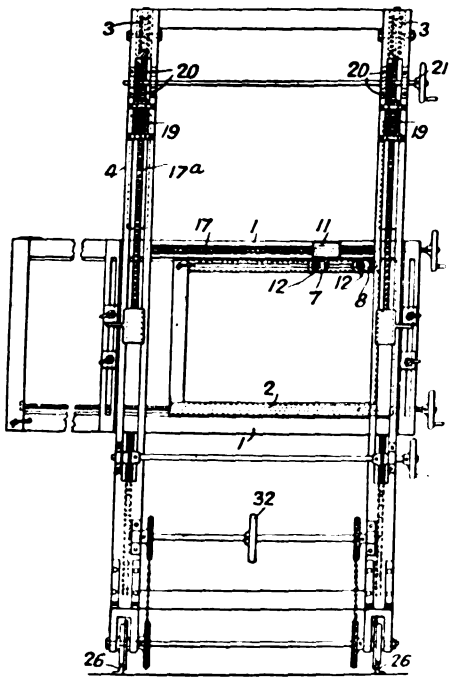
New Inventions



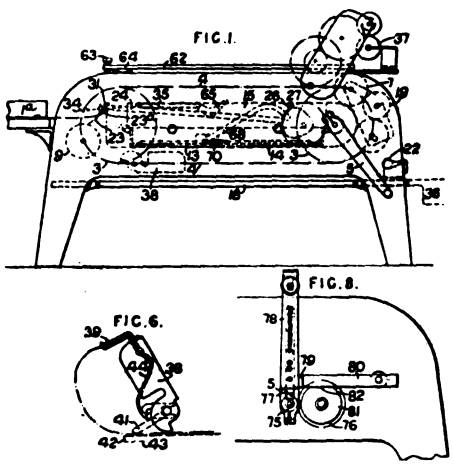
Photographic Type Composing.

Mr. E. K. Hunter has patented an invention relating to printers' composing apparatus of the kind comprising a stencil provided with opaque characters, and means for successively projecting selected characters on to a sensitive surface. The stencil consists of a flexible film which may be of any desired length and may bear a number of founts and cases of characters. The apparatus may be controlled by means of a keyboard or a perforated strip. The stencil 6 is mounted on rollers 7, 8 carried by a revoluble table 18, character selection being effected by traversing the stencil to select the style of character, and then moving the table to select a character. The selected character is projected on to a sensitive surface 16 by means comprising a light-source 14, a lens system, and a shutter 15, the lens system being adjustable for enlarging or reducing. The apparatus may be controlled by means of a perforated strip 9, wound on rollers 10 and co-operating with jacquard mechanism or electric devices 13. For correcting errors, the strip may have correcting perforations co-operating with electric devices 12 in series with the devices 13, the devices 13 being inoperative when a correcting perforation is presented to the devices 12. The perforated strip may be prepared in a keyboard apparatus comprising keys and slides for making perforations corresponding to the characters and the size and style thereof, and an indicator displaying characters and indicia for spacing and justification.



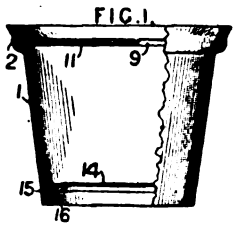
Sheet Delivery Mechanism.

In this invention the gripper shafts of endless chain delivery mechanism for printing machines are secured to the chains in such manner as to be readily adjustable in a direction longitudinally thereof so that alteration of the position of the grippers due to stretching or contraction of the chains may be corrected. The shafts 4, 5, carrying respectively the grippers and gripper pads, are supported by plates 6 adjustably secured to brackets 7 rigid with the delivery chains 1 A rib on the plate 6 engages a groove 11 in the bracket, on which are provided screw studs 8 passing through slots 9 in the plate 6. In the modification, Fig. 4, the adjustment is effected by nuts 15 on either side of a yoke 13 integral with an arm 14 on the bracket 7, and nuts engaging a screw stud 12 secured to the plate 6. A scale 16 and pointer 17 indicate the amount of the adjustment. The invention is patented by Messrs. Linotype and Machinery Limited, A. V. Bugler and T. E. Delafons.



Step and Repeat Apparatus.

Mr. W. T. Wilkinson has patented a photographic step and repeat copying apparatus which comprises a frame 2 carrying the sensitive surface slidably mounted in a frame 1 which is itself slidable vertically in a suppor 4, the horizontal and vertical movements being made by pre-determined steps by means of sets of three stops 7, 8, 11 the characteristic feature being that the zero stop 8, as well as the intermediate and distance stops 11, 7, is adjustable. The stops are clamped by means of thumb screws 12, so that to get for example the horizontal movement the frame 2 is moved to the left till a finger on the intermediate stop 11 abuts against the zero stop 8, after which the stop 11 is unclamped and moved forward till it contacts with the distance stop 7 when it is again clamped and the frame 2 moved as before to give the next step. The frame 1 is counterpoised by means of weights hung on pulleys 3 and the support 4 is mounted on wheels and arranged to run on rails 26, movement being effected by rotation of a hand wheel 32. The movement of the intermediate stops 11 may be effected by hand, or, as shown, by means of a screw 17 or racks 17^a operated by worms 19 through bevel gearing 20 from a handle 21. The sets of stops may be arranged so that the intermediate stop is on the relatively moving member and the zero and distance stops on the relatively fixed member.



Printing Machines.

This invention relates to printing machines of the kind in which inking and impression rollers are carried by a pair of endless chains or belts rotating about a fixed forme or chase and consists chiefly in an improved construction and arrangement of the sheet feeding and delivery devices. A pair of endless chains 4 passing round sprocket wheels 3 carry inking rollers 7 and an impression roller 9 and are rotated round the type bed 15 by a crank handle 5 on the shaft of one of the wheels 3. The sheets to be printed are fed from a table 1_a into a clip 23, comprising two members pressed apart by a light spring. A stronger spring on the shaft of the clip normally holds the clip bodily in a downwardly extending position out of the path of the inking rollers 7 but after the passage of these rollers, the clip is turned into the position shown by the engagement with a lip 31 on the clip of the end of a rod 24 operated by a cam 26 on a gear wheel 27. The sheet is fed into the clip against a registering tongue 23^a, whereupon the lower member of the clip is engaged by the impression roller 9 to grip the sheet and turn the clip over bodily into the plane of the type bed 15, in which position a projection 34 on the clip is engaged by a spring latch 35. As the roller moves clear of the clip, the latter is opened by its spring and, upon the release of the latch 35 by the engagement of the roller 9 with a bell crank 65, it returns bodily to its normal position. Prior to this return, the rear edge of the sheet is engaged by a spring clip 39, Fig. 6, pivoted to a carriage 38 carried by the chains 4, the carriage being provided with an arm 41 which upon engaging a shoulder 42 on a rail 43 turns the carriage into the position shown and the clip 39, by means of the connection 44, lifts the sheet, which is then carried forward into the nip of delivery disks 37 and conveyed to a delivery tray 36. During the printing the impression roller 9 is pressed downwards on to the sheet by the engagement of runner disks on its shaft with guide bars 62 adjustable by screws 63 and springs 64. The inking rollers receive ink from a duct roller 22 by contact therewith of a distributing roller 19, and during their passage beneath the type bed 15 they engage a distributing disk 14 carried by a ratchet wheel 13 which is rotated intermittingly by a pawl pivoted to a block 70 reciprocated by a link 68 from the gear 27. The rollers 7 are held in contact with the disk 14 by the engagement of runners on their shafts with guide rails 18. In order to stop the rotation of the chains 4 when the clip 23 is in sheet receiving position, the crank handle 5 may be provided with a spring trigger 78, Fig. 8, having a stop 77 adapted to engage a stop 79 on the end of the lever 80 pivoted to the frame and resting on the periphery of a disk 81 driven by gearing 76, 75 from the crank 5. The stop 79 is held above the path of the stop until a flat part 82 of the disk comes opposite to the lever 80 when the rotation of the crank is arrested. The invention is patented by Mr. C. A. H. Bullock.

Paper Containers.

A British patent has been granted to Mr. A. Moore relating to the manufacture of paper containers. A container formed of non-calendered paper or other fibrous stock has a re-inforced flared neck 2 formed by folding a continuation of the side wall 1 inwardly upon itself to form three overlying portions which are consolidated by great pressure so as to form a practically solidified homogeneous mass. The neck is formed with an annular groove 9 to take a paper disk or cap 11, the inner or lower side of the groove being broader than the upper one to provide a seat for the cap and terminating flush with the inner wall of the body 1. The bottom 14 has a depending flange 15 bent up again to form a part 16, a lower continuation of the side wall being folded upon and caused to interlock with these parts by pressure similarly to the neck. Multi-ply stock, incorporating a binder, may be employed for the vessels, which may be paraffined to render them waterproof

Inks for Home and Export.

Messrs. R. A. BARTLETT, Ltd.

This company, which celebrated its first birthday only last March, is a striking example of the achievement of a large amount of progress in a short space of time, a fact which speaks well for the new firm of ink makers. From the outset Messrs. R. A. Bartlett, Ltd., proved to the trade that they were placing upon the market reliable inks giving sound value for money, and the hundreds of customers they have placed on their books in their brief career as a company is plain confirmation that the firm is already recognised as one of the leading printing ink makers in this country.

Space does not allow us to give very full particulars of the fine works which Messrs. Bartlett have equipped in the Willesden district—in a most central and convenient position for works of this description—but readers will be interested to have some information about the company and to see the photographs which we reproduce here.

The first illustration gives an outside view of the premises, but it should be remarked that our illustration fails to do full justice to its subject, inasmuch as the firm's more imposing buildings are mainly hidden in the rear. The works are, in fact, very extensive, and are well adapted for the manufacture of the firm's specialities. Adequate space has been allotted for the clothing of lithographic rollers and the manufacture of printers' sundries, in which the firm does a very big business.

The second illustration provides an inside glimpse of some of the machinery used in the manufacture of Bartlett inks.

Classes of ink in which this company specialises particularly include concentrated offset inks, rotary photogravure inks, copperplate inks as well as letterpress inks for all purposes; they are, moreover, in a specially good position to supply dry rollers, of which they hold large stocks. Messrs. Bartlett are also the sole manufacturers and suppliers of the well-known "Drylio" litho inks, which are being used successfully by some of the leading printers here and overseas.

At the Willesden factory high-class inks for all well-known processes are produced daily under the personal supervision of Mr. Albert E. Earl, director and general manager of the company, who has spent the whole of his career in studying the requirements of printers, and Messrs. R. A. Bartlett, Ltd., are fortunate in having the services of such an experienced gentleman.

The managing director of the company, Mr. Reginald A. Bartlett, is too well known in the trade to need any introduction to printers in this country, and when we state that the company's sales are increasing rapidly week by week we are merely stating a fact that is in accordance with the general anticipation of the many friends these two directors have in the trade.

Although young, the company possesses one of the most experienced technical staffs in this country, all the workers having been selected for their knowledge of high-class inks and their production. In the same manner the outside staff has been appointed, and the company's products are being brought before the trade in all parts of the United Kingdom by practical men who understand the trade's requirements and difficulties, the London sales manager being Mr. Fred Howe, a practical lithographer, who is well known throughout the lithographic trade.

Our overseas readers will be interested to know that large shipments of inks have already been sent abroad by Messrs. R. A. Bartlett, Ltd., and these sales give promise of steady expansion. Would-be agents who are anxious to sell printing inks of reliable quality have here an opportunity of *taking* up some good lines, and should lose no time in communicating with 8, Hythe-road, London, N.W.10.

Mr. James Gallie, J.P.

Complimentary Dinner by Envelope Makers.

A well-deserved compliment was paid to Mr. James Gallie, J.P., of Edinburgh, by members and ex-members of the Council of the Employers' Federation of Envelope Makers and Manufacturing Stationers, when they entertained him to dinner on Thursday, May 31st, at Oddenino's Imperial Restaurant, Regent-street. The purpose of the entertainment was to mark the appreciation of the members of the Council for their guest's services to the trade during the two years in which he occupied the presidential chair.

Appreciation by Mr. Spicer.

Mr. J. Leonard Spicer, the President of the Federation, occupied the chair, and, in proposing the only toast of the evening, voiced his pleasure at seeing that so many of those who had been associated with Mr. Gallie had made special journeys—some from Glasgow, some from Edinburgh and others from Yorkshire—to be present. He mentioned how one member of the Council, having travelled from Manchester, had had to respond to a telegraphic recall an hour or two before the dinner started, and added that Mr. F. G. Hawdon and Mr. James Paterson were unfortunately prevented from attending by reasons of health.

Mr. Spicer then spoke at some length of the services rendered by Mr. Gallie right through the early days of the formation of the organisation. He mentioned how their guest had seen the possibilities for the future of such an organisation, and how the formation of the Scottish Section had been in no small degree the result of Mr. Gallie's work. Mr. Spicer claimed that his own prophecy of two years ago, when Mr. Gallie was new to the post of President, had been amply justified, and that he had carried on the great tradition commenced by Mr. Godfrey. The speaker mentioned how during five years Mr. Gallie had made journeys from Edinburgh to attend 54 council meetings, 41 executive committee meetings, apart from other conferences involved by the work of the Federation and necessitating certainly over 90,000 miles of travelling. In fact, Mr. Spicer believed that Mr. Gallie held the record on the West Coast route.

Proceeding, Mr. Spicer spoke of Mr. Gallie's great aptitude for negotiation and his tact, which had been invaluable. He told how Mr. Gallie had had charge of the organisation during two years of lusty growth, a period in which it had taken deeper root in the stationery trade, and in which it had increased its reputation as an organisation which got things done. Mr. Spicer described Mr. Gallie as one of those quiet men from the North who had encouraged the spirit of camaraderie and help one to another. He thought the whole of the Council would agree with him in saying that the Federation owed an enormous debt of gratitude to their guest, who had never missed a single meeting, except when the railway strike prevented him from travelling, and in proposing the toast of Mr. Gallie's health he believed that he had behind him the united sentiment, as well as the affection, of his fellow-members of the Council.

An Eloquent Acknowledgment.

Mr. Gallie, in reply, added to the debt which the Council already owed him by an after-dinner speech of a quality rarely achieved even by speakers with oratorical reputations. He said that perhaps the most difficult task which the Federation had thrust upon him was to reply to the speech which Mr. Spicer had just delivered. He would not attempt to thank his fellow members adequately, for that was beyond him. As a sentimental sort of person he felt that the dimness of his glasses would prevent it, and those present must take it that the poverty of his expression was due to the wealth of his appreciation. Whilst listening to the eulogy of the President, it just occurred to him that had the Prime Minister heard it he would realise that he had an opportunity of remedying the most noticeable omission from his Cabinet, in which he had not included a single Scot. Mr. Gallie said he would like to assume the prerogative of old age, and as one who had retired from the chair, he thought that prerogative came to him, and he could talk about his experiences in organisation. He recalled that in his early days, representing his firm on certain committees of the Scottish Alliance, he had preserved that sphinx-like silence, with its easy simulation of wisdom, which earned its due reward. He spoke of the early days when as a member of the Council he spoke on the gospel of good fellowship and better prices. He felt then like a Scottish Daniel entering a den of English lions, and he was reminded how as a young scholar he entered the placid atmosphere of a class presided over by a preceptor, represented in the case of the Federation by that giant of the industry, Mr. Godfrey. When he succeeded to the chair left vacant by Mr. Godfrey, he found the seat rather roomy and at times a little draughty.

After referring in the kindliest terms to the help he had received from the Secretary, Mr. Gallie turned to the President and accepted his suggestion that during the past two years the Federation had still further spread its roots, and he asked Mr. Spicer to accept an expression of confidence that under the leadership of the present President the organisation would continue to prosper in what they all hoped would be better times. Just as a final word, Mr. Gallie said his tenure of office had enriched him with a circle of friendship which he hoped he might long retain.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

Discussion of a Visit made to the Central London Printing School.

The monthly meeting of the Association, held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C., was a very largely attended one. The chair was occupied by Mr. H. Milton (president), who was supported by Mr. J. Fleming (vice-president).

After the reading of the minutes which were confirmed, a considerable amount of correspondence was dealt with.

Letters were read from Messrs. Miles, Napier, Willmott and Crosby. Mr. A. F. Walker wrote expressing a desire to see another column in the new list of members showing what department the member belonged to. Mr. A. J. Flint in a letter mentioned that he would be glad to hear of a vacancy. The correspondence included a letter from Mr. Colebrook who inquired if there was amongst the members a practical bookbinder, forwarder or finisher, who would be willing to place two or three hundred pounds in a small, though successful bookbinding house in London.

Mr. A. C. Ware presented the report of the annual dinner, and Mr. J. Fleming extended the best thanks of the Association to the three stewards for their services, and Messrs. J. J. Jones, J. A. Esler and A. C. Ware briefly replied.

During the afternoon the executive, on the invitation of Mr. J. R. Riddell, had made an official visit to the Central London Printing School, and the next item on the agenda was the hearing of reports from those who had taken part in the visit.

The president, the first to speak, thought the majority of the departments in the School were well equipped, more particularly the foundry and the machine-room. There was not a great deal to be said in favour of the binding department, however. At the time of the visit there were seventeen or eighteen lads who all seemed to be working on the same tools. As far as tuition in warehouse work was concerned, it seemed to be conspicuous by its absence.

Mr. J. Fleming said the equipment in the composing-room, machine-room, litho, foundry, photo-litho and process department was splendid. He thought all the departments were excellently equipped, with the exception of the bindery. He maintained that it was up to the Association to write to Mr. Riddell to see if this department could not be better equipped so that the teacher might have a chance of properly teaching the lads under his control. He went on to say he thought the binding department was lacking in finishing plant. He had much sympathy with the teacher on account of the small plant at his disposal and contended that as subscribers to the School they should write to the governing body and ask them to do something better than had been done so far. It was up to the governing body to get more plant so that lads in their section of the craft would get as good a chance of learning their trade as other sections of the industry.

Mr. J. Lee endorsed the words of the previous speakers. As far as finishing tools were concerned he believed there were only three sets of letters and they were all of one size. Undoubtedly there was a shortage of finishing tools, and they were so necessary. The binding section of the trade was always considered last in everything.

Mr. A. G. Aves was agreeably struck with the plant in all the departments except the binding and warehouse sections. He did not think much warehouse work could be learnt on such scanty plant as was at the School at present, especially in these days when a knowledge of mechanical appliances was so necessary.

Mr. W. F. Crib thought there was not enough attention paid to warehouse work. He did not see a ream of paper in the place, and failed to see how students could obtain a knowledge of packing and stocking. As regards machinery for the binder and the warehouseman, his opinion was that the School was badly equipped.

Mr. Geo. A. Eden explained they should remember that the School was always known as a printing institution. While at St. Bride Institute the binding section of the industry had only a class in binding theory, and its plant consisted of a marbling trough. Now they had got something of a start with a certain amount of plant, and were just beginning to grow. Still, he thought it was up to them to improve on what they had already got, and he agreed with other speakers in pressing this matter forward in a letter from the Association. Mr. Eden mentioned that a proposal was to be put before the governing body at the next meeting to launch a class for girls in folding and sewing and other particular sections of the craft which were specially operated by them.

Mr. B. J. Sansom, binding instructor at the School, said unfortunately at the time of the visit, instruction in warehouse work was not in progress, for that class was held on Friday mornings and afternoons. Warehouse instruction was given according to the strength of the machinery available. After the binding class had been completed paper was brought up from the warehouse, and then a course of instruction was given in all the various manipulations appertaining to that department. With regard to the statement made that there were only three boxes of letters, Mr. Sansom said that was wrong. There were six boxes of letters, three cases of brass type, palettes, gouges, centres, corners and ornaments, suitable for stationery, letterpress and account-book finishing. They also had half-a-dozen finishing rolls. Altogether they had eight presses that could be used for finishing. The binding department at present was equipped with a numberer, two standing presses, round cornering machine, hole-eyeletting machine, thumb-indexing machine, loose-leaf punching machine, wire stitcher, board cutter, double striker ruling machine, Smyth sewer, folding machine, cutting machine, etc. This array of up-to-date machinery Mr. Sansom considered a very big advance on the School at St. Bride Institute, and thought it a splendid beginning.

Mr. Hellery proposed that a letter be sent to Mr. Riddell voicing the suggestion put forward by several speakers that the binding department was not in such an efficient state as they had expected. In the course of his remarks Mr. Hellery stated that apprentices bore testimony to the painstaking efforts displayed by Mr. Sansom.

Mr. T. Hunt, in seconding, referred to the deep interest Mr. Sansom took in the classes under his control, and also to the respect the boys had for him. There was no reason why the binding section of the trade should continue to stay at the bottom rung of the ladder, and he hoped that the letter to be sent would be the means of improving their representation at the School.

After a brief reference to the success that had attended the annual outing on Saturday, June 2nd, the meeting was brought to a close.

Cardiff J.I.C. District Committee.

At the annual meeting of the Cardiff District Committee of the Joint Industrial Council held in Cardiff this month officers were elected, and a report of the activities of the Committee for the year was received.

These activities included a highly successful social held under the auspices of the Committee at the close of the old year, and arrangements for a bowls club for the summer months. The Committee regretted that the Printers' Holiday Home at Weston-Super-Mare had had to be closed owing to insufficient support last year—through the unfortunate strike—but agreed that the experience gained had given all concerned a useful lesson, and that when the time was opportune there was no doubt that the scheme would be revived.

A special sub-committee was formed to make arrangements for next winter when it was hoped to have a scheme of educational work for the apprentices, etc., and some interesting lectures for all in the trade.

The next quarterly meeting is arranged, by kind invitation of Mr. Frank Murrell, to take place at Weston-Super-Mare some time in September, when a definite programme for the winter will be submitted.

IT is reported that plans are under way for the building of a $6,000,000 pulp and paper plant at North Vancouver, B.C., by a Chicago firm. The plant, which will have a capacity of 250 tons a day, will obtain its supplies of pulp wood from timber lands owned near Vancouver by Wisconsin interests.

Pioneer Paper Boxmaker.

Death of Mr. P. J. Firth, of Sydney.

On April 7th there were laid to rest in Rookwood Congregational Cemetery, Sydney, Australia, the mortal remains of that grand old pioneer of the paper box trade in Sydney, Mr. Peter Job Firth, aged 88 years. Born in Yorkshire, England, Mr. Firth was brought up to locomotive engineering, being engaged therein in England, Denmark and Russia, rising to the position of locomotive engineer of the Karsloff-Kafkass Railway in the South of Russia.

In 1875, asthma drove him out of Russia and finally took him to sheep-farming in the Riverina district of New South Wales. He sold out there and in 1893 commenced cardboard boxmaking in Sydney. The turnover during the first month, April, 1893, amounted to just over £50. From such a small beginning the business prospered under his sagacious direction till in 1908 the monthly turnover was about £2,000.

In that year the factory was wiped out by fire. The insurances totalled £6,000, the loss amounted to £16,000, a net loss of £10,000. At that time Mr. Firth was 72 years old; but notwithstanding his age, plans were at once made for creating a new business, plans which have proved completely successful.

The business was formed into a limited company, thus giving his employees an opportunity to secure shares, with the result that to-day, with a paid-up capital of nearly £50,000, the employees own over 15 per cent. of the share capital. The last figures that were got out, just before his death, showed a monthly turnover of £20,000, the business having factories in Sydney, Newcastle, and Brisbane, and warehouses in Melbourne and Adelaide.

Remembering that the subject of this sketch had no business training, his success is the more remarkable. He himself would have attributed it to always "trying to deal fairly with his customers," and "telling them the truth even when it did not seem to pay him." When Mr. Firth entered the box *trade of* Sydney in 1893, cardboard boxes were a luxury; in seven years he had made them a necessity, enormously increasing the output of his own and the other box factories of this city by the means he took to popularise boxes of all kinds and for all purposes.

In politics Mr. Firth was a radical Free Trader, an ardent disciple of Henry George. He was also a strong peace-man, always bitterly opposed to militarism whether it were Russian or British, French or German.

At the graveside the service was conducted by his pastor, a Congregationalist, assisted by a Presbyterian minister and a Baptist minister. In addition to relatives, there were present over sixty of his Sydney employees, also representatives of the Master Printers' Association, the Cardboard Boxmakers' Association and a number of business firms, including Edwards, Dunlop and Co., Australasian Paper and Pulp Co., and the Commercial Banking Co. of Sydney.

Wreaths were sent by the staff and employees of the company in Sydney, Newcastle, Brisbane, Adelaide and Melbourne, and by many business friends, including S. T. Leigh and Co., Simpson, Lonsdale, Ltd., and J. Fielding and Co., Ltd. There were also present at the service a number of Henry George men, who perhaps felt that Mr. Firth was of those who, in the words of Henry George—

> "Will toil for it,
> Suffer for it; if need be, die for it.
> This is the power of truth."

Paper Tester.

The Process Engineers, U.S.A., have patented a device for testing the resistance of paper to tearing. Strips of paper are torn by the aid of a pendulum-like mass which falls from a predetermined height. The instrument works in such a manner that the effect of the force acting on the mass through the angle of fall is diminished by the resistance of the tearing paper until the mass comes to rest. The tearing resistance of the paper is then balanced against the force of the falling mass and may be measured from a graduated scale.

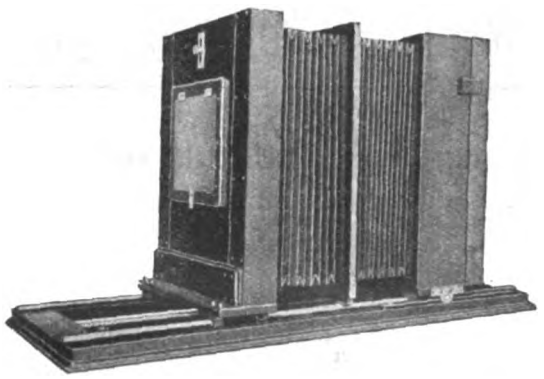
Printers' Engravers' and Foundry Saw.



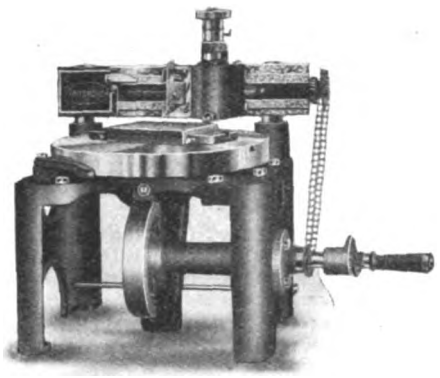


Photo-Litho and Photo-Engraving Camera.

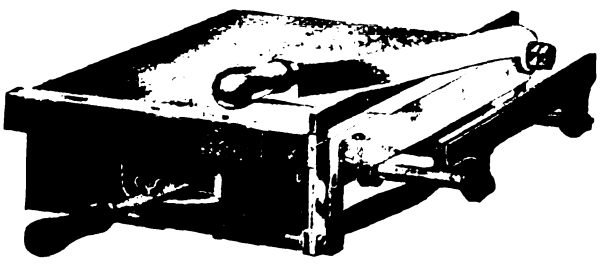
Arc Lamp for Photo Engraving & Lithography.

Stereo Electro and Engravers' Beveller.

Rotary Planer for Foundry and Printers' use—type-high or pica plates.



Stereo Electro and Engravers' Router.

Stereo Facing Paste.

Short Bonds and Planes.

Extra Heavy Card and Matrix Cutter.

Jig Saw.

THE above illustrations represent only a few of the machines, etc., we manufacture for Stereotyping, Electrotyping, Photo-Engraving and Photo-Lithography.

We also manufacture Zinc and Copper Sheets for Photo-engraving, Job Folding Machines, Electric Proof Presses, Photo-Litho Whirlers and Printing-down Frames in ordinary and Lighter Models, etc., etc.

A Buyers' Guide to Supply Houses

Advertising in the "British and Colonial Printer and Stationer," with a brief reference to some of their Specialities.

BOOKBINDERS AND BINDERS' SUPPLIES.

BAILEY BROS., LTD., Clarendon-buildings, Ronalds-road, Highbury, London, N.5.—Wholesale bookbinders.

AUG. BREHMER (T. McAuliffe, British Successor), 12, City-road, E.C.1. Bookbinders' machinery.

JAMES BRANDWOOD AND CO., 21, Saville-street, Manchester. Marbling inks.

THOMAS BROWN, 7, Albion-street, Manchester. English gold leaf, brown and white blocking powder.

CASH AND CLARE, 75, Great Eastern-street, London, E.C.2. Bookbinders, box makers, and gold blockers.

CAXTON MACHINERY CO., 188, Albert-street, Glasgow. Wire stitching machines.

CHANNON'S PATENT GLUE, LTD., Rosemount Works, West Byfleet, Essex. Glue for bookbinders, specially suitable for Smyth-Horne machines.

DOW AND LESTER, Forester's Hall-place, Clerkenwell-road, London, E.C.1. Bookbinders to the trade.

FISHER BOOKBINDING CO. (1912), LTD., St. Ann's Works, Herne-hill, London, S.E.24. Binders to the printing trade.

GARWOOD AND MUDDIMAN, LTD., 77, Queen Victoria-street, London, E.C. Leather and leatherette, grains.

WILLIAM GREENWOOD AND SON, Carlton Works, Halifax. Case making, gold blocking.

MOSSES AND MITCHELL, 122-4, Golden-lane, E.C.1. "Vulmos" fibre cutting sticks and plates.

NICKERSON BROS., 99 and 101, Worship-street, London, E.C. Tanners and manufacturers of moroccos, roans, etc.

T. W. AND C. B. SHERIDAN CO., LTD., 63, Hatton-garden, E.C.1. Gathering, binding and wrapping machines, Sheridan case-makers, paper cutters, blocking and embossing presses.

SMYTH-HORNE, LTD., 1-3, Baldwin's-place, Baldwin's-gardens, Gray's Inn-road, London, E.C.1. All bookbinding machines.

WEBB, SON AND CO., LTD., Warwick House, 294, City-road, E.C.1. Wholesale bookbinders.

G. WELLS AND CO., 11, Bread-street-hill, London, E.C.4. Loose leaf specialities.

T. WILLIAMSON AND CO., 6, 8 and 8a, Palace-square, and 7, Pool-street, Manchester, and 30-31, St. Swithin's-lane, London, E.C. Cloths, label cloths, photograph cloths.

WINTERBOTTOM BOOK CLOTH CO., 60, Wilson-street, London, E.C. Manufacturers of bookbinders' cloth, label cloth, morocco cloth, buckram, etc.

COMPOSING AND TYPESETTING MACHINES.

LANSTON MONOTYPE CORPORATION, LTD., 43 and 43a, Fetter-lane, London, E.C.

LINOTYPE AND MACHINERY LIMITED, 9, Kingsway, London, W.C.2.

COPPER PLATE PRINTERS.

WHITEMAN AND BASS (LITHO), LTD., 15, Clerkenwell close, London, E.C.1.

ENGRAVERS, DIE SINKERS, Etc.

BADOUREAU AND JONES, LTD., Poppin's court, Fleet-street, E.C.4. Fine art electrotypers and stereotypers.

BADDELEY BROTHERS, Moor-lane, E.C. Dies, embossing, perforating presses, relief stamping.

ENGRAVERS, DIE SINKERS, Etc.

B. DELLAGANA AND CO., LTD., 11, Shoe-lane, Fleet-street, London, E.C.4. Dellanick and Steeletto nickel steel printing surface, block makers, etc.

DIRECT PHOTO-ENGRAVING CO., LTD., 38, Farringdon-street, London, E.C. Photo etchers, artists, designers.

FLEET FOUNDRY, 91, Blackfriars-road, London, S.E.1. Electros and stereos.

G. H. MADDIN AND CO., LTD., 10 and 11, Middle-street, Aldersgate-street, London, E.C. Engravers, die-sinkers, cameo printing, embossing blocks.

MARSHALL ENGRAVING CO., LTD., 12-14, Farringdon avenue, London, E.C. Embossing and process engravers, artists and photographers.

MINTON AND CASEY, 1, Clerkenwell-road, London, E.C. Artists, engravers and die-sinkers.

W. MILES AND CO., 44, Houndsgate, Nottingham. Type-casting machines, engravers and cutters of oriental matrices.

JOHN SWAIN AND SON, LTD., 89-90, Shoe-lane, London, E.C. Photo engravers, designers and electrotypers.

ENVELOPE MACHINE MANUFACTURERS.

ROBERT BROWN AND CO., 119, Oakley-street, London, S.E.1. Engineers to the printing trade.

DAVID CARLAW AND SONS, LTD., 31, Finnieston-street, Glasgow. "Leader" envelope folding and gumming machine.

KRAFT (WATERPROOF).

HYDROLOID, LTD., 179 and 180, Upper Thames-street, E.C.4. Cables: "Hydroloid, London."
Manufacturers of Hydroloid Kraft. Superior to all Pitch Papers for Packing, Tyre Wrapping, etc., etc.

LOOSE LEAF SPECIALITIES.

WEBB, SON AND CO., LTD., Warwick House, City-road, E.C.1. Cables "Relieur, Isling, London."

G. WELLS AND CO., LTD., 11, Bread-street-hill, E.C.4.

PAPER AND BOARDS.

HENRY FEATHERSTONE, 13, Whitefriars street, Fleet-street, London, E.C.4; Cables, "Fethpapmill, Fleet, London." Paper agent and merchant.

KAYE'S RUBBER LATEX PROCESS, LTD., 7-8, Great Winchester-street, London, E.C.2. Latex papers.

W. LUNNON AND CO., 59, Carter-lane, London. Paper merchants. Supply Lunco paper in colours and white.

J. AND J. MAKIN, 20, Mount-street, Manchester. Papermakers.

W. ROWLANDSON AND CO., LTD., 4, St. Paul's Churchyard, London, E.C.4. Book Paper Specialists.

VAN HUIDEN, Winschoten, Holland. Strawboards, corrugated boards, mill and leather boards, etc.

HYDROLOID, LTD., 179 and 180, Upper Thames-street, E.C.4. Cables: "Hydroloid, London."
Manufacturers of Waterproof, Oilproof Papers and Boards, Index Cards, Hydroloid Kraft, superior Wall Pitch Papers for Packing, Tyre Wrapping, etc., etc.

PAPER AND BOARDS,

HARRY B. WOOD, 201-5, Produce Exchange, Manchester. Boards, dextrine, leather, wood pulp and straw.

PRINTING TRADE VALUERS.

FRANK COLEBROOK, F.A.I., 146, Fleet-street E.C.4. Telephone: Holborn 2288.

EDWIN W. EVANS, 150, Fleet-street, E.C.4. Telephone: Central 6678.

N. W. MCKENZIE, 114-115, Holborn, E.C.1 Telephone: Holborn 1805.

PAPER AND PRINTING TRADE PUBLICATIONS.

"BRITISH AND COLONIAL PRINTER AND STATIONER." Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

The *British and Colonial Printer and Stationer*, founded in 1878, is published every Thursday. It has a large circulation among Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc., whose interests are catered for by the publication of the latest improvements in machinery, new processes, labour and time-saving devices, etc. A strong weekly feature is its Commercial Intelligence The Quarterly Export Issues of the *British and Colonial Printer and Stationer* afford an unexcelled channel of publicity, seller being introduced to buyer with most successful results. Are you a subscriber? If not, why not? It is a good investment at a low price—13s. for one year (subscription 8s. 8d., plus 4s. 4d. postage). Send a remittance to the publishers, as above, at once.

"THE BOOKBINDER" forms a Monthly Section of the *British and Colonial Printer and Stationer*, and may be obtained for an annual subscription of 3s. 3d., including postage.

"WORLD'S PAPER TRADE REVIEW." Publishers: Stonhill and Gillis, 58, Shoe-lane London, E.C.4.

Anyone interested in the paper market will find a fund of information in the pages of the *World's Paper Trade Review*, established in 1879. Published every Friday, it gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. It surveys the whole field of the paper and allied industries at home and abroad. Become a weekly reader by remitting 32s. 6d. (subscription 26s., plus postage 6s. 6d.), to the publishers. There is no better medium for advertisers, as, to quote one of many testimonials: "We have found your paper at every mill with whom we are doing business, both here and on the Continent."

PLANT AND MACHINERY.

ALAUZET & DERRIEY, REUNIS, 81, Av. Philippe Auguste, Paris. All-size rotary press.

BENTLEY AND JACKSON, LTD., Lodge Bank Works, Bury, Lancs. Papermakers' engineers.

BRITISH FURNACES, LTD., 7, Grosvenor-gardens, London, S.W.1. Fuel economy in type-metal melting.

BUMSTED AND CHANDLER, Cannock Chase Foundry, Hednesford, Staffs. Paper bag making machinery.

EDMUND BUSH AND SON, LTD., Crown Point-road, Leeds. Hot-air drying apparatus for drying varnished and gummed sheets.

CAXTON MACHINERY CO., 74, York-street, Glasgow. C.M.C. "Perfection" Machine. Wire stitching, platen presses, etc.

Paper and Print.

Interesting Address by Mr. F. Heckford in London.

Mr. F. Heckford, chief chemist and technologist to Messrs. John Dickinson and Co., Ltd., gave a fascinating address to the members of the South-West London Master Printers' Association on Tuesday, June 5th, on the subject of "The Pecularities and Pitfalls of the Craft," looking at the matter from the papermaker's point of view. Mr. E. G. Cole, president of the local association, was in the chair, and the meeting was held at Stanley's Restaurant, Lavender-hill, Battersea.

The Magic Papermaker.

The subject was handled by Mr. F. Heckford in a modest and attractive manner, and the master printers present were obviously interested in the demonstration and discourse. Not only did Mr. Heckford give a clear exposition of the process of papermaking, but he actually made a sheet of paper in the presence of his audience. With the aid of a bowl filled with half-stuff as it flows on to the wire, he dipped in a miniature mould and, with a deft shake, fashioned a sheet of paper on the spot.

Exhibiting rag half-stuff and esparto grass and sketching on a board the different fibres, Mr. Heckford described the characteristics of each — cotton fibres, with their absorbent qualities, which fitted them for blottings and bulking papers; linen fibres, for writing papers, because they felted closer and made a hard sheet; hemp fibres, whose strength and opacity adapted them for high-class Bible papers; and wood fibres, which go to make 98 per cent. of the paper manufactured. It was explained that mechanical wood fibres, because of their thickness and lack of affinity, readily allowed the water to drain away, and, therefore, they were adaptable for fast machines with a speed of a thousand feet a minute. Consequently these fibres were largely used in the manufacture of news-print. Esparto fibre, because of its thin, short and uniform character, made a nice smooth litho printing paper.

The Beating Process.

Remarking that the beating process was the most important in the manufacture of paper, since all the ingredients of the sheet must go into the beater, Mr. Heckford said that beating the stuff for 20 minutes produced a blotting paper; continuing the beating for 9 or 10 hours they got a writing paper; 24 hours' treatment gave them a greaseproof; and 48 hours a beaver board or the body of a motor car. Kraft, parchment, coated, embossed, and photographic papers were then described.

Dealing with the difficulties which printers sometimes met with in the handling of their papers, the lecturer mentioned that paper, being a vegetable, animal and mineral compound, shrank or swelled in the absence or presence of moisture and heat because of its plant origin. While the perfect sheet had its fibres lying at right angles, giving equal strength either way, generally the fibres ran 70 or 75 per cent. in one direction, and 30 per cent. in the other, so that there was unequal strength. The power of ink and water was enormous, and in attacking the sheet they took the line of least resistance, entering the paper in the weaker direction.

Rubber Latex.

Answering questions as to the value of rubber latex in paper, Mr. Heckford said this was really a commercial question. Papermakers did not take kindly to it. Unless users wanted paper with rubber in it, he did not see any particular virtue in the addition. It was very difficult to work rubber into paper, even in small quantities, because it coagulated. Certainly latex gave a paper which was more elastic, but very often its strength was not increased; the folding properties ought to be. If people wanted rubber in paper, the manufacturers would supply it.

Mr. Heckford gave his audience a rough and ready test for determining the value of comparative papers. This was to crumple the papers in the hand two or three times, rub them, and then note the number of pin holes. The paper with the fewer pin holes was the better paper.

With regard to fluff arising from antique printings, Mr. Heckford observed that excessive fluff would indicate that there had not been sufficient beating. At the same time featherweight papers would always fluff more or less.

A Commercial Question.

Coniferous woods were used by papermakers because they were soft and very easily reduced. It was purely a commercial question. Thirty years ago bamboo was spoken of, but even to-day it had not come into its own, or only slightly. So long as papermakers could get wood and grass at their present prices they would not buy bamboo at £15 a ton or any grass for which they had to go into the middle of Africa.

Storing Paper.

On the question of storing paper, Mr. Heckford said, if they could keep the temperature at 60 degrees, winter and summer, he thought they had done everything that was possible, and the paper would retain its 7 or 8 per cent. of moisture without much variation. If the temperature rose to 70 degrees a little more of the moisture would be lost; and if the temperature dropped to 50 degrees more moisture would be absorbed. Generally 60 degrees would keep paper in its normal state of equilibrium.

With regard to the difficulties which printers found in printing on some art papers, Mr. Heckford indicated that the trouble might arise from the coating mixture (gelatine or casein) perishing, and thus liberating the mineral matter. Again, if they had a good coating mixture and it was not properly calendered, then there was not sufficient skin to keep the moisture away and it would dissolve the mineral matter. If a papermaker made a mistake with chromo or art paper, it would come back to him, and he had to admit his error. Art paper contained 40 or 50 per cent. of mineral matter, and if it was not properly made it would pick.

Mr. R. B. Simnett explained a method he had adopted to prevent new paper from picking. This was to get half a dozen girls to open several lots of paper and interleave it. If they allowed the air to get to the paper for about 24 hours that paper in eight cases out of ten would work properly.

The chairman proposed a hearty vote of thanks to Mr. Heckford for his illuminating demonstration and to the firm of Messrs. John Dickinson and Co. for allowing him to come and address them.

Mr. J. D. Wise, in seconding the resolution, expressed thanks to Mr. Heckford for giving such instructive information regarding a commodity by which printers lived.

Mr. Heckford suitably acknowledged the resolution.

The Annual Gatherings.

Taking up the business of the meeting, Mr. Johnson, from headquarters, spoke of the great success which had attended the recent annual meetings of the Federation, and mentioned that very warm expressions of appreciation had since been received from provincial members.

Mr. Wise expressed the gratitude which they should all feel towards the officials at Holborn for the strenuous work they had carried out in connection with the meetings. The vice-president (Mr. Langley), whom they were glad to see that evening, had devoted himself for many months to the work of organisation. He was glad to know that London had upheld the best traditions. The gatherings were of the most delightful and harmonious character.

Mr. Simnett also joined in expressions of gratitude to the organisers, and a cordial resolution of thanks was passed.

Mr. Langley, in reply, said they had to remember that London master printers had as their president a master mind (Mr. Howard Hazell). He had brought forward a perfect schedule for the annual meetings. He (Mr. Langley) thought that the vote of thanks ought to be passed to Mr. Howard Hazell and the committee who had arranged the festivities and the business meetings. Proceeding, the vice president observed that at 24, Holborn, they had a wonderful staff. They were indebted to Mr. Whyte, the conference secretary, who had all his time occupied, because the work of the Association had to go on all the same. Mr. Langley added that he would like to pay a high tribute to Mr. Willsher for the marvellous mathematical way in which he carried out the details for the week. They were also indebted to the stewards for their assiduous attention. Mr. Langley said he should convey the resolution of thanks to the president of the London Alliance, and ask him to convey it to the committee which was responsible for the arrangements.

The chairman recalled that one gentleman had observed that London had outdone Glasgow in every respect except one, and that was in regard to the weather.

It was announced that Mr. Austen-Leigh would address the local Association on October 2nd, while for the next meeting, July 3rd, Mr. Atkinson (Messrs. Garrett and Atkinson) would deal with "The Peculiarities and Pitfalls of the Craft" from the blockmaker's point of view.

Paper Trade Golfing Society.

Narrow Victory by the Printers.

A match by singles and foursomes took place at Coombe Hill Golf Club on Thursday, May 31st between the Paper Trade Golfing Society and the Printers, when the latter were successful in winning the singles by 7 points to 5, each side winning 3 matches in the foursomes, the day's play thus resulting in a victory by 2 points in favour of the Printers. Scores:—

The Printers were the guests for the day of the members of the Paper Trade Golfing Society, whose hospitality was much appreciated, the day's golf being of the most enjoyable nature.

BOOKS FOR AUSTRALIA.—In view of a report which has been current among exporters of books to Australia that the Commonwealth Customs Authorities no longer require the form of invoice drawn up by the Imperial Customs Conference to be used in connection with non dutiable books, the High Commissioner for Australia telegraphed to the Department of Trade and Customs, Melbourne, for information. The reply received by the High Commissioner is to the effect that the Conference form of invoicing and certificate must still be used in connection with books equally with other classes of goods.

FROM amongst the products of modern scientific and engineering research for the purpose of discovering means for improving the quantity and quality of output of printed matter and thereby cheapening the cost of production, no machine can be found to equal the diversity of application possessed by the composing and typecasting machine known as "The Monotype."

THE LANSTON MONOTYPE CORPORATION, LIMITED,
43 & 44, FETTER LANE, LONDON, E.C 4

The "WINKLER" High Speed Automatic Art Press.

With Oscillating Cylinder and Front Delivery Printed Side Up.

Discriminating printers recognise it to be the ideal machine for producing Fine Half-Tone and Multi-Colour Work.

Unequalled for Dead Register, Rolling Power, Impressional Strength, Speed and Noiseless Running.

Occupies only half the floor space of a two-revolution machine for the same size of sheet.

The middle inking roller is of smaller diameter, thus eliminating any possibility of circumference marks on solid surfaces.

The forme is supplied with **fresh** ink from **all** inking rollers both during the forward and backward space movement of the bed.

To prevent "picking" when printing difficult formes, **electric heating** of the bed is provided, the distributing rollers being specially **water-cooled.**

Automatic Cylinder Check, Throw-off of inking rollers and Slow Motion.

VOLUME 92. NUMBER 25. [REGISTERED AS A NEWSPAPER.] LONDON: JUNE 21, 1923. EVERY THURSDAY. PRICE TWOPENCE.

The L.M.P.A. Annual Meeting.

Government Printing, Country Competition and other Matters of Vital Trade Interest come under Discussion.

In addition to the usual business, several matters of special interest were discussed at the annual general meeting of the London Master Printers' Association, held at noon on Thursday last at Stationers' Hall. There was a fair attendance of members, and the chair was occupied by the president of the Association, Mr. W. Howard Hazell, who was accompanied by prominent members of the Council and the Association's officials.

In opening the meeting, Mr. Hazell read a telegram, which, he said, he had been very pleased to receive, from Colonel H. Rivers Fletcher, president of the Federation of Master Printers. This ran: "Please express my personal thanks and appreciation of admirable arrangements made by your committees for annual meeting."

The treasurer, Mr. J. H. Williams, presented the financial statement and report for the year ending March, 1923. The accounts showed a substantial balance on the right side, and were unanimously approved.

The Annual Report.

The annual report, which, having been circulated, was taken as read, indicated the difficulties of the year, particularly in regard to protracted wage negotiations, but nevertheless stated that each district association reported at its annual meeting that the members had every reason to be pleased with the work of the association for the past twelve months. The attendance at the meetings had been better, and the interest taken in the important matters raised at these local meetings had been keener than ever before. During the year which ended on March 25th last, 88 members were added, including union, non-society and open houses.

The report continued: "A very active campaign for the reduction of the postal rates has been carried on by the Federation, by the Joint Industrial Council and by private members of the Association, among whom Lord Southwark and Mr. W. H. Burchell were prominent. Largely owing to these representations to the Postmaster-General, the postal rates have been reduced, which will assist many industries and lead to more catalogues and circulars being printed, to the great advantage of our members. The favourable result of this agitation shows the necessity for a strong Master Printers' organisation, and is an answer to printers outside our Association, who sometimes say the Association is ineffective."

Another interesting reference was as follows; "The action of H.M. Stationery Office in transferring work from London printers to the State Works without allowing the master printers of London to quote for it, is an injustice to the printing trade of London and a doubtful economy to the State. Strong representations have been made to the Treasury and H. M. Stationery Office, and questions have been asked in Parliament. It is to be hoped that the action of the Association and the forthcoming inquiry will prevent a continuance of these most unsatisfactory methods."

Amongst a number of personal references to those who have been prominent in the Association's activities, mention was made of the fact that Mr. C. T. Jacobi had been unanimously elected an honorary member of the Association on severing his connection with the firm of Messrs. Chas. Whittingham and Griggs, Ltd, after a period of 50 years.

Figures were cited to show that the Bad Debt Recovery Section had again been of much assistance to members; the Federation of Master Printers had paid the Association a compliment by recommending this arrangement to the provincial alliances.

A Difficult but Progressive Year.

In moving the adoption of the report, Mr. Howard Hazell remarked that though the year had been a difficult one he thought they could congratulate themselves that the Association was stronger at the end of the year than it had been at the beginning. He hoped that, in future, time given to dealing with labour difficulties would gradually lessen, so that they might be able to give more attention to constructive work, which was of infinite advantage to master printers and all concerned with the trade.

Arising out of the report, the subject of organisation was raised by Mr. W. H. Burchell, who elicited from the secretary some details about the work of the organisers, including a tribute to their success in obtaining new members.

The Menace of State Printing.

Mr. Geo. Eaton Hart asked whether members were aware that notice had been given that the printing of the *London Gazette* would be taken away from the old-established firm who had done the work very satisfactorily for a number of years and transferred to the Stationery Office printing works. This, he said, was a matter which gave a great deal of concern to the printing trade as a whole, and he would like some statement on the subject.

The chairman referred to the committee of the Federation of Master Printers which is very carefully watching the question of Government printing, and he called on Mr. Goodwin to speak on the subject.

Mr. Goodwin ably responded, making it plain that the Federation was in close touch with the whole question, and in using its influence in the matter had received a good deal of help from various members of Parliament. He said it was a very serious menace to the printing trade of London that work previously done by London printers was being transferred to the factories of the Stationery Office without an opportunity being given for London printers to quote. A year or so ago contracts were put up to tender to the amount of about £160,000, and out of this total the Stationery Office, competing on equal terms, had been able to secure only a few thousand pounds' worth of contracts. Since that date contracts had been allocated to the Stationery Office without offering opportunities for private printers to compete at all. This had been done in the case of the Telephone Directory and the Post Office Guide; now there was the *London Gazette* and the County Court forms, whilst there was a possibility also of Parliamentary forms being transferred to the State Printing Works, without private printers having an opportunity of quoting. He referred to the committe of inquiry being set up by the Government, and said the Federation had been pressing for many months to get this inquiry started because the experimental period of the works at Harrow would end on June 30th, and they wished that a decision might be reached before that date as to whether or not these works should be continued. They had had the assurance that the committee would set up shortly, and that the Federation would have an opportunity of giving evidence, but they were doing all they could to protest against new work being given to the State printing works before that inquiry had been held. It was quite impossible to know whether the work of the State printing works was economical or not, unless opportunities were given for competitive prices to be offered. With regard to the *London Gazette*, an extremely important point was that they understood that one of the contentions of the Stationery Office was that the *London Gazette* had been taken from the contractors because during the recent dispute there was a slight delay in the production of this paper. That, he said, was an ironical reason to give, because the dispute originated at the Station-

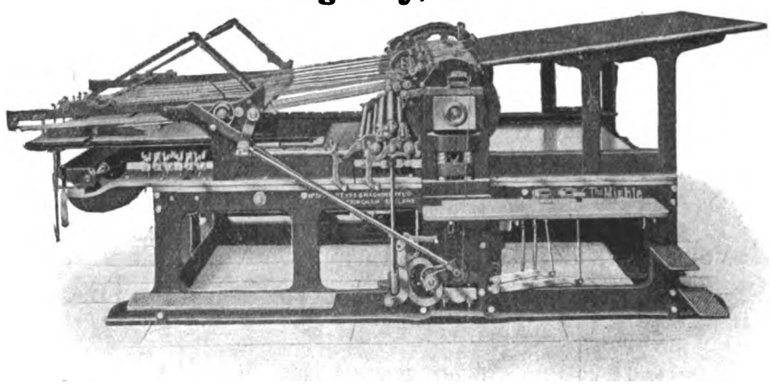
Every printer appreciates Miehle work—and so does the buyer of printing. Miehle printing does not cost more than ordinary printing, but it commands better prices.



The Miehle is prepared for a job more quickly than an ordinary press. The rollers are quickly set, the ink duct can be accurately adjusted to suit formes of any kind, make-ready is reduced to the mimimum owing to the scientific construction of the press, and the little make-ready required is quickly effected.

There is no risk in installing a Miehle. It is a sound investment for every printer—a perfect tool and a real asset at all times.

If the work you are now doing is "ordinary," you can raise your standard of printing to the highest level by installing the Miehle.

The Miehle is built in this country, in our Works at Altrincham, Cheshire, and can be obtained only from us.

ery Office and it was because of the Stationery Office dispute that the private contractors were afterwards involved. It would be a very serious matter for the whole country if the State was going to rule that because of the possibility of labour troubles all work must be done in State factories.

Mr. Hart remarked that the work done for the Government was done at a price far below any other kind of printing. He knew the cost of printing as well as any man living, and he was convinced that prices outside the Governmental establishment were much lower than it was possible for a Government institution to work to.

Mr. G. Poulton having suggested a similarity between the starting of printing works by big consumers of printing and the carrying on of the Stationery Office printery, the chairman pointed out the important distinction that if the Government ran at a loss, printers, as tax payers, had to pay for it, whereas in the case of the private firm the shareholders bore the loss, and the public had not to pay.

The meeting then unanimously adopted the report.

London's Relation to the Country.

The treasurer, Mr. Williams, then moved that the meeting approve a subscription for the year 1923 to 1924 on the basis of one halfpenny in the £ of wages and salaries paid, subject to deductions for amounts exceeding £50,000, £100,000 and £150,000 respectively, with a minimum of £1 1s. and a maximum of £500, the subscription to include the Alliance contribution to the Master Printers' Federation.

Mr. C. T. Jacobi seconded this motion.

Mr. Burchell proposed to add after "the Alliance contribution to the Master Printers' Federation" the words "which shall not exceed a total of £1,000." He drew attention to a printed leaflet which he had brought to the meeting for distribution showing the graded wages of the different parts of the country. He complained that lower costs in the provinces were responsible for a great deal of work leaving London.

The chairman ruled that it was out of order for the meeting to attempt to alter the contribution to the Federation for the current year, as the rules provided that it was at the annual general meeting of the Federation of Master Printers that the contribution should be assessed.

Mr. Poulton expressed disagreement with this ruling, and asked when they could take any steps with regard to the contribution.

Mr. Tonkin proposed that the Council be recommended to give notice that they would next year revise the subscription to the Federation.

Mr. S. Goss seconded this proposition. He said there had for a long time been rumblings of discontent in the Association with regard to the contribution to the Federation, and it would be wise if members in authority as leaders in the Association would take notice of these rumblings, and not wait for the earthquake.

The treasurer, Mr. Williams, pointed out that the rate of subscription of some of the alliances in the Federation was three times that of London.

Mr. A. Langley then spoke at some length, stressing the value to the L.M.P.A. of their connection with the Federation, and opposing any suggestion of weakening that connection.

Mr. J. D. Wise also spoke to the same effect, quoting figures to show the monetary value to London of wage reductions obtained by the aid of the Federation.

After much further discussion an amendment was put to the meeting in the following terms: "That the Council of the London Master Printers' Association be requested to consider the annual subscription to the Federation, and bring up the matter at a further meeting with a view to making representations to the Federation for a reduction next year."

This amendment was carried, the voting being 26 to 11.

The official resolution on the subject of the subscription was then unanimously adopted with the amendment added.

Miscellaneous Business.

The Association's auditors, Messrs. A. C. Roberts, Wright and Co, were re-elected, and the meeting then proceeded to discuss certain proposed alterations and additions to the objects and rules of the Association. Slight additions to objects were made in view of income-tax difficulties in respect of payments by the Association to its members or their dependents in distressed circumstances, and in respect of payments made in aid of technical education. An interesting alteration to rule was one providing that in future no employer holding a trade union card shall be eligible for membership or send to any meeting a representative holding a trade union card, except by special permission of the Council given under suitable guarantees.

On the proposal of Mr. Whitehead, seconded by Mr. E. C. Austen-Leigh, it was agreed to ask the Council to consider the possibility of founding a substantial guarantee fund to provide for compensation to members who might suffer loss through carrying out the instructions of the Council.

Mr. J. J. Keliher, who was one of those attending the recent international congress of printers at Gothenburg, conveyed the greetings of the congress to the London Master Printers' Association, and briefly reported on the interest and value of the congress proceedings.

The chairman announced that the Stationers' Company now has a register of students who are likely to leave the Company's schools, and the register is available to master printers who may wish to take any of these lads into their offices.

On the proposition of Mr. Wheeler, it was agreed that the Council should reconsider the question of reducing the subscription of firms such as litho artists and engravers with wages bills exceptionally high in proportion to the value of their plant.

The meeting closed about 1.30, having lasted about an hour and a half.

Paper and Printing.

Lectures on Its Application at Manchester.

The appointment of Mr. T. H. Cunane (Messrs. A. M. Peebles and Son, Ltd.) as lecturer at the Manchester College of Technology on "The Application of Paper to Printing" is one of special significance. It denotes the efforts being made in the direction of education and it indicates the closer relations which are steadily growing up between the papermaker, the merchant and the paper consumer.

Mr. Cunane takes a wide view of his lectures. The course at Manchester, for instance, which deals with the qualities and behaviour of paper from the aspect of the general printer, will be applicable not only to the printer, but to other consumers of paper such as box and bagmakers, etc. Indeed his lectures, which have been given from time to time in various parts of the country were delivered with a view to educating the consumers on the technical and practical details of the use of papers, and represented an earnest endeavour to bridge the gulf between the paper manufacturers or sellers of paper and the various users. The lecturer especially discussed all the various troubles and difficulties of both sides, with a view to helping both the makers and users.

Practical Training and Experience.

Special qualifications are possessed by Mr. Cunane for the task which he will develop at Manchester. He gained many technological successes at the Manchester College of Technology and at the Bury Technical Institute. In 1904 he obtained a 2nd class, and in 1905 a 1st class ordinary certificate in papermaking, and in 1904 and 1906 1st class honours final certificates. In the latter year he was 3rd in all England. Mr. Cunane's scholastic successes have not been confined to papermaking, for he has secured 1st class certificates in electrical engineering, applied mechanics, steam and steam engines, machine construction, drawing, advanced chemistry (organic and inorganic), and 2nd class certificates in cotton-linen bleaching and dyeing.

On the practical side also Mr. Cunane has had a good grounding. He has had six years in a paper mill and 16 years were spent "on the road," his experience comprising salesmanship and buying. It might be added, further, that Mr. Cunane held the position of shift chemist and superintendent to the Ministry of Munitions at two of their cotton mills.

With all this practical and technical knowledge at his disposal, Mr. Cunane is in a favourable position to ascertain the various difficulties with which the consumers of paper are confronted. An important qualification as a lecturer, too, is that he takes a pleasure in unravelling the various problems which have been put before him, and if he can be of any assistance to the trade as a whole he regards it as a pleasure and an education to himself to do so.

A Splendid Start.

Birmingham and District Paper, Printing, etc., Golf Club.

Whoever conceived the notion of introducing a joyous hour to enliven the mundane days of business by suggesting the Paper, Printing, Stationery and Allied Trades of Birmingham and District should have their own golfing organisation, builded better than they knew and ought to have been thoroughly satisfied during the late hours of Thursday, May 31st, when some 40 members of the trade wended their various ways home from Olton Golf Links. For the afternoon of that day was delightful, notwithstanding that "Winter lingering chilled the lap of May," while the evening culminated with speeches, prize-giving and jocularity of a character which all too infrequently is witnessed among the grave seniors of the cost department and the paper-rack.

We have no intention of giving a catalogue of the golf. Indeed in some cases such would be prohibitive, since even etymology has its limits; suffice it to say that of the 38 competitors, two only—and they members of the Olton Club—were successful in securing the four prizes offered; which seems rather a pity, as it would have been better had the awards been more broadly scattered, and such, indeed, was the feeling of the fortunate couple.

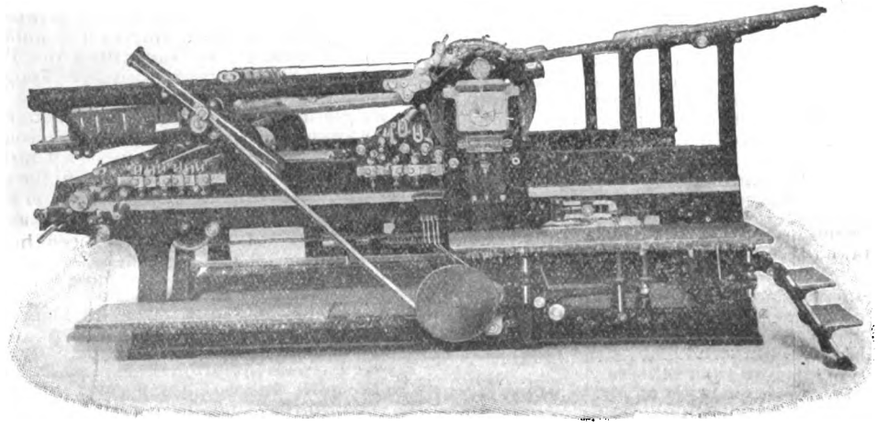
The social value of the event commenced when Mr. Fred Jefferson (Kenrick and Jefferson), as president, welcomed the "boys"—some of whom were sturdy grandfathers—to a cold collation, and in doing so at once proved to the company the right man was in command. The president has a pleasant and happy manner, and the occasion suited him admirably, for not only is he a keen golfer, but rather an exponent of the game from his handicap of 3. He told the meeting that their trade was a fine trade, a great trade, and a trade that by united effort would yet be greater, and without preamble or ambiguity informed the company that such gatherings as that would do infinite good and bring all into closer relationship, and finally to a happy friendship, which was always helpful.

The gathering then proceeded in the ancient method of toasting the King, down the gamut of degrees to the toasting of "Our Humble Selves," and most of the speeches were good and all of them to the point.

Mr. Arthur Groves (Spicers, Ltd.) spoke about the president, and the president's reply—extracts from which are given—was a very happy one; following which words of wit and sensibility fell from Mr. Garnett Browett (Uptons Ltd.), Mr. Josh Bailey (Manifoldia Ltd.), Mr. J. McNicol (E. C. Osborne, Ltd.), Mr. H. H. Bore, hon. treasurer (Perry and Co., Ltd.), Mr. T. B. Preece, hon. secretary (Hudson and Son), and Mr H. O. Worrall, an allied trader, who humorously referred to printers' estimates, and his gentle persiflage should certainly cost him a trifle extra on his next printing order.

In addition to the above, among those present were Messrs. John Hutchison, Percy Hudson, Arthur Vaughton, and Percy Plant to grace the vice-presidents' table, so that the trade was very well represented by some of the most notable men of the district.

The winner of the 18 hole medal round was H. H. Bore, whose gross score was 85; handicap 11, nett 74. Mr. Bore also took the prize for the best gross score. The runner up was Mr. F. J. Urry, with a gross score of 89, handicap 14, nett 75, and he was also fortunate enough to win the prize for the sealed 9 holes handicap.



The proceedings terminated with the presentation of the prizes by the president, and everyone voted that the opening meeting had been a most successful gathering.

At the final committee meeting of the spring season to be held shortly, it is hoped to make plans for the autumn competition, which will probably be held on Sandwell Park Course, the president's club.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

Trade Notes.

IN the Chancery Division Mr. Justice Sargant dismissed with costs the action brought by the Ridgway Co., publishers, of New York, against Messrs. Hutchinson, publishers, of Paternoster-row, London, claiming an injunction to restrain defendants from publishing a monthly fiction magazine under the title of *Hutchinson's Adventure Story Magazine*, or otherwise using the word "Adventure" in connection with the name of any publication without clearly distinguishing it from the magazine published by plaintiffs three times a month under the title *Adventure*.

MESSRS. LEATHWAIT AND SIMMONS, advertising and newspaper agents, 5, Birchin-lane, London, are, on the 23rd of this month, removing to more commodious and up-to-date premises at 34, Throgmorton-street. In 1919 the business of Messrs. Leathwait and Simmons was acquired by Messrs. G. Street and Co., Ltd., and since that date it has been carried on by them as a separate branch under its own management.

A CONFERENCE was arranged for yesterday between the Labour Committee of the London Master Printers' Association and the London Society of Compositors to discuss the general position in regard to linotype and monotype piece scales. In view of the prevalent opinion that a period of stabilisation of wages has been entered upon, it is rather disturbing to learn that quite a number of wage matters, in respect of classification of machines, etc., have still to be settled. Thus the L.M.P.A. is to meet the Machine Managers' Society on the 25th inst., the "Natsopa" on the 27th and the Paper Workers' Union on the 28th.

WE hear that the response made to the L.M.P.A. appeal for subscriptions, following the annual general meeting, has been highly satisfactory, a feature particularly interesting in view of recent criticisms of the Association being the fact that the proportion of small printers who are hastening to renew their subscriptions gives emphatic evidence of the value attached by them to the master printers' organisation.

NORTH WALES MASTER PRINTERS.—The North Wales Alliance of the Federation of Master Printers held their annual meeting at Chester on Saturday. Mr. Harrison, the president, was in the chair. Mr. Powlson, of Colwyn Bay, was elected president for the ensuing year, and Mr. Harrison, retiring president, was appointed vice-president. The other officers were re-elected as before. Following the annual meeting there were a number of interesting speeches. Mr. Bethell laid special emphasis upon the importance of master printers being closely federated together throughout the country, and he made a strong plea for larger attendances and keener interest in the regular meetings. Mr. A. E. Goodwin put in a plea for greater support to be given to the officers of the Alliance, and pointed out the many advantages which members received, especially the benefits derived from the Federation Costing System.

AT the meeting on July 3rd of the South-West London Master Printers' Association, Mr. E. H. Atkinson, of Messrs. Garratt and Atkinson, Ealing, a member of the Council of the Master Process Engravers' Federation, will give an address on "The Peculiarities and Pitfalls of the Craft," speaking from the blockmaker's point of view. The meeting is to be held at the Central Hall (Committee Room D), Westminster, at 6.30 p.m. for 7.

THE Association of Master Printers of East and North-East London announce that, through the kindness of Mr. Riddell, the principal of the London School of Printing, the monthly meeting of the Association will be held at Stamford-street, E.C., next Wednesday, June 27th. Mr. Riddell has offered to show the members over the school and then open a discussion on "Efficiency in Printing Offices."

AT a meeting of the Publicity Club of London at the Hotel Cecil on Monday, Lord Newton's Bill was severely criticised, and one speaker remarked that the country had had enough of D.O.R.A.'s apron strings, and did not desire to be strangled by the pinafore strings of her children.

MR. CHARLES HOLME, Hampstead, the founder and for twenty-five years editor of the *Studio*, who died on March 14th, left £88,447, with net personalty £64,834.

THE death took place on Saturday of Mr. Ernest Head, news editor of the *Pall Mall Gazette*, at the age of 52. He had had a long association with Fleet-street and with newspapers in the West of England.

THE National News and Operators' Guild propose forming an unemployed register with the object of placing members of the Guild who are in want of situations in touch with any vacancies. It is also proposed to form a group system of government divided as follows:—Lancashire Group, Midland Group, Yorkshire Group, Durham and Northumberland Group, Western Group, Ireland.

THE delegates on the international Press visit to Sweden left Gothenburg on Tuesday night for Stockholm.

PRESS AT GOLF.—The annual match between London and provincial golf teams will take place at Manchester on June 28th. The London team is to be chosen by Lord Riddell. The arrangements for the match are being made by Mr. J. R. Scott, the president of the Newspaper Society, who will entertain the teams at dinner after the match.

TO CELEBRATE the winning of the Mid-Week Challenge Cup, members of the *Liverpool Daily Post* Football Club visited Southport on Saturday by charabanc. After dinner at the Prince of Wales Hotel, the medals were presented to the players, and a resolution was passed thanking Sir Alexander Jeans and Mr. Allan Jeans for their generous support.

TWENTY rare war stamps used by the British Forces in some of the former German colonies were sold on Thursday by Mr. H. R. Harmer, of Old Bond-street, for nearly £400. The face value of the stamps was under ten shillings.

AT the annual Conference of the National Federation of Retail Newsagents, Booksellers, and Stationers, at Leamington there was brought forward on Thursday a proposal from the Executive Council that capitation fees be increased by an extra penny per week in order to make adequate provision to cover loss of profit on the part of members in carrying out "approved national policies," and also to cover loss suffered by members whose stoppages of supplies occur, as in the case of the recent Typographical Association strike in the provinces, and the Simpkin Marshall strike in London. The proposal was, however, shelved until a better period of trade.

SIR CHARLES STARMER was the principal guest at the Federation's annual dinner when Mr. T. E. Naylor, general secretary, London Society of Compositors, responded to the toast of "Fraternal Organisations."

TUCK'S POSTCARD COMPETITION.—The judges have now completed their somewhat heavy task of awarding all the prizes in the different sections of Tuck's Postcards Postage Prize Competition, and a list of prizewinners in the hospital section has already been issued and the cheques duly posted to the hospitals concerned. It is hoped to issue by the end of the week a complete list of all the prize-winners among the competitors and of the successful stationers in the window display competition.

Trade Union Matters.

UNEMPLOYMENT BENEFITS AND NON-RECOGNISED OFFICES.—The Executive Council o the Typographical Association have been informed by Mr. Bowerman that a small committee of the Trades Union Congress have interviewed the Minister of Labour on the subject of the withholding of State unemployment benefit from two members of the Typographical Association who had refused to accept situations in offices not on the "fair list" of the Association. Mr. Bowerman states that he has since received an intimation that the Minister has no authority to reverse or vary a decision given by the Umpire, whose decision on all questions of the right to benefit under the Unemployment Act is final. The Typographical Association have decided to refer the matter back to the General Council of the Trades Union Congress, with a view to Parliamentary action being taken.

TYPOGRAPHICAL ASSOCIATION COMMITTEES.—Messrs. Yates, Bottomley, Dove, Marsh, Mellor, Portch, Powis, Roche, Wesson, and the regular officials have been elected as the committee of the Executive Council for the ensuing twelve months. The Rules Committee will be as follows: Messrs. Harvey, Holmes, Mellor, Morgan, Wesson and the officials. Finance Committee: Messrs. W. Bottomley, Dove, Bristow, and the officials. Re-grading Committee: Messrs. Yates, Dove, Portch, and the officials. The following have been elected to represent the Association on the Joint Industrial Council: Mr. J. French (president), Mr. H. Skinner (secretary), Mr. E. G. Yates (vice-president), and Messrs. W. Bottomley and Powis. A standing order has been adopted that requests for wages alterations or changes in working conditions shall be dealt with by the committee of the Executive Council. The whole of the members of the Executive Council shall form the panel for meetings of the Joint Labour Committee.

PLATEN MINDERS AND CENSORSHIP.—The resolution that was to have been brought forward by the Platen Printing Machine Minders at the meeting of the London Trades Council on Thursday last on the question of trade union censorship of the Press has been postponed. The resolution was crowded out owing to the pressure of other business, and will, we understand, be introduced at an early date. In conversation with an official of the Platen Printing Machine Minders' Society we learn that the proposed resolution is the outcome of what the unions consider a biased criticism in the *Evening Standard* of May 25th of the paper workers' strike at Valleyfield Paper Mills. A reply from the unions concerned was sent to the editor of the paper mentioned, pointing out the alleged inaccurate statements and unfair comment which the criticism contained, and asking that the same publicity be given to the union side of the question. This was not done, and hence the unions—whilst always willing to differentiate between censorship and dictatorship in press publicity—feel that their side of labour questions ought to receive fair publicity.

PRINTING UNIONS AND THE C.W.S.—Mr A. E. Holmes, secretary of the Printing and Kindred Trades' Federation, writes to certain newspapers: "I notice an advertisement in your columns, in which the Co-operative Wholesale Society professes to give a list of trade unions which have raised no objection to the application of variations of wages and conditions in the Society's works. In this list is a number of unions connected with this Federation, and it is on behalf of these that I am addressing you. It is possible that some of the other unions are included in the list, with just as little title as those I have the honour to represent. The fact is that several deputations attended before the directors of the Co-operative Wholesale Society, and strongly protested against the variations in wages and conditions and the manner in which they were imposed—*i.e.*, the unions themselves were ignored, and the notification of changes was made an individual question with each of the employees, who had notices served on them. I regret to have to say that it is the opinion of my Executive Committee that it has taken part in no less satisfactory negotiations for the past ten years than it experienced with the directors of the Co-operative Wholesale Society. In view of this fact, it is a little gratuitous on the part of the directors to list the names of our societies with those who have raised no objection."

C.W.S. REPLY.—In reply to Mr. Holmes's remarks the Co-operative Wholesale Society writes to point out that the recent agreed wage reductions in the printing industry were applied to co-operative workers without dispute. "It would appear," it is added, "that Mr. Holmes is alluding to another and an earlier matter altogether in his public criticism of the C.W.S. The variations about which he writes, and about which he says several deputations attended upon the C.W.S. directors, had reference to a change which the C.W.S., through pressure of competition, felt compelled to make—this being done to place its printing works on the same conditions and wages as other printing establishments. Up to that time the C.W.S. had been paying higher wages than the recognised standard, and working four hours less per week than the stipulated number."

NATIONAL UNION OF JOURNALISTS.—The Fifeshire Branch of the National Union of Journalists has been resuscitated, with Mr. T. Hunter as chairman and Mr. Payne as secretary and treasurer. The reformation of the Fifeshire Branch is the result of a special propaganda being carried out in Scotland to strengthen the position of the Union.

Printers Visit Apsley Mills.

West and North-West L.M.P.A. Entertained by John Dickinson and Co., Ltd.

Just forty—not thieves, but printers—men seeking knowledge and good relationship in business, responded to the invitation of Messrs. John Dickinson and Co., Ltd., to visit their Apsley Mills, from which emanate the goods bearing the widely known "Lion Brand" trade mark, on Tuesday, June 12th.

The invitation was given two months back to the new president of the West and North-West London District Association, Mr. J. Emlyn Jones, at one of their monthly luncheons at Pagani's, when three of the heads of the firm were their guests.

"The Lion's Den."

That the invitation was appreciated was evidenced by the response, and that the visitors were welcomed was proved by the reception given. "Visiting the Lion's Den" one member described it as, but if there was any devouring intended it was evidently expected to be on the part of the visitors and not the "Lions." Food there was in plenty for both mind and body, as well as for reflection!

W. and N.-W. London Master Printers at Apsley Mills.

London representatives of the firm, who were well known to most of the visitors, greeted the party at Euston, and at Boxmoor cars were waiting to convey them to the mills about a mile and a-half distant. There all were received by Mr. W. E. Ellens, the general manager, Mr. Iliff, and the various heads of departments, and after a pleasant introduction over coffee and light refreshments, formed up into small groups and then proceeded to make a comprehensive tour of the works under the guidance of experts from each department.

It is not within the province of these notes to describe all the processes and working of the mills. The main features at Apsley are the manufacture of ivory and other boards, the production of envelopes in vast quantities, suite stationery, account book making in all its ramifications of printing, ruling and binding, scholastic and commercial stationery, relief stamping, and the production of high class filing cabinets, desks, and other office furnishings.

Perfectly Equipped Works.

Of the works themselves it can be said that their equipment seems to be perfected in every minute detail. It embodies machinery that appears to be capable of performing so excellently the intricate details of manufacture, and at such a high rate of speed, that the work of hand production is reduced to a minimum and the duty of the operator becomes almost that of mechanically supplementing that of the machine. Behind this equipment is an organisation that has almost entirely eliminated waste both of material and labour, and has brought the process of production and output to the highest state of efficiency.

The works are set amid charming country surroundings, and the old world atmosphere is enhanced by gardens which even in the present backward season were profusely in bloom. Everything about the mills presented that spick-and-span appearance which only a well-ordered community in ideal environment can produce.

In view of the capabilities of the modern machinery in operation here, there would be excuse for presuming that the staff employed was correspondingly small, but to stand on the banks of the enclosure opposite on the cessation of the morning's work would be a speedy disillusionment. Two thousand five hundred workers with one intent, are a convincing argument when making for the firm's canteen, accommodating about 1,000 for a meal, and the cycle shed, where 800 machines can be parked, and space for 240 more is being provided, or rapidly dispersing to their homes by foot, bus, or other available conveyance.

Luncheon Interlude.

Although providing a fairly strenuous day, the visit was not entirely one of sight-seeing. The lunch interval provided opportunities for the interchange of those courtesies which add much to the pleasure of the moment, and have a permanent value in bringing about a better understanding between those who are more and more coming to realise that mutual goodwill and co-operation is one of the chief factors in successful trading.

An excellent lunch was served to the guests in one of the large dining rooms of the "Guild house" adjoining, in which it was pleasing to note some 800 young people enjoying their mid-day meal of excellent fare, provided for them at very low rates, and all served in a very short time.

During the lunch, the general manager, Mr. Ellens, very graciously welcomed the guests, and expressed his pleasure in seeing so many present. He voiced the regret of Mr. Ling, the managing director, at being unable to be present; it was always a delight to him to have visitors who were interested in their productions, and to show them through the mills of which they were proud.

The Visitors' Compliments.

Mr. J. Emlyn Jones, on behalf of his fellow guests, thanked Mr. Ellens for his kind welcome, and remarked on the delightful courtesy of the correspondence leading to this visit. He complimented the firm on the atmosphere pervading the establishment, the beautiful order, and the well-dressed healthy looking staff there in such numbers. The charming surroundings of rock garden and well-kept lawns, no less than the ultra cleanliness of the works, suggested a "family" feeling towards the workers that could not fail to bring out the best in them. He envied Messrs. Dickinsons the facilities that enabled them to study their staff so well. They were astonished at the immense organisation and assembly of wonderful machinery, no less than the kindliness prevailing. Mr. Emlyn Jones thanked Mr. Ellens and Mr. Iliff especially for their charming welcome, and for so instructive an outing, which they would all look back upon with pleasure. He asked the company to join him in the toast of "Prosperity to Messrs. Dickinson and their genial representatives"

An Example of "Service."

Mr. Goldstraw, of Nash Mills, in responding, dwelt on the desire of the firm for friendly relationship with their customers, their willingness to do everything to help them to secure business, and extended the invitation to visit Nash Mills or those at Croxley, where the process of papermaking was in operation.

One other brief interlude occurred for tea, and the taking of an excellent photograph of the company in the garden—which we are able to reproduce herewith, and a copy of which has since been received by each visitor—whereupon Mr. J. R. Burt took the opportunity of voicing the thanks of the West and North-West Printers for the hospitality given. He said he had heard expressions of surprise at 24, Holborn, in reference to their hosts as to "how it was done," but he thought that after this visit the possibilities of up-to-date equipment, organisation brought up to the highest point of efficiency, ample space and cleanliness, as operating at Apsley, would go a long way to providing the answer. The visit had been both entertaining and educating, and would be long remembered.

Mr. Ellens having reiterated the pleasure the visit gave to the firm, and inviting further ones to their other mills, the inspection was continued in the cabinet making and machine construction departments, where many of the envelope-making machines are built, and to the power house.

The visit terminated with a cheery send-off from the officials of the firm, and the presentation of a most attractive souvenir of the mill and a cabinet of stationery for the lady friend at home.

A Business-Building Moral.

Pleasant comments on the visit of course there were, and one of the most frequent was on the apparent interest of the employees in their work. Every visitor would have liked to have watched longer the rapid and clever manipulation of paper, books, and machines, indicating, undoubtedly, that the inducement to excel is here encouraged by the knowledge that the door to promotion is ever open, and that merit has its reward also in equitable remuneration. Some light was culled in this connection on the homeward journey from one of the firm's representatives we travelled with, and the presence in the party of the Federation Costing Secretary opened our eyes to the applicability, both to the hosts of the day and to progressive printers, of a legend seen on a building estate by the railway side just out of London—"Houses built by Costing."

"Daily Telegraph" Paper Mills.

Visit of S.-E. London Master Printers.

The South-East London Master Printers' Association paid a visit on Tuesday, June 12th, to the *Daily Telegraph* Paper Mills at Dartford. A party of 40 journeyed by train from London Bridge, and the remainder joined up at the mill, making together between 60 and 70 members and friends.

On arriving at the mill, the visitors were divided into parties of ten, each party being escorted by a head of one of the departments, who, as can be readily imagined, was exceedingly well qualified to act as a guide. Every branch of the manufacture of paper was very fully explained, not only with regard to newsprint, but also banks, bonds and glazed imitation parchment, these latter qualities not being generally known as produced by this particular mill.

After the visit to the mill, which had occupied over two hours, the party was entertained, at the invitation of Viscount Burnham, to high tea at the Bull Hotel, a very fine example of the old English type of galleried hotel. They were catered for in most magnificent manner, and presided over by Mr. Philip Goldney, the manager of the mill, acting as host on behalf of Lord Burnham.

After tea, musical items were provided by Mr. Michie, of the Mill staff, and Mr. and Mrs. Dix, and were greatly appreciated.

A very hearty vote of thanks to Lord Burnham was proposed by Mr. H. H. Norman, treasurer of the South-East Association, who voiced the appreciation of the gathering.

Mr. Goldney replied, saying that the mill was always open to inspection, not only by printers, but by paper manufacturers, and that they made a point of extending a most hearty welcome to all their visitors.

Acknowledgment was also made to Mr. Lack, of Dartford, and Mr. F. Mason, the hon. secretary, for their efforts towards the success of the outing, both of whom replied.

A most entertaining function, greatly enjoyed by members and their lady friends, terminated with the hearty singing of "Auld Lang Syne."

To do your best for your organisation do your best for your constitution.

De La Rue, Ltd.

Recommendations to Debenture Holders.

Mr. Sidney Lamert, who was appointed chairman and managing director of Messrs. Thomas de la Rue and Co., Ltd., in May has made an important report to the board in relation to the affairs of the company.

He states:—"In every department expenses must be drastically cut and the strictest economy practised, but these savings alone will hardly suffice. It will be advisable to effect, at least temporarily, some arrangement with the holders of our convertible 6 per cent mortgage debenture stock. There is, as you are aware, £1,200,000 of this stock in issue, and the complete service of it calls for £115,000 per annum, including sinking fund and interest. In addition, we have outstanding an earlier issue of £260,000 of 4½ per cent. mortgage debenture stock carrying a first charge."

After pointing out that the drain on the company's resources has been increased by, among other things, the necessity of providing finance for the subsidiary business of J. A. Weir, Ltd, Mr. Lamert adds:—"While the company has still in hand ample cash resources for all trade requirements, and is in no sense embarrassed, the fact has to be faced that we have to provide a sum approximately of £125,000 per annum in debenture interest and sinking fund payments.

"My recommendation is that we should immediately take the debenture stockholders into our full confidence, advising them that in their own interest they should relieve the company during the next three years of the necessity of making sinking fund payments and for the same period should accept interest in the form of deferred certificates payable out of the profits of the business. It will also be necessary to obtain their consent to such a modification of the guarantee given by J. A. Weir, Ltd., as will enable that company to finance its business by recourse to its own bankers.

"It would, I think, be reasonable to advise the debenture holders that the current trading losses will quickly be eliminated, and that within a short time the business as a whole can be placed on a sound profit-earning basis."

The board state that they have adopted Mr. Lamert's recommendations in full.

Newspapers in Slander Actions.

Cases to be Tried by Jury,

In the Outer House of the Scottish Court of Session on Thursday the relevancy was sustained and issues were approved for the trial by jury of three actions at the instance of Richard Williamson, C.B.E., Westerton, Callender, against E. Hulton and Co., Manchester; *The People*, Ltd., Milford-lane, London, and Odhams Press, Ltd., Long acre, London, for £5,000 in each case as damages for alleged slander.

On December 9th, 1922, the pursuer was served with an indictment charging him with certain criminal offences. He pleaded not guilty at the first diet on December 16th, and the trial was appointed to take place at the Christmas circuit, in Glasgow. The case against him was not called at the Circuit Court, and no motion was made on behalf of the Crown for postponement. The papers complained against apparently confused the pursuer with a certain William Lees, convicted on December 30th at the High Court of Justiciary at Glasgow, and the reports of the case of Lees applied to Lees personal descriptions not applicable to him but applicable to the pursuer.

Lord Murray, in dealing with the case against *The People*, Ltd., said the case in his judgment, fell within the principle of the decision in the well-known case of Jones *v.* Hulton. In this case, as in Jones's case, the defamatory character of the statement was not disputed; the whole issue was as to the identity of the person defamed—that was to say, whether the publication was of and concerning the pursuer. In his opinion, mere difference in name did not, in view of the remarkable correspondence of the description, preclude those who knew the pursuer and his circumstances from reasonably concluding that the statement referred to the pursuer. In this view the pursuer was entitled to present his case to a jury. It was not suggested that the libel was other than a blunder, but this, as was settled in Jones's cases, would not save the defenders. There was no substantial difference between the case of Williamson *v. The People*, Ltd., and the two other cases of Williamson *v.* Odhams Press, Ltd., and Williamson *v.* Hulton and Co., and he would accordingly allow the issue as proposed by the pursuer in all three cases.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion **3/0**
Three Insertions **6/0**
For every line exceeding three lines **1/.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

Telephone: 8407 City.

Situations Vacant.

PRINTING and STATIONERY.—REPRESENTATIVE wanted for Eastern Counties, with established connection.—Applications, stating experience, class of work and remuneration required, to Box 14181.

SUBSCRIPTION CANVASSER wanted for old-established Printing Trade Journal.—Reply, in first place, to Box 14162.

Situations Wanted.

A PRINTER'S CUTTER, all-round man, used to all classes of work, Guillotine and Punching Machines, could take charge; London district.—W.G., 36, Cross street, Stratford, E.15. 14182

ARTIST-DRAUGHTSMAN (process litho training), 31, competent, hard worker, figure, design, maps; has had charge; good address; desires SIT.; mod. starting salary; might mean small cap. in any concern where ability, personality counted.—Box 14174.

BOOKBINDER and FINISHER, WAREHOUSEMAN, used to taking charge, desires situation.—31, Westbury street, Swansea. 14151

CUTTER (Binders and Printers), good all-round man, requires permanency; T.U. rates.—Box 14168.

CUTTER, WAREHOUSEMAN, BINDER; able to take charge; 22 years experience; used to all Binding Machines; abstainer; moderate wages; seaside or country preferred.—Box 14167.

GOLD BLOCKER seeks sit., 14 years experience in Account and Letterpress Work; Blocks or Type; ex. ref.—Write, Box 14156.

JOURNALIST, home, foreign experience, seeks Position; preferably descriptive or political writer.—Apply, Box 14175.

LADY COST CLERK (Printer's), 8 years exp., knowledge Bookkeeping, Shorthand, Typewriting; mod. salary; London.—Box 14158.

LETTERPRESS MACHINE OVERSEER, shortly disengaged owing to amalgamation; full experience with all classes of work; good organiser and disciplinarian.—B., 218, St. John's-road, Walthamstow, E.17. 14172

LETTERPRESS OVERSEER requires sit.; used to modern machines, half-tone, colour, catalogue, weekly, etc.; 7 years' ref.—J.F., 62, Cornwall-road, Westbourne Park, W. 14184

LETTERPRESS WORKING FOREMAN requires sit.; used to modern machines, platens, etc.; any class work; best ref.—C.D., Ritchings-avenue, E.17. 14185

MACHINE MINDER seeks situation; Wharfes and Platens; good refs.—Ulph, 6, Norwood-corner, Cliffe-at-Hoo, Kent. 14171

MANAGER-OVERSEER seeks position (Jobbing and News); good organiser, estimator and buyer.—Box 14159.

MINDER seeks perm., Wharfes and Platens, H.T. and Commercial.—W., 134, Chesterroad, Watford, Herts. 14163

PACKER (29) seeks sit. (N.S.); 8 years experience; good reference.—F. W. Burton, 166, Kirby-street, Snowfields, Bermondsey, S.E.1. 14164

PLATEN HAND, good class Com. and 2-Col., etc., could take charge Gen. Machines, wants sit.; town or country.—C. J., 16, Adam-street, S.E.1. 14152

PRINTERS' FOREWOMAN (disengaged), experienced, very energetic; highest references.—R. Levy, 3A, Broudesbury-road, Kilburn 14183

THE PRINTERS' PROVIDENT ASSOCIATION, 39-40, Shoe-lane, E.C.4, is able to supply ALL CLASSES of EFFICIENT LABOUR for the Printing and Allied Trades at short notice; no charge.—Phone, Holborn 527. 14180

WAREHOUSEMAN-CUTTER seeks sit. any distance; 20 years' exp.—Hay, 145, Highstrest, Hampton Hill, Middlesex. 14173

YOUTH desires Apprenticeship either in Litho or Letterpress Machining, or in Stereo Foundry; intelligent; C.C.S. scholar.—G. A. Rutherford, 39, Moselle-avenue, N.22. 14126

Agencies.

CONTINENTAL firm of Paper and Printing Machinery Manufacturers desires to GET INTO TOUCH with British firm who could handle their production in England, either as Sole Agents or Merchants buying for own account.—Reply, giving full particulars, to Box 14160.

Machinery for Sale.

NEW PLATEN (Treadle Power), inside chase 9½ by 6½-in., self-inking, automatic delivery.—Charles and Co., 12, Old Jewry-chambers, E.C.2. 14157

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Miscellaneous.

NO PREMIUM.—HARROW.—IMPORTANT BUSINESS PREMISES adjoining large Drapery Store; fine position opposite station and bus stage; large shop with show-room or rooms over; rent £250 or freehold for sale; unique opportunity for High-class Stationery and Fancy Goods.—Clarke and Co., The Harrow Estate Offices. Tel. 219. 14165

Printing Football Coupons.

At the Stratford Police Court, on Wednesday, June 6th, Frederick William Manning and Alfred Glaister Manning, trading as the Ranelagh Press, Ley-street, Ilford, were summoned for printing circulars relating to ready money football betting.

Mr. E. B. Knight, who prosecuted for the Police Commissioner, stated that a number of coupons and circulars relating to football came into the possession of the police in March, and in consequence a man named Morton was fined £10 and £5 5s. costs at East Ham for distributing them. The name of the Ranelagh Press was printed on the coupons, and in consequence Inspector Hamilton went to see the defendants. They at once admitted that they were the printers of the coupons, and said they had no idea that they were doing wrong. Frederick Manning added that they were given an undertaking that there would be no ready-money betting. Mr. Knight added that there was an absolute prohibition of printing these coupons, and his contention was that it did not matter if the money passed before or after the match. Mr. F. A. Stern, for the defendants, said that the Act was passed to put down the very growing evil of ready-money betting on football, but there was nothing to say that credit bets should not be made.

The chairman (Mr. Bailey) said that the Bench were unanimously of opinion that there had been an infringement of the Act, but that the defendants had no intention of breaking the law. The case would be dismissed on payment of £2 2s. costs. Mr. F. Stern intimated that possibly an appeal would be entered.

The State Printing Inquiry.

IT is a welcome though belated fact that the Government has at last set up a committee of inquiry into the whole question of State printing works, their desirability or undesirability, their conditions of working and the principle (if they are to continue) on which work should be allocated to them. The personnel of the committee is given on another page of this issue and, though perhaps not proof against objection, seems to be such that a thorough and fair probing of the problem should result from the inquiry. It is a pity the inquiry is not now ending, instead of being about to begin, and it is to be hoped that the committee will lose no time in tackling the business entrusted to them. As the experimental run of the State printing works at Harrow is due to end on the 30th inst., we can scarcely hope that the committee's recommendations can become operative before the experimental period has been somewhat extended. But the sooner the committee's findings are put into effect the sooner will some alleviation be made of much apprehension and irritation in the printing trade. Meanwhile it should be urged that new work, *i.e.*, work not already being printed by Government establishments, should not be handed over to State printeries until the committee has completed its inquiry.

Employers' Special Labour Requirements and Union Action.

CERTAIN grievances are likely to be shortly ventilated affecting the rights of employers to engage labour for their special requirements. The ground of complaint is the very arbitrary action sometimes taken by various unions in restricting the employer's choice of labour. Capital is expended in the introduction of modern machinery, and workmen versed in the intricacies of the business, with full experience, are essential to obtain the best results. An employer may be fortunate in finding a man whose qualifications lead to an engagement. This man, on "joining up" early in the war, allowed his dues to lapse and to day finds himself without a trade union card. His potential employer stipulates that a card must be obtained, recognising that unless this is done a union or combination of unions may use their influence to bring a cessation of work in the factory, or even put an edict into force preventing the handling of his goods. The consequence, of course would be the breaking of contracts and loss of business. In the absence of a card, therefore, the man of special qualifications cannot be engaged without the employer courting labour troubles. He, therefore urges the man to obtain a card. "No," says the union, "we have had men on our books for some time with a prior claim to employment." That may be so, but in regard to special work their qualifications are not of the required standard. The old union member, whose card lapsed owing to war service, is not granted a card, the employer is unable to employ the man he wants, and he is placed in the predicament of having hands sent to him by the union who do not possess those qualifications which he feels are necessary for the proper use of the special machinery which he has installed and is anxious to operate with satisfactory results. This is a thing that handicaps profitable working and prevents the expansion of established businesses. The employers have strong grounds for pressing for a more satisfactory understanding with the trade unions in this important matter.

Offset Printing Papers.

PAPERS specially produced for offset printing are in ever-increasing request. There is the bond paper for letter headings, etc., on the one hand and a book paper for brochures, catalogues and booklets on the other. The idea some makers seem to have, that a thick soft cartridge is the ideal paper for photo and colour work, is all wrong. We have by us samples of a new making of real offset book paper to which we hope to refer later.

Wages in the Paper Trade.

NOTICE has been given by the Papermakers' Association to terminate the agreement No. 3 governing wages and hours in the paper mills of this country. What are described as "conversations" with the trade union officials have been proceeding with a view to the formulation of a new agreement. The desire apparently from the employers' point of view is to amend certain clauses which experience has shown to require alteration. Accordingly it was considered that the best way to deal with this matter was to redraft the whole agreement. We understand that the conversations have been amicable and no serious disturbance of the industry is anticipated Formal negotiations are to begin to-morrow (Friday), in Manchester.

In the House of Commons on Monday, Sir W. Joynson-Hicks (Financial Secretary to the Treasury) informed Sir C. Kinloch-Cooke that he will not defer the placing of the contract for the printing of the *London Gazette* with a State establishment until the committee appointed to inquire into the work of State printing establishments has reported, because, having regard to the desirability of running Government printing establishments in the most economic manner, he could not agree to any curtailment in the orders which would normally be assigned to them while the whole question of their continuance was under consideration.

AT public auction in Paris a blue two cent Hawaiian stamp of 1857, unobliterated, was sold for about £1,500.

WITH the amalgamation (New York) of the *Globe* with the *Sun* we get the *Sun and Globe* but it is intended to shorten the name later.

THE Compositor and the Printing Plate.

Alert Questioning by the L.S.C. Guild.

Wednesday, the 13th of June, saw the Guild of the L.S.C. assemble in strength in the L.S.C. Board-room. Mr. Frank Colebrook had been invited to speak, and had proposed to talk upon types, but he was eventually asked if, instead of this, he would talk about plates. He consented readily, and Mr. J. A. Corey, managing director of Nickeloid, Ltd., agreed to act as chairman.

Half an hour or so before Mr. Colebrook was due to attend, he was rung up by Mr. A. J. Newton, long and most honourably known as the principal of the London County Council School of Photo Engraving and Litho, and for a short time head also of St. Bride's Printing School (now incorporated in the London School of Printing). He had come over from New York. Messrs. Eastman (otherwise Kodak's) "took" Mr. Newton from Bolt-court, and for about eight years he has been in the States (controlling and greatly developing the photo engraving side of the Eastman establishment)—to which he returns on June 30th. When he rang up Mr. Colebrook, and the first warm greetings had been exchanged, Mr. Newton was promptly commandeered and indeed willingly assented, to join Mr. Corey and Mr. Colebrook then almost due at the gathering of the Guild.

Mr. Corey, opening the proceedings, quoted an observation that it was one of the marks of a good craftsman that he was always keen on fresh information regarding his work, and was always just as ready to pass on to others what he had himself acquired. In that sense, Mr. Colebrook was, he thought, a very good craftsman.

Mr. Colebrook restricted his talk to a little more than twenty minutes, because of the "glorious opportunity" which was afforded by the presence of Mr. Newton, whom they could question upon any matters connected with plate making. In his shortened address he did, however, touch upon old and present engraving. He told how Le Blon, in London about two hundred years ago, worked a three-colour process of his own by way of mezzotint. He roughed his plate all over with a "plough"; the plate being then inked, would show a velvety full tone all over. The half-tones and high lights would be produced by the use of a burnisher, or other tools, modifying some of the intense full colour. Le Blon's three-colour method was based on Isaac Newton's theory of colours, but of course it was not photographic.

The lecturer explained Fox Talbot's half-tone experiment with gauze in 1853, and Clerk-Maxwell's three-colour half-tone pioneering in the sixties. He explained, too, the colour analysis, and colour synthesis employed in three-colour half-tone; he dealt with screen shifting (by 30 degs.) and with the significance of screen adjustment gear and the differentiation of size of dots in high lights and shadows. Points like these were touched upon, and a little was said of other methods of plate making, and of duplicating processes.

Several of the questioners dealt with the injury to type, which by their observation, resulted from the constant heating in stereo moulding. It seemed almost hopeless to rely upon uniformity of type height, when type had made many visits to the foundry. On one member speaking of finding two heights of type in his case, after these stereo mouldings, another speaker suggested that it would be more correct to speak of a dozen different heights. The advantage of electrotyping in which the same heat problem did not arise, was variously dwelt upon, and on one questioner asking if a famous American journal was not regularly electrotyped, Mr. Corey said he was right; it was always electrotyped.

The difference between imparting a surface or a blush of nickel to a copper electrotype, and the forming of the whole printing plate by way of depositing iron and nickel—(the practice adopted in making nickeloids)—was explained. Questions were asked as to length of runs, and it appeared that although long runs were not very frequent, it had often happened that many more than a million had been satisfactorily run from one set of the best made electros. One speaker spoke of a run of several million having been thus made satisfactorily.

Mr. Colebrook said he had seen an electro of the eighth generation, *i.e.*, an electro from an electro, from an electro, and so on, printed side by side with the original plate, and with the first electro, and he had found himself unable to say which was which.

Mr. Newton was closely questioned on various engraving points mentioned or suggested by Mr. Colebrook, and with his blackboard he dealt with question after question poured in through the best part of an hour. Mr. Corey was also questioned, and what with their observations, and a few other words by Mr. Colebrook, the meeting was declared to have been, at the end, one of the very best the Guild had ever had. Votes of thanks to all three who had thus taken part were very heartily accorded.

Inquiry into State Printing.

Constitution of the Committee.

An important step has at last been made toward the holding of the inquiry, so long demanded by the printing industry, into the question of State printing. The Lords Commissioners of his Majesty's Treasury have appointed a Committee of Inquiry into the Government printing works. The terms of reference of the Committee are: "To consider the question of carrying out printing for State purposes in Government establishments, due regard being had to the experience already gained in that direction, and to report to what extent, if any, it is desirable that such Government establishments should be continued in the future, and as to the general conditions under which they should be maintained, and the principles on which work should be allocated to them."

The Committee has been constituted as follows: Colonel J. Gretton, M.P. (chairman); Sir George Rowland Blades, Bart., M.P.; Mr. A. J. Bonwick, M.P.; the Right Hon. C. W. Bowerman, M.P.; the Hon. E. C. Harmsworth, M.P.; Mr. W. A. Jenkins, M.P.; Sir Henry Banbury (of the Post Office); Mr. W. R. Codling (of the Stationery Office); Mr. A. W. Hurst (of the Treasury). The secretary to the Committee is Mr. J. R. Chambers, of the Treasury, and any communications should be addressed to him at Treasury Chambers, Whitehall, London, S.W.1.

Pressmen at Gothenburg.

A cordial welcome was given on Saturday at the City Hall to the Press delegates from the United Kingdom and all parts of the world who are in Gothenburg in connection with the Jubilee Exhibition. The British representatives are: Viscount and Viscountess Burnham, Sir Campbell Stuart and his mother, Captain Miles Graham and Lady Evelyn Graham (*Morning Post*), Mr. and Mrs. Hugh Redwood (*Daily News*), Mr. John Buist (*Glasgow Herald*), Mr. J. B. Wilson (*Daily Express*), Sir Roderick and Lady Jones (Reuter's Agency), Mr. and Mrs. A. W. Woodbridge (*Yorkshire Post*), Mr. J. B. Hobman (*Westminster Gazette*), and representatives of Canada and Australia.

The Mayor, M. Carlander, made an eloquent speech, and Lord Burnham replied on behalf of the delegates, who have come in great numbers from all parts of the world, those from Great Britain and the Dominions being, perhaps, the most numerous.

Lord Burnham said they were there to celebrate the tercentenary of one of the most progressive and most expansive commercial centres of the world. The British, who took so much Swedish timber and wood pulp, and used in better times to consume by far the greater quantity of her pig-iron, rejoiced in abundant proofs of Sweden's essential soundness. As newspapermen, they stood to-day for the most powerful and penetrating of the international forces which form and inform the life and mind of civilised mankind An internationalism that was helpful, healing, and honest was the first necessity of the world to-day.

In the evening a grand banquet was given by the Town Council, at which the Mayor, speaking in English, dwelt on the importance of the *rôle* of the Press in teaching the nations to know each other, and in bringing them together. Several Pressmen answered in turn, expressing admiration of the peaceful work that Sweden had been able to accomplish.

Personal.

THE Prime Minister was the principal guest at the annual dinner of the Parliamentary Press Gallery, held on Friday night at the Palace of Westminster, under the presidency of the chairman of the Gallery, Mr. William Veitch.

LORD RIDDELL, Sir Adolf Tuck, Mr. Gustave Tuck, Sir Herbert E. Morgan and Sir Ernest Benn were amongst the supporters of the London School of Economics and Political Science, present at a luncheon at the Mansion House on Friday to commemorate the establishment of the Commerce Degree.

IN the cricket match last week between elevens representing the North and South from the House of Commons, Sir G. Rowland Blades was one of the champions of the successful South. He made 30 runs not out, and also took three wickets for 23 runs.

SIR JOHN LE SAGE is retiring at the end of this month from the position of managing editor of the *Daily Telegraph*, with which newspaper he has been connected for sixty years.

CONGRATULATIONS to Mr. Chas. T. Jacobi on the rare distinction conferred upon him by his election as honorary member of the London Master Printers' Association. For fifty years honourably associated with the Chiswick Press, and still keeping in touch with the craft by acting as consulting printer and technical adviser, Mr. Jacobi has an exceptional record of good service rendered in and to the printing craft.

MR. BARRINGTON HOOPER has been appointed Controller of Publicity to the British Empire Exhibition in succession to Mr. W. S. Crawford, who was compelled to resign owing to the increasing call on his time by his own business.

MR. JOHN WALKER, of John Walker and Co., Ltd., Warwick lane, E.C., publishers and stationers, has been elected president of the National Union of Manufacturers for the coming year, in place of Mr. George Terrell.

MR. G. BELTON COBB, will be managing director of J. W. Arrowsmith (London), Ltd., the new style of the well-known Bristol publishing business, which is transferring itself to London this month. Mr. Cobb has had an extensive experience of the publishing trade.

MR. ERNEST OLDMEADOW, has been appointed editor of the *Tablet*, the principal Catholic organ in this country.

MR. CLIFFORD ALLEN has been elected a director of the *Daily Herald* in place of Mr. Tom Shaw, M.P., who resigned.

THE members of the staffs of the *Rochdale Observer* and *Heywood Advertiser* held a picnic to Chester on Monday in celebration of the 70th birthday of the proprietor, Mr. Walter Scott, J.P. A presentation was made to Mr. Scott of a gold mounted walking stick from the combined staffs of the two papers.

IN the news-room of the *Liverpool Journal of Commerce* last week, Mr. E. E. Young, of the composing department, was presented with a case of cutlery, to mark his 50 years' association therewith. There was a full attendance of subscribers from the various departments and the speeches delivered evidenced the high mutual regard existing between employer and employee.

MR. F. HECKFORD, who was as much interested in the master printers whom he addressed at Battersea as they were in him, has written to Mr. F. H. Cole (the secretary) to express his personal appreciation of the meeting.

IN his letter Mr. Heckford observes: "The touch of natural history, scientific explanation of storing paper in actual use, common agreement of paper and printing difficulties, and insight into a master printers' organisation were very interesting and instructive."

DIVIDENDS AND REPORTS.

WATERLOW AND SONS.—Interim dividend of 2½ per cent., free of tax, on deferred ordinary shares; same as a year ago.

KELLY'S DIRECTORIES.—The directors of Kelly's Directories announce a dividend of 1s. per share and a bonus of 1s. per share, both less tax, payable July 6th.

NEW COMPANIES.

GEORGE OZON, LTD.—Capital £100; printers, lithographers, publishers, general and law stationers, advertising agents, photographers, etc. Private company. First directors: A. Weeden and Mrs. F. M. Ozon. Registered office: 9, Lancaster-road, Enfield.

BRIGGS AND ASSOCIATES, LTD.—Capital £2,000; to adopt an agreement with S. Mitchell, and to carry on the business of advertising contractors, printers, paper and pulp manufacturers, photographers, envelope manufacturers, etc. Private company. Subscribers: E. Briggs, S. Mitchell and H. T. Windsor. Registered office: 19, Craven-street, Strand, W.C.

UBIQUITY, LTD.—Capital £10,000; to take over the business of publishers, carried on as the Kingsley Press, Ltd., and to adopt an agreement with W. Wynn. Private company. Permanent directors: W. Wynn, W. A. M. C. Lattey and Mrs. M. L. B. Lattey. Registered office: 168, Regent-street, W.1.

J. SAVILLE AND CO., LTD.—Capital £3,000; to acquire the business of an educational publisher, carried on at 5, Gower-street, W.C.1 as "J. Saville and Co." Private company. Subscribers: J. Davidson, W. H. Mayne, R. Lieberman and H St. G. Syms. Registered office: 5, Gower street, W.C.1.

EDUCATIONAL CO., LTD.—Capital £6,000; to take over the business of publishers, booksellers, printers, etc., now carried on by The Educational Co. of Ireland, Ltd., in Northern Ireland. Private company. Subscribers: J. M. Thompson and H. Boyd. Registered office: 36, Fountain-street, Belfast.

JOHN BROWN (PRINTERS), LTD.—Capital £2,000; to acquire the printing, lithographic and bookbinding business lately carried on by the late J. Brown and now by his executors at Coalpit-lane, Nottingham. Private company. First Directors: J. W. Key Wilkinson and A. E. Lyon.

CATTELL STATELOPE CO., LTD.—Capital £3,000; to adopt an agreement with Charles G. Woodham, Ltd., to work, develop and turn to account the property, rights and interests to be acquired under the said agreement, and to carry on the business of stationers, printers, typefounders, lithographers, stereotypers, diesinkers, bookbinders, advertising and general agent, draughtsmen, ink manufacturers, booksellers, paper manufacturers, etc. Private company. First directors: G. H. Cattell and W. G. Wragg.

CRUSHA AND SON, LTD.—Capital £23,000, to adopt an agreement with W. Crusha; carrying on business at 821 and 823, High-street, Tottenham, and elsewhere, for the acquisition of the business of a newspaper proprietor and general publisher. Private company. Directors: W. Crusha, E. W. Whitworth and J. Rose. Registered office: 821, High-road, Tottenham, N.17.

LLAN AND WELSH CHURCH PRESS CO., LTD.—Capital £100; to acquire the business of newspaper proprietors and publishers now carried on by the Welsh Church Press Guarantors' Committee at the Rectory, Llanfairfechan, Carnarvon. Private company. Permanent directors: Right Rev. Lord Bishop of St. David's, Very Rev. Griffith Roberts, Rev. A. W. Parry, Rev. F. P. Watkin Davies and H. C. Vincent. Registered office: The Rectory, Llanfairfechan, Carnarvon.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

PARTRIDGE AND LOVE, LTD. (Printers and advertising contractors, Bristol).—Mortgage dated June 6th, 1923, to secure all moneys payable by mortgagee (C. P. Fry, 11, Upper Belgrave-road, Clifton, Bristol), under his guarantee to the company's bankers, not exceeding £4,500, charged on 57, 58, and 59, Broadmead, Bristol (subject to mortgages of £5,000 and £1,000).

L. B. MAY, LTD. (Paper merchants, etc., London).—Debenture dated May 25th, 1923, to secure £1,850, charged on the company's undertaking and property, including uncalled capital. Holder: N. J. Hulbert, 133, Foxley-lane, Purley.

ST. NEOTS PAPER MILL CO., LTD.—Satisfaction in full on June 1st, 1923, of debentures dated March 16th, 1922, securing £8,000.

MORO, LTD. (Manufacturers, printers, paper makers, etc., London).—Particulars filed of £1,500 debentures authorised May 29th, 1923, charged on the company's undertaking, lease, plant, stock, fixtures and fittings at 2a, Dalling-road, Hammersmith, and other property, present and future, including uncalled capital; the amount of the present issue being £500.

ARTHURS PRESS, LTD.—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated May 31st, 1923, to secure all moneys due or to become due from company to Lloyds Bank.

PARTRIDGE AND LAWRENCE, LTD. (printers, etc.).—Letter of deposit dated May 25th, 1923, charged on lease of 7, Mary Ann-street, Birmingham, to secure all moneys due or to become due from company to Westminster Bank.

SWINDON PRESS, LTD.—Second debenture dated May 28th, 1923, to secure £10,000, constituting a specific charge on the company's freehold land and buildings erected thereon, machinery and goodwill and a floating security, on the company's undertaking and property, present and future, including uncalled capital. Holder: A. J. Bennett, Kirklington Hall, Southwell, Notts.

ST. LAWRENCE TIMBER PULP AND STEAMSHIP CO., LTD.—Issue on May 16th, 1923, of £1,140 debentures, part of a series already registered.

LUDGATE PULP AND PAPER SYNDICATE, LTD.—Charge on certain debts and securities therefor, dated May 15th, 1923, to secure all moneys due or to become due from company to N.P. and Union Bank of England.

J. R. CASH AND CO., LTD. (printers, etc., Huddersfield).—Mortgage dated June 1st, 1923, to secure £1,560, charged on certain land and buildings in Chapel Hill, Huddersfield Holders: Huddersfield Building Society.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

G. T. Northover and A. S. Flowers, printers and manufacturing stationers, 11, 12 and 13, Lizard-street, Old street, London, E.C.1, under the style of G. T. Northover and Co.

H. R. Relph, H. Hayden and A. W. Lodge, printers, 5, White Horse-street, Leeds, under the style of H. R. Relph.

W. J. Williams and J. Hughes, under the style of the Imperial Wall-Paper Co., at 146, Queen's-drive, Walton, Liverpool.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

A. Hickman, 13, High-street, Madeley, Salop, printer, stationer and confectioner.

O. Stanton, 54, Sussex-place, South Kensington, lately carrying on business at 1, Newman-street, Oxford-street, London, advertising agent.

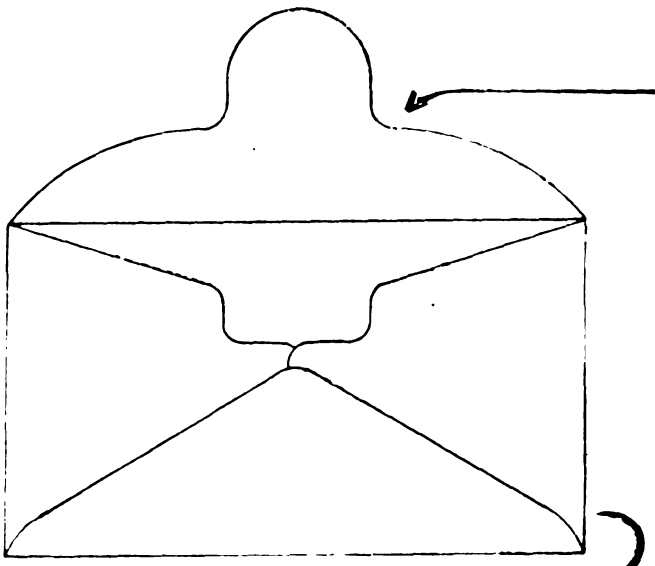
George Newnes' Profits.

Sir Frank Newnes, Bart., presided at the twenty-sixth annual ordinary general meeting of George Newnes, Ltd., held on Thursday at the Savoy Hotel, W.C.

The chairman, in the course of his remarks said he was glad to say that their associates Messrs. C. Arthur Pearson, Ltd., had also had a satisfactory year, as appeared from their recently-published accounts. The two businesses were working in close accord with excellent results. So far as concerned George Newnes, Ltd., irrespective of investments amounting to more than £200,000, the cash in hand amounted to £119,129, as compared with £82,932 last year. The printing works at Notting Hill had proved an excellent investment. They were now in full working order, and the operating committee were glad to report that the enterprise had fully justified their expectations. The works were one of the largest and best equipped in the country. The company's publications were all doing well.

The accounts and report were unanimously adopted.

Burrup, Mathieson and Co. Ltd.



Messrs. Burrup, Mathieson and Co., Ltd., have acquired the business formerly carried on by Messrs. Burrup, Mathieson and Sprague, Ltd., which is now in voluntary liquidation, and the whole of the assets and liabilities of the old company have been taken over by the new company, which will continue to carry on the business without any break, and in the same manner as hitherto. There will be duly held a formal meeting of creditors of the old company, under Section 188 of the Companies (Consolidation) Act, 1908. This is, however, purely a formal matter, as the liquidation of the old company is merely a domestic matter for transferring the assets and liabilities to the new company, and creditors will be paid in full, in due course.

SIMPLICITY

The Keynote of the WINKLER Automatic Feeder.

Simplicity also means efficiency. Simplicity permits quantity production at moderate cost. The WINKLER Feeder, through its simplicity and absence of confusing adjustments has set a new standard of value, combining the utmost efficiency and reliability with a remarkably low price.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

Write to-day for Prospectus to the Sole Agents—

The Caxton Home, Limpsfield.

Opening of New Entrance Gateway and Gates.

Favoured with a fine afternoon, the Caxton Home put on a gay appearance on Saturday last, on the occasion of the opening of the new entrance gateway and gates, presented by the South London Caxton Musical Society. The gateway is quite an imposing structure of brick and stonework, and the gates are built of English oak and partially panelled.

Over 150 subscribers and friends of the institution were present, including the Rt. Hon. G. N. Barnes, C.H., the Rt. Hon. C. W. Bowerman, M.P., Messrs. C. J. Drummond, J.P., T. E. Naylor, J.P., W. F. France, J.P., W. Warren, T. H. Middleton and H. W. Clark (Electrotypers' Society), H. Murch (*Daily News*), E. J. Nichols (Friendly Societies' Convalescent Home), E. Briscoe and J. J. Deasy (trustees), and S. J. White, secretary. A goodly number of ladies also favoured the company with their presence. In addition to the presentation of gates, the Robinson Memorial Bed for electrotypers was opened, and a short commemorative meeting held in the War Memorial room.

The company having assembled at the entrance to the Home, Mr. S. White, as chairman of the South London Caxton Musical Society, opened the proceedings, referring especially to their 31 years' work for the Home. The gates about to be opened would replace those given by the North London Caxton Musical Society exactly 24 years ago. Mr. H. Murch (vice-president of the Society) was then invited to formally open the gates and hand them over to the trustees of the Home.

Mr. Murch having referred to the many years of active work for the Home of the Society—its cash contributions to its funds, the War Memorial Wing, endowment of beds, the gift of a greenhouse, and last, but not least, a wireless listening in set—said it had been a pleasure to be present at several of their musical evenings, and paid a generous tribute to Mr. G. C. Josland (trustee) and Mr. J. R. Triggs (hon. sec.) for the good work they had accomplished. He then unlatched and threw open the gates, which bore the following inscription: "This Gateway was presented, June, 1923, by the South London Caxton Musical Society. J. R. Triggs, Hon. Sec."

Mr. E. Briscoe (senior trustee) accepted the gift, and thanked the Society for their very useful and handsome present.

Mr. C. J. Drummond moved a vote of thanks to the South London Caxton Musical Society, and, regretting that the sister society in North London had been dissolved, expressed a hope that it might be resuscitated. He warmly eulogised the work of their South London friends. Mr. C. W. Bowerman seconded the vote, which was enthusiastically agreed to, and Mr. G. Josland replying, thanked the proposer and seconder for their kind words in recognition of their work, and invited any friends who might desire to join them to become members.

Mr. White asked Mr. Murch, on behalf of the South London Caxton Committee, to accept the gift of a silver key, suitably inscribed, as a memento of the occasion, which Mr. Murch said he would treasure with other expressions of regard in his possession.

The company then adjourned to the Home, where a tablet was unveiled, opening the "Robinson Memorial Bed" for the benefit of electrotypers and stereotypers, by Mrs. Clark, and Mr. Clark (secretary, London Branch) was handed a framed illuminated certificate entitling him to nominate patients to occupy the bed.

Later, in the War Memorial room, Mr. C. J. Drummond laid a commemorative wreath at the foot of the Memorial Screen, this being the second anniversary of its dedication, and expressed the hope that as the years went by similar gatherings would meet to pay their respects to their fellows who had laid down their lives in the war. He also placed the "Book of Remembrance" in the cubicle of the Memorial Screen. This book, finely bound by Messrs. J. Truscott and Son, with illuminated frontispiece, contains the names and other records of 2,570 officers and men. Mr. C. W. Bowerman, having paid a tribute to the men in the printing trades who had fallen, suggested a "two minutes' silence" after the sounding of "The Last Post," which was feelingly responded to.

These little functions having been concluded, the company adjourned for tea, the number present taxing the resources of the Master and Matron to find accommodation in the dining hall and adjoining rooms.

Lloyd Memorial (Caxton) Home.

Memorial to Late Mr. W. Abrahams.

On Saturday last a party visited the Lloyd Memorial (Caxton) Seaside Home, Deal, and unveiled a tablet to the memory of William and Mary Ann Abrahams. Mr. Wm. Abrahams was for many years in the employ of the *Morning Advertiser*, and was largely known and respected by a great number of City men. He bequeathed £250 and two handsome pictures to this institution with which he had been intimately connected for over 30 years. As a result of inviting any old friends to the function several were present at the ceremony and expressed satisfaction with all they saw.

Mr. T. A. Newnham, in asking Mrs. F. C. Brown to unveil the tablet, said he had known Mr. Abrahams for a considerable time prior to his last illness. Mr. Abrahams was respected at the *Morning Advertiser* and by a still larger circle of Fleet-street men connected with the printing trade. He always had a warm heart for those who deserved sympathy and support, but was not one who cared to do a kind act for others to talk about it. He thought that by leaving so large a sum to an institution of this kind Mr. Abrahams demonstrated his character as an earnest worker for his less fortunate fellow man more than if he had given the money away during his lifetime, and therefore they could all honour and respect the name of William Abrahams. Mr. Newnham concluded by asking Mrs. F. C. Brown to unveil the tablet.

Mrs. F. C. Brown, in her response, said Mr. Abrahams was one of the founders of this Fund and always had the welfare and progress of the Lloyd Memorial Home at heart, in which his wife—her dear sister—joined. A few years ago, while on their holiday Mr. and Mrs. Abrahams had visited the Home, and her sister, being much impressed with what she saw, expressed a wish to name a bed on some future occasion. They were here that day to fulfil that wish, believing it to be the best possible way of perpetuating their names.

The secretary, Mr. H. F. Parker, said that the committee were proud of the fact that the weekly subscribers were able to maintain the Home practically by their own subscriptions. They did not give benefits to a greater value than the funds accumulated by each office or each collector, but it was very gratifying to be able to give benefits equivalent to the total contributions made since the subscriptions commenced; and no case has ever been turned down on account of any large sum which had to be expended on one patient.

He invited inquiries concerning the work of the Home, and would be pleased to supply information at 80, Blackfriars-road, S.E.1.

Cornwall Press Staff Outing.

On Saturday last the administrative staff of the Cornwall Press Ltd. (Paris Garden, Stamford-street) had a most enjoyable outing. When the party, numbering about 30, left the Victoria Embankment at 9 o'clock there was some rain, but this, fortunately, did not persist, and the run to Brighton, notwithstanding the cold wind, was a pleasant one.

At the Hotel Metropole, where a sumptuous repast was served, the chair was occupied by Mr. H. Langley Jones (managing director), and the company included Mr. T. W. Fletcher (director of Iliffe and Sons, Ltd., Dorset House, Tudor-street), the heads of the various departments and the counting-house staff.

Mr. W. A. Perkins, in submitting "The Chairman," briefly spoke of the regard in which Mr. Langley Jones was held by the whole of the staff.

The chairman, in reply, heartily thanked those present for the manner in which they had helped him to effect the re-organisation of the Paris Garden establishment and the transfer of the firm's plant from Coventry. He regretted that Sir Edward Iliffe and Mr. Coker Iliffe were unable to be present, but he gave a warm welcome to Mr. Fletcher.

Mr. Fletcher responded. Mr. A. H. Howell, in cheery style, gave "The Stewards," to which Messrs. A. J. England and T. C. Bell replied.

The party then separated for an hour or two, and proceeded to sample the delights of Brighton.

On the return journey a halt was made at the Castle Hotel at Hickstead, where tea was served in a marquee on the lawn, and afterwards members of the party amused themselves with bowls and in other ways.

London was reached soon after 10 o'clock, all who participated agreeing that the outing had been a great success.

Aylesbury Printers' Sports Club.

Hazell, Watson and Viney's New Ground.

The formal opening of the sports ground which has been provided by the directors of Messrs. Hazell, Watson and Viney, Ltd., for the benefit of members of Hazells' Social Sports Club at Aylesbury, took place on Saturday in the presence of a fairly numerous attendance. The ground is eight acres in extent, and is well laid out for cricket, tennis, bowls, a playground for the children and a well-appointed pavilion. It is situate at the junction of Victoria Park, the principal entrance being from Albert-street, its close proximity to the Printing Works adding to its convenience, and it will be an acquisition which members of the club will appreciate. The general council who have taken over supervision comprises representatives of all departments.

The programme on the occasion of the opening ceremony on Saturday gave an opportunity for each section to take part. Monks Risborough C.C. brought over a team to play cricket with Hazells', and Aylesbury Bowling Club also arranged a fixture with Hazells' B.C. Then there was a tennis tournament, and the children thoroughly enjoyed swings, see-saw and a sandpit. The Printing Works Band played at intervals and for dancing in the evening, Mr. W. Smith conducting. Teas were served in the pavilion and also in a marquee, the proceedings passing off very pleasantly in fine weather.

Mr. W. Howard Hazell, chairman of the directors, performed the opening ceremony, having the support of his fellow directors, Mr. R. C. Hazell, Capt. O. Viney, Mr. J. Crowle-Smith, the Mayor of Aylesbury (Mr. G. J. Thrasher), the Vicar of Aylesbury (Rev. C. S. Pepys), Mr. Walter Jowett (vice-chairman of Council), Mr. J. Groves (chairman of organising committee), Mr. H. Somers, Miss Harper, Messrs. R. H. Malin, H. C. Johnstone, D. Sillers, H. Newton, H. Weston, W. Saunders and other local residents.

Mr. Hazell said the directors were very glad they had been able to secure and set apart eight acres of land as a recreation ground for their employees. It had been provided at a cost of over £2,000, and he thought they might congratulate themselves upon the successful result they saw before them that day.

Mr. Walter Jowett said, as vice-chairman of the General Council of the Social and Sports Club, he could assure the directors that they all appreciated this further act of generosity on their part, showing their interest in the health and happiness of the employees. (Applause.) Mr. Jowett acknowledged the keen interest Mr. Ralph Hazell and Capt. Viney had taken in the matter, and also spoke of their indebtedness to Mr. Weston and Mr. Dobson. He felt sure with such organisation the club would be a success, and he had pleasure in calling for three cheers for the directors of Messrs. Hazell, Watson and Viney, Ltd.—which were heartily given.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

ITALY.

An agent in Rome is desirous of securing the representation for Italy of British stationery manufacturers. Correspondence in English. (Reference No. 727.)

PANAMA.

A commission agent of Panama City is desirous of securing the representation, on a commission basis, of British manufacturers of wrapping paper, paper bags, paper bags (grocery), etc. (Reference No. 745.)

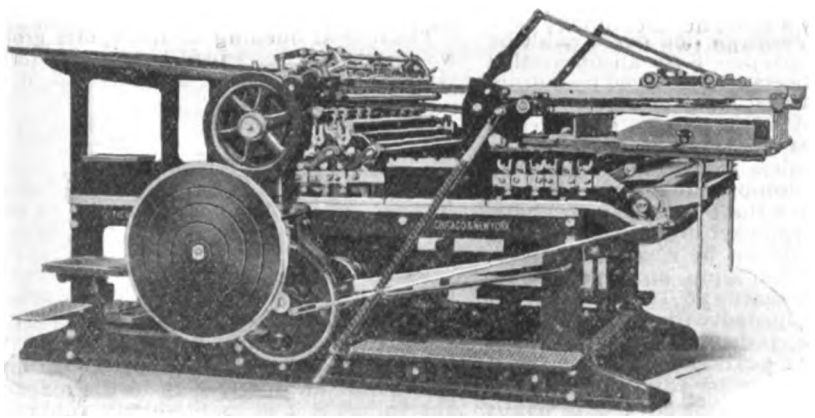
The . . .



American Miehle Company's THREE-ROLLER Two-Revolution Press.

SPECIFICATION.

Type matter locked in Chase, 24 in. × 38 in.

Largest sheet which can be delivered, 26½ in. × 41½ in. (approximately Double Royal).

The Inking arrangements on this machine are adequate for all requirements. The Three-roller Press has a pyramid of eight rollers and riders over the forme, three of the rollers being inkers.

Gear side view of the American Miehle Company's Three-roller Two-Revolution Press.

Over-all measurements:
Width 7 ft. 10 in.
Length with sheet delivery 12 ft. 3 in.
Practicable speed per hour 2,400.

THE American Miehle Company's Three-roller Two-revolution Press will handle satisfactorily every class of work undertaken by the Jobbing Printer. It will print the heaviest and lightest formes with equal ease. It registers to a hair and delivers faultlessly. It is an American Miehle Company's Press, in no way inferior to that Company's regular Four-roller machine, bearing the same high reputation, and giving the fullest satisfaction where installed.

This machine may be seen running by appointment.

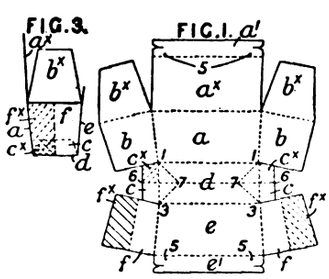
New Inventions

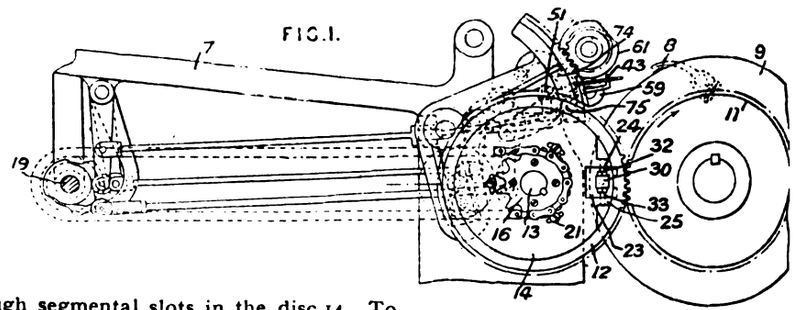
Rotary Tubular Printing Presses.



In a rotary tubular-plate printing press wherein the plate cylinder is formed of a number of coaxial plate carrying sections of which adjacent sections are connected together by a shaft supported in a fixed bearing, the external diameter of the bearing is less than that of the cylinder and the plate bearing surface of one or each of the adjacent sections overlaps the bearing so that the margin between adjacent ends of the plates

is less than the length of the bearing. This construction permits a four-page-wide web to be printed with equal margins between the pages without previous slitting and also provides adequate support for the printing cylinder. The plate cylinder 1 carrying four tubular plates P is formed in two sections 1^a, Fig. 3, connected together by a shaft 3 supported in a bearing 4 which is in the form of a cylindrical block connected by a web 4^a with the flange 4^b which is bolted to a tie 6 secured between the side frames of the machine, arcuate channels 4^c being provided between the block and flange 4^b. The ends of the sections 1^a may be recessed to receive the bearing 4 or, as shown, bands 5, each consisting of two half rings, may be secured to the reduced ends of the sections, and overlap the bearing, ribs 5^b on the bands engaging grooves in the sections. The tie 6 is of the section shown in Fig. 2 and may support the inking apparatus. Specifications 23627/13 and 3334/15 are referred to. The invention is patented by the Duplex Printing Press Co.

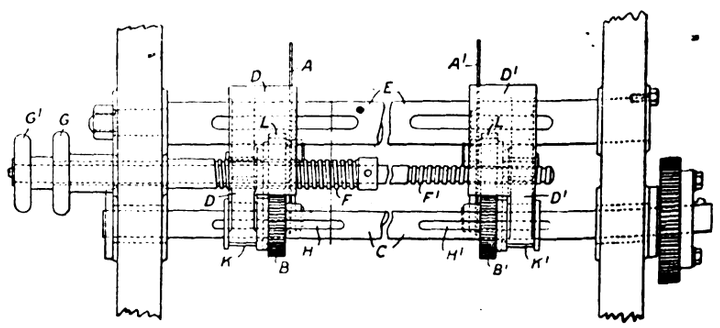
Collapsible Boxes.



A folding or collapsible box of the wallet type, as patented by Mr. C. R. Shill, is made from the blank shown in Fig. 1 creased along the dotted lines. The front *e* and back *a* are bent upwards from the bottom *d*, the inner end pieces *b* of the back are bent inwards, the end pieces *c* of the bottom are bent upwards and fixed by the adhesive portions c^x to

the outer faces of the pieces *b*, and finally the outer end pieces *f* of the front are bent inwards and fixed by the adhesive portions f^x to the outer faces of the pieces *b*, *c*. The open box thus formed may be collapsed flat along the lines 6 6, 1·7 and 3·7, the parts *b*, *c* folding between the front and back. When opened and filled, the upper parts b^x of the pieces *b* are bent down and with the parts *b* brace the whole structure, the part a^x forming the closure and the parts a^1, e^1, being drawn together by a looped cord passing through holes 5 in these parts and engaging the flared slits at the ends thereof.

Sheet-Feeding Mechanism.

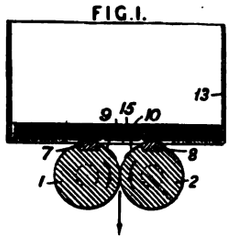


In an invention by the Harris Automatic Press Co., printing or like machines fitted with a sheet-feeding mechanism comprising means for positioning the sheets correctly and forwarding them to grippers of the machine are constructed with a single device for collectively adjusting the timing of the operations of the positioning and forwarding means with relation to the press. As applied to a press in which sheets are fed over a table on a support 7 to grippers 8 on an impression cylinder 9, the sheets are advanced by a dropping roller 74 carried by a curved arm 75 to a front stop 43 and are registered sideways by a pusher register 51. The sheets are finally forwarded by rollers 59, 61. The registering devices and the dropping roller are all actuated by cams on a shaft 19 driven by chain-gearing from a sprocket 16 on a shaft 13, and the roller 61 is driven by a segmental gear oscillated by a crank-pin on a gear-wheel driven from the shaft 13. To enable all the devices to be adjusted with relation to the press, the shaft 13 is driven from the impression cylinder by a gear-wheel 11 in gear with a wheel 12 which can be adjusted relatively to the shaft 13. The wheel 12 is normally secured to a disk 14 keyed to the shaft 13 by means of set-screws 21, Fig. 2, which pass

through segmental slots in the disc 14. To adjust the wheel 12 these screws are loosened, and screw-bolts 32, 33 arranged in a slot 23 in the disk 14 are adjusted in jaws 24, 25 in the disk 14 and so move a block 30 secured to the wheel 12 relatively to the sides of the aperture 23 in the disk 14. When the block 30 is adjusted to bring the wheel 12 to the desired position, it is made secure in this position by the set-screws 21.

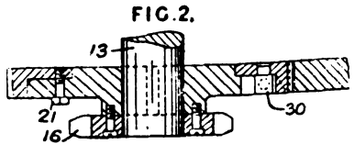
Delivery Mechanism.

An invention patented by Messrs. E. T. Morris and T. J. Mills, relates to beaters for delivery mechanism of printing machines which are particularly applicable to machines for printing periodicals, magazines, etc., and serve to beat the folded sheets or pages in the unprinted margin as they are propelled forward by rollers so as to strike them on to supports or shelves on an endless belt, and consists in mounting each beater with its actuating gear on a bracket tapped



to engage a screw to enable the distance between each pair of beaters to be adjusted. The beaters A, A^1, with their actuating gears L, and driving gears B, B^1, are carried in brackets D, D^1, slidable on a rod E and adjustable by means of screws F, F^1, turned by hand-wheels G, G^1. Preferably the two screws are arranged co-axially, the screw F being in the form of a sleeve, and the other screw F^1 mounted within it. The driving gears B, B^1 have bosses K, K^1, engaging forks on the brackets, and are connected to their driving shaft C by means of keys engaging keyways H, H^1 in said shaft so as to be free for sliding movement thereon.

Folding Paper.



A British patent has been granted to Mr. R. Braunstein covering a device for folding paper. Sheets are fed from a magazine as 13

FIG.1.

and forwarded to crimping rollers, if desired, by a pair of positively driven rollers 1, 2, mounted in adjustable bearings and arranged just below an aperture 15 in the magazine, the rollers 1, 2 being fitted with rubber, etc., gripping surfaces 7, 8 adapted to effect the extraction of the bottom sheet, which is passed

FIG.2.

between the rollers in a folded condition. Strips of plastic material 9, 10 may be arranged in front of the surfaces 7, 8, so as to press the fold and make it permanent. The rollers 1, 2 may be formed hollow, and suction devices used in connection therewith so that the separation of the sheets is assisted by suction. The rollers in this case are similar to those described in Specification 165,396.

MESSRS. ROBERT STEWART AND CO., Glasgow, papermakers' agents, have prepared some interesting "points for paper merchants," and issued them in a stiff cardboard case the size of a railway season ticket. Tables are given showing how to convert kilogrammes and grammes into lbs., centimetres to inches, and a system of pricing thin wrappings. In addition there are some "home truths" for paper buyers, such as "a ton in stock is worth two at the mill any day."

EXPERIENCE is a dead loss if you cannot sell it for more than it cost.

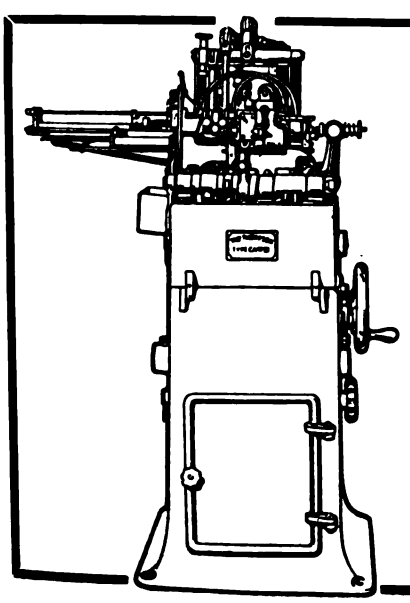
News-Print Production.

Furnishing April statistics of the production of news-print, the News-Print Service Bureau, N.Y., says: The 50 reporting companies produced 210,632 tons and shipped 211,884 tons during April. Shipments exceeded production by 1,252 tons. Production figures include 1,146 tons of hanging, of which 156 tons were made in Canada.

The average daily production of news-print paper by mills reporting for April amounted to 99·5 per cent. of the average daily output during the three months of greatest production in 1922, with allowances for changes in machines.

Comparing production during the first four months of 1923 with that of the same period of 1922, the United States companies reporting show an increase of 56,167 tons, or 14 per cent., the Canadian companies an increase of 69,419 tons, or 21 per cent., and the total of all the companies reporting shows an increase of 125,586 tons, or 18 per cent.



Stocks during April decreased 826 tons at mill points in the United States and 301 tons in Canada. Total stocks of all reporting mills amounted to 28,398 tons, or 1,127 tons less on April 30th than on March 31st. These stocks were equivalent to 3·4 days' average production, about 23 per cent. of which was at British Columbia mills that ship by water.

British Paper in Australia.

The Development of Preference.

There is every prospect that the market for British paper in Australia will continue to develop favourably. Mr. A. Simpson, the British Trade Commissioner at Sydney, who is now in this country, brings tidings of the friendly feeling that exists in the Commonwealth towards goods made in the Mother Country.

An important feature of Australia is that it is an expanding market, and as the population continues to grow so demand will increase.

Requirements in paper and stationery lines in that part of the world are on a large scale. At present there is a big demand for all classes of paper, such as news-print, wrapping papers and stationery. Price, quality and appearance, of course, play a great part in securing custom.

Attractiveness.

There is plenty of business to be had in the Commonwealth; but in order to obtain their share British exporters require to provide goods which attract the eye. In the way of compendiums and boxed stationery, our manufacturers need to exercise rather more taste and variety. Just now ready sale is obtained for stationery which is attractively prepared. Moreover, competitors not only issue this class of goods in ornate form, but designs and style are constantly being changed. "Joyous and attractive-looking pictures" is how Mr. Simpson describes the boxed and other stationery which so readily captivates the buyers in the big stores at Melbourne, Sydney and elsewhere. English firms, it is true, send out some good-class stationery, but apparently they do not devote to this side of salesmanship the same attention as their competitors. Naturally the materials have to combine reasonable value for money, and the Americans seemingly attain the necessary selling value, although it may be that the products of the United Kingdom excel in certain directions. If our paper houses would indulge in a greater amount of variety and ingenuity in the get-up of their goods it is believed they would secure an even larger share of the trade than they do.

News-Print Preference.

Mr. Simpson recalls that there was a good deal of excitement in the fight for the £3 a ton preference for British news-print. That concession has, as we know, resulted in considerable benefit to British papermakers.

But all round the feeling of the Australians towards Britain is of the warmest character. There is a strong sentimental leaning towards the manufactures of the United Kingdom, subject, of course, to price, quality and service.

Local Manufacture.

Our readers are fairly familiar with the efforts of the Commonwealth to produce pulp and paper from local materials. There are many difficulties to be overcome, of which perhaps the most serious is transport. On an experimental scale paper from many materials has been made; but the question of commercial application is another important problem.

There is a great desire on the part of Australians to make themselves industrially independent, and their great natural resources will be developed as quickly as possible. Their future status as regards paper and pulp manufacture is not yet clear, though in the matter of boards much progress has been made. In the meantime there is a steadily growing market for British paper goods, and with the assistance of the preference and the natural results that follow the closest attention should be given to the requirements of the Commonwealth.

Changing Paper Demand.

The situation of the French paper industry is not as bad as represented. There is little demand for some kinds of paper, and the quantities manufactured are considerably more than in 1914. A serious matter is that mills are being built or altered to make paper for which there will be no demand in five or six years. It must be noted that kraft packing paper will surpass all in the future.

Exports of British Paper, etc.

Stationers' Social Society.

Mr. M. Relph holds the Woollacott Challenge Cup for the year 1923. This cup, it will be remembered, was presented to the Stationers' Social Society by Mr. A. Woollacott for annual competition among its bowling members. It was won in 1921 by Mr. James H. Senior and in 1922 by Mr. Harry J. Burholt.

As on the two previous occasions, this year's competition was held on the green (Cumberland turf) of the Maldon Bowling Club, through the kindness of Mr. A. Woollacott and Mr. Harry Ling, who are members of the club. The entrants were Messrs. M. Relph, W. Penman, W. S. Muir, H. J. Burholt, J. H. Senior, W. H. Day, F. C. Dryer, Geo. Michie, T. Hastings, E. M. Fells, P. S. Porteous, A. Woollacott, H. Ling, F. E. Cooper and A. Bishop.

Although the weather in the morning was by no means cheerful, it improved in the afternoon and the conditions were quite enjoyable. The various rounds were keenly contested, the handicapping giving every satisfaction. In the semi-final, Mr. Ling beat Mr. Woollacott and Mr. Relph achieved a victory over Mr. Senior. The final attracted close attention, it being recognised that Mr. Relph (who received three) had a very formidable opponent in Mr. Ling (scratch). Mr. Relph, however, played with a consistency that he had maintained throughout the day, and the game showed very little margin from commencement to finish, when even the decisive shot (which gave Mr. Relph 21 against Mr. Ling's 17) was subject to measurement.

As winner Mr. Relph received the congratulations of Mr. Ling and all present, and was carried off the green amidst great enthusiasm. During the day he played with success against Mr. Penman, a bowler of some renown, and he also had to meet the two previous cup-holders, Mr. Senior and Mr. Burholt.

Mr. Chas. Davidson (the president of the

VOLUME 92. NUMBER 26. [REGISTERED AS A NEWSPAPER.] LONDON: JUNE 28, 1923. EVERY THURSDAY. PRICE TWOPENCE.

Price Cutting: Its Effect on Our Craft.

A Subject of Vital Importance Discussed by a Prominent Printer and Member of the Federation Costing Committee.

Major W. H. Barrell, managing director of the firm of W. H. Barrell, Ltd., of Portsmouth, was, as previously reported, one of the speakers at the recent Cost Congress of the Federation of Master Printers, when he delivered an address on "Price Cutting: Its Effect on Our Craft." Our readers will doubtless be interested to read in fuller form than were we able to publish at the time his suggestive treatment of this important subject.

In his introductory remarks Major Barrell said that he spoke as representing a smaller house and as a practical printer of over 25 years' experience in every branch of the trade. He then continued substantially as follows:—

Causes of Price Cutting.

Why should cutting exist? I can only think of *three* reasons: Ignorance—of true cost and operation times; panic—during a slack period; hatred (in degrees)—of one's brother craftsman. If it is ignorance then the sooner master printers get down to understanding their costs and the checking of operation times, the better for the craft in general and themselves in particular. The study and use of the Costing System is the "tonic" for this. It is said that 90 per cent. of businesses started in these days fail eventually, it is fairly obvious it is mainly on account of bad service and management and bad finance.

After this there are, I am sorry to say, the two more prevalent reasons — panic and hatred—both deadly diseases which can be cured, but better still be prevented.

Hatred—in all its stages from incipient jealousy to what practically becomes robbery with violence, can only be overcome and is in many cases stamped out by knowing our brother craftsman by social intercourse and continual efforts on the part of everyone of the "converted" to show a real sporting effort to elevate the trade in all their dealings both with the consumers of print and their competitors and get his brother tradesmen into the Federation. There is so much work to go round, and as a rule enough for everyone. If you want more, create it, don't steal it. I would suggest the strenuous efforts used to lose money by "cutting-in" would be more usefully employed in the thinking out of doing better work and rendering better service to the public at a fair and legitimate profit, and so gaining the respect of the whole community.

Panic is caused by loss of balance, loss of confidence in one's position and ignorance of costing. Panic is the periodical result of fear, fearing that the worst is going to happen—and if one fears and "funks" long enough and hard enough, it *will* happen. I would suggest that some fear to know their costs.

Major W. H. Barrell.

A Royal Cure-All.

Thank heavens we have a royal cure-all for this dreadful nervous disorder. It is a "patent" in every sense of the word, and is the proprietary medium—with ever-increasing sales—of our Master Printers' Federation. Unlike other patent remedies, its constituents are worth and cost more than the wrappers or the advertising. It is claimed, and I have personally proved, that this Costing System is simplicity itself: with a turnover of about £2,000 it takes about ¼ hour a day, or with a turnover of £20,000 a lady clerk 2½ hours a day. It is invaluable in checking of leakages, in determining the necessary staff and the necessary equipment for one's works, in utilising floor space to the full and so getting full value for buildings, rent, rates, taxes, light, heat, etc., in the collecting of work and customers that are profitable and dropping those who are a loss, in collecting debts in court, in arranging works and work to avoid lost time and effort, and in the organisation and the correct distribution of all one's overhead or general expenses, whether a machine, worker or period. Slack time, the "bug" or "germ" of panic, provides the very much needed opportunity in every printing office to have a jolly good clear up; it is an opportunity for reorganisation and preparation to do good work at a profit.

Is our craft to become a bondage of slavery or are we to be regarded as a commercial unit? The whole thing in my humble opinion depends upon "business building." Let us mind our p.'s and q's, that is, the making and keeping of Permanent Profitable Patrons by rendering a real good service and giving satisfaction in Quality and Quantity, thereby keeping our craft clean, dignified and respected.

Where Cutting Leads.

It stands to reason that if by cutting we reduce our reserves, or worse still, never build up reserves, then eventually our type, machines, buildings, etc., will become so worn and inefficient that we shall be unable to produce good work. Our craft will suffer by adverse criticism of the public, especially those of good taste who desire good work and know what they want, and will pay for it. We shall lose their esteem and regard, and it naturally follows we shall be pushed lower and lower; our product will deteriorate and certainly will not demand a fair market value, and it naturally follows we should not be able to pay good wages and eventually we should become a degraded fifth-rate power in commerce and be unable to attract decently educated and keen lads to learn our trades. I would suggest that we as master printers are responsible for the future of the lads that come into our trade and of the trade in general. Should we be so foolish as to let cutting get a strangle-hold, we should eventually have our trade back into that ghastly pre-war condition during which a dustman or labourer received a higher wage than an experienced machinist, compositor or even an artist in our craft.

If we regard price-cutting from the public' point of view, when the buyer of our product gets the top price double the bottom price, he must think some of us are robbers and the others fools, both thoughts are certainly negative and certainly cause a bad impression. Whereas if buyers of print can feel assured of fair treatment, that is, a consistent figure whether they ask for estimates or not, the growing habit of price-getting and price-cutting and lowering of quality will be to a large extent eliminated. It is the extraordinary difference in printers' quotations that encourages this habit which is a nuisance to the buyer and a bore and unremunerative portion of our businesses to-day.

What Cost Finding Does.

I will try to express the mental process and result of real cost finding and charging. Once a man has had the pleasure of seeing a profit on most of his departments in any one week, he will never be satisfied until he ensures that profit weekly and brings all his departments to the same level. To a losing department he will devote particular attention until he has brought it into line, either by cutting out work that is a loss or altering his rates till at least his figures balance. The job on his charging out sheet which shows a loss will be a danger signal and you may rest assured that the loss will not be repeated. The printer from his figures will turn that "jelly stick" into a real "backbone" and be able to meet his customers with confidence and a clear conscience. A little personal experience is worth worlds of precept. I know during the past and at present I am unwillingly forcing work at a loss upon a non-costing competitor; and what will be the result? That is only to be disclosed by the balance sheet (after, say, about 15 months' trading); whereas with the Costing System and weekly returns the loss could have been checked before it became great. From this and other experiences that we must all have we can see that the "non-coster" has a lot to fear from the business-like costing printers—the business builders of our craft.

Finally I would contend that a costing house which will not sell the product of its staff at a loss, gains and holds the respect, confidence and most loyal support of its employees, and, after all, that should be every master printer's earnest desire.

Spicers, Limited.

Retirement of Sir Albert Spicer.

An important change in the directorate of Spicers, Ltd., is announced. Last week Sir Albert Spicer retired from the chairmanship, although he remains a director.

Mr. H. G. Spicer was appointed chairman in succession to Sir Albert, and Sir Howard Spicer, deputy-chairman.

At the meeting of the directors on the 20th inst. Mr. H. G. Spicer presented Sir Albert Spicer with a silver cigar-box, bearing the inscription: "Presented to the Right Honourable Sir Albert Spicer, Bt., by his fellow-directors as a mark of their affection and esteem, on the occasion of his retiring from the chairmanship of Spicers, Ltd., June, 1923."

The Tudor Athletic Club (Spicers, Ltd.), held their first sports meeting since the war at the Club Grounds, Burbage-road, Herne Hill, on the 16th. After the presentation of prizes by Lady Spicer, Mr. Groves (manager, Birmingham House), and Mr. T. K. Mackenzie (senior London representative) presented to Sir Albert Spicer, on behalf of the staffs, an easy chair, silver salver and tea and coffee service, as a memento of the kindness and consideration they had received at his hands.

Sir Albert, who was received with enthusiasm and the singing of "For he's a jolly good fellow," said that after 58 years of business he felt retiring from the chairmanship of the board, but he still hoped as an ordinary director to continue his interest in the welfare of all.

Lady Spicer, to whom a travelling case was presented by the staff, joined with Sir Albert in thanking all for their gifts.

The whole of the staffs at home joined in the presentation, and cablegrams from abroad were received from Mr. P. W. May (Bangkok), Mr. E. A. Spoor (Buenos Aires), Mr. W. Jones (Toronto), Mr. A. Herbert (Johannesburg), Mr. J. C. Gates (on his way to this country from Australia), Mr. W. W. Bruce (on his way home from New Zealand), and Mr. H. A. B. Sinclair (on behalf of the Australian staffs of Spicers and Detmold, Ltd.).

Printers' Managers in Conference.

P. M. and O. A. United Gathering at Leicester.

Cordiality and enthusiasm marked the 1923 United Gathering of the Printers' Managers and Overseers Association, held at Leicester on Saturday the 16th inst. There was a good representation of all parts of the country to participate in the private delegate meeting in the morning, and in the evening about 120 people sat down to dinner, when, with representatives of the master printers as their guests, the members, accompanied by their ladies, had a most enjoyable time at the Grand Hotel. Mr. J. W. Campbell, president of the Leicester Centre, occupied the chair.

Councillor W. B. Wykes.

Councillor W. B. Wykes, who appeared in his official capacity as vice-president of the Master Printers' Federation, proposed the toast of the P. M. and O. A. He frankly admitted that the master printers were frequently jealous of the educational enterprise of the Association, a movement in which they themselves were somewhat lacking. Management was a question that should come before capital and labour, and he welcomed the suggestion that the Association should have a seat on the Conciliation Committee.

Mr. S. M. Bateman, president of the P. M. and O. A., responded, and pointed out that the Association was doing all it could towards bettering and enlarging the knowledge of those engaged in the printing trade. The membership had increased to 1,400, and it was hoped in a few years to increase it to 2,500. Their first object would then be to make the Association independent of all disputes. The members had no influence in fermenting or settling disputes, and they should not be brought into them. (Applause.)

Mr. W. G. Hubbard, vice-president of the Leicester centre, proposed "The Delegates." Leicester was the smallest and youngest centre, but he believed it was a growing organism.

Several delegates replied.

Presentation to Treasurer.

Mr. C. Durston, who had been treasurer of the Association for 17½ years, was presented with a gold watch, suitably inscribed, in recognition of his services, and as a mark of esteem. A gift was also made to Mrs. Durston.

Mr. W. H. Crane gave the toast of the visitors and ladies.

Mr. C. H. Chandler (editor of the *Leicester Mail*) associated with Mr. Berryman (London), in reciprocating the welcome, said he saw no earthly reason why the masters should be jealous. The employers depended upon the overseers; they were the backbone of every printing establishment in the country. (Applause.)

Councillor E. Grimsley, speaking to the toast of the "Printing Trade," urged that more value should be placed upon the question of apprentices. It was one of the fundamentals of industry, and the foundation of all success.

Preserve Craftsmanship.

Craftsmen in the printing offices should have the opportunity of giving expression to their souls and ideals. He was pleased that the industry, unlike that of the boots and shoes and hosiery, was not becoming intensely mechanical and so losing its individuality.

Mr. H. Weston, president of the Leicester M.P.A., in responding, acknowledged that the P. M. and O. A. was an educative organisation, but he declined to accept the inference that the master printers were such "small men" in the industry.

Mr. E. W. Whittle, general secretary P. M. and O. A., honoured, and Mr. J. W. Campbell (president) acknowledged "The Leicester Centre," while Mr. J. H. Linthwaite gave the toast of the artistes.

Mr. A. E. Astor arranged a musical programme, which added considerably to the pleasure of the gathering.

MR. G. H. WILKINSON, C.C., has for the second year in succession won the Billiards Tournament of the City Livery Club. By a coincidence he had to meet in the final his opponent of last year—Mr. H. J. Brancker. After a very close and hard contest, Mr. Wilkinson won the match, which was played at the Regent Billiard Saloon, by 52 points in 500 up.

A BOOK entitled "The Story of the Typewriter," issued by the Herkimer County Historical Society, New York, commemorates the fiftieth anniversary of the invention and manufacture of the first practical typewriting machine (that of C. L. Sholes, who was a printer and publisher) and forms a useful history of typewriting development.

THE *Monotype Recorder* continues its very interesting practice of having each number designed and produced by a different printer. This neat house journal illustrates convincingly the capabilities of monotype composition, whilst at the same time it contains reading matter of interest to monotype users and to printers generally.

ARE Process Block Prices too High?

American and British Charges Compared.

In view of the many complaints by printers and others in respect of the present high prices of process blocks, an article in the official organ of the Federation of Master Process Engravers, the *Process Monthly*, sets out to investigate this question. By way of proving that block prices in this country are *not* too high a comparison is made with the prices charged in the United States, where, it is stated, conditions are as stable as they are here.

The comparison of prices is as follows:—

Line Work.

	English min. 14in. £ s. d.	American 14in. surface measure. £ s. d.
Ordinary	0 7 0	0 14 0
Fine copy	0 9 4	1 1 0
Ben day tint	0 2 4	0 7 0
Colour plates	0 9 4	1 1 0

Half Tone.

100 Screen or over on Copper.

Squared	0 12 10	1 1 8
Circles and Ovals ...	0 15 2	1 7 1
Vignette or cut to shape	0 18 8	1 12 6

Less than 100 Screens on Zinc.

	60 line screen. s. d.	85 line screen. s. d.	£ s. d.
Square	8 2	9 4	0 16 3
Circles and Ovals	9 4	10 6	1 0 4
Vignette or cut out	11 8	12 10	1 4 4

Colour.

	minimum 30in. square. £ s. d.	cut-out. £. s. d.	30in. surface measurement, both styles same price. £ s. d.
2 colour ...	4 10 0	5 5 0	11 11 8
3-colour ...	8 5 0	9 15 0	17 7 7
4-colour ...	10 2 6	11 12 6	23 4 2

American Charges for Extras.

Over and above these prices the American process engraver charges extra if copy is not suitable for simple straightforward work. If reduced beyond one-sixth the charge is double. Extra negatives stripped in to tone work call for doubled block rates, in addition to the cost of stripping in. Painting in of colours on tone plates is charged extra and reversing black to white or *vice versa* calls for another 50 per cent. additional. Fine etching a half-tone plate is an extra, and so is the making of blocks from wash drawings or airbrushed originals. If a customer wants anything finer than 150 screen his price is increased 25 per cent. If he wants more than one proof and one file proof, he has to pay 10d. each for all beyond these two, and if the size is larger than 11in. by 7in. he has to pay a still higher price. For colour work extra proofs beyond three are 2s. 8d. each. The minimum time charge for any kind of work is half an hour.

Further reference to this question of prices will be found elsewhere in this issue.

IN the Birmingham Stipendiary's Court last week a number of appliances, stated to be capable of producing "perfect imitations" of Treasury notes, were shown, when Thomas Palmer, aged 62, of Lichfield-road, was committed for trial on a charge of being in possession of dies for the making of £1 and 10s. Treasury notes.

TUCK'S POST CARD COMPETITION.—Following the announcement, which we recorded last week, of the distribution to twenty hospitals of the prize-money—amounting to £1,000—allocated according to the votes of competitors in the £5,000 prize competition organised by Messrs. Raphael Tuck and Sons, Ltd., the firm has now issued the long list of awards for the best window displays in connection with the competition. The first prize of £50 goes to Messrs. R. Johnson and Co., Ltd., 411, Lord-street, Stockport. Second prizes of £25 each are won by Messrs. W. H. Smith and Son, 19-21, Corporation-street, Birmingham, and Gledsdale Bros., 64, Deansgate, Bolton. The winners of third prizes of £15 each are Messrs. G. H. Sillick, 2, Bedford-street, Plymouth; Musk and Son, 129, Beulah-road, Thornton Heath; G. H. Harris, 41, St. Giles'-street, Northampton; and S. and A. Janes, The Arcade, Okehampton.

Trade Notes.

WINDING-UP PETITION.—Art and Humour Publishing Co., Ltd.; petition of J. T. Scrivens, trading as Premier Engraving Co. To be heard in Birmingham on July 19th.

THE week's partnerships dissolved include those between E. Bamford and A. McL. Paterson, printers, at Glasshouse-street, Salford, under the style of A. M. Paterson and Co., and between A. Banham and J. F. Whyte, printers and stationers, 23, Gerrard-street, London, under the style of Banham and Whyte.

ST. CLEMENTS PRESS DEVELOPMENT.—The St. Clements Press, Ltd., whose day and night printing service is so well known, have opened a branch at 62, Moorgate, for the convenience of their City clients, under the personal supervision of Mr. Fred G. Hart, director and sales manager. A private wire has been installed connecting the City House with their vast resources at Portugal street, Kingsway.

JORDAN DIAMOND JUBILEE.—Messrs. Jordan and Sons, Ltd., of Chancery-lane, registration agents, printers and publishers, are this year celebrating the diamond jubilee of the business, which was founded in 1863. During the later decades of the last century a small business in which Mr. Richard Jordan had been joined by his brother, Mr. William Jordan, developed into the well-known company registration and publishing business. Mr. William Jordan is now in his 84th year and still chairman of the company. On Saturday last the directors invited the staffs of the head office, branches and printing works to commemorate the sixtieth birthday of the firm by an outing and dinner at Brighton In recognition of the fact that the long and faithful service of many members of the staff has largely contributed to the success of the business, the directors presented gold watches to twelve members of the staff who had served twenty years and over.

SOUTH-WESTERN MASTER PRINTERS. — A meeting was held at Torquay on Friday last, at which Mr. H. V. Chappell, the energetic president of the South-Western Alliance of the Federation of Master Printers opened his campaign for the strengthening of the organisation. Mr. G. F. Jones, J.P. (the Alliance secretary), and Messrs. H. Pollard and W. Townsend of Exeter were also present. Mr. A. Langley (vice-president of the L.M.P.A.) accompanied Mr. A. E. Goodwin from London and they both spoke on the work of the Federation and various problems that concern it. It was decided to form a South and East Devon Association, linking up Torquay, Paignton, Newton Abbot and Exeter. Representatives from all these districts were present and undertook to do everything possible to support the organisation.

A VERDICT in her favour, with £500 damages, was awarded to Miss Hetty King, the well-known male impersonator, in the Court of Session at Edinburgh on Thursday, in her action against the proprietors of the *Weekly Record*, Glasgow, for alleged slander. She objected to a first-person interview with her published by the *Weekly Record*. She denied that she was interviewed on behalf of that journal.

THE offices of the *Daily Herald* have been more than once visited by detectives of the City Police, following the publication of a photograph of the submarine X1, launched at Chatham. The warrant was issued under the Official Secrets Act, empowering search for the original and all copies of the photograph.

THE price of *The Times* Literary Supplement has been reduced from 6d. to 3d.

AFTER a brief illness the death has occurred at his residence, South Shields, of Mr. Robert Anthony Simpson, head of the firm of Messrs. R. Simpson and Sons, printers, of that town. Mr. Simpson who was 62 years of age, became associated with the business when it was established by his late father. For a considerable number of years it has been carried on under his personal direction.

MR. DOUGLAS J. GANT, who died with startling suddenness after being at work up to Saturday week, was buried on Tuesday at Forest Hill Cemetery. He was the first secretary of the Lloyd Memorial Home and one of the oldest members of the Typographical Association.

Striking testimony as to the value of the "British and Colonial Printer and Stationer":

"Please put us on your Subscription List for an additional 2 copies of the *British and Colonial Printer and Stationer*. We find the contents of such help and guidance that we feel that our representatives should each have a copy regularly each week."

M. Co.

The Printers' Charity Sports.

A GREAT DAY AT STAMFORD BRIDGE.

Favoured with glorious summer weather, the 28th annual meeting of the Printing and Allied Trades Charity Sports Association, held on Saturday afternoon at Stamford Bridge grounds, was an outstanding success, there being a good attendance, with a large number of entries for numerous well contested events. Many famous athletes were among the competitors, and the programme provided an excellent afternoon's sport.

This year's president of the Association is Mr. W. Lints Smith, general manager of *The Times*. Both he and Mrs. Lints Smith were present, and the latter presented the prizes to the successful competitors. A pleasing interlude on the arrival of the president and his wife was the presentation by little Miss Irene Jewell of a handsome bouquet to Mrs. Lints Smith.

Others present included Messrs. J. Heddle (*Daily Sketch*), A. V. Sheppard (*Daily Mirror*), S. Long (*Daily Express*), A. H. Mundey (Fry's Metal Foundry), W. M. Bower (Linotype and Machinery), Guy Pollock, Gordon Robbins, C. G. Mullock, Alfred W. Paul (Shackell Edwards), Percy Squire, Fred P. Phillips, L. F. T. Day, H. W. Bye, T. E. Naylor (London Society of Compositors), W. C. Warren (Electrotypers and Stereotypers), H. W. Clark (Electrotypers and Stereotypers), B. T. Embleton (Machine Managers), G. Larcey (Printing and Paper Workers), and J. Keep (Natsopa).

Among the trade events the competition for the Fryotype Championship Shield was especially well contested. Waterlow and Sons did well, P. North winning the 880 yds. race and R. S. Chisholm being second in the one mile race. P. F. Goodyer, who won the one mile last year, again proved successful. F. G. Easto, of *The Times*, was not challenged seriously in the one mile walk, for he led throughout the race, winning in the end by 25 yds.

The firm of Waterlow and Sons had also the distinction of winning the Linotype Shield.

Several open scratch races were included with a view to discovering likely entrants for the forthcoming Olympic games. In the 100 yds. open G. E. Varney (Poly H.) won by inches in 10 2-5 sec. H. J. Storey (Highgate H.) ran a well-judged race in the mile to win in 4 min. 31 2-5 sec.

Two jumping championships of the London Business Houses A.S.A. were also included. The high jump was taken by L. Earlie. H. Nozieres, the Swiss and Surrey A.C. sprinter, won the long jump, he being the only competitor to beat 20 ft.

In her heat of the 100 yds. scratch ladies' race Miss N. Callebaut (London Olympiades) was timed to do 11 3-5 sec., which equals the world's record made by Miss Lines. Miss Callebaut won the final by 2 yds. in 12 sec.

The following is a list of the principal events:—

Trade Events.

One Mile Walk, Fryotype Championship.—F. G. Easto, *The Times*, 1; F. Creasey, Mansell, Hunt, and Gatty, 2; W. Symonds, Cassell and Co., 3. Won by 25 yds. Time, 7 min. 13 1-5 sec.

880 Yds. Race, Fryotype Championship.—P. North, Waterlow and Sons, 1; G. Dodkins, Amalgamated Press, 2; F. J. Walker, W. H. Smith and Son, 3. Won by 1 yd. Time, 2 min. 7 sec.

100 Yds. Race, Fryotype Championship.—J. A. Slough, Temple Press, 1; A. Dowie, H.M. Stationery Office, Harrow, 2; R. Young, Wyman and Sons, 3. Won by 2 yds. Time, 11 sec.

One Mile Race Fryotype Championship—P. F. Goodyer, Cassell and Co., 1; R. S. Chisholm, Waterlow and Sons, 2; T. Goodman, H.M. Stationery Office, Harrow, 3. Won by 30 yds. Time, 4 min. 45 4-5 sec.

Fryotype Championship.—Waterlow and Sons, 5 points, 1; Cassell and Co., 4, 2; Temple Press, *Times*, and H.M.S.O., Harrow, tied for third place with 3 points.

Trade Societies' One Mile Relay Race.—National Union of Printers, Bookbinders, etc., "A" team, 1; London Society of Compositors, 2. Won easily. Time, 3 min. 59 sec.

The winning team was P. F. Goodyer, J. A. Slough, W. Commons, and J. H. Fletcher.

80 Yds. Veterans' Handicap.—A. J. Dudley, Printing and P., 1; J. McLean, Highgate Harriers, 2; J. W. Walford, *Daily Mirror*, 3. Won by 1 yd. Time, 12 sec.

Tug-of-War, Walker-Usher Cup.—Caribonum beat Vauxhall Printing Works (holders) by two pulls to one.

One Mile Novelty Relay.—*Times* A.A., T. G. Riley, F. G. Easto and W. E. Sandford, 1; Waterlow and Sons, E. Taylor, S. Dyer, and P. Smith, 2. Won by 150 yds. Time, 3 min. 49 4-5 sec.

Two Mile Team Race, Linotype Cup.—W. W. Philp, Waterlow's, 1; R. S. Chisholm, Waterlow's, 2; J. Logan, Waterlow's, 3. Won by a foot. Time, 11 min. 5 sec. Team placings: Waterlow and Sons (holders), 6 points, 1; *Times* A.A., 17, 2.

Open Events.

One Lap Bicycle Race.—J. E. Sibbit, Manchester Wheelers, 1; E. J. Kerridge, Catford Cycling Club, 2; W. G. Stewart, Kentish Wheelers, 3. Won by three lengths. Time, 35 sec.

Three Laps Bicycle Race.—J. E. Sibbit, Manchester Wheelers, 1; S. G. Owen, Belle Vue Cycling Club, 2; J. C. Knight, Wolverton Athletic Club, 3. Won by one length. Time, 2 min. 9 4-5 sec.

One Mile Race.—H. J. Storey, Highgate Harriers, 1; A. J. Lock, Kent Athletic Club, 2; J. Groves, Highgate Harriers, 3. Won by 25 yds. Time, 4 min. 31 2-5 sec.

Two Miles Walk Team Race.—Belgrave Harriers, 7 points, 1; Surrey Athletic Club, 19 points, 2; Herne Hill Harriers, 30 points, 3. The winning team was: A. Spendlove, R. McMullen, E. Reeve and W. J. Hawker.

Three Miles Team Race.—Herne Hill Harriers, 15 points, 1; Surrey Athletic Club "A" Team, 18 points, 2; Surrey Athletic Club "B" Team, 28 points, 3.

100 Yards Ladies' Race.—Miss N. Callebaut, London Olympiads Athletic Club, 1; Miss E. W. Edwards, London Olympiads Athletic Club, 2; Miss S. Stone, Kensington Athletic Club, 3. Won by 3 yds. Time, 12 sec.

880 Yards Ladies' Relay Race.—London Olympiads Athletic Club "A" Team, 1; London Olympiads Athletic Club "B" Team, 2; Highgate Harriers "A" Team, 3. The winning team was Miss Callebaut, Miss Batt, Miss Willis and Miss Trickey.

High Jump (London Business Houses A.S.A. Championship).—L. Earlie, Britannic House, 5 ft. 2⅛ in., 1; C. H. Hoare, Forbanks S.C., and G. B. Ward, Cuaco H., tied at 5 ft. 2 in. Hoare won the toss for second place.

Long Jump (London Business Houses A.S.A. Championship).—H. Nozieres, Lyons, A.C., 20 ft. 8 in., 1; L. Earlie, Britannic House, 19 ft. 7½ in., 2; H. S. Borer, Gas Light and Coke Co., 19 ft. 2 in., 3.

At the close of the prize-giving, Mr. H. F. Parker, the general hon. secretary of the Printing and Allied Trades Sports Association, made a short speech from the grand stand calling for a hearty vote of thanks to Mr. and Mrs. Lints Smith, and especially to Mrs. Lints Smith, who had had a busy afternoon in presenting the prizes which were very numerous. The vote being cordially carried, Mr. Lints Smith, on behalf of his wife and himself, made fitting response. In the course of his remarks he referred to the meeting as a very enjoyable one, and congratulated the Association's officials and the many others whose hard work had helped to make the gathering such a great success.

First aid service was made available by the attendance of Detachment No. 68 (City of London) Division ("Printers' Own") St. John Ambulance Brigade. Apart from minor calls made upon them, their aid had unfortunately to be requisitioned on account of a bicycle accident in the second heat of the 440 yards scratch cycle race. C. Alden (Kentish Wheelers) crashed, and H. G. Rundel (Belle Vue), who was close on his heels, was unable to avoid following suit, the former suffering injury to his thigh. Mr. Rundel escaped with minor damages, and although bandaged had the pluck to take part very creditably in later racing.

The London Society of Compositors Band, conducted by Mr. W. Amery, did good service by contributing musical selections throughout the afternoon.

These sports are, of course, not only an important sporting fixture, but also constitute a notable event in the cause of charity. The organising of so big a meeting involves an immense amount of work on the part of those principally concerned, and the thanks of the trade are due to those responsible. Mr. W. F. Parker acted as general organiser of the whole affair, and collected all the money (about £150) for the prizes. Mr. W. C. Jewell, the hon. secretary of the athletic section, had a big task in organising the many events. Mr. A. Oddy, hon. treasurer, worked hard in collecting donations, as did also Messrs. J. Knight and W. J. Ailen, whilst Messrs. F. J. Walker and G. Smith were successful in selling no less than 1,700 sixpenny programmes. As a result of the exertions of these and many other good workers, printing trade charities will benefit considerably, the whole of the gate money being devoted to this worthy end.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The June meeting of the Association was held on Tuesday of last week, the 19th inst., at St. Bride Institute, Bride-lane, E.C.4. In the unavoidable absence of the president and vice-president Mr. J. Parker was voted to the chair. There was a rather small attendance of members, and the business before the meeting was not of a lengthy or important nature. The present meeting was the last one of the season, and the Association's activities will be resumed on September 18th.

The minutes of the previous meeting having been read and confirmed, several items of correspondence were considered. Among these there was a letter from Mr. J. Hall, of the Monometer Manufacturing Co., Ltd., who promised a lecture at an early date on the subject of metal melting.

The chairman next invited any of the members to give impressions of the visit the Association had made to the Central London Printing School.

Mr. W. M. Forsyth, speaking from the point of view of the foundry, thought the equipment was very good for a school of that kind. It was quite up-to-date, and gave a boy a first-class chance of learning his trade.

Other speakers expressed similar views, and the general opinion was one of satisfaction that the electrotyping and stereotyping section of the trade was well represented at the school.

After the discussion of a new rule bearing on the question of overtime, the meeting was brought to a close.

Necrology

Mr. Ernest Smith.

The funeral took place on Saturday, June 23rd, at Potters Bar Cemetery, of Mr. Ernest Smith, manager of the printing department of Odhams Press, Ltd. As a tribute to the high esteem in which he was held, not only was Mr. J. S. Elias, the managing director, present, but every department of the firm was represented and a number of beautiful wreaths were sent.

In the early days of his career, Mr. Smith was associated with Mr. E. W. Southwood, who in 1887 founded Southwood, Smith and Co. In 1899, this latter firm was incorporated with Odhams Press, Ltd., where Mr. Smith held a position of great responsibility and by his many fine qualities earned the respect and admiration of his many fellow-workers.

Mr. Smith was taken ill quite recently and succumbed on June 20th after an unsuccessful operation. He was most affectionately regarded and is deeply mourned by his very many friends at Odhams Press, Ltd.

THE Canadian Weekly Newspaper Association, in session at Halifax, decided to hold the fifth annual convention in London in June next year, followed by a month's tour of the British Isles.

Government Contracts.

Contracts were placed with the following firms during April:—

Crown Agents.

PRINTING MACHINE.—Harrold and Sons, Ltd., London, E.C.

PAPER.—C. Baker and Co., London, E.C.

STATIONERY.—Waterlow and Sons, Ltd., London, E.C.

H.M. Stationery Office.

PRINTING, RULING, BINDING, ETC.

Scotland—Group 16 (1923), Census of Scotland, Vol. II.—T. and A. Constable, Ltd., Edinburgh.

Group 226 (1923)—Type—Lithography, excluding reducing and ruling.—Lesty and Co. (1922), Ltd., London, W.C.

2,500 Covers for Range Tables.—J. Adams, London, E.C.

700 O.A.P. Supplementary Registers, No. 3.—Willmott and Sons, Ltd., London, E.C.

Bdg. 4,000 cps. "Naval Magazine and Explosive Regulations."—Dow and Lester, Ltd, London, E.C.

1,000 Books A.B. 228.—Drake, Driver and Leaver, Ltd., London, E.C.

2,000 W./T. Log Books, Form 398; 15,000 Books, Army Form E. 549; 260,000 Index Cards, A.F.N. 7,506a and N. 7,506a; 20,000 Books, T.E. 1,030; 3,000 Books, P. 1,037; 10,000 Books, T.E. 1,140; 15,000 Ships Rotation Books "C," No. 234.—Waterlow and Sons, Ltd., London, E.C.

1,000 Postal Order Counter Record Book, No. 1,083; 600 Books, "Certs. Recd.," I.R. T. 227.—McCorquodale and Co., Ltd., Wolverton.

8,000,000 Accounts, Form 455.—J. Worrall, Ltd., Oldham.

1,750,000 Form T. 23; 40,000 Army Form O. 1,854.—W. P. Griffith and Sons, Ltd., London, E.C.

52,000 Sunshine Cards.—J. Corah and Sons, Loughborough.

6,000,000 Form P. 430.—The McAra Printing Co., Ltd., London, E.C.

8,990,000 Record Cards; 6,250,000 Telegram Form A.—H.M.S.O. Press, Harrow.

750,000 Form 410/A.G.D.—Howard and Jones, Ltd., Ltd., London, E.C.

10,000 Naval Savings Bank Pass Books.—Brendon and Sons, Ltd., Plymouth.

55,000 Book Med. 40 (revised).—H. Blacklock and Co., Ltd., Manchester.

2,000,000 Telegram Form "A."—*Midland Daily Tribune*, Nuneaton.

2,175 Assessment Books Q. 6.—T. Shackleton and Co., Manchester.

2,150 Assessment Books Q. 4.—G. Hargreaves, Manchester.

317 Books I.R. (N.I) T.R. 19.—Wm. Finlay and Sons, Belfast.

40,000 Ships Blue Book C. No. 233, C. and E. T. 294.—Bemrose and Sons, Ltd., Derby.

4,200,000 Pink Cards; 2,100,000 Green Cards; 1,000,000 Form P. 576.—J. Robertson and Co., Ltd., St. Annes on-Sea.

ENVELOPES.—Pirie, Appleton and Co., Ltd., London, W.C.

PAPER OF VARIOUS DESCRIPTIONS.—J. Baldwin and Sons, Ltd., Birmingham; W. and R. Balston, Ltd., Maidstone; J. Brown and Co., Ltd., Penicuik; Caldwell's Paper Mill Co., Ltd., Inverkeithing; A. Cowan and Sons, Ltd., London, E.C.; R. Craig and Sons, Ltd., Caldercruix; J. Cropper and Co., Ltd., Kendal; J. Dickinson and Co., Ltd., Hemel Hempstead; Ford Paper Works (1923), Ltd., Hylton; Golden Valley Paper Mills, Ltd., Bittern; Hollingworth and Co., Maidstone; Imperial Paper Mills Co., Ltd., Gravesend, Inveresk Paper Mills Co., Ltd., Musselburgh; S. Situations Vacant.

PRINTERS' REPRESENTATIVE, with connection in London, required by firm in the North doing First-class Colour and Half-Tone Work.—Write, in confidence, with full particulars, Box 14188.

SUBSCRIPTION CANVASSER wanted for old-established Printing Trade Journal.—Reply, in first place, to Box 14162.

TYPOGRAPHICAL ARTIST WANTED, who has a knowledge of Up-to-Date Typesetting and the ability to create attractive Lay-outs for Catalogues, Folders and all classes of Letterpress Printing; salary will be in accordance with ability, and applicants should give full particulars of past experience and be able to produce specimens of their work.—Apply by letter only to Secretary, Sir Joseph Causton and Sons, Ltd., 9, Eastcheap, London, E.C.3. 14193

Situations Wanted.

CUTTER (Binders and Printers), good all-round man, requires permanency; T.U. rates.—Box 14168.

EXPERIENCED PRINTERS' FOREWOMAN, disengaged owing to depression of trade; highest references can be given.—Miss Levy, St. Mary's Press Printers, Brown's Buildings, St. Mary Axe, E.C. 14190

FOLDING BOXES.—L'PRESS PRINTING OVERSEER, 20 years' experience in producing Folding and Cigarette Boxes in Three and Four Colours; all classes of Machines, Stereo, Electro, Colour Making; situation abroad not objected to.—Write P., Box 14186.

GOLD BLOCKER seeks sit., 14 years experience in Account and Letterpress Work; Blocks or Type; ex. ref.—Write, Box 14156.

JOURNALIST, home, foreign experience, seeks Position; preferably descriptive or political writer.—Apply, Box 14175.

LADY COST CLERK (Printer's), 8 years exp., knowledge Bookkeeping, Shorthand, Typewriting; mod. salary; London.—Box 14158.

LETTERPRESS MACHINE-ROOM FOREMAN, disengaged; 20 years' reference.—F. Flat 16, 238, Gt. College-street, Kentish Town, London, N.W.1. 14191

LETTERPRESS MINDER, used to First-class class Work on most types of machines.—W. M., 10, St. John's-road, Upper Holloway, N.19. 14192

LETTERPRESS OVERSEER requires sit.; used to modern machines, half-tone, colour, catalogue, weekly, etc.; 7 years' ref.—J.F., 62, Cornwall-road, Westbourne Park, W. 14184

LETTERPRESS WORKING FOREMAN requires sit.; used to modern machines, platens, etc.; any class work; best ref.—C.D., 66, Ritchings-avenue, E.17. 14185

MANAGER-OVERSEER seeks position (Jobbing and News); good organiser, estimator and buyer.—Box 14159.

THE PRINTERS' PROVIDENT ASSOCIATION, 39-40, Shoe-lane, E.C.4, is able to supply ALL CLASSES of EFFICIENT LABOUR for the Printing and Allied Trades at short notice; no charge.—Phone, Holborn 527. 14180

THOROUGHLY Experienced PRINTERS' FOREWOMAN, shortly disengaged; very energetic and reliable.—R. L., 3A, Brondesbury-road, Kilburn, N.W. 14189

YOUTH desires Apprenticeship either in Litho or Letterpress Machining, or in Stereo Foundry; intelligent; C.C.S. scholar.—G. A. Rutherford, 39, Moselle-avenue, N.22. 14126

Tenders.

The British Empire Exhibition (1924) Incorporated.

TENDERS for the provision of
(a) OFFICIAL PUBLICATIONS (i.e., Catalogues, Guide, Souvenirs, Daily Programme, etc.)
(b) PICTURE POST CARDS, LETTER CARDS, etc.

The above-named Association is prepared to receive Tenders for the Provision of Catalogues, Programmes and Other Printed Matter in connection with the British Empire Exhibition to be held at Wembley during 1924. Tenders may be submitted for (a) and/or (b) as set forth above.

Forms of tender may be obtained at the offices of the Association on payment of a fee of 10s. which payment will not be returned. Tenders must be delivered in sealed envelopes not later than July 7th, addressed as below and marked "Publications Tender."

The British Empire Exhibition
(1924) Incorporated,
16, Grosvenor Gardens,
London, S.W.1. 14187

Agencies.

CONTINENTAL firm of Paper and Printing Machinery Manufacturers desires to GET INTO TOUCH with British firm who could handle their production in England, either as Sole Agents or Merchants buying for own account.—Reply, giving full particulars, to Box 14160.

Machinery for Sale.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Business for Sale.

PARIS.

TO BE SOLD AT ONCE, on account of leaving, PRINTING WORKS, in full working order, including Colour Luxe Typo, 14 Modern Machines, with possession of Cottage, three floors, total area 1,200 square metres. Very interesting Real Estate Business. Very low price. Offers invited.—Write at once to Gutenberg Publicité, 56, Rue de Paradis, Paris. 14194

Visit to the Nickeloid Co., Ltd.

The students of the London School of Printing have been fortunate in having the privilege of being shown over the works of the Nickeloid Co., Ltd., where they inspected what is generally agreed to be one of the most up-to-date photo-engraving and duplicate plate making plants in the United Kingdom.

The tour round the works was highly appreciated by the students, the operations of making original and line and half-tone blocks and their duplication being demonstrated under workshop conditions, which is of the greatest educational importance to those who will probably in the near future be issuing orders for reproductions.

The party was fortunate in having as guide the general manager, Mr. J. A. Corey, who, by his practical experience and enthusiasm for the craft made the visit a memorable one.

A number of similar visits to engineering works, paper mills, printing ink factories and up-to-date printing offices have taken place and others are being arranged. Such are not the least important factors of the function of an up-to-date technical school.

Improved Book Production Standards.

THE exhibition of 20th-century printed books, which is being held this month at the Galleries of the Medici Society, Ltd., 7, Grafton-street, Bond-street, W.1, provides a tonic for anyone who is pessimistic as to the standards of present-day book printing. One finds there over 400 books neatly displayed, their pages open under glass, and an examination of the typographic design of these examples gives evidence how widespread is now the application of good modern principles relating to choice of types, proportion of margins and general make-up of book pages. Due largely to the influence of the Kelmscott and other private presses, and to the missionary work of a few evangelists of better printing, the general standard of book page design has shown marked improvement in the last two decades and has been reflected also in America and elsewhere. The exhibition, in the organising of which the Medici Society has had the help of Mr. Stanley Morison, of the Pelican Press and Cloister Press, consists mainly of British examples but includes also a number from America and from the Continent of Europe, Continental book producers being represented chiefly by Germany and France. Amongst British printeries whose products are shown may be mentioned the Ashendene Press, Cambridge University Press, Chiswick Press, Cloister Press, Curwen Press, Doves Press, Oxford University Press, Pelican Press, Riccardi Press and the Dolphin Press. These and many others show admirable work, most of which has been done under commercial conditions and so goes to prove that a high standard of design is not necessarily accompanied by extravagant prices. It is interesting to note that the German exhibits indicate the growing use of the Latin character in preference to Fraktur, a movement which the publishing house known as Insel-Verlag has done much to popularise by numerous attractive publications. Exhibitions of this kind are worthy of every encouragement, as they provide an unrivalled opportunity of studying the possibilities of type faces and the principles of typographic design, and must therefore tend to improve the general standards of book production.

* * *

The Price of Process Blocks.

THE comparative figures printed on another page whereby the British Federation of Master Process Engravers point out the apparent higher cost of process blocks in the United States will not, we think, suffice to convince British printers that the prices they pay to engravers for process blocks are entirely proof against objection. In the first place a bare comparison of figures is not quite fair, because of the high status of prices generally in America. For the printer to compare the price of British blocks with that of blocks from the Continent is ruled out as unfair on the score of depreciated exchange, yet is it not also unfair to make comparison in a direction where there is comparative appreciation? That blocks at present prices are expensive things to the printer and that the prices are prohibitive for many purposes, cannot be denied. We have no wish to charge our process friends with profiteering. So far as we have heard of investigations made into the question, no case has established out for unreasonable profits on the part of the block-maker. Is it not possible that the root of the trouble is to be found in the high overhead expenses to which the process people point as a reason for high prices? The way to reduce the incidence of overhead expenses is to increase turnover, and to eliminate as far as possible all idle plant, idle space and idle time. When the slump in trade was at its worst there might have been justification for the argument that only those who were absolutely compelled to use blocks used them at all and a reduction of prices would cause no adequate increase of consumption. To-day the slump is on the wane and doors are opening in every direction to an expansion of business. Is it not time to reduce the price of blocks and simultaneously to advertise their wider use, trusting that the increased business resulting will benefit block-maker and block-buyer alike?

Personal.

VISCOUNT BURNHAM is expected to attend the coming of age celebration in connection with the Municipal College of Technology, Manchester, which will be held on July 5th.

MR. ROBERT DONALD has retired from the direction of the *Referee*, and will not be responsible for the policy of the paper after the next issue.

MR. VALENTINE KNAPP, the late president of the Newspaper Society, has written a graceful letter of acknowledgment of the presentation which was made to him at the recent annual dinner of the Newspaper Society in recognition of his three years' presidency, the longest term of office held by any president in the history of the Society. "While the generosity of the subscribers," he says, "greatly outmeasures such services as I have been privileged to render, the evidence thus afforded of the appreciation of my fellow members of the Society, than which nothing was more to be desired, is an intense gratification."

MR. RONALD FIELD, who has recently relinquished the position of commercial manager of the *Birkenhead Advertiser*, was on Wednesday of last week presented by the firm and employees with a tea and coffee service.

MANY congratulations have been received by Mr. W. G. Sercombe, of Clevedon, on his celebrating the 50th anniversary of his entry into the printing trade. He was apprenticed to the late Richard Corner, of the *Wellington (Somerset) Weekly News* on June 9th, 1873.

A World Bureau of Master Printers.

Address by Mr. R. A. AUSTEN-LEIGH,

Before the International Congress of Master Printers, Gothenburg, Sweden, June 4th—6th.

The various discussions to which we have listened during this Congress will have brought home to us the fact that we master printers are all faced with much the same problems. Questions of wages, hours, apprentices, costing systems, standardisation, relations with kindred trades, etc., perplex all of us, and I beg leave to suggest that in these days when labour is organising itself more and more on international lines, employers will be wise to keep rather more in touch with what is going on in countries other than their own.

Limitations of editorial space, ignorance of foreign languages, pressure of business, combine to-day to prevent most of us keeping ourselves *au courant* with the movements abroad. From time to time the national daily press may inform us that a strike or lock-out has taken place among printers in some country, but the chances are that it forgets to give us the less sensational news of how and when the trouble is brought to an end. To take an example, at the end of last year the British *Times* gave considerable prominence for two days to the fact that work had ceased in most of the printing offices of the Netherlands, but although I searched diligently I never discovered how the strike terminated. Indeed I only learnt the result by writing to the secretary of the Dutch Master Printers, who very courteously found time to give me all the information I desired. Now the success of the Dutch Master Printers in increasing the number of hours worked in the factory from 44 to 47 was a notable fact, and it cannot be disputed that possession of that information might have proved a strong point for employers in other countries to use, if they happened at the time to be faced with a demand for a reduction in the number of working hours.

Other points that are clearly of importance for master printers to know are the success that attends attempts to procure standardisation, say, of sizes of paper; the modifications and improvements that may be introduced from time to time in standard costing systems; the ratios existing in various countries of apprentices to journeymen; the means of combating unemployment, or providing superannuation pay; the progress towards a system of paying employees according to the size of their families; the establishment of a uniform price list; the methods of disciplining the members of a master printers' association; and of concluding agreements with trade unions. But it is scarcely necessary to prolong the list.

If I can carry my audience so far with me as to admit the advantage of keeping ourselves and our organisations abreast of what is going on in the printing world at large, I think I may proceed to consider the best and the most economical means of doing this.

In the first place some central clearing house will need to be set up, where monthly reports can be sent from the various countries, which agree to be interested in such a Bureau. The official in charge of the Bureau will need to be a linguist, and to be possessed of sufficient journalistic ability and printing knowledge to be able to decide what matter is sufficiently interesting to be included in the Bulletin that he will issue. Again the Bulletin will need to be issued in at least three different languages—English, French and German. I do not think that the work need occupy more than one man's time, and an economical plan would be for the secretary of the Bureau to have his quarters in the offices of some federation of master printers. I hesitate to suggest in which, but I think the lack of linguistic ability will certainly rule out the British Federation. Possibly the Swedish Federation would be willing to set the seal on the services which it has rendered the printing craft in organising this International Conference, by undertaking the formation of such a Bureau. The expenses of the Bureau would naturally be met by subscriptions from the participating countries, and I cannot imagine that the expenses thus divided would be great, or that they would be large enough to deter the various national organisations from eagerly subscribing to an institution from which they would be bound to derive such considerable advantages. The Bulletin should be issued monthly, and at a date which should ensure it arriving in most European countries in time for extracts to be available for reproduction in the national organs which presumably are published at the beginning of each month. It would probably consist at first mainly of actual news, but by degrees would include specimens of fresh faces of type, accounts of new machinery and new methods of printing. National agreements with employees would be given in full. In short, the Bulletin could be made of such vital interest to all master printers that if advertisements were taken enough of these should be obtainable to make the Bulletin self-supporting. At the beginning I would suggest that a questionnaire be issued to the various national federations asking for information.

The replies would be correlated and issued in the Bulletin.

I have endeavoured in the above paper to give a brief idea of the services which I suggest an International Bureau might render. I am not suggesting it with any idea that we need one in order to crush by some united opposition the legitimate aspirations of our employees, but mainly that we may all be placed in the best position to defend our genuine interests.

An Important Wages Principle.

Engineers in Newspaper Printing Offices.

An important principle has been established by the Industrial Court which sat recently to adjudicate upon a case placed before it by certain newspaper offices in Manchester and the Electrical Trades Union and Amalgamated Engineering Union. The employers asked for a reduction of 20s. per week during the current year in the rate of wages of men employed as engineers, fitters and turners, electrical fitters and electrical assistants in certain morning and evening newspaper offices in Manchester. The terms of reference of the Court were to decide whether this reduction or any portion thereof should apply.

The Award, which has now been issued, states that immediately prior to the outbreak of war the fitters and turners in the Manchester newspaper offices were paid a rate of 42s. per week (excepting some autoplate mechanics who were paid a higher rate), the normal working week at that time being 48 hours. During the war the wages of the men concerned were advanced concurrently with engineering trade wages. Subsequently, however, the men secured advances of wages, in common with other classes of workpeople in the printing industry, substantially higher than the advances given in the engineering trades.

In summarising the case of the employers, the Award states: A reduction of 20s. per week has been, or is being, made in the wages of practically all employees in the printing industry with a lesser reduction in the case of certain small classes of workpeople. A reduction of 20s. per week in the case of the men now concerned would, in the case of skilled men, leave the minimum day work rate at £4 17s. 6d. per week as compared with the compositors' present rate of £3 17s. 6d. per week, although their pre-war rate was only 4s. per week above the compositors' rate. In the outside engineering trade a reduction of 32s. 4d. per week has been made in the Manchester district from the maximum of 1920, giving a present district engineering rate of 56s. per week, so that, whereas the rate of fitters and turners in the Manchester newspaper offices was pre-war 3s. per week above the district engineering rate, it is now 61s. 9d. above. The information of the employers is that, outside London and Manchester, the wages of the engineers in the newspaper offices bear a close relationship to the district engineering rate. It was shown by the employers that a substantial amount of work on which the men concerned are now employed could be put out to contract at a much reduced cost.

On behalf of the men, it was contended that as the number of men involved was small, any saving that would result from the proposed reduction would be insignificant compared with the profits being made, and that the men, being "pivotal" men, were entitled to their existing rates.

The final clause of the Award, which is signed by Sir William W. MacKenzie, Mr. J. McKie Bryce and Mr. D. C. Cummings, deals with the particular principle involved in the arbitration as follows: "The claim before the Court involves among other questions the problem of the regulation of wages of a class of workpeople engaged in an industry other than that in which the class of labour concerned is in the main employed, and comprising a section comparatively small in numbers, but of vital importance, in the industry in which they are engaged. Even before the war the engineers in the newspaper printing offices in Manchester had somewhat different rates of wages and working conditions from those obtaining in the engineering industry, and although, during the war, the wages movements in the engineering trade governed the wages of the men concerned, after the war the influence of the newspaper industry reasserted itself on their wages and conditions which have since been regulated in accordance with the requirements and position of the newspaper industry. The view of the Court is that the position in the newspaper industry should be the main consideration in the determination of the present claim, and in this respect due regard should be had to the level of wages of the principal classes of workpeople in this industry, including the fact that practically the whole of the workpeople in the industry have accepted a reduction of wages of 20s. per week. The Court, having regard to all the facts, are of opinion that a claim has been made out for a reduction of the wages of the men concerned. The Court do not, however, find that the employers have substantiated their claim for the full amount of the reduction claimed, and in all the circumstances the Court decide that the rates of wages of the men concerned shall be reduced by 7s. 6d. per week on and after the first day in June, 1923, a further 5s. per week on and after the first pay day in September, 1923, and a further 5s. per week on and after the first pay day in December, 1923."

"SLOGGER" FEEDER MANUFACTURERS.—To prevent any misapprehension as to the makers of the "Slogger" feeder—the company having been referred to in our issue of June 14th as H. T. Backhouse, Ltd.—it should be mentioned that the registered title of this company is H. T. B., Ltd. The sole manufacturing and selling rights of "Slogger" feeders were acquired by Messrs. H. T. B., Ltd., in December, 1921, and the company possesses well-equipped works, with special plant and tools, making possible the production of sheet pile feeders which are absolutely reliable, fully automatic and entirely British in design and production.

The Bookbinder

Difficulties in the Bindery.

By B. J. SANSOM

(Bookbinding Instructor, London School of Printing).

During the last few months we have heard a great deal about bookbinding being the "Cinderella" of the printing and kindred trades, and from these remarks we must assume that the binder is called upon either to rectify mistakes or to produce work in an unreasonable length of time and yet make that work look presentable for the customer.

Unfortunately the binder is the last person to receive the work, and jobs which have been delayed in other departments have to be speeded up and rushed through their final stages without giving the bindery work a chance to dry, and as paste and glue are extensively used in binding, it is important that each stage of the work should become thoroughly set before proceeding with another.

Avoiding "Rush" Binding.

Sometimes difficulties of this kind cannot be helped, but when their occurrence is continuous it becomes both annoying and embarrassing. This could certainly have been avoided by means of a better understanding between the heads of the warehouse, composing, printing, ruling and binding departments.

It is not to be expected that those in control of these departments are acquainted with the detailed technicalities or stages through which the work passes, sufficiently to enable them to gauge the time that it occupies in each branch of the business. American text books advise the different departments to consult the binder before proceeding with the work, whilst in this country in a well organised firm where there is a planning department, it is a well known fact that fewer mistakes occur, and better results are attained. We are living in an age when competition is keen, and increased production is desired, but without modern methods, combined with a perfect understanding of technical details by which mistakes can be obviated, we shall have continually increased costs, or—should an estimate be given for the work—less profits.

Importance of Paper.

Bookbinders rarely consider it necessary to have a knowledge of paper, in spite of the fact that it forms the foundation of printing, ruling and binding; and in the selecting of paper, insufficient attention is paid to see that it is suitable for the purpose required. Nothing is more unsightly than the leaves of a bound book, when opened, standing up. Such a fault might have been rectified had the weight, size and substance of the paper been taken into consideration. Instances of this kind are due either to the fact that the paper contains too much bulk, or that the grain is in the wrong direction. Thick, soft-sized papers are quite unsuitable for reading book work, also the thickness of the paper should be regulated by the size of the book. In reading book work, where printing papers are generally used, mostly in 8vo and 4to sizes, paper should be chosen which is in keeping with the size, and which will lie flat and not have to be held down with the hands by the reader whilst reading. By the use of too thick paper the life of the book is seriously impaired, owing to the fact that invariably the reader forces it open, and by so doing breaks either the paper or the back in order to make it comfortable for himself.

Repeat orders for cloth case work, usually wanted in a hurry, occasionally come into the bindery and the overseer in the department is informed that it is wanted at an early date. Owing to the short time at his disposal he is obliged to have the cases made before the paper is in the works. Naturally he expects the paper to be the same weight and substance as before, and after the books are sewn, it is observed that the groove in the cases is too small because the paper is heavier in weight or contains too much bulk. Haphazard methods have ruined many businesses and the binder is not exempt. If there is any slight variation in weight or bulk, the binder should be informed of the fact, or failing that, keep to the rule of making up a dummy copy out of the paper which is to be used for the job.

Value of Sample Sheet.

Many errors are seen after the work has been printed, which could have been avoided had a sheet of the job when making ready for printing been folded up into a section, and comments made by the binding-room overseer. He is well acquainted with the various stages of binding, through which a book passes and should be able to see ahead. If the margins are out of truth or he cannot get the correct fall of the pages, he can ear-mark them for the printer, and the trouble will be avoided. At the present time, however, the sheets are printed and sent into the bindery and the binder is expected to humour the pages so as to make the book presentable, which is at times an impossibility. It is common knowledge that sheets at times are printed on one side, and the alignment of pages is incorrect and when the other side is printed a lead is taken out of the forme to make the print fall. Practices of this kind should be discontinued, for they only create a lot of trouble during the early stages of binding. A forme may be badly imposed, or the alignment of the pages may be altered by the printer, when locking-up the forme on the printing machine. It does not follow, because a sheet is backed up and registers perfectly with the other side, that the pages when folded will fall in correct alignment with each other. The printer when ready for running the job off, should put a rule over it or, failing that, a good method of procedure is, after a sheet is printed on one side, to place it on the table of the guillotine cutting machine, the lay edge up to the back gauge, also observing that the print is in the centre of the sheet, then by the use of the side of the machine, and extending the back gauge, the sheets can be drawn in towards the front table and the platen pulled down over it. If the edge of the platen is in correct alignment with the top lines of print on each full page, and the side lines of print are square with the lay edges, also the imposition of the forme is perfectly true so that the margins are equally divided, then this should be sufficient indication that it will fold up correctly.

Folding Troubles.

The duty of the folder, whether hand or machine, is to get the top and side lines of print on a page to register with the corresponding page, and if the sheets are indifferently printed some will fall, others will not, which certainly looks very unsightly after the book is bound. The position of the pages for book work, whether type or illustration, can only be regulated by having a clear knowledge of the method of obtaining the correct setting for folding to print, of untrimmed and standard cut sizes for book work, of marginal room, sizes of paper, and of the correct alignment from the printer's lay edges.

A difficulty which very often presents itself, and is generally seen after binding, is that a leaf or a number of leaves do not clear in the cutting at the bottom of the book. One must take into consideration that the binder works to standard cut sizes, and at times cannot reduce the book under the size. Should it have to be gilt edged, it is impossible for the gilder to gild the shorter leaves, for with this work it is necessary to scrape the edges quite level, otherwise it is impossible to get good results. The printer, when working off a few reams which are shorter than the others, may not consider this to be of much importance, and does not trouble about the effect produced later, but the binder looks at the matter in quite a different direction, as it may prevent his getting good results or may entail additional time.

Size and Squareness of Paper.

The printer may get his print in the centre of the sheet, so that the margins are equal at the top and bottom and side edges, yet the paper may vary in size. One must not take it for granted that paper which comes into the warehouse from the merchant or mill is always square or of the standard size. Invariably the compositor, when making up his forme, relies on the standard size of the sheet of the paper to be used for the job, and should the reams vary in size, when they are folded up it can be seen that some of the pages are shorter in length and not clear in the cutting at the tail after the book is sewn.

Notes and News.

Trade Slow, but Outlook Healthy.

According to general report and opinion there is no improvement in the bookbinding industry to record. The unemployment figures also show no material development. June and July are customarily slack months in the trade, but when all months are slack it is merely a question of degree. The publishers' binders are perhaps experiencing a more difficult period than commercial bookbinders and we hear of much idle machinery. Even the summer season is failing us and there is so much less purchase and reading of books. Despite the present displeasing condition of affairs it must still be admitted that compared against last year there is a big improvement and that progress is actually being made. The outlook is healthier and the fact that many of the larger houses are spending money on new machinery points to a definite hopefulness and confidence in the full recovery of trade. Incidentally it is becoming clear that labour-saving machinery is going to be the fundamental factor in future competition.

Importance of Machinery.

The managements of some of the smaller

Digitized by Google

and old-established binderies would find solid food for long thought if they would make a habit of studying current machinery catalogues and trade press advertisements. They would masticate the food more thoroughly and with less internal disturbance by paving the way for digestion with a few visits to the more thoroughly equipped binding establishments. The time is ripe for a representative exhibition of printing and binding machinery. In these days it behoves the manufacturer of any sort of goods or material to have a close acquaintance with every type of machine introduced to save labour or improve efficiency in the production thereof.

Papers for Bookbinders.

A very useful booklet demonstrating papers for bookbinders has been issued by Messrs. Ibbotsons, Ltd, of 64, Goswell-road, London, E.C 1, who are also agents for Duxeen. Practically the whole range of every day patterns and colourings for end papers, linings, box covers and pattern card making is included, and there is a wealth of suggestion for the bookbinder who has realised that he is not tied to marble paper.

Fibre Boards.

From A/B No. 1 Tingstad, of Gothenburg, we have received a few specimens of portmanteau fibre boards, demonstrating an extremely high standard of quality. Various textures are shown, including grained cowhide, pigskin and crocodile, and several colourings are included which make up a very close approximation to the real thing. The great advantages of fibre board suit and attaché cases are low price and light weight, twin concessions which have operated to create a new field and a heavy demand.

The Market for Leather.

The leather market is hardening, according to experienced opinion. When the tanner speaks of a firm or rising market he is invariably speaking with special reference to pelts, kips and what we take to be his raw materials. As we understand it there is very keen competition for the better class skins, and America, *i.e.*, the United States, usually sets the buying pace. Sheepskins have the greatest value to the maker of bookbinding leathers. They also make the best appeal to the U.S.A. commissionaries whose instructions are to secure all the best material available. In America they rear cattle and very few sheep, hence their dependence on foreign sources of supply. The quality of sheepskins varies very considerably according to source of origin, *i.e.*, so far as their leather-making propensity is concerned. • Argentine sheep are reared for meat and the skins are affected by insect bites. Merino sheep are reared for wool and the skins are ridged. New Zealand sheep yield ideal skins and for these the competition is keenest. Incidentally, the difference in cost of leathers prepared from sheepskins will be the better appreciated when the conditions under which the skins are secured are better understood. The U.S.A. buyers go all out for New Zealand pelts and run the price up. If our buyers cannot face the market level they must take the inferior skins. The reputation of the best tanners will not permit this lowering of standard; hence the necessity for a selling price which will compensate cost.

Leather Prices.

One manufacturer advises that owing to the very heavy advance in the price of pelts, basils will be increased to 9d. per sq. ft. on July 1st. Good quality stout red glazed basils cannot possibly be sold at a lower figure than this. Thin basils and inferior stout skins for half and quarter binding are available at 7d. per sq. ft. Roller basils can be secured at 6½d. and 7d. per ft., skivers range from 5d. to 6½d. per ft., rough morocco best are 1s. 2d., seconds 10d., rough calf best is 1s. 2d, seconds 10d.; fair calf best is 1s. 9d., seconds 1s. 6d.; pig skins are plentiful and cheap, the first grade running out at 1s. 3d. and seconds at 1s. per ft.; Anglo hides have advanced to 1s. 10d. and 2s. per sq. ft. for selected skins, with seconds at 1s. 6d. per ft.

Prices of Boards.

Strawboards have eased very appreciably. Thin unlined boards are to-day quoted £9 5s. per ton delivered. For 1½ lb. and upwards the extra charge is £1 5s. per ton. Foreign glazed leather boards No. 1 grade are listed at £19 5s. per ton; No. 2 grade £18 10s. per ton; white wood pulp boards remain firm at £18 per ton for 60's to 350's, £19 per ton for 450's and £20 per ton for 600's; English machine-made blockboards are hard at £28 per ton and hand-made boards are quoted at £38.

Good Work by Bookbinding Students

L.C.C. Central School Exhibition.

This year's exhibition of students' work at the London County Council Central School of Arts and Crafts, Southampton-row, included, as usual, much to attract and charm the lover of beautiful books. The various exhibits in bookbinding, printing, lettering, illumination, book illustration, etc., were largely the work of young students who have not yet entered, or have just entered, the several trades for which they are being trained, and this fact gave added interest and merit to the examples shown.

In regard to the bookbinding exhibits, a thing this year that somewhat limited the variety of work available for exhibition was the fact that the students had turned out many copies of the Rolls of Service for the different L.C.C. schools, all well bound in leather with gold lettering and tooling. This, though providing excellent practice in straightforward work, did not allow scope for that creative originality which it is the School's desire to foster. Nevertheless, there was an excellent range of bindings to be seen, the work including even such things as inlaid picture covers in leather, and bindings showing a panel of wood with leather borders and back. Whilst there was plenty of neatly executed work ordinary in style, there were also happy indications of the individual freedom which students are encouraged to exercise.

At the Central School stress is laid upon the art side of bookbinding, and, whilst students receive training that will fit them for entering the trade, they are encouraged to look upon bookbinding as a branch of creative art. In this they are helped by the fact that all branches of book production are carried out on the premises, the different departments being in close touch with one another, and a worker in any one department being able to watch all departments co-operating to the designing and producing of the book beautiful. Thus some of the books bound consist of illuminated manuscripts written by students of the School—perhaps by the same students that bind them—whilst others are composed and printed in the School's printing department, wood engravings and wood blocks, for illustrations, initials and the like being also cut by students. Bookbinding workers are taught to cut their own tools as well as to use them, and facilities are also provided for learning metal block making. The student, therefore, gets an insight into the art of book production as a whole, and the training given and the examples set before the learner are such that he can hardly fail to imbibe a love of finely-made books and a high criterion of craftsmanship which should make him a better worker than he would otherwise be in whatever department of book production he may later be employed.

A feature of the exhibits which could not escape the eye of the bookbinder was the presence amongst the books of an example or two of half-bound covers with marbled paper of unusual style. Such papers are rarely met with in this country, though there has been a small amount of importation of a similar kind from France. We learn that the School has of late been experimenting in marbling, and has evolved a method in which oil colours are used instead of water colours, and which is found to be simple and comparatively clean, whilst giving pleasing depths of colour in the finished sheet. Conventional designs are avoided, and students are encouraged to create designs of their own by the use of simple natural forms.

The wise printer, however much he may admire some of the work of the private presses, will not wish to have any particular style—such, for instance, as that of books emanating from the Doves Press—set up as the only ideal, to which all classes of printing should tend to approximate. Nor will the bookbinder, if he have sufficient imagination and breadth of vision, believe that there is only one right cult among the many that claim the notice of the student of bookbinding design. It would seem, however, that there can hardly be a better way of training the young craftsman than to centre his thoughts upon a few of the choicest obtainable examples of work in his own craft—bookbinding, printing, or whatever it may be—and at the same time allow him freedom to use the general principles these embody as a base upon which to build the expressions of his own individuality. Such, we gather, is the method of the Central School of Arts and Crafts, and it seems to be abundantly justified in its results, both by the dignified restraint produced by adherence to principle and by the equally pleasing variety arising from the play of individual creative faculty.

Rules for Hand Bookbinding.

An Apprentice School Summary.

One of the best bookbinding establishments of the United States is that of the R. R. Donnelley and Sons Company of Chicago.

In order that the Donnelley binding should be the best binding that can be done, an apprentice school has been established in the bindery under the direction of expert binders' of years' experience. There boys are taught to bind books according to the finest standards of earlier periods. This includes hand sewing of books, gilding and the hand tooling of fine designs on leather covers, making inlays and doing all the other things that make the craft of the bookbinder so interesting. There is technical interest in a placard that is framed and hung on the wall of the bindery school room to serve as a guide in all of the work done in the school. It reads as follows:—

"The following rules are to apply on all books to be bound at a cost of six dollars or over.

"Sheetwork: All sheets broken at the back should be protected with a guard. All single leaves or plates should be guarded around adjoining sections. Folded plates should be guarded with linen at the folds. No pasting on is permitted. End papers should not be pasted on, but be made with a linen, vellum or leather joining and sewn on as a section.

"Sewing should be flexible around the bands and all along the section, preferably by kettle stitching.

"All books must be sewn on five cords. All five cords must be laced into the boards. The cords should not be reduced or frayed, but places should be sunk into the boards to receive the cords.

"Boards should be the best block millboard, and edges in the joint should be slightly rounded. Two boards should be made together for large books.

"Headbands are to be worked on cord, vellum or cat gut, set with strong paper or leather and to be frequently tied down.

"Lining up. if necessary, should be done with leather, linen or vellum; always leather if a large book.

"Full gilt books should be trimmed and gilt before sewing.

"Only English acid free leather should be used. Leather should be pared down very little. Naturally, thin skins, such as calf, should be used on small books; heavy skins, such as pig skins, on large books. Leather should not be made too wet and stretched tightly in forwarding, as it is strained too much on contraction, leaving a small margin of strength.

"French joints should be universally used.

"Hollow backs should be used only in exceptional cases.

"Less expensive or ordinary library editions may be sewed in the way practised in other binderies, but never less than four cords which must be laced in. A better way in case customer does require bands, is to sew on four linen tapes which should be pasted off on waste end paper. The end paper should be cut off about two inches from the back and inserted with tapes in the centre of board previously split. The board should be left about one-eight inch from the back of the book to form a French joint."

That good work is turned out by the students trained under these auspices is evidenced by the fact that the world-famed Grolier Club of New York has accepted with strong expressions of appreciation a handsome leather-bound copy of the recent special Franklin Bi-Centennial Number of the *American Printer*, bound at the Donnelley school and presented to the Club.

MESSRS. ERNEST HALTON, Walter Throughton and Truscott Smith, of the new firm of publishers, Messrs. Halton and Truscott Smith, Ltd, 57, Haymarket, London, S.W.1, were all until lately on the staff of the *Studio*, and have had many years' experience of book production.

DIVIDENDS AND REPORTS.

ODHAM'S PRESS.—Profit of Odhams Press for 1922, was £71,145, plus £21,117 brought in, making £92,262. Dividends on 10 per cent. A Preference shares to March 31st, 1922, absorbed £5,493, on 8 per cent. preference shares to June 30th, 1922, £18,931, and provision for taxation £9,299, leaving £58,538. Directors have written off consideration paid to former editor of *John Bull* £25,000, and on account of special development and advertising expenditure £22,738, leaving to be carried forward £10,800. Report states that in view of unusual position with which the company was faced during latter half of 1922 directors decided that only prudent course was to postpone payment of preference dividends until audited accounts should be available. While they have every confidence in the future, they have decided to defer payment of dividends. Need of additional working capital to meet extension of business has necessitated issue of debentures. Agreement was consequently entered into with Investment Registry, Ltd., under which that company purchased £250,000 debentures, a further £72,200 being held as security against balance of indebtedness of company to vendor of Borough Billposting Company.

"YORKSHIRE EVENING NEWS." — Final dividends at 10 per cent. per annum on preferred ordinary shares. The latter receive, in addition, a bonus of 2s. per share, making the ordinary dividend 25 per cent. for the year. A balance of £7,811 is carried forward, against £2,592 brought in.

RAPHAEL TUCK AND SONS.—Dividend at the rate of 5¼ per cent. per annum on the preference shares for half-year ending June 30th.

NEW COMPANIES.

PAKWEL, LTD.—Capital £2,000, in £1 shares (1,000 10 per cent. cumulative preference and participating); to acquire the business and assets of F. Shepherd and Co., Ltd., from the liquidator thereof, and to carry on the business of manufacturers of paper of all kinds and articles made from paper and pulp, including cardboard, millboards and other boards, manufacturers of and dealers in fancy goods, etc. Private company. Subscribers: Ernest Wheldon and Hans Brandenburg. Registered office: 33-4, Bennett-street, Stamford street, S.E.1.

B. T. ORD, LTD.—Capital £4,000, in £1 shares; to adopt an agreement with B. T. Ord, and to carry on the business of stationers, printers, papermakers, paper bag and account book-makers, box-makers, etc. Private company. Subscribers: B. T. Ord and J. C. Fortune.

WILLIAMS AND GOLDTHORP, LTD.—Capital £2,000, in £1 shares; to acquire the business of a waste paper, pulp and general merchant now carried on by S. G. Williams at 53, Gracechurch-street, E.C. Private company. First directors: S. G. Williams and C. A. Goldthorp. Registered office: 53, Gracechurch-street, E.C.

WEST NORFOLK AND KING'S LYNN NEWSPAPER CO., LTD.—Capital £20,000, in £1 shares; to adopt agreements with (a) the *Lynn News* and County Press Co., Ltd., and (b) F. S. Thew, and to carry on the business of newspaper proprietors, printers, publishers. First directors: Sir Richard Winfrey, F. S. Thew, F. H. Partridge, J. A. Parsons, W. R. Sadler and T. Diggle.

R. P. JENSEN AND CO., LTD.—Capital £30,000, in 20,000 7½ per cent. cumulative participating preference and 9,975 ordinary shares of £1 each, and 500 management shares of 1s. each; to carry on the business of a paper, stock and general merchant as formerly carried on by R. P. Jensen, as "R. P. Jensen and Co.," at 17, Monument-street, E.C., and to carry on the business of manufacturers, agents for and dealers in paper and papermaking materials, etc. Private company. First directors: R. P. Jensen and A. B. Anderson. Registered office: 17, Monument-street, E.C.

J. AND G. INNES, LTD.—Capital £25,000, in £1 shares (15,000 ordinary, 3,000 participating preference and 7,000 cumulative preference; to acquire the businesses now carried on at Cupar and elsewhere, (1) by J. and G. Innes, newspaper proprietors and publishers, printers, bookbinders and wholesale and retail stationers and (2) by A. Westwood and Son, printers, bookbinders and stationers. Private company. First directors: G. Innes, F. G. Innes, W. G. Innes, J. M. Mitchell and D. Hardie. Registered office: 20, Crossgate, Cupar, Fife.

ALAN GRAHAM AND CO., LTD.—Capital £500 in £1 shares; to carry on the business of printers and publishers, etc. Private company. First directors: H. A. Cumming and Mrs. Lilian M. A. Cumming. Registered office: 158, Fleet-street, E.C.

CASTER AND JELLEY, LTD.—Capital £5,000 in £1 shares; to take over the business of printers, booksellers, stationers and dealers in fancy goods, carried on by F. Caster and A. T. Jelley at Market Place and Chapel-street, Peterborough, as "Caster and Jelley." Private company. First directors: F. Caster, A. T. Jelley, A. Swallow and E. Adams. Registered office: The Market Place, Peterborough.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

ALBERT E. REED AND CO., LTD. (Paper manufacturers, etc., London).—Satisfaction in full on May 31st, 1923, of debenture stock secured by trust deed dated June 18th, 1903, and deed of exchange dated November 27th, 1917, securing £100,000.

JOHN MARKS, LTD. (Photographers, papermakers, stationers, etc., London).—Debenture charged on the company's undertaking and property, present and future, dated June 12th, 1923, to secure £2,000. Holder: W. Teggin, 7, Woodbine-street, Moss Side, Manchester.

CHRISTMAS CARD ASSOCIATION, LTD. (Preston).—Deposit on June 1st, 1923, of deeds of workshop and premises in Preston, to secure all moneys due or to become due from the company to Manchester and County Bank, Ltd.

C. Arthur Pearson, Ltd.

At the twenty-seventh annual general meeting of C. Arthur Pearson, Ltd., the report and accounts were adopted confirming the payment of a dividend at the rate of 15 per cent. per annum on the ordinary shares, including the interim dividend of 5 per cent. already paid. In the course of his speech, the chairman, the Right Hon. Lord Riddell, stated that during the year under review the printing works at Notting-hill had been completed and fully equipped. Practically the whole of the printing work required by Newnes and Pearson was now being executed at those works. The arrangement according to which the businesses of Newnes and Pearsons were carried on by an operating committee composed of members of the two boards had proved highly satisfactory; the two businesses were working in close unison, and the directors of that company and of George Newnes, Ltd., were fully satisfied with the arrangement made at the time when the profit-sharing agreement was entered into.

Trade Union Matters.

MR. H. SKINNER will continue to represent the Printing Group on the General Council of the Trades Union Congress.

THE post of secretary of the Trades Union Congress will be shortly vacated by Mr. C. W. Bowerman, and there are a number of nominations for the office, amongst those proposed being Mr. F. O. Roberts, who is nominated by the Typographical Association.

L.S.C. AND WAGE REDUCTION.—At the Trades Union Congress to be held at Plymouth in September, the London Society of Compositors will move: "That in the opinion of this Congress the persistent demand by employers for reductions of wages is not justified by economic necessity, is harmful in practice, leads to injurious unsteadiness and disturbance of trade, and saps the foundations of all social and industrial progress. This Congress therefore calls upon affiliated unions to oppose a strenuous resistance to the efforts now being made to reduce the remuneration of labour to pre-war standards, and urges upon the General Council the importance of assisting the unions in the work of organisation upon such lines as will strengthen their ranks against frequent attacks upon the standard of life."

L.S.C. JUBILEE SPORTS.—Saturday, July 7th, is the date of the London Society of Compositors' Jubilee Celebrations at the Crystal Palace. Apart from the general attractions offered by the grounds, there is to be a "Reunion" meeting with speeches, and dancing to follow. An attractive sports programme has also been prepared, under the direction of Mr. H. F. Parker (8, Albion-road, Wandsworth-road, S.W.8), to whom entries have to be sent not later than Saturday next, the 30th inst.

"T.A." AND NEW ORGANISER.—Owing to the resignation of Mr. H. Matthewman from the position of organiser the Executive Council of the Typographical Association are asking for candidates from their members for the position.

"T.A." AND INTERCHANGE OF MATRICES.—The Executive Council of the Typographical Association, after a long discussion on the question of the interchange of type and matrices between different printing offices, have decided to request the employers' organisation to agree to a conference for a consideration of the points at issue. The Council at the same meeting affirmed a previous decision that at present the interchange of matrices and news matter cannot be allowed.

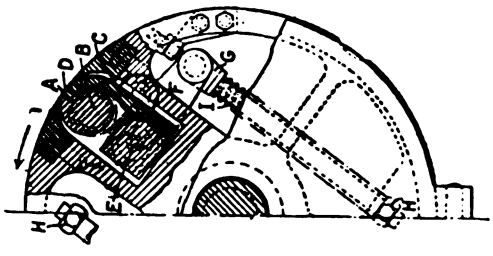
New Inventions

Binding Loose-Leaf Books.



Messrs. Eden, Fisher and Co., Ltd., and Mr. F. Cavalli have patented an invention in which leaves from a loose-leaf ledger or binder are permanently bound within a cover, after their back edges have been secured by glue, by inserting glued wooden pegs 8 into the holes previously used for the loose binding and securing the leaves within the cover by screws 9. The cover or binder

comprises two strips 6, of metal, hard wood or the like, connected by a thinner rounded piece 11 and provided with holes to receive the screws passing into the wooden pegs. Additional holes are also provided to receive screws passing directly into the leaves. The strips 6 are connected to covering boards 1 of millboard or the like by hinge strips of canvas or similar material. A piece of millboard 4 is glued upon the backs of the leaves to stiffen that portion. A covering strip of leather is applied upon the strips 6 to cover the heads of the screws.

Folding Mechanism.

Messrs. T. J. Mills and E. T. Morris have patented an invention that relates to the jaw cylinder of folding mechanism employed in printing machines for folding papers of various numbers of pages. It has one of its jaws positively closed by a cam and the other spring loaded. The leading jaw A is pivoted

on a shaft B having an arm C rocked by a cam. The other jaw D is carried on a shaft E having a projecting arm F, pivoted to a rod G, slidable through an eye H and is resiliently supported by a spring I to enable products of varied numbers of pages to be folded.

An Etching and Engraving Machine.

An etching, engraving, or like machine of the kind in which a pattern is traced out by a stylus on the end of a pendulum arm adapted to cause relative universal movement on a single plane between a plate support and a tool carrier, as patented by W. S. Eaton, is provided with a rotatable circular pattern plate having circumferentially arranged characters and with a layout disc projecting beyond the plate whereby a design compiled on the disc may be traced out by successive adjustments of the plate. As shown, the invention is applied to the machine described in Specification 153,186, wherein a pendulum 18 is universally connected at one point to a bracket 20 and at its upper end to a movable table 14 carrying a tool 16 acting on the work carried by a fixed support 10. A circular disc 25 bearing letters and numerals on both sides is rotatably mounted by means of a stud 24 on a base 22 removably supported on the pattern table 21. Between the table and the disc and rotatable on the same stud is a layout disc 27 projecting beyond the disc 20. In the reproduction the characters are inverted and the sequence of the letters is reversed, and to

FIG.2.

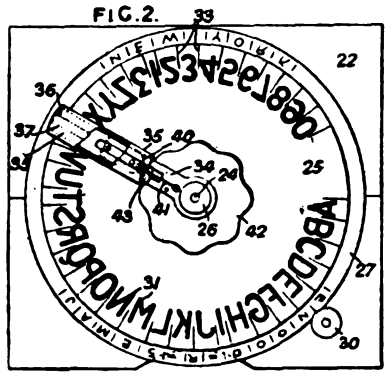


FIG.1.

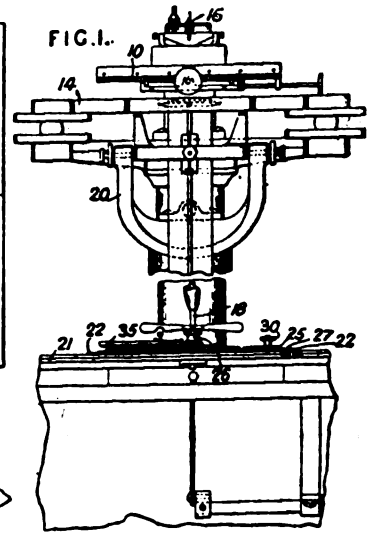

FIG.4.

allow for this the characters to be reproduced are formed on the disc 25, as shown in Fig. 2. Also, as the characters at the top of the pattern appear at the bottom in the reproduction and *vice versa*, those 31 on one side of the disc have their apices directed towards the centre 24 and are suitable for the top part of the copy, and those on the other side of the disc are oppositely directed so as to be suitable for the lower part. Circular lines to form a background or other part of the design may be formed by inserting the stylus in one of a series of depressions 36, 37 on a carriage 35 slidably mounted on a radial arm 34 rotatable on the stud 24. A spring 41 presses the carriage 35 towards the centre 24 and a fixed cam 42 engages an impact piece 40 thereon to cause the formation of wavy lines, a stop pin 43 holding the impact piece out of engagement when true circles are to be formed. Similar wavy lines may be formed by the use of a disc 44, Fig. 4, provided with guide lines as shown. In use, the required combination of characters is marked out on the disc 27 by positioning the latter to correspond with the characters 31 in turn, copying the guide lines 33, and inserting the letter in the space so formed. The disc 27 is then clamped in position by a nut 30. The disc 25 is now positioned to correspond with the design and is secured while each letter is being copied by tightening the nut 26 on the stud 24. The characters are formed by fine lines which, as also the depressions 36, 37, may be so close as to produce a solid copy.

Copying Paper.

An application for a British patent has been made by Mr. F. May relating to copying paper. According to this invention, copying paper, particularly rolled up paper for copying machines, is strengthened and protected against softening of the fibres, due, for instance, to the applied damping fluid, by the application of or impregnation with a protecting material, preferably at the borders of the paper. The material is insoluble in water, and is applied to dry copying rolls before the application of the fluid which maintains the paper damp, and to wet copying rolls before the copying operation. The quality and thickness of the paper may thus be below normal without decreased strength, whilst the edges of dry copying rolls are prevented from adhering together.

CIGARETTE paper in books, white and coloured; playing cards, and wall-paper are among the goods which are subject to a Polish Customs surtax of 899,900 per cent. (multiplier 9,000).

Paper Standardisation.

By RUBEN RAUSING, M.S.

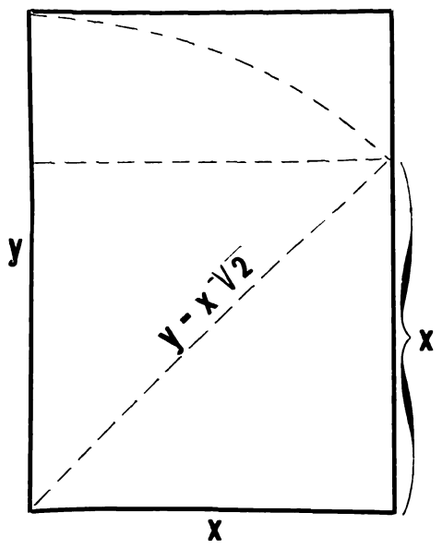
By a standard we mean an easily defineable, exact unit. So a metre is the unit of length. A foot, however, in the original meaning of that word, was not a standard, as the length of a man's foot could vary. With respect to paper, we are still on the same stage as were the standards for length in the earlier Middle Ages. We define a certain size as "folio," "quarto" or other words, perhaps, in other languages, but these sizes do not mean the same number of centimetres or inches in different places, but mean in one place one thing, in another place another thing. When we are going to standardise paper, we shall try to get standards which mean exactly the same thing wherever they are mentioned.

How is a size generally arrived at? Some big consumers have formed their own standards. In the same way printers have their own private standards, which are used if the consumer does not give exact sizes. Very often the customer, when ordering letters, says that he wants "quarto" or "the general size," and so the printer takes his own size.

The average customer, however, makes his sizes from his momentary needs in each case. We can see it from the absolute disorder that anybody can find in the market.

Are there no standards at all in the market? Yes. The big publishers always have standards for their own books. Producers of card systems, files of all kinds, are obliged to keep standard sizes. On the whole, however, we can say that in very few cases paper ready for consumption is standardised with regard to size.

The goal of standardisation is to save labour as well as material in the different stages of production, which will naturally lead to a lower price. A big cost item may also be saved by the consumer indirectly, as much of the work for handling and filing different sizes of paper, as catalogues, will fall away.



Some groups of consumers, as I mentioned before, have made their own standards. A publisher and printer, the presses of whom consume thousands of tons of paper per year, is certain to have his own standards. He may also have a paper mill and paper machines which are well fitted for those sizes. A new standard in such cases would probably not make the product cheaper, that is, it would not mean any savings whatsoever. The very same thing could be said about the big newspapers and of the biggest magazines. Thus we see that for some big needs a general standardisation is not so necessary. It is instead for the direct consumption of catalogues, circulars, pamphlets, accounting books and so on for business in general and for governments and cities that standardisation will do good. But this consumption is of the greatest importance economically.

How can we get a general standardisation? The easiest way would be to select a number of the sizes most used, make them standards, and do away with other sizes. There are many persons who would prefer to solve the question in this way, although I am afraid that the discussion about which sizes should be kept and which abandoned would take their whole life. This way would, of course, be advantageous in some respects, as it would mean only a small deviation from existing habits.

The great disadvantage of this scheme, however, would be that the paper would have to be manufactured and kept in stock in almost all the different sizes, as we could not, as a rule, cut down the small sizes from the big ones without a loss.

We have tried, therefore, to have such standard sizes as we can get by dividing a few big standard sheets, preferably two to four of them. In Sweden Mr. C. Ramström, now president of the Sveriges Litografiska Tryckerier, Ltd., many years ago introduced a standard series with the relation of 2:4 and 3:4 between the shorter and the longer side. If we divide repeatedly a paper with the relation of 2:3 between its sides, half the number of the new sizes will keep the relation of 2:3, and the rest that of 3:4.

About 1911 the German Professor and Nobel Prize-winner Ostwald proposed a series of world sizes, and I think it is fair to say that this proposition caused the general interest in the standardisation movement in this branch that now goes through the world. Professor Ostwald based his series on the fact that if a rectangular paper, the sides of which are related $1:\sqrt{2}$, that is the relation of one side to the diagonal of a square, is divided into two equal rectangular parts through the longer side, those new sizes have that same relation.

Professor Ostwald had the intention to make a series of paper sizes with that specific relation between the sides. The number of sizes should be very limited and each size should be a multiple of the original size and so it could be obtained by dividing the latter size into parts.

There seem to have been other persons in other parts of the world who were struck by the same idea as Mr. Ostwald. In the United States Mr. N. J. Werner from St. Louis later on published a series like that of Prof. Ostwald but which contained intermediate sizes in geometrical progression with the others. So he got a greater number of sizes and could thus offer greater possibilities to satisfy the taste and needs of different persons. Both Mr. Ostwald and Mr. Werner based their series on a size of 1×1.41 c/m. ($\sqrt{2} = 1.414\ldots$) Herewith I give the series proposed by Mr. Werner:—

Series A	Series B	Series C
1 x 1.41	1.06 x 1.5	1.1 x 1.56
1.18 x 1.68	1.26 x 1.78	1.31 x 1.85
1.41 x 2	1.5 x 2.13	1.56 x 2.2
1.68 x 2.37	1.78 x 2.53	1.85 x 2.62
2 x 2.83	2.13 x 3	2.2 x 3.12
2.37 x 3.37	2.53 x 3.56	2.62 x 3.71
2.83 x 4	3 x 4.25	3.12 x 4.4
3.37 x 4.75	3.56 x 5.06	3.71 x 5.25
4 x 5.66	4.25 x 6	4.4 x 6.25
4.75 x 6.75	5.06 x 7.12	5.25 x 7.4
5.66 x 8	6 x 8.5	6.25 x 8.8
6.75 x 9.5	7.12 x 10.12	7.4 x 10.5
8 x 11.3	8.5 x 12	8.8 x 12.5
9.5 x 13.5	10.12 x 14.25	10.5 x 14.9
11.3 x 16	12 x 17	12.5 x 17.7
13.5 x 19	14.25 x 20.25	14.9 x 21
16 x 22.6	17 x 24	17.7 x 25
19 x 27	20.25 x 28.5	21 x 29.7
22.6 x 32	24 x 34	25 x 35.3
27 x 38	28.5 x 40.5	29.7 x 42
32 x 45.2	34 x 48	35.3 x 50
38 x 54	40.5 x 57	42 x 59.5
45.2 x 64	48 x 68	50 x 70.7
54 x 76	57 x 81	59.5 x 84
64 x 90.5	68 x 96	70.7 x 100
76 x 108	81 x 114	84 x 119
90.5 x 128	96 x 136	100 x 141.4
108 x 152	114 x 162	119 x 168
128 x 181	136 x 192	141.4 x 200

During and after the war there has been much stress laid upon the necessity of economy all over the world. The way to economy in industry leads through standardisation and therefore there are few countries of any industrial importance, that have not their special committees for industrial standardisation. As far as I know, paper is on the list in all countries on account of its great rôle in industry.

It seems to be quite obvious that the present state of waste in paper industry will not be allowed to continue. One of the members of the Swedish Committee that was formed through the initiative of the Swedish Industries League (Sveriges Industriforbund) and the Stockholm Chamber of Commerce (Stockholms Handelskammare) in order to investigate the standardisation of paper tabulated the sizes of about 7,000 forms and circulars used by the state and certain cities. Among these 7,000 sheets about 5,000 different sizes were found. It should be mentioned that for a great many functions the state has a normalised series of paper sizes.

It is necessary for the printer not only to follow the development of this question, but to master and lead it, as it is of the greatest economical importance to him. The printer should make clear to himself what he wants in this respect.

Paper is an object for foreign trade. We only need think of the exchange of letters, catalogues, circulars of all kinds, books, etc., and that foreign trade is facilitated to a great degree through the use of paper, to understand, that for the business man and for the trade in general, an international standard is desirable and almost necessary. That principle for a standardisation that I have just mentioned is, as far as I understand, the only basis on which an international agreement can be founded. On account of the natural relation between the sides, the whole series is given as soon as the first units have been formed out. The discussion—and I am sure there will be plenty of it—will have to turn about these sizes and move within certain limited circles. Should there not be a natural principle like this one, almost each recognised size would have to be discussed, and I can see no possibility that there could be obtained anything like a practical result.

For the private printer a generally recognised standardisation means less investment of capital, as the stock of paper on account of less number of sizes can be kept small. He will also be able to keep a smaller force for handling stock and even a smaller administrative and office force for buying purposes and control. He will also have much greater possibilities to standardise operations within his departments than he ever had before.

I see the great difficulties and even the losses during the first period and hardly any of them need be discussed. It is quite evident also that it will take a great number of years before there is anything like standardisation on the market.

There will be difficulties also for the consumer, but the practical business man will soon find the advantages. As far as can be seen, all sizes proposed for that purpose will suit present office machinery, such as typewriters, files, etc.

Below you will find a series proposed by a German Committee on Standards that has been recommended by the Swedish Committee just mentioned:—

Series A mm.	Series B mm.
841 x 1189	1000 x 1414
594 x 841	707 x 1000
420 x 594	500 x 707
297 x 420	353 x 500
210 x 297	250 x 353
148 x 210	176 x 250
105 x 148	125 x 176
74 x 105	88 x 125
52 x 74	62 x 88
37 x 52	44 x 62
26 x 37	31 x 44
18 x 26	22 x 31
13 x 18	15 x 22
9 x 13	11 x 15

Series C mm.	Series D mm.
917 x 1297	771 x 1090
648 x 917	545 x 771
458 x 648	385 x 545
324 x 458	272 x 385
229 x 324	192 x 272
102 x 229	136 x 192
114 x 162	96 x 136
81 x 114	68 x 96
57 x 81	48 x 68

Before I end, I just want to point out that a standardisation of paper is not in any way complete by the standardisation of sizes. There are other important factors that we must also deal with, if there shall be any real gain, viz.: quality, thickness and colour of the paper. I have not been able to find any leading proposition for standards, and that part of the problem seems not to be so well developed that there can be formed any basis for discussion.

Read at the International Congress of Printers, Gothenburg, June 4th-6th.

FROM Saturday, June 16th, the address of Mr. Halstaff Coles, papermakers' agent, paper merchant and wholesale stationer, 6, Great George-street, Leeds, he having removed from 49, Basinghall-street, Leeds. The style of the firm will in future be Halstaff Coles and Son

Gold Inks

(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

THE WORLD'S

Paper Trade Review

IS PUBLISHED EVERY FRIDAY AT

58, Shoe Lane, London.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*

The following is a letter we have received from The Fisher Bookbinding Co. (1912) Ltd.—one of many unsolicited testimonials.

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

Norwegian Strike.

Closing Down Pulp and Paper Mills.

Labour in the Norwegian pulp and paper mills has, after all, decided to strike, and plants were closed down from Sunday week.

Naturally the news of the wholesale strike has caused great perturbation in the paper and pulp markets. It is not known yet as to whether exports of stock will be permitted, but, in any case, the very existence of the strike is bound to cause an accentuation of demand, with the inevitable effect upon prices. Quotations for paper were already exhibiting a tendency to rise, not so much because of the existence of demand, but by reason of the actual costs of production, and the development of the trouble in Norway will no doubt give papermakers and paper merchants the necessary courage to insist upon prices which they regard as justifiable.

Origin of the Strike.

The strike had its origin in the sympathetic action taken by the paper and pulp mill employees in connection with a dispute which has for some time been proceeding in regard to the working conditions of a few men, said to be not more than 18, employed on the floating of timber in the Drammen district.

AN APPEAL.—Mr. R. Percy Hodder-Williams (Hodder and Stoughton, Ltd.), issues an earnest appeal on behalf of the Royal Commercial Travellers' Schools at Pinner, where there are 365 orphan boys and girls. This is a trade charity and it concerns every trade employing commercial travellers. Mr. T. W. Bastin, of Messrs. Bastin, Merryfield and Cracknell, Limited, 12, Great Portland-street, London, W., who has accepted the office of President for the 1923 Appeal, is most anxious to secure the services of an active body of stewards to help in raising a sum of £24,000 which is required annually to maintain this large number of boys and girls. Subscriptions may be sent to the secretary of The Royal Commercial Travellers' Schools, 17, Cheapside, London, E.C.4.

"Bridge" Paper Mills, Ltd.

Order for Compulsory Winding Up.

In the companies winding up court last week, Mr. Justice P. O. Lawrence made an order for the compulsory winding up of Bridge Paper Mills, Ltd., on the petition of the Dorland Agency, Ltd., of Regent-street, creditors for £2,933.

Paper Agent's Examination.

The public examination was held on June 15th, before Mr. Registrar Francke, at the London Bankruptcy Court, of Arthur Leopold Houghton, paper agent, late of 58, Ludgate-hill, E.C., who petitioned the court in February, 1923, with total liabilities £1,556 (unsecured £1,206) and assets valued at £25. In reply to the official receiver, debtor said a previous failure was recorded against him in May, 1916, but the proceedings were annulled in December, 1919, the debts having been paid in full. In May, 1918, with £500 capital, he commenced, and thereafter until October, 1918, successfully carried on business as a paper agent at 19, Ludgate-hill; owing to illness he then closed it, but in February, 1921, he started a similar business at 83, Upper Thames-street, removing eight months later to 58, Ludgate-hill, where he had the use of a friend's office. He traded there till May, 1922, when, owing to lack of capital, he closed down and had since been in employment with a firm of paper merchants on a commission basis only. Witness attributed his insolvency to ill-health and to depreciation in value of shares. The examination was concluded.

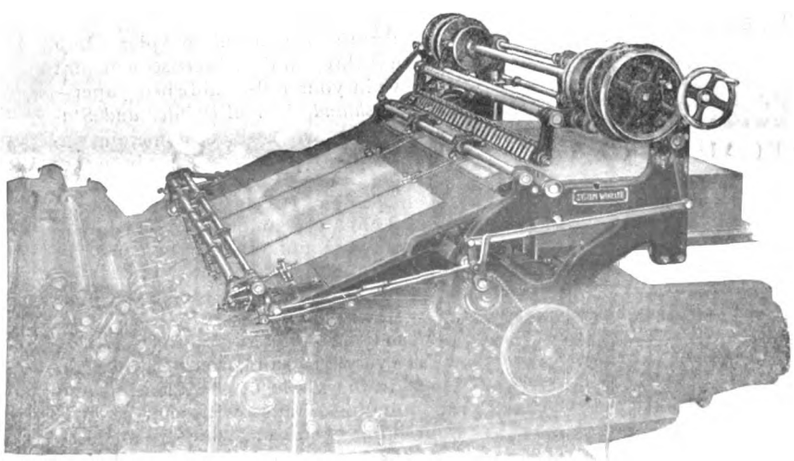
THE late Mr. Herbert James Austin, of Beulah House, Chorley-wood, Herts, and of Saunderton and Bledhow, Bucks, paper manufacturer, printer, and farmer, who died April 28th, left £16,174.

Waste Paper Merchant's Discharge.

An application was made to Mr. Registrar Mellor at the London Bankruptcy Court on June 19th for an order of discharge on behalf of Abraham Cohen, commonly known as Audrey Cohen, who formerly carried on business as a waste paper merchant. The official receiver reported that the applicant commenced business in 1914 as a waste paper merchant and traded in succession as the Gresham Wool and Metal Stores, and the Central Waste Paper Co. The business was successful until the beginning of 1921, when it fell away owing to the slump; the stock then became valueless and had to be destroyed. The official receiver opposed the application on statutory grounds, including unjustifiable extravagance in living, and his Honour suspended the discharge for two years and a half.

John Eberstein and Co., Ltd.

This private company has been registered with a capital of £21,000 in £1 shares (20,000 8 per cent. preferred ordinary and 1,000 management). The holders of the management shares shall have the right to the management of the business and the control of the company. To carry on in London or elsewhere the business of paper merchants and agents for the sale and brokers of and dealers in all kinds of paper; ship owners, ship builders, charterers of ships or other vessels, etc.



The subscribers are: F. L. Neve, 36, Upper George-street, Luton, solicitor; C. F. Butler, 21, Corporation-buildings, Avondale-square, S.E.1, clerk. The first directors are John Eberstein and Carl Eberstein.

THE Hampshire Paper Bag Manufacturing Co. have started operations at Station-street, Portsmouth, with an output of over a million bags per week. Mr. J. G. Durham is the head of the concern.

The "WINKLER" Automatic Feeder

will make an Ideal, Automatic Unit out of your Printing Machine, and will give you an output of from 25 to 60 per cent. above that of hand feeding, with better register. Particularly when feeding tissue paper the output is enormously increased.

SWISS MANUFACTURE.

SEPARATION of sheets by suction and blast.

Length of printing machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs, and therefore suitable for short runs.

Change to hand feed in a few minutes.

No tapes or friction wheels to mark or set-off on colour work.

The blast of air frees the sheet from dust and fluff before it is fed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

Write to-day for Prospectus to the Sole Agents—

Latex Papers and Printing.

A question regarding latex paper seems to require clearing up. Some enterprising people who inquire of their printer for information regarding the latest development in paper-making, viz., paper made with rubber latex, are frequently informed that this paper will not print, that the ink will not dry, especially for rotary printing where quick drying is, of course, essential. This is absolutely erroneous. The printer who makes such a statement is under a serious misapprehension; therefore, the sooner he realises this, the better it will be for his business. It can be authoritatively noted, without fear of contradiction, that rubber latex in paper has *no* detrimental effects on the printing properties of paper of any description whatsoever.

Every class of paper from common "news" printing to litho, imitation art and coated art, and even tub-sized papers have been made with latex, and have been proved to give better results on the printing machines, whether flat-bed or rotary, than the same class of paper without latex.

Quite a large number of jobs have already been completed and given entire satisfaction. It can be conclusively demonstrated that the addition of rubber latex actually improves the surface of any class or description of paper, which means that, if a given surface is required, less pressure can be used with the rollers when finishing rubber latex papers than ordinary paper, resulting in *improved bulk*.

From the point of view of the consumer, this is a very important point, as it actually means a *saving in cost*, seeing that the lighter weight paper handles as well as a heavier non-latex paper.

When it is remembered that latex paper has so many other advantages, it is only a question of time before a very large number, if not all mills, will, of their own volition, use latex in their manufactures.

The invention is only in its infancy, and like all inventions has had to face a certain amount of opposition, due very largely to the rooted conservatism of manufacturers. Paper-makers are, as a class, more jealous of their trade secrets than perhaps some manufacturers of other commodities. As a rule their "finish" is not divulged, and therefore they resent being ordered to make their paper with this or that composition. This is due to the old traditions of the trade, but modern enlightenment is gradually reducing the reluctancy to work a formula, within certain limits, where necessary. Practically all latex paper so far made has been made specially to the order of paper merchants or consumers, but, as before mentioned, mills will increasingly recognise the improvements to be obtained by making under Kaye's patent, and without disclosing the fact make a lot of their products to include a percentage of rubber latex.

In conclusion of this article, let us once more reassure printers that they need have no fear about the printing properties of latex papers, as the drying properties, which is the printer's concern, are not governed alone by the latex in the paper, but by the combination of size and latex. These constituents can, of course, be graded to suit the work for which the paper is required in exactly the same way as size by itself is added in making paper without latex; in other words, it is just as practicable to make even, quick-drying paper, such as waterleaf duplicators, with latex as it is without.—*Bulletin of the Rubber Growers' Association.*

MESSRS. LORILLEUX AND BOLTON, LTD., have issued specimen books illustrating the use respectively of their cover inks and of inks supplied in tubes. Users of printing inks will find both these books of practical interest, the cover specimens being of a striking character and the inks in tubes being a line that makes special appeal to the very small printer.

THE issue of the *Linotype Record*, dated April, 1923, is of special interest in view of its contents besides being a striking example of linotype typography. One of the articles contained therein tells a little of the story of the Vatican Polyglot Printing Office and shows the up-to-date linotypes installed at this establishment.

Paper Box and Bag Wages.

Changes in Minimum Rates.

The "cost of living" index figure having fallen to 70, the minimum rates of wages effective from June 1st, 1923, are those applicable during the period when the "cost of living" figure falls within the limits specified by the respective trade boards. These rates will remain in operation so long as the "cost of living" figure remains within the limits so specified.

Paper Bag Trade Board (Great Britain).

The rates applicable, per week of 48 hours are those set out in the Board's Notice P. (9) for the period when the "cost of living" figure is less than 71 but not less than 61.

General minimum time rates: (A) male workers (i.) Machine tacklers, 23 years of age and over, 66s., with lower rates for younger workers; (ii.) paper-bag cutters 23 years and over, 60s,, with lower rates for younger workers; (iii.) hydraulic pressers, slitters, stock-keepers, packers and despatchers, of 21 years of age and over 52s. 6d., 53 6d., 55s., 57s. during the first, second and third twelve months and subsequent employment in the same occupation respectively; (iv.) all other workers, other than learners, 52s. 6d., with lower rates for learners. (B) Female workers, including home workers, 29s., with lower rates for learners. Piece-work basis time-rate for all female workers, 31s.

Paper Box Trade Board (Great Britain).

The rates applicable, per week of 48 hours, are those set out in the Board's Notice B. (10) for the period when the "cost of living" figure is less than 71 but not less than 61.

General minimum time rates: (A) Male workers (i.) Machine minders, die makers, forme setters, cutters (including shears and guillotine) and head stock-keepers of 23 years of age and over, 66s., with lower rates for younger workers; (ii.) all other male workers, other than learners, 49s, with lower rates for learners. (B) Female workers, other than learners, 29s. 6d, with lower rates for learners. Piece-work basis time rates:—(i.) Male workers, other than those specified in (A) (i.) above, 54s. 6d.; (ii.) female workers, 31s. 6d.

Australian Notes.

Skilled Engravers Wanted — British Goods Favoured—New Companies Registered—New Government Printer—Book Censorship.

(From Our Sydney Correspondent)

DURING a recent hearing in a Sydney Arbitration Court, when application was made by the Process Engravers (Cumberland and Newcastle) for a variation of an award in the direction of increasing the proportion of apprentices to journeymen, and to alter the age from 16 years to 17 years, reference was made to the shortage of skilled labour. A witness said that for four or five years there had been a shortage of skilled labour in some of the departments of the process engraving trade. Advertisements inserted in Australian and New Zealand newspapers produced only four answers. There was a great shortage because the newspapers had taken all the available men.

THE City Council of Sydney has passed a resolution that for the requirements of the Council British goods should have preference when those requirements could not be obtained in the Commonwealth.

AN important new registration is that of Shepherd and Newman, Ltd., with a capital of £10,000 in £1 shares. The company is to take over a going concern, the business of printers, bookbinders and stationers at present carried on by Charles Arthur Shepherd, Arnold Leslie Newman and F. E. Young Shepherd, trading as Shepherd and Newman, at Commonwealth-street, Sydney. First directors are: C. A. Shepherd, A. S. Newman, F. E. Y. Shepherd. Subscribers to the memorandum also include Christinel Shepherd, O. H. Collings, Nellie Shepherd, Jeanis Freda Newman.

A COMPANY has been registered as the Australian Newspapers, Ltd., capital £20,000 in 200 "A" shares and 1,800 "B" shares of £1 each, to carry on the business of general printers, lithographers, engravers and advertising agents and generally to carry on the business of newspaper proprietors, printers and publishers. First directors are: K. M. Gelder, T. Mackey and D. Van Hinloopen Tatterton. Subscribers to the memorandum are: G. W. Dempster, T. A. Mazel, L. W. Burt, T. Davidson, G. A. Hart, M. R. St. John and J. J. Mulligan.

UNDER the title of The Better Business Bureau, Ltd., in 2,000 shares of £1, a company has been registered as publicity agents and propagandists, news representatives, advertising agents, etc. The names of J. H. Catts and P. C. Evans appear as directors. Others subscribing to the memorandum include Amy Catts, Alma Maud Evans, Minnie Harriet Jardine, R. H. Venables, P. R Hayward.

SINCE the death of Mr. W. A. Gullick, the post of Government Printer has not been formally filled. The Treasurer, Mr. Cocks, decided to re-organise the printing office, and appointed Mr. Spence to act as supervisor in carrying out the scheme. With the transfer of Mr. Spence to the post of Under-Secretary to the Treasury, it became necessary to appoint a new Government Printer in his place. This has recently been done by the appointment of Alfred James Kent to that important position. The appointment is an acting one for the time being, to be made permanent later.

MR. KENT entered the public service in 1885 and has passed through all the different departments of the Government Printing Office. For a time he was attached to the Treasury in the accountancy department. Mr. Kent has been associated with Mr. Spence in carrying out the re-organisation of the printing office, and the Government has expressed great satisfaction at the results achieved. Mr. Campbell has been many years in the service, and has worked his way up from compositor to overseer, and latterly, superintendent.

THE question of the censorship of books is exciting much discussion in Melbourne as it is also in New York. Whilst in New York censorial action originates chiefly from private sources or societies, in Melbourne initiative is taken by the Customs. Besides banning a number of other books and periodicals, including the English *Photo Fun* and *Photo Bits*, the Customs department has aroused much criticism by prohibiting the importation of "The Decameron" under the section of the Customs Act that declares thnt all blasphemous, indecent, or obscene works and articles shall be automatically prohibited entry into Australia.

IT was explained by the authorities that it was found that recent editions of "The Decameron" had been highly "spiced" by departures from the text, so as to make the narratives still more "risqué." They were cheap editions, intended for general sale, and where books were imported to pander to the taste for salacious literature the department refused to deliver the classic. Editions in good binding and formation, of course, would be permitted, also editions in the original Italian.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

Author of "Practical Modern Metalithography."; City and Guilds of London Honours Silver and Bronze Medallist in Lithography and Photo-Mechanical Processes.

INTRODUCTORY ARTICLE.

Rise and Progress of Lithography — Assailants of the Craft—Starting Point of Offset—Senefelder and Rotary Lithography—Relation of the Litho Stone to Photo-Mechanical Developments — Stone *versus* Metal Plates.

Some thirty years ago the major portion of the world of printerdom was keenly contemplating the conjoint decadence of chromo-lithography, and its gradual usurpation by the half-tone screen, tri-colour, typographic method—then in the prime of its development. Many others gleefully predicted the speedy downfall of this century-old, pictorial stone craft of lithography, and its entire effacement from the realm of the graphic crafts. Though thirty years may be a big slice out of the lifetime of an individual, it is a mere nothing in the lifetime of a craft such as printing. Thus these gratuitous prognostications and sinister wishes of soothsayers of these bygone periods did not always mature; and so we are enabled to-day to record a tale very different from that which was being prepared for us then.

It was indeed an eventful epoch in the history of art-crafts, which grateful humanity will ever recall, that period—just a century and a quarter ago which ushered into the productive world of the "art preservative of all arts," that new member of its sphere, the profluent graphic art of lithography.

A Humble Beginning.

From an obscure garret in an old world alley-way at Munich, came the man and the genius whose "child of the brain" has evolved to us of the present day, the potent printing process, offset lithography. The magnitude of the modern developments, and the still possible future conquest of the pictorial crafts, both prompt and justify our narrating the circumstances of its humble origin, as related by its talented inventor, Alois Senefelder, as affording a mental purview of how small individual beginnings may lead to such mighty world-wide attainments as are now being realised, and yield us the connecting link right through.

He says: "I had just succeeded in my little laboratory in polishing a stone plate, which I intended to cover with etching ground, in order to continue my exercises in writing backwards, when my mother entered the room and desired me to write her a bill for the washerwoman, who was waiting for the linen. I happened not to have even the smallest slip of paper at hand, as my little stock had been entirely exhausted by taking proof impressions from the stones; nor was there even a drop of ink in the inkstand. As the matter would not admit of delay, and we had nobody in the house to send for a supply of the deficient materials, I resolved to write the list with my ink prepared with wax, soap and lampblack, on the stone which I had just polished, and from which I could copy it at leisure.

"Some time after this I was just going to wipe this writing from the stone, when the idea all at one struck me, to try what would be the effect of such a writing with my prepared ink, if I were to bite in the stone with aqua fortis; and whether, perhaps, it might not be possible to apply printing ink to it, in the same way as to wood engravings, and so take impressions from it.

Epoch-Making Experiment.

"I immediately hastened to put this idea into execution. . . . On examining the effect of this experiment I found the writing elevated about the 10th part of a line. I now proceeded to apply the printing ink to the stone, for which purpose I found that a thin board covered with fine cloth communicated the ink in a more equal manner than any other material. Thus the new art was invented; but in order to gain a livelihood by it, capital was indispensable to construct a press, purchase stones, paper, etc., but I could not afford even this trifling expense, and so saw myself obliged to relinquish all my fond hopes, unless I could devise an expedient to obtain the necessary money.

"At length I hit upon one, which was to enlist as a private in the artillery, as a substitute for a friend of mine, who promised me a premium of 200 florins. I went to Ingolstadt with a party of recruits, to join my regiment; but to my great disappointment, the commander of the regiment discovered that I was not a native of Bavaria and therefore, according to a recent order of the Elector, could not serve in the army. Thus my last hope failed me, and I left Ingolstadt in a state of mind bordering on despair. As I passed the great bridge over the Danube and looked at the majestic river, in which I had been twice nearly drowned whilst bathing, I could not suppress the wish that I had not been then saved, as misfortune seemed to persecute me with the utmost rigour, and to deny me even the last prospect of gaining an honest subsistence in the military career."

Such were some of the inception difficulties of this lithography which was later destined to evolve to the universal metalithographic offset procedure of to-day.

The Revolution Effected.

Prior to this epoch, industries and manufactures moved but slowly and with limited ambition. Merchandise possessed but little colour printing to enhance its attractiveness, and to establish standard characteristics of trade mark brands of commercial merit. Lithography, with its artistic colour possibilities, had not yet been born.

Slow and cumbrous methods of hand engraving upon wood and metal were the only media by which advertisement proclamations could be made, or the art masterpieces of genius portrayed to the multitude. Famous works of art were locked up in the few art galleries, or in the mansions of the opulent. Ecclesiastical missals, with their beautiful hand-coloured illustrations, were virtually chained in the churches and abbeys.

Had lithography depended upon its stone-age period solely, then it could not have risen to the triumphs that have rewarded it to-day. Despite this fact we must not abuse the good old stone, as through its agency, practically all the vital developments and agencies that have made lithography the power that it is to-day were evolved.

Evolution of Lithography.

Screen images were first tried upon stone, long before the half-tone ruled-screen of photo-process work was inspired. Photo-lithography direct upon stone was the

Display Composition Costs.

NO PRINTER CAN TO-DAY AFFORD TO SET HIS DISPLAY BY HAND.

All type composition from 5-point to 36-point is essentially work for mechanical composition, and the most profitable machine for such work is the Linotype. (This machine sets type faces up to 60-point, but beyond 36-point the faces are of a more or less condensed character.)

The Linotype slug—recognised throughout the world as the best unit for type composition—has many additional advantages in the jobbing department.

Let us tell you about them.

pioneer of line engraving upon zinc by photo-mechanical means. Gradated ruled shading upon lithographic images by means of single lined ruled copperplate transfers to stone was a practical method decades before it was later applied to photography and photo-mechanical images.

Rotary lithography is as old as Senefelder days, as, in company with an Englishmen, Mr. Thornton, the old master tried printing from stone cylinders, and specimens of calico printing were produced by lithography at Offenbach, which were declared to be so perfect that the best English cotton prints by the orthodox methods of textile printing did not surpass them.

The Offset Principle.

Again, the principle of offset as applied to printing upon tin sheets and iron plates was first tried out, and successfully attained from lithographic stone upon a flat-bed litho machine, and commercially carried on for approximately a quarter of a century before its offset adoption for paper printing from metal plates.

Zinc plates were not unknown to Senefelder, as he actually tried them for printing purposes as printing surfaces in lithography, and left records for their treatment and etching, etc., but despite that, the progressive developments of the craft were negotiated by and through the agency of the litho stone.

Engraving upon stone or intaglio etching of images was likewise a primary stone procedure, much beautiful work being done by this means, and equal to the finest hand-engraving upon copperplates, resist grounds being prepared upon stone for chemical etching methods. The litho stone was also the medium for the earliest form of photo-litho transfer paper work long before such methods were applied to zinc plates. Prior to the adoption of photo zinc engraving, transfers used to be taken from litho stone and retransferred down to thick zinc plates for etching into relief blocks for type-high images in letterpress printing.

Screenless and irregular grain photo-litho processes were first evolved upon lithographic stone both for pictorial and commercial purposes, and thus the way was made clear for modern photo-mechanical processes upon zinc and copper.

It will thus be seen that the Solenhofen limestone has played its part as a craft milestone upon the road of photo-mechanical progress, and, although it is too cumbersome to allow of further developments upon the lines of modern requirements, we must nevertheless accord it its rightful place in history as the medium from which the first offset print in lithography had its inception and being.

BRITISH FILTER PAPER SUPPLIES.—The Council of the Institute of Chemistry have appointed a sub-committee to consider the production and supply of filter paper in this country. Chemists who wish to offer criticism or to lay complaints before the sub-committee are requested to communicate with the Registrar.

THE Dockyard at Northfleet, writes a correspondent, is again the subject of rumours as to parties associated with the paper trade being likely purchasers of the site. Among names freely mentioned locally is that of Becker and Co. Further, it is stated that a representative of Messrs. Armstrong Whitworth & Co., has lately been in the neighbourhood, and that the Dockyard was being surveyed.

The Book Industry in Belgium.

The Commercial Secretary at Brussels reports that according to the *Pro Belgica* for June 13th, there are in Belgium about 10,000 workers employed in the various branches of the book trade: printing, lithography, binding and their sub-divisions. This broad classification includes all forms of work connected with the production of books, from the most artistic to the most ordinary.

The workers are grouped into two corporations: Onze Vakbelangen (Our Professional Interests) and the Commission Syndicale Belge, with which are affiliated the Federation Typographique and the Central Organisations of the Bookbinders and Lithographers. The number of workers in the book industry who are members of Onze Vakbelangen is estimated at 750. The remaining 90 per cent. belong to the Commission Syndicale. This includes 2,000 women members. Some of these organisations are very old, such as the Association Typographique de Bruxelles, a section of the printers' federation. This association was founded 80 years ago.

An agreement exists between the masters and workmen of the book industry, but it is not general. However, it applies to about 8,000 of the workers. This agreement is for three years' duration, but is subject to revision, as regards wages, every three months.

Argentine Market for Printing Inks.

According to the American Trade Commissioner at Buenos Aires, the United States supply 80 per cent. of Argentina's requirements of printing and lithographic inks. The business is largely in the hands of a few houses (branches of American and European factories) which import the ink in barrels and rework it in local shops. Formerly, the slow drying European inks were preferred in the Republic, but the largest consumers now use the American standards, but in many of the smaller shops, slow drying inks are preferred.

The total import of printing inks into Argentina in 1921 amounted to 406,645 kilos. Of this quantity the United States takes the leading place as the biggest supplier, followed by Germany and Great Britain. Consignments from France have decreased from 110,467 kilos to 13,041 kilos.

About half of the ink imported is "news" ink, the remainder being job and lithographic inks.

STATIONERS' COMPANY.—The Master of the Stationers' Company (Mr. H. J. Fitch) and the wardens (Mr. E. P. Vicher and Mr. R. Bentley) visited Hendon last week and there carried out most faithfully the wishes of an old-time stationer, Richard Johnson, who is buried in the churchyard. He left moneys to provide that once a year his tomb should be inspected, and, if necessary, repairs carried out; and that on the occasion of the visit a sermon should be preached on the text, "Human life is a bubble," which is found upon the gravestone. The Vicar of Hendon gets a guinea for the sermon.

Trade Notes.

UNDER the title of "Making the Super-Printer," Mr. W. Howard Hazell contributes to *John o' London's Weekly* of June 30th an article commendatory of the work of the London School of Printing.

THE British Industries Fair for 1924, organised by the Department of Overseas Trade, will be held at the White City, but instead of taking place at the end of February, as is usually the case, it will be held from April 28th to May 9th.

ALREADY ten leading newspapers have expressed their willingness to compete in the fancy dress competition on the occasion of the London Society of Compositors jubilee celebrations on Saturday next at the Crystal Palace. The prizes offered in this competition are for the best three fancy dresses (ladies only) representing some phase of printing or newspaper production or any particular newspaper or periodical.

THE N.U.P.B.M.R. AND PAPER WORKERS' GALA DAY.—The second annual gala day of the Paper Workers' Union is to be held on Saturday, August 25th, at the London County Athletic Grounds, Herne-hill, S.E.24. Besides a number of trade events, the programme of sports is to include many diverting gala attractions. The Union's London Central Band will play selections of music during the proceedings.

IN our report last week of the Printing and Allied Trades Charity Sports Association at Stamford Bridge, we gave the London Society of Compositors as having secured second place in the Trade Societies' One Mile Relay Race. This credit should have been given to "B" team of the National Union of Printing, Bookbinding, Machine Ruling, and Paper Workers.

BERRY UNITED SPORTS.—The second annual sports meeting of the Berry United Sports Club—an institution embracing members of the staffs of the *Financial Times*, the *Sunday Times*, the *Graphic*, Kelly's Directories, St. Clement's Press, Suttley and Silverlock, etc., was held on Saturday at Preston-road, Harrow, and among those present were Sir William E. Berry, Bart., and Miss Sheila Berry, who distributed the prizes.

"CHAPEL" OUTING.—The summer outing of the composing-room chapel of Messrs. Stonhill and Gillis was held on Saturday. Starting from Farringdon-street soon after nine o'clock, the party was conveyed by charabanc through some delightful scenery to Aylesbury, where an excellent dinner, at the Bell Hotel, was presided over by Mr. Geo. Smith, father of the chapel. "The Firm" was enthusiastically honoured, and the opportunity was taken of wishing farewell to Mr. Chas. Rivers, who this week retires on superannuation. The return journey was made *via* St. Alban's, where tea was taken, London being reached soon after 8.30 p.m., after a most successful and enjoyable day.

EDWARD RABAN, PRINTER.—The Master Printers' Guild of Aberdeen recently issued as a well printed cloth-bound quarto a "Record of the Celebration of the Tercentenary of the Introduction of the Art of Printing into Aberdeen by Edward Raban in the Year 1622." In addition to an interesting permanent record of last year's celebrations the book provides also an article on "The Beginnings of Printing in Aberdeen" by G. M. Fraser, Librarian of the Public Library, and a comprehensive "Census of Raban's Books" by P. J. Anderson, LL.B., University Librarian. The book is printed by the University Press, Aberdeen.

STATE OF TRADE.—In spite of the unseasonable weather, business in the printing group of trades has maintained the slight improvement of last month, and the tone all round seems more hopeful, although business is by no means good—states the weekly report of the Leicester Chamber of Commerce. In letterpress, small orders are still ruling, and competition is getting keener, although most firms in this district are keeping on full time. With regard to lithographic printing, although in some instances large firms are fairly busy, in the majority of cases printers are finding it difficult to carry on full time. In bookbinding, etc., improvement has been less marked than in the letterpress and litho, but it is difficult to state any improvement has occurred during the last four or five weeks; the position is about the same.

THE *Alnwick and County Gazette* and the *Alnwick Guardian*, two weekly newspapers published in the town of Alnwick, Northumberland, have been amalgamated.

NEXT Saturday will be the sixty-eighth anniversary of the publication of the first number of the *Bury Times*.

MR. FRANCIS HAMAR OATES, C.B., J.P., of Besthorpe, Newark, chairman of the *Newark Advertiser*, Ltd., who died on May 9th, aged 57, left estate of the gross value of £15,908, with net personalty £12,344.

JUDGMENT was entered for Odhams' Press, Ltd., in the King's Bench Division on Friday in the case in which Mr. Ernest Chapman Wray, journalist, of Kensington, sued them for alleged wrongful dismissal, claiming six months' notice instead of three months.

APART from very attractive fiction, *Pearson's Magazine* for July has some good topical articles, including one on tennis by Miss McKane.

THE whole of the awards in Tuck's Post Card Postage Prize Competition have now been made, and cheques and prizes posted to all prize-winners. Details of the list of prizes, amounting to £5,000, can be inspected at leading stationery and art stores throughout the kingdom.

"A WEEK'S pay for a night's work" was Sir John Baddeley's comment at the Guildhall on Thursday in sentencing to a month's imprisonment Frederick Harris, a compositor, for obtaining the unemployment dole by means of a false declaration. Harris received £1 19s. 6d. for seven hours' work on Saturday evenings in a weekly newspaper office.

MR. GEORGE D. ROBEY, who for 50 years has been connected with the firm of Worrall and Robey, printers and export stationers, Fenchurch-street, London, died with painful suddenness on Monday at Eastbourne. He was climbing the slopes towards Beachy Head when he was seen to fall forward and was dead when visitors reached him. Mr. Robey was identified by papers in his pockets, the contents of which included a return ticket to Eastbourne issued that day.

MR. ARTHUR WILLIAMS MARCHMONT, the novelist, who died at Bath in his sleep on Sunday night, was in his early life a journalist and edited successively the *North-Eastern Daily Gazette* and the *Lancashire Daily Post*. In 1894 he abandoned journalism for fiction, and produced altogether some 35 novels.

AMALGAMATED PRESS WAR MEMORIAL.—Sir George Sutton on Friday afternoon unveiled a war memorial which has been erected in the entrance hall of Fleetway House, the headquarters of the Amalgamated Press, to the memory of the 142 officers and men who gave their lives for their country in the Great War. Sir George Sutton mentioned that 1,270 members of the staff served in the army and navy. Of that number, 213 were wounded, and on the tablet, which he had the solemn duty of unveiling, were the names of those who had passed over but whose memory would for ever remain sacred.

THE late Mr. Walter Montgomery Jackson, Fairfield, Connecticut, United States of America, the eminent publisher, who as a boy started in a booksellers' and publishers' business at Boston, working his way up to the general managership and eventually becoming a partner, and who, when he came to England to take up the campaign of the "Encyclopædia Britannica," revolutionised the book trade by his introduction of the subscription book business, and is said to have made £500,000 out of one popular issue alone, died at Gibraltar in March, leaving property of the value of £18,084 in this country.

DR. JOSE CARLOS RODRIGUES, the eminent Brazilian journalist, and until recently proprietor of the *Jornal do Commercio* of Rio de Janeiro, has just passed away, at the age of 80, after an operation.

MESSRS. MARTIN AND CLARKE, The Paper House, Joiners' Hall Buildings, E.C.4, have issued with their summer list printed samples of a good intermediate quality cream wove bond at an attractive price, and a superior tub-sized bond water-marked "Purley Linen." There is also an interesting feature in the shape of a sample blotter indicating that both the paper and the firm are available for best service.

CIGARETTE papers in great and attractive variety are made by Messrs. Schoeller and Hoesch, Gernsbach, for whom Mr. Geo. W. Turner, College Hill Chambers, College-hill, E.C.4, is the sole agent for the United Kingdom and Colonies. The resources of the manufacturers are very extensive, and their products cover a wide range, both as to substance and tints, while watermarking is a feature. In addition to cigarette papers, Messrs. Schoeller and Hoesch's fine tissues are invaluable for a variety of purposes.

A LIBEL action, brought by Sir Percy Coleman Simmons, who was chairman of the L.C.C. last year, against the *Saturday Review*, was settled in the High Court on Friday. The case arose out of an article headed "The Battle of Edwardes Square" (Kensington). It was said that the defendants had wholeheartedly apologised and had paid substantial sums to charities in which Sir Percy was interested.

THE funeral took place last week at Newcastle, of Mr. Thomas William Large, who was well-known in Tyneside printing circles. Forty-four years of age, he served his apprenticeship to the printing trade in his late father's business, and carried on the business later with his brothers. At the funeral Mr. John English, represented the North-Eastern Master Printers' Alliance and the Newcastle and District Master Printers' and Allied Trades Association.

AN inquest has been held at Walkerith, near Gainsborough, on the body of Charles Benjamin Godfrey, a foreman printer, whose body was recovered from the river Trent.

THE American Photo-Engravers' Association holds its 27th annual convention in Chicago on July 19th, 20th and 21st.

The Late Mr. W. D. Kay.

We regret to record the death of Mr. William Dutton Kay, which occurred at Lytham in Lancashire on June 7th. Mr. Kay was well known to the older generation of papermakers and merchants, especially in the Midlands and Manchester, where he was much esteemed and respected by a large circle of friends in the trade.

By his death Messrs. Smith, Stone and Knight, Ltd., of Birmingham, have lost one of their oldest and most valued representatives, Mr. Kay having represented them with conspicuous ability and success for upwards of forty-three years, at one time covering a great part of England and touching Scotland and Ireland. Previous to Mr. Kay's connection with Smith, Stone and Knight he had, after serving an apprenticeship to the trade, become manager to a paper mill at Shiplake, Henley-on-Thames. Mr. Kay was born at Chester on May 28th, 1842, and was consequently 81 years of age at the time of his death. In 1916 he relinquished his most arduous work, but kept up his connection with the firm as their Manchester representative until 1919, when he finally retired, though he still kept in touch with many of his old customers. On his retirement Mr. Kay was the recipient of many handsome presents from the directors and the staff of Smith, Stone and Knight in remembrance of his long and pleasant association with that firm. He retained to the end a wonderful youthfulness, and he will long be remembered for his genial and kindly disposition. He died at Lytham, and was interred at the Manchester Southern Cemetery on Saturday, June 9th, the service being taken by his son-in-law, the Rev. T. Bingley Boss, Vicar of Goosnargh (Preston), and Rural Dean of Garstang. Mr. Kay had a family of four sons and two daughters, all of whom survive him. Mrs. Kay, who came of an old papermaking family, died in 1918, shortly after celebrating their golden wedding.

Efficiency and the Technical School.

East and North-East London Master Printers Visit London School of Printing.

At the invitation of the Principal, Mr. J. R. Riddell, the East and North-East London Master Printers' Association met at the London School of Printing on Wednesday of last week, when there was a record attendance of members who enjoyed an interesting and instructive evening. The visitors made a tour of the School premises, and afterwards listened to a stimulating address on "Efficiency" by the Principal, which was followed by a lively discussion of various efficiency problems appertaining to the printing office. A start was made at 6.30, but so absorbing did the proceedings prove that it was not until well past 9 o'clock that the party dispersed.

Practical Tuition and Good Equipment.

The company, which numbered between 20 and 30, were first welcomed by the Principal in the School's commodious board room, Mr. Riddell giving a short account of the work of the School. Of the 1,600 or 1,700 students, he said, about half attended during the day at their employers' expense. He laid emphasis upon the discipline of the School in respect of punctuality and honest work, it being regarded as the School's function to develop character as well as to teach. Attention was drawn to the practical workaday character of the instruction given, and it was stated that the School had been successful in turning out students who had made good in responsible and remunerative positions not only at home but also abroad.

Next came a thorough inspection of the premises, the Principal taking the lead and commenting on the equipment and work of the various departments, including those devoted to chemistry and the testing of materials, bookbinding, lithography, photo litho, machine typesetting, hand composition, machining, stereo and electrotyping, etc.

An Address on "Efficiency."

The tour of inspection completed, the visitors seated themselves again in the board room, Mr. C. H. Ward (chairman of the Association) and Mr. T. D. Hawkins (secretary) accompaning Mr. Riddell at the top of the table. It was decided to postpone the ordinary business of the Association until the next meeting and to proceed at once with the discussion on the subject of "Efficiency."

Mr. Riddell opened the discussion with an address which contained many practical ideas and suggestions of interest to those in charge of printing businesses. He said efficiency at the present time is probably the hardest worked word in the English language. It is heard in every direction, and is frequently used by those whose experience is limited to a theoretical knowledge of the subject on which they were expatiating, making the statement that principals and head-teachers of technical schools, form no exception to the rule, but he might claim that his past industrial experience gave him some right to comment on the need for efficiency in the printing business. Giving several definitions of efficiency, he submitted that it meant the elimination of regret, worry and fear, and the application of skill and knowledge which produced results with the minimum expenditure of time, energy and money. In respect of conditions making for efficiency, he stressed cleanliness in the printing works, and the economising of labour by the right placing of materials and provision of proper supplies. In regard to machinery and other apparatus the main point insisted upon was the danger of over-equipment, some drastic remarks being made about the white elephants that adorn some printing establishments. Special interest was aroused by a suggestion that the time is upon us when the movement towards efficiency must mean the splitting up of the printing trade into distinct areas—printers agreeing to pool their resources and arrange that firms in certain areas should agree amongst themselves to specialise in the various classes of work, and thereby reduce unnecessary duplication of plant in a district. Due emphasis was laid on the aid which scientific costing can render in the attainment of efficiency, but the opinion was expressed that 75 per cent. of the dockets written to-day are not worth the paper they are written on, and over-elaboration of costing methods was deprecated. In regard to the selling side of the business, which the speaker said cost as much as, if not more than, the productive side, it was urged that salesmen should be encouraged and trained to give genuine service to the customer by suggesting and advising as to the best way of achieving what the customer required. To ensure efficiency in the selling department, said the speaker, the salesman should be judged not by turnover, which was no criterion, but by profit on sales effected. On the labour side of the business, efficiency was largely a matter of training. Stress was laid on the value of giving apprentices as complete a training as possible, and inculcating in them the pride of craft.

Efficiency Problems Discussed.

The chairman having declared the meeting open for discussion, many of those present participated.

In reply to a question, Mr. Riddell stated that students of all ages were admitted to the School, and there were quite a number over fifty.

Mr. V. Pitman, in an interesting contribution to the discussion, dealt mainly with the suggestion of sectionalising the printing trade. He thought that although the proposal involved difficulties it was a reasonable one and he instanced the production of paper bags and printed packets, a line of work to which he had been paying special attention. Every printer, he said, should endeavour to specialise in some direction and should also find out what equipment his neighbours had.

There was some discussion as to the relative importance of locality and printing facilities, and it seemed to be generally agreed that facilities for special service would bring in the work whether or not the locality were favourable.

General agreement was expressed as to loss of efficiency resulting from trade union restrictions whereby a man is confined to one particular class of work and forbidden to do other work. Mr. Riddell thought the trade unions were now awakened to the desirability of a boy gaining a general knowledge of the trade, and he was optimistic that the position in the workshop would eventually be greatly improved.

The chairman, in winding up the discussion, referred particularly to the limited training obtained by lads in the printing offices of to-day, and spoke with satisfaction of the facilities for wider tuition offered by the London School of Printing. He thought the School was doing a remarkably fine work for the craft as a whole. He expressed on behalf of the visitors their great pleasure in having the opportunity of being present, and thanked Mr. Riddell for the privilege accorded.

Mr. Hawkins, junr., seconded the expression of thanks. He assured Mr. Riddell that in respect of numbers this was a record meeting for their Association—and that was the highest compliment the Association could pay him. The meeting was also the most interesting that the Association, in his recollection, had ever held.

Mr. Hawkins, senr., also associated himself with the thanks expressed, the meeting showing its cordial approval.

Mr. Riddell, in responding, suggested that the Association should make an annual event of a visit to the School, and he invited the members to look in at any time and see the work in progress.

In order to encourage ability in industrial design, the Royal Society of Arts has decided to hold an annual competition, one class open to students or Schools of Arts and the other open to all. The subjects so far arranged include book production.

The late Mr. James Pope, Bristol, a director of the *Bristol Times and Mirror*, Ltd., and for some years advertising manager of that paper, died March 18th, aged 85, left £17,310, and the late Mr. Walter Reid Warton, Bristol, chairman of Messrs. Walter Reid and Son, proprietors of the *Western Daily Press* and associated newspapers, died December 10th, 1921, aged 43, left £12,618.

Messrs. Ernest Stuart and Co, paper agents and merchants, 11, Queen Victoria-street, London, have had an experience of postal charges which demonstrates the absurdity and unfairness of the present regulations. They had occasion to post a packet of samples to some friends abroad and the postage was 3d. An exactly similar pocket posted to the provinces cost 8d. "There is nothing new in this," they write," but what a handicap to trade, as even the large and wealthy houses must think twice before embarking on any great outlay."

Odhams Press, Ltd.

The ordinary general meeting of shareholders in Odhams Press, Ltd., was held on Tuesday at the Hotel Cecil, W.C., Lieut.-Col. W. Grant Morden, J.P., M.P. (the chairman of the company) presiding.

After referring to the progress of *John Bull*, the chairman dealt with other sections of the firm's business. He said the machines in the printing department were busier than they had been for some years past; a 10 years' contract had been secured for printing *The People*, and contracts for 10 other publications had been secured. The Borough Bill Posting section of the business had been considerably developed. Special attention had been paid to Illuminated Signs, and the company held the key positions suitable for electric advertising. The purchase of the share capital of Messrs. Dean and Son, owners of "Debrett's Peerage" and of the well-famed toy books, was made at the end of 1921, and all indications pointed to a satisfactory year for that branch, while the earnings of the *Sporting Life* continued to be satisfactory.

Mr. W. J. B. Odhams (deputy chairman) seconded the motion, and after some discussion the report and accounts were adopted.

Rare Book Prices.

In the sale of the late Earl of Carysfort's 19 special books at Sotheby's on Monday, Mr. P. Rosenbach, of New York, gave £9,500 for a first example of the Bible, printed about 1455, by Gutenberg at Mainz. He also obtained another Bible, printed on vellum in 1462 by Gutenberg's successors, Fust and Schoiffer, for £4,800. A "First Folio" of Shakespeare realised £6,100, and the total obtained at the sale for 19 books was £35,550.

Reviews of Sample Books, etc.

We have received a batch of samples of fibre and portmanteau boards from A/B Nol-Tingstad, of Gothenburg, which demonstrates very effectively the high degree of efficiency that has been attained by our friends in the production of this specialised line of goods. Ordinary and standard qualities are shown in a range of substances, grainings and colours. Perfect leather facsimiles have been secured, so much so that it would require an expert to detect the imitation on made-up goods. The strength of the boards is well above the average and ensures a long life, even under rough usage, for attache cases, portmanteaux and similar goods. The grains before us represent pigskin, crocodile, long-grained cowhide, levant grain and straight grained hide. The colours include dark green and various tones of brown. Boards may be supplied varnished or otherwise. Users of this class of board are well advised to investigate the claims of superiority, which, we believe, are accurately made by the manufacturers. The London agents are Messrs. George Harrison's Agencies, Ltd., 32, Queen Victoria-street, E.C.4.

President Harding has sold his newspaper the *Marion* (Ohio) *Star* to two Ohio publishers. He will continue as stockholder of and editorial contributor to the paper.

Debenture Stockholders' Amendments.

The adjourned meeting of the debenture stockholders of Messrs. De La Rue and Co. took place on Friday at Winchester House, Old Broad-street, to deal with resolutions postponed from the previous meeting for further consideration. Resolution No. 1 relates to such modification of the guarantee given by J. A. Weir as shall enable that company to borrow £200,000. The debenture stockholders committee has tabled an amendment that the charge shall be limited to £150,000 (not £200,000 as originally asked for), subject to certain further provisions.

The debenture holders' committee states that in order to carry out its functions properly it has been deemed necessary to frame a resolution giving it a formal constitution, and for the purpose of ensuring its recognition by the company and giving it the necessary authority counsel has advised that the trust deed should be amended in that sense. An amendment by way of addition to resolution No. 4 has accordingly been settled by counsel with this end in view. The committee explains that the purpose in mind is to safeguard the interests of the debenture stockholders by ensuring to them full control during such time as interest and sinking fund payments are not being fully discharged in cash by the company.

Fight Over News-Print Price.

Canadian Appeal Heard in London.

The Judicial Committee of the Privy Council on the 26th ult. heard an appeal arising out of an action brought by a number of newspaper proprietors and publishers in Western Canada against the Fort Frances Pulp and Paper Co., Ltd., Ontario, to recover excess payments made by the plaintiffs for news-print paper supplied by the defendants during the war, when the supply and price of paper were under Government control. The Supreme Court of Ontario gave judgment in favour of the plaintiffs, and it was from this judgment that the paper company now appealed.

According to the case as presented to their Lordships, the Paper Controller, acting under the authority of various war-time Acts and Orders in Council, fixed the price of news-print at $73 per ton in rolls in car-load lots, and those prices were paid by the respondents to the appellant during July, August and September of the year concerned. Both publishers and manufacturers appealed against this order, and the Paper Control Tribunal, in August, 1919, reduced the price to $66, and directed the respondents to apply to the Controller for an order for a refund of the price paid in excess. The Controller directed the appellant to account to the respondents for the excess paid. He also revised his orders for the first half of 1918 and the whole of 1919, and directed the respondents to account to the appellant for the differences between the prices actually paid and the revised controlled prices. Both parties then appealed against this order, and the Control Tribunal again revised the prices for the first half of 1918 and the year 1919, and ordered the appellant to refund all excess received by it over the prices then fixed. The respondents then brought an action against the appellant to recover the sums directed to be refunded. The appellant defended on the ground that all the orders were *ultra vires*, and counter-claimed for the difference between the ordinary market price of news-print at the time and the prices fixed by the orders.

The appellant now repeated these contentions and urged that the War Measures Act of 1914 did not authorise the fixing of news-print prices. They also alleged that all deliveries of paper to the respondent were made under duress.

On the other hand, the respondents contended that the appellant acquiesced in the proceedings of the Controller and contracted to sell paper to the respondents at such prices as would be fixed by him.

Their Lordships reserved judgment.

WHEN a man insists on proving the truthfulness of his remarks always let him do it.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines 1/.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines 6d

Very interesting Real Estate Business. Very low price. Offers invited.—Write at once to Gutenberg Publicité, 56, Rue de Paradis, Paris. 14194

The Value of a Small Advertisement in the "British and Colonial Printer and Stationer."

We have received the following letter, dated April 5th, 1923:—

Re my Advertisement in your paper "Newspaper Engineer and Machine Overseer desires change," will you please cancel same, as I have secured a splendid appointment through your valuable paper. Wishing you and your journal every success.

U.S. News-Print Production.

Information received by the Federal Trade Commission, Washington, shows that the average production of total news-print and standard news, based upon the total combined production for the years 1918 to 1922, inclusive, amounted to 111,450 tons for total news-print, and 101,400 tons for standard news for a period corresponding to April. The actual production for April, 1923, amounted to 116,719 tons of total news-print and 107,023 tons of standard news, which was 5 per cent. above the average for the five-year period for news-print and 6 per cent. above for standard news.

The production of news-print for April, 1923, compared with April, 1922, shows an increase of 4 per cent. for total news-print and 2 per cent. for standard news. The production of total news-print for April, 1923, compared with April, 1920, shows a decrease of 9 per cent. for total news-print, and 11 per cent. for standard news.

Average Prices Paid by Publishers.

The weighted average price on contract deliveries from domestic mills to publishers during April, 1923, f.o.b. mill, in car load lots, for standard news in rolls was $3.827 per 100 pounds. This weighted average is based upon April deliveries of about 87,000 tons on contracts involving a total tonnage of approximately 686,000 tons of undelivered paper manufactured in the United States.

The weighted average contract price based on deliveries from Canadian mills of about 47,000 tons of standard roll news in car load lots, f.o.b. mill, in April, 1923, was $3.791 per 100 pounds. This weighted average is based upon the April deliveries on contracts involving about 249,000 tons of undelivered Canadian paper.

The weighted average market price for April, 1923, of standard roll news in car load lots f.o.b. mill, based upon domestic purchases totalling about 9,000 tons, was $3.852 per 100 pounds.
